### Key: Effects of option on SA objectives

++	+	?	0	-	--
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	Site is close to rights of way and the Cotswold Sports centre) 1.3km away) as well as within walking distance of services and facilities in Tilehurst, which should enable active, healthy lifestyles.		The site is close to local services and facilities and open countryside meaning that there would be a positive impact on environmental and social sustainability.
	Will it increase opportunities for access to sports facilities?	+	The site is quite close to the Cotswold sports centre and recreation ground (1.3km)		
	Will it protect and enhance green infrastructure across the district?	0	Unlikely to have an impact on green infrastructure		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	Site is close to a number of services and employment opportunities as well as public transport options linking into Reading.		The site is close to local services and facilities, with good access to education and employment services, meaning that there will be a positive impact on economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	There are a number of public transport options in Tilehurst and opportunities for walking and cycling.		The site is served by regular bus services, and is within walking distance of a number of services and facilities, meaning that there would be a positive impact on all elements of sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	0	There are trees with Tree Preservation Orders adjacent to the site, but the site itself is unlikely to have an impact on biodiversity or geodiversity.		Development unlikely to have an impact on any element of sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	<b>0</b>	The site is adjacent to the AONB in an area of low/medium landscape sensitivity.	Landscape Assessment indicates development on <del>part of this</del> <u>the</u> site subject to measures to conserve and enhance the AONB <u>would be acceptable</u>	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	<b>0</b>	Development of the site is unlikely to have an impact on the character of the built environment		Development unlikely to have an impact on any element of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	<b>0</b>	Unlikely to have an impact on heritage assets, although the site is adjacent to a listed building.		
	Will it promote, conserve and enhance the District's cultural assets?	<b>0</b>	The site is unlikely to have an impact on cultural assets		
	Will it provide for increased access to and enjoyment of the historic environment?	<b>0</b>	The site is unlikely to have an impact on access to or enjoyment of the historic environment.		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from or impact on air quality?	<b>0</b>	Unlikely to have an impact on air quality		Development unlikely to have an impact on any element of sustainability.
	Will the site be at risk from or impact on noise levels?	<b>0</b>	Unlikely to have an impact on noise		
	Will there be an impact on soil quality?	<b>0</b>	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	<b>0</b>	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>-</b>	The site is greenfield		The site could have a negative impact on environmental sustainability as it is a greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	<b>?</b>	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will the site be subject to / at risk from flooding	<b>0</b>	The site is not at risk from flooding	SUDs would be required	With appropriate SUDs development of the site will not have an impact on any element of sustainability
<a href="#">11. To ensure a strong, diverse and sustainable economic base</a>	Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?	<b>0</b>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	<b>0</b>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	Will it promote and support the vitality and viability of the District's commercial centres?	<b>0</b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significant, positive or negative, impacts from this site. The site is well located for services and facilities as well as having good public transport links into Reading giving a number of positive sustainability impacts.

There are potential negative impacts relating the loss of Greenfield land, [although with appropriate mitigation the negative impact could be reduced.](#)

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Scale:** Eastern Area

**Duration:** Permanent

**Timing:** short to long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EA	<b>Settlement:</b>	EUA	<b>Parish:</b>	Tilehurst
<b>Site ID:</b>	EUA031	<b>Site Address:</b>	Land to the east of Sulham Hill	<b>Development Potential:</b>	35-29 dwellings (0.96ha at 30dph)

**Recommendation:**

The site is recommended for allocation

**Justification:**

The site is well related to the existing residential development, and local service and facilities and is not at risk from flooding. There are no significant issues on the site.

[The development potential of the site has been changed following consultation responses from the site promoter and consideration of the density of the neighbouring development. Development of approximately 35dph is considered appropriate in this location which gives approximately 35 dwellings on the site.](#)

**Discussion:**

**Site Description:**

The site is well related to the existing residential development, close to local service and facilities (including the local primary school and community hall). This site is adjacent to a children’s play area.

[The site is currently used as grazing pasture for the neighbouring riding stables. The lease agreement between the stables and the land owner requires the land owner to provide additional land elsewhere should the existing site/s become unavailable.](#)

**Landscape:**

The site is adjacent to the AONB, in an area of low/medium landscape sensitivity. Landscape work carried out for the site indicates development on the site would be acceptable subject to mitigation measures.

**Flood Risk:**

The site is in Flood Zone 1. SUDs would be required.

**Highways /Transport:**

The proposal is expected to have a marginal impact on the highway and travel network. ~~Access would ideally come from Clements Mead.~~ [The Council’s Landscape Assessment work requires access to come from Clements Mead, to preserve the rural character of Sulham Hill.](#)

There is a bus stop with a regular bus service within 400m of the site.

**Ecology:**

There are no known ecological or environmental designations on the site.

**Archaeology:**

There is a listed farmhouse near to the site, but as the area is already developed there is unlikely to be an impact on archaeology.

**Education:**

~~Existing primary school provision in the Eastern Urban Area is close to or at capacity. There is capacity for additional pupils within the local secondary schools.~~

[The Local Education Authority indicated that a satisfactory solution to school place provision can be achieved in the area.](#)

**Environmental Health:**

There are no known air, noise or contamination issues with this site.

**Minerals and Waste:**

Site partly underlain with gravel deposits. Consideration of Policies 1 & 2 of the RMLP required.

No known waste issues.

## Site Selection – Site Commentary

### **Land use planning consultation zone:**

The site is not within an AWE consultation zone.

### **Environment Agency:**

25% of the site is in SPZ3.

### **Thames Water:**

No water supply infrastructure issues envisaged.

No wastewater infrastructure issues envisaged

### **Parish Council:**

The Parish Council feels that this site is important open space used for grazing horses from the neighbouring stables. [At preferred options the Parish Council objected to development on this site.](#)

### **Preferred Options consultation key issues:**

- [General comments](#)
- [Principle of development, including alternative suggestions](#)
- [Landscape/setting and character including impact on AONB](#)
- [Infrastructure including lack of facilities and services.](#)
- [Highways and Transport issues.](#)
- [Ecology including impact on Sulham Woods and impact on species.](#)
- [Flood risk](#)
- [Personal issues](#)
- [Pollution – noise, light, air.](#)
- [Loss of employment](#)
- [Crime and security](#)
- [Issues with the consultation](#)

### **SA/SEA:**

The SA/SEA indicates a predominantly neutral impact on sustainability. There are no significant impacts from this site. The site is well located for services and facilities as well as having good public transport links into Reading, giving a number of positive sustainability impacts. There are potential negative impacts relating the loss of greenfield land, although with appropriate mitigation the negative impact could be reduced.

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission/[site promoter](#)):**

The site is proposed for approximately 30 new dwellings in a mix of dwellings types and sizes. [An indicative framework plan submitted as part of the preferred options consultation indicates the site could accommodate approximate 50 dwellings \(1.4ha at 30 – 40dph\).](#)

-------------------------------	-------------------------------	--------------------------	-------------------------

## Summary of Site Assessment

### Key Issues:

- Greenfield
- Adjacent to the AONB
- Impact on the highway network – significant improvements would be required to Sulham Hill which would change the character of the rural lane.

## Site Assessment

<b>Parish Council consultation response:</b>	Parish Council very concerned about the development of this site. Currently site is very wet. Development would impact on the AONB and adjacent woodland. The woodland is seen as valuable open space by the community. Would rather see other sites considered before this.

### Summary

There are no significant impacts from this site. The site is well located for services and facilities as well as having good public transport links into Reading. There is potential for development of the site to have a negative impact on the character of the landscape as the site is rural in nature, despite being adjacent to residential development on one site. The Landscape Assessment work carried out indicates that the site would be suitable for development with appropriate mitigation, [however access would need to come from Vicarage Wood Way. Access onto Sulham Hill would have a negative impact on the character of the landscape, and therefore, on environmental sustainability that could not be mitigated.](#) Access to the site is via Sulham Hill which is narrow in places, and does not have footways, which could lead to issues of road safety without appropriate and extensive mitigation.

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Eastern Area

**Duration:** Permanent

**Timing:** Short to Long term.

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EA	<b>Settlement:</b>	EUA	<b>Parish:</b>	Tilehurst
<b>Site ID:</b>	EUA032	<b>Site Address:</b>	Land to the east of Sulham Hill, between Barefoot Copse and Cornwell Copse	<b>Development Potential:</b>	45 dwellings (1.5ha at 30dph)

**Recommendation:**

The site is not recommended for allocation

**Justification:**

The site is close to local services and facilities. ~~significant improvements would be required to the highway network to enable development to take place.~~ [Development on the site would look away from the existing development, meaning that it would not be that well related to the existing settlement. The landscape character assessment states that access cannot come from Sulham Hill due to the impact this would have on the character of Sulham Hill. While there is no longer a requirement to widen Sulham Hill, it is considered that an access onto Sulham Hill would](#) This would significantly change the character of the rural lane (Sulham Hill) ~~and this is not considered appropriate.~~

**Discussion:**

**Site Description:**

The site is located to the west of Tilehurst, backing on to existing residential development, although the western part of the site is adjacent to Sulham Hill, a rural lane.

**Landscape:**

The site is adjacent to the AONB, in an area of low/medium landscape sensitivity. Landscape Assessment work carried out on the site indicates that development on part of the site would be acceptable subject to important measures to conserve and enhance the AONB.

[The Landscape Assessment states that access should not come from Sulham Hill. No alternative access can be achieved.](#)

**Flood Risk:**

The site is in Flood Zone 1.

The site is at risk from surface water flooding, and there is anecdotal evidence that the site is often waterlogged.

A FRA and appropriate mitigation, including SUDs would be required.

**Highways /Transport:**

The proposals will have a marginal impact on the highway and travel network. Although there are concerns regarding access onto Sulham Hill. ~~In order for an appropriate access to be obtained Sulham Hill would need to be widened and a footway provided along the entire length. Significant levels of vegetation would also need to be removed to enable adequate sight lines to be provided. This would significantly change the character of the rural lane.~~

There are a number of public transport options near to the site with a regular bus service passing within 400m of the site.

**Ecology:**

The site is within a Biodiversity Opportunity Area and there are badgers present on the site. The site is adjacent to ancient woodland and tress protected by Tree Preservation Orders as well as a Local Wildlife Site.

Appropriate buffers and badger mitigation would be required.

**Archaeology:**

The site is surrounded by a sensitive HLC and is the site of a historic farm. This is unlikely to have an impact on the deliverability of the site.

**Education:**

## Site Selection – Site Commentary

Existing primary school provision in the Eastern Urban Area is close to or at capacity. There is capacity for additional pupils within the local secondary schools. [The Local Education Authority has indicated that a satisfactory solution to school place provision can be achieved in the area.](#)

### Environmental Health:

There are no known air, noise or contamination issues on the site.

### Minerals and Waste:

The site is partly underlain by gravel deposits. Consideration of policy 1 & 2 of the RMLP required.

No known waste issues.

### Land use planning consultation zone:

The site is not within an AWE consultation zone

### Environment Agency:

The site is within SPZ3. [The Environment Agency have said that there is no in principle objection to development in SPZs.](#)

The site is also on an aquifer [and 35% of the site is considered to be at high risk of contaminating groundwater.](#)

### Thames Water:

No water supply infrastructure issues envisaged.

Concern regarding wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A drainage strategy would be required

### Parish Council:

The Parish Council are very concerned about development of this site and the impact it would have on the AONB and the adjacent ancient woodland.

[At preferred options the Parish Council objected to development on this site.](#)

### Preferred Options consultation key issues

- [Principle of development](#)
- [Reasons for rejection other Tilehurst sites apply to this location too.](#)

[For the consultation responses and Council's response, please see the Statement of Consultation.](#)

### SA/SEA:

There are no significant impacts from this site. The site is well located for services and facilities as well as having good public transport links into Reading. There is potential for development of the site to have a negative impact on the character of the landscape as the site is rural in nature, despite being adjacent to residential development on one site. The Landscape Assessment work carried out indicates that the site would be suitable for development with appropriate mitigation; [however access would need to come from Vicarage Wood Way. Access onto Sulham Hill would have a negative impact on the character of the landscape, and therefore, on environmental sustainability that could not be mitigated.](#) ~~Access to the site is via Sulham Hill which is narrow in places, and does not have footways, which could lead to issues of road safety without appropriate and extensive mitigation.~~

### Proposed development (from SHLAA submission):

The site is proposed for approximately 60 new dwellings in a mix of dwellings types and sizes.

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
air, water and soil quality, and minimise noise levels throughout West Berkshire	or impact on air quality?		quality		on any element of sustainability.
	Will the site be at risk from or impact on noise levels?	<b>0</b>	Unlikely to have an impact on noise		
	Will there be an impact on soil quality?	<b>0</b>	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	<b>0</b>	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	The site is greenfield		The site could have a negative impact on environmental sustainability as it is a greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	-	A small part of the site is at risk from surface water flooding as well as the area to the northeast of the site.	A <a href="#">Flood Risk Assessment</a> would be required, with appropriate mitigation and <a href="#">Sustainable Drainage Methods (SUDs)</a> provided.  There is no evidence that the site <a href="#">itself</a> has flooded.	Flooding can have a negative impact on all elements of sustainability, although there is no evidence of flooding on the site. Appropriate mitigation including <a href="#">Sustainable Drainage Methods (SUDs)</a> will reduce the negative impact on sustainability.
<a href="#">11. To ensure a strong, diverse and sustainable economic base</a>	Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?	<b>0</b>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards</a>
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	<b>0</b>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for</a>		<a href="#">economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">housing will have an overall neutral effect on economic sustainability.</a>		
	Will it promote and support the vitality and viability of the District's commercial centres?	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significant impacts from this site. The site is well located for services and facilities as well as having good public transport links into Reading, meaning the site scores positively on these elements of sustainability. The site is rural in nature and adjacent to the AONB, meaning that there would be potential for development to harm the character of the landscape or to change the character of the built environment. The Landscape [Capacity](#) Assessment ~~work~~ indicates that the site would be suitable for development, although appropriate mitigation measures would be required to ensure that the potential negative impact was reduced and neutralised where possible. [However, if the site was to be developed alongside EUA003/008 there would be a negative impact on the character of the AONB that would not be able to be mitigated.](#) The site is adjacent to ancient woodland and a local wildlife site, as well as having some [Tree Preservation Orders](#) TPOs on site. Appropriate mitigation and buffers would be required to mitigate this impact. A small part of the site is within an area at risk from surface water flooding, with the appropriate Flood Risk Assessment and mitigation measures (including [Sustainable Drainage Methods](#) (SUDs)) there should not be an impact on sustainability.

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Eastern Area

**Duration:** Permanent

**Timing:** Short to Long term.

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EA	<b>Settlement:</b>	EUA	<b>Parish:</b>	Tilehurst
<b>Site ID:</b>	EUA033	<b>Site Address:</b>	Land to the east of Long Lane and south of Blackthorn Close	<b>Development Potential:</b>	30 dwellings (1ha at 30dph)

### Recommendation:

The site is recommended for allocation

[The site was recommended a preferred option, but it is now not recommended for allocation](#)

### Justification:

The site is adjacent to existing residential development, close to local service and facilities. ~~There are no significant issues on the site.~~ [Development on the site would look away from the existing development, meaning that it would not be that well related to the existing settlement. The Landscape Capacity Assessment indicates that development of this site, alongside EUA003/008, would have a negative cumulative impact on the AONB, and only one of these sites should be developed. The Landscape Capacity Assessment gave a preference for EUA003/008 over this site.](#)

[The preferred options consultation raised significant concerns over flooding following extreme weather at the proposed access point to the site. Environment Agency maps recognise Long Lane as being within an area of deep surface water flood risk. Whilst there is an engineering solution that could be provided, it is an additional issue that impacts upon deliverability or viability of the site. In addition, improvements to widen Long Lane and improve the sight lines at the junction of Long Lane and Sulham Hill would be required thereby adding a further complexity that other sites in the area do not have.](#)

### Discussion:

#### Site Description:

The site is located to the west of Tilehurst, close to local services and facilities (including a primary and secondary school). The eastern part of the site is adjacent to the existing residential development, although the western part of the site is adjacent to the AONB.

#### Landscape:

The site is adjacent to the AONB in an area of low/medium landscape sensitivity. ~~A Landscape Capacity Assessment work carried out~~ [indicates that part of the site is suitable for development subject to important constraints to conserve and enhance the AONB.](#)

[The Landscape Capacity Assessment states that this site should not be developed in conjunction with EUA003/008 due to the cumulative impact on the character of the AONB.](#)

#### Flood Risk:

The site is within a groundwater emergence zone and adjacent to an area of surface water flood risk. There is no evidence of flooding on the site.

The site is within Flood Zone 1.

A [Flood Risk Assessment](#) FRA and appropriate mitigation including [Sustainable Drainage Systems](#) (SUDs) would be required.

#### Highways /Transport:

The proposals are expected to have a marginal impact on the highway and travel network. [The site is not expected to generate significant amounts of traffic, and there will therefore be a limited impact on congestion.](#) Access should be taken from Long Lane. ~~Long Lane would need to be widened to the front of the site and footways provided to link the site into the existing footway network.~~

[Improvements would be required to widen Long Lane and improve the sight lines at the junction of Long Lane and Sulham Hill.](#)

There are a number of bus services within 400m of the site.

#### Ecology:

The site is partly within a BAP ([Biodiversity Action Plan](#)) habitat and within a Biodiversity Opportunity Area.

## Site Selection – Site Commentary

Badgers are present on the site. The site is adjacent to Ancient woodland and a Local Wildlife Site. Trees protected by Tree Preservation Orders are present on the site.

~~The site promoters have prepared an extended phase 1 habitat survey. This has been reviewed by the Council's ecologist who is content that, subject to the mitigation measures set out in the survey, there would not be a detrimental impact on ecology. would be required and appropriate buffers would be required between the site and the ancient woodland. provided.~~

### Archaeology:

~~The site is a surviving parcel of a pre-18<sup>th</sup> century field system. The site lies within a sensitive Historic Landscape Characterisation HLC area. Further assessment would be required, but unlikely to impact on deliverability.~~

~~A Historic Environmental Assessment has been prepared by the site promoter and this has been reviewed by the Council's Archaeological Officer who has advised that it would be advantageous if the outline of the field could be preserved, and that there are unlikely to be any significant archaeological finds or deposits.~~

### Education:

~~Existing primary school provision in the Eastern Urban Area is close to or at capacity. There is capacity for additional pupils within the local secondary schools. The Local Education Authority has indicated that a satisfactory solution to school place provision can be achieved in the area.~~

### Environmental Health:

There are no known air, noise or contamination issues on this site.

### Minerals and Waste:

The site is partly underlain by gravel deposits. Consideration of policies 1 & 2 of the Replacement Minerals Local Plan for Berkshire RMLP required.

No known waste issues.

### Land use planning consultation zone:

The site is not within an AWE consultation zone

### Environment Agency:

The site is within [Groundwater Source Protection Zone \(SPZ\) 3](#).

### Thames Water:

~~No water supply infrastructure issues envisaged. Concern regarding wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development. An integrated water and wastewater strategy will be required at the planning application stage should the site be allocated for development.~~

A drainage strategy would be required

### Parish Council:

The Parish Council are very concerned about development of this site and the impact it would have on the AONB and adjacent ancient woodland. The woodland is seen as valuable open space by the local community. [At preferred options Tilehurst Parish Council objected to development of this site.](#)

### Preferred Options consultation key issues:

- [General comments – impact on property prices, financial gain for landowners, development should be directed to the Midlands/north of England, Council officers live outside district/settlements where allocations proposed, significant opposition which should be given weight.](#)
- [Consultation process and timing – school holidays, lack of time, etc.](#)
- [Crime and security – increase in population/density will result in higher crime levels.](#)
- [Cultural heritage and the historic environment – evidence of large battle during Dark ages and site one of last remaining 18<sup>th</sup> century irregular fields.](#)
- [Density – concern over medium density housing.](#)
- [Ecology – impact on woodlands, species, etc.](#)
- [Economy – e.g. lack of local employment opportunities will increase commuting, development will](#)

## Site Selection – Site Commentary

- [not improve economic prosperity of area.](#)
- [Flood risk – surface water flood risk area.](#)
- [Gaps between settlements – concern over being part of Reading etc](#)
- [Highways and transport issues including access, impact on highways network, impact on traffic, parking and public transport.](#)
- [Impact on infrastructure, facilities and services including schools, doctors, leisure etc.](#)
- [Landscape/setting including impact on AONB.](#)
- [Open/recreation space.](#)
- [Personal issues – impact on quality of life, health.](#)
- [Pollution – air, light, noise.](#)
- [Principle of development – poorly chosen site, SA/SEA questioned, alternative sites available, e.g. Previously Developed Land, setting of precedent for further development in area.](#)
- [Settlement boundaries.](#)
- [Sustainability.](#)

*[For the consultation responses and Council's response, please see the Statement of Consultation.](#)*

### **SA/SEA:**

[There are no significant impacts from this site. The site is well located for services and facilities as well as having good public transport links into Reading, meaning the site scores positively on these elements of sustainability. The site is rural in nature and adjacent to the AONB, meaning that there would be potential for development to harm the character of the landscape or to change the character of the built environment. The Landscape Capacity Assessment indicates that the site would be suitable for development, although appropriate mitigation measures would be required to ensure that the potential negative impact was reduced and neutralised where possible. However, if the site was to be developed alongside EUA003/008 there would be a negative impact on the character of the AONB that would not be able to be mitigated. The site is adjacent to ancient woodland and a local wildlife site, as well as having some Tree Preservation Orders on site. Appropriate mitigation and buffers would be required to mitigate this impact. A small part of the site is within an area at risk from surface water flooding, with the appropriate Flood Risk Assessment and mitigation measures \(including Sustainable Drainage Methods \(SUDs\)\) there should not be an impact on sustainability. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

~~There are no significant impacts from this site. ## Summary of Site Assessment

### Key Issues:

- Greenfield
- Ground and surface flood risk
- Proximity to railway line
- Access

## Site Assessment

<b>Parish Council consultation response:</b>	<p>Parish Council are concerned about this site, and would not want to see it as a Gypsy and Traveller site. Parish Council are keen that the inspector's decision on the application (12/02215) be considered, especially with regard to the rural nature of the area and potential for further encroachment towards Pangbourne.</p> <p><a href="#">At preferred options stage the Parish Council indicated that 'in principle' they would not be against the extension of the settlement boundary as proposed by this site, although a number of concerns were raised (proposed developable area, loss of gap between Purley on Thames and Pangbourne, creation of isolated development, concern over infrastructure) The site was considered suitable for high quality retirement accommodation or low cost housing e.g. Starter homes of which it is considered there is a shortage in Purley on Thames.</a></p>

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment: - Nature of effect (scale, likelihood of occurrence) - Duration (temporary, permanent, short/med/long term) - Cumulative - Synergistic - assumptions	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	Site is close to recreation ground and play facilities and close to local services and facilities		The site is close to local services and facilities and open countryside meaning that there would be a positive impact on environmental and social sustainability.
	Will it increase opportunities for access to sports facilities?	<b>+</b>	Site is close to recreation ground		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	Development of the site is unlikely to impact on green infrastructure		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>+</b>	There are a range of services and employment opportunities close to the site, with a number of public transport options nearby.		The site is close to local services and facilities, with good access to education and employment services, meaning that there will be a positive impact on economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>+</b>	The site is close to a number of public transport options. Tilehurst railway station is approximately 2.6km from the site, and regular bus services pass by or near to the site.		The site is served by regular bus services, and is within walking distance of a number of services and facilities, meaning that there would be a positive impact on all elements of sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	<b>?</b>	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	<b>0</b>	Development of the site would be unlikely to have an impact on biodiversity or geodiversity		<a href="#">Development could have a negative impact on environmental sustainability, but with</a>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment: - Nature of effect (scale, likelihood of occurrence) - Duration (temporary, permanent, short/med/long term) - Cumulative - Synergistic - assumptions	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	0-	The site is adjacent to the AONB, but has a low/medium landscape sensitivity itself. <a href="#">Landscape Assessment work indicates that part of the site would be suitable for development subject to mitigation measures.</a>	<a href="#">Mitigation measures as set out in the Council's landscape assessment would need to be provided.</a>	<a href="#">appropriate mitigation the impact would be neutral.</a>
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	+	The site is well related to the existing settlement, with development on two sides.		Unlikely to have an impact on any element of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	?	There are Saxon graves near to the site.	Further work is required to determine whether there is anything of archaeological significance on the site.	
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact on cultural assets		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact on access to or enjoyment of the historic environment		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	?	The south of the site is located adjacent to the railway line	Development is only proposed for the northern part of the site.	Unlikely to have an impact on any element of sustainability.
	Will the site be at risk from, or impact on, noise levels?	?	The south of the site is located adjacent to the railway line	Development is only proposed for the northern part of the site.	
	Will there be an impact on soil quality?	0	The site is unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	The site is unlikely to have an impact on water quality		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	The site is Greenfield		The site could have a negative impact on environmental sustainability as it is a Greenfield site.
10. To reduce emissions contributing to climate change and ensure	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment: - Nature of effect (scale, likelihood of occurrence) - Duration (temporary, permanent, short/med/long term) - Cumulative - Synergistic - assumptions	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
adaptation measures are in place to respond to climate change					could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	-	The site is at risk from surface and ground water flooding.	There has been no evidence of flooding on the site. A FRA and appropriate mitigation including SUDs would be required.	Flooding can have a negative impact on all elements of sustainability; Mitigation measures should reduce this impact.
<u>11. To ensure a strong, diverse and sustainable economic base</u>	Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?	<u>0</u>	<u>Not considered relevant</u>		<u>The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</u>
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	<u>0</u>	<u>The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</u> <u>The development of the site for housing will have an overall neutral effect on economic sustainability.</u>		
	Will it promote and support the vitality and viability of the District's commercial centres?	<u>0</u>	<u>Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</u> <u>The development of the site for housing only will have a neutral effect on economic sustainability.</u>		

### Summary

There are no significant positive or negative impacts on sustainability from this site. The site scores positively in terms of opportunities for sustainable travel and active and healthy lifestyles as it is close to local services and facilities. There are no biodiversity or environmental designations near to or on the site. The proximity to the railway line could cause noise and air pollution, but careful design and use of only part of the site could mitigate this impact. The site is at risk from surface and groundwater flooding, although with appropriate mitigation the negative impact should be reduced.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Eastern Area

**Duration:** Permanent

**Timing:** Short to Long term.

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EA	<b>Settlement:</b>	EUA	<b>Parish:</b>	Purley-on-Thames
<b>Site ID:</b>	EUA035	<b>Site Address:</b>	72 Purley Rise, Purley-on-Thames	<b>Development Potential:</b>	35 dwellings (1.24ha at 30dph)

### Recommendation:

The site is recommended for allocation

### Justification:

The site is well related to the existing settlement, close to local services and facilities.

~~Access to the site would need to be resolved.~~ [The site promoter has confirmed that a suitable access can be provided to the site.](#)

### Discussion:

#### Site Description:

The site is located to the north west of Purley-on-Thames and is well related to the existing settlement with development on two sites. The site is located behind the current building line. The site has good access to local services and facilities as well as being close to the Thames Path.

#### Landscape:

The site is located adjacent to the Chiltons [North Wessex Downs](#) AONB. ~~Development is not considered to have a negative impact on the AONB.~~ [Landscape Assessment work carried out indicates that part of the site would be suitable for development, subject to mitigation measures set out in the assessment.](#)

#### Flood Risk:

The site is within Flood Zone 1, a groundwater emergence zone and adjacent to a surface water flood risk, although there is no evidence of the site flooding. A FRA and appropriate mitigation, including SUDs would be required.

#### Highways /Transport:

Access to the site is a significant concern. The current access road is not wide enough to be an adoptable road, additional land would be required. [The site promoter has confirmed that additional land can be provided to ensure an adoptable access can be created.](#)

Traffic generation from the site would have a limited impact on the highway network.

There are a number of public transport opportunities in Tilehurst with regular bus services to Pangbourne and Reading.

#### Ecology:

Part of the site is within a BAP habitat. ~~An extended phase 1 habitat survey would be required.~~ [An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected](#)

#### Archaeology:

Saxon graves have been found on the other side of the railway line, meaning there is archaeological potential on the site. However, it is unlikely to impact on deliverability.

#### Education:

~~Existing primary school provision in the Eastern Urban Area is close to or at capacity.~~ [The Local Education Authority has indicated that a satisfactory solution to school place provision can be achieved in the area.](#) ~~There is capacity for additional pupils within the local secondary schools.~~

#### Environmental Health:

Proximity to the railway line means a noise survey would be required, with appropriate mitigation.

#### Minerals and Waste:

No known mineral deposits.

## Site Selection – Site Commentary

No known waste issues.

### Land use planning consultation zone:

The site is not within an AWE consultation zone

### Environment Agency:

The site is within SPZ3, at high risk of contaminating groundwater and is on a major aquifer.

### Thames Water:

~~Concern regarding water supply capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of any development.~~

~~A water supply strategy would be required.~~

No [water supply or](#) wastewater infrastructure issues envisaged.

### Parish Council:

The parish council consider that the development of this site would allow for further encroachment of Purley-on-Thames towards Pangbourne.

[At preferred options stage the Parish Council indicated that 'in principle' they would not be against the extension of the settlement boundary as proposed by this site, although a number of concerns were raised \(proposed developable area, loss of gap between Purley on Thames and Pangbourne, creation of isolated development, concern over infrastructure\) The site was considered suitable for high quality retirement accommodation or low cost housing e.g. Starter homes of which it is considered there is a shortage in Purley on Thames.](#)

### Preferred Options consultation key issues:

- [Principle of development including coalescence of settlements, need to use brownfield sites first and precedent.](#)
- [Highways and transport issues including access, lack of public transport, access road and concern over impact onto the A329.](#)
- [Infrastructure and services including schools and doctors, shops and leisure facilities](#)
- [Landscape and setting.](#)
- [Flood risk](#)
- [Gypsies, travellers and travelling showpeople.](#)
- [Ecology](#)
- [Heritage](#)

[For the consultation responses and Council's response, please see the Statement of Consultation](#)

### SA/SEA:

[There are no significant positive or negative impacts on sustainability from this site. The site scores positively in terms of opportunities for sustainable travel and active and healthy lifestyles as it is close to local services and facilities. There are no biodiversity or environmental designations near to or on the site. The proximity to the railway line could cause noise and air pollution, but careful design and use of only part of the site could mitigate this impact. The site is at risk from surface and groundwater flooding, although with appropriate mitigation the negative impact should be reduced. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

~~The SA/SEA does not highlight any significant sustainability issues. The site would have a number of positive impacts in relation to the opportunities for sustainable travel, health and active lifestyles as it is close to local services and facilities. There are no biodiversity or environmental designations near to or on the site. The proximity to the railway line could cause noise and air quality issues, but careful design and use of only part of the site would mitigate this impact. The site is at risk from surface water and groundwater flooding which could have an impact on all elements of sustainability unless appropriate mitigation, including SUDs are provided.~~

### Proposed development (from SHLAA submission):

[The site is being promoted for approximately 34 dwellings \(1.2ha at 29dph\), for a mix of dwellings sizes and types, including affordable housing, with potential for bungalows and self build plots.](#)

## Site Selection – Site Commentary

The original SHLAA submission of the site also included potential for Gypsies and Travellers on the site; however the site was assessed as suitable for housing and therefore, is no longer being promoted for this use.

The site has been proposed for low density (10 – 20) dwellings, in a mix of types and sizes, including affordable housing. The site has also been suggested for a care home or Gypsy and Traveller site

# Site Selection – Site Assessment

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site is located close to the local facilities in Theale		The site's location gives opportunities for walking and cycling and provides easy access to local services and facilities. Therefore, in terms of environmental and social sustainability development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	+	The site is close to local playing fields, but is not as close as site THE009		
	Will it protect and enhance green infrastructure across the district?	?	A right of way runs along the northern boundary of the site. Development would need to take this into account		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	Site close to local facilities and services (employment, shops, school), but will not provide new facilities		Theale's location within West Berkshire means that development here would have easy access to the strategic road network for a range of employment opportunities. Therefore, development of the site could have a positive impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	There are a number of public transport options in Theale – railway station and several bus services		The site is close to local services and facilities which encourages walking and cycling. There is therefore a positive impact on environmental and social sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity	<b>0</b>	The site is designated as a Biodiversity Opportunity Area (BOA).	BOAs provide opportunities for improvements to biodiversity.	Development could have an impact on the character

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	and geodiversity assets across West Berkshire?		There is ancient woodland adjacent to the site.	Buffers are required around ancient woodland.	of the landscape and therefore a negative impact on environmental sustainability. The site is not actually within the AONB, meaning that with appropriate mitigation the impact should be neutralised.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	? -	<p>The location of the site would mean that there would be some impact upon the landscape, as the site is also adjacent to the AONB. <u>The site is adjacent to the AONB. A Landscape Assessment has concluded that the site as a whole should not be pursued</u></p>	<p><del>Sensitive design and appropriate boundary treatment / buffers would be required.</del></p> <p><u>The Landscape Assessment identified that part of the site would be suitable for development, with appropriate mitigation measures:</u></p> <ul style="list-style-type: none"> <li>• <u>Limit developable area</u></li> <li>• <u>Retain landscpcae buffer of min. 15m to Blosson Lane and footpath</u></li> <li>• <u>Additional tree planting as show in assessment</u></li> <li>• <u>Development should face onto open space off Woodfield Close, but retain boundary platning</u></li> <li>• <u>Break up built form with substantial areas of tree planting</u></li> <li>• <u>Access from existing access</u></li> <li>• <u>Reduced density to reflect semi-rural edge of Theale</u></li> </ul>	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	-	The site is close to the existing settlement, separated from existing development by an area of public open space. Development would change the character of the built environment.	Careful design would help to mitigation the impact and fit any development into the existing residential development.	Development could have a negative impact on sustainability by changing the character of the built environment. However, with appropriate mitigation this impact should be minimised.
	Will it conserve and	<b>0</b>	The surrounding area has many	Further investigation of	

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	enhance the significance of the District's heritage assets?		archaeological features, however the impact that this would have is not fully known	potential archaeological features is needed	
	Will it promote, conserve and enhance the District's cultural assets?	<b>0</b>	There are no cultural assets in Theale		
	Will it provide for increased access to and enjoyment of the historic environment?	<b>0</b>	The site is unlikely to have an impact on access to the historic environment		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	<b>?</b>	Given the location of the site close to the M4, air quality could impact upon development of this location	Appropriate mitigation and development of a smaller site area away from the M4	Poor air quality and noise pollution would have a negative impact on sustainability, appropriate mitigation, including development of a smaller site away from the M4 would help to reduce this impact to an acceptable level.  Contamination of the site would have a negative impact without appropriate mitigation, although cleaning of the site would have a positive impact on sustainability.
	Will the site be at risk from, or impact on, noise levels?	<b>-?</b>	The site is close to the M4, and noise will <u>could</u> impact upon development	Appropriate noise mitigation and development of a smaller area of the site away from the M4	
	Will there be an impact on soil quality?	<b>+</b>	The site was previously a sewage treatment works and the land could therefore be contaminated. Development could result in decontamination of the land and an improvement in soil quality	Decontamination	
	Will there be an impact on water quality?	<b>0</b>	Unlikely to have any impact on water quality		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>?</b>	The site was previously a sewage treatment works, however the site has been cleared of any structures <u>some</u> and hardstanding <u>remains on the site.</u>		There is unlikely to be an impact on sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	<b>?</b>	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	<b>-</b>	The eastern part of the site is within Flood Zone 2. The site is also at risk from ground and surface water	An FRA would be required with appropriate flood mitigation including SUDs to be provided.	Flooding can have a negative impact on all elements of sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			flooding	The developable area could be reduced to only develop the area outside flood zone 2.	An FRA will identify the areas most at risk and propose appropriate mitigation and SUDs to reduce this impact.
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a> <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significant sustainability issues on the site. The site is close to local services and facilities within Theale, with good opportunities for walking, cycling and public transport all giving the site a positive score in terms of sustainability. [The Landscape Assessments on the site has indicated that only part of the site would be suitable for development, with significant buffers required to mitigate the impact on the AONB.](#) The site is a brownfield site, on previously contaminated land, meaning that development of the site could have a positive impact on soil quality and improve the character of the area. The site is close to the M4 which, without appropriate mitigation could lead to significant noise and air quality issues and a knock-on effect on sustainability. The site is also at risk from flooding, from a number of sources, which without appropriate mitigation would lead to a negative impact on sustainability. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### Summary of effects:

**Effect:** Predominantly neutral

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Likelihood:** High  
**Scale:** Eastern Area  
**Duration:** Permanent  
**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	Eastern Area	<b>Settlement:</b>	Theale	<b>Parish:</b>	Theale
<b>Site ID:</b>	THE001	<b>Site Address:</b>	Former Sewage Works, Theale	<b>Development Potential:</b>	138 dwellings (3.45ha at 40dph) <a href="#">57 dwellings (1.9ha at 30dph)</a>

### Recommendation:

~~The site is recommended for allocation for approximately 90 dwellings~~  
[At Preferred Options the site was recommended for development.](#)  
[The site is no longer recommended for allocation.](#)

### Justification:

~~The site is close to local services and facilities within Theale. The site area has been reduced to take into account the area of the site within flood zone 2.~~

~~Access to the site is an issue and would need to be resolved.~~

[There are significant concerns regarding access to the site, as additional land would be required along Blossom Lane to provide adequate access.](#)

[The site is poorly related to the existing settlement and the landscape assessment states that buffers would be required to the edge closest to the settlement, further distancing the site from the existing settlement.](#)

### Discussion:

#### Site Description:

The site is located to the east of Theale, close to the settlement boundary, but not adjacent to it. It is close to the centre of Theale, where there are a number of local services and facilities and there is good access to the open countryside.

The site was previously a sewage treatment works, however, it is now vacant.

Overhead power lines cross the site, with a pylon present on the site.

#### Landscape:

The site is in an area of medium landscape sensitivity adjacent to the AONB. [The Landscape Character Assessment \(2015\) states that only part of the site would be suitable for development, and at lower density in keeping with the semi-rural edge of Theale. A number of mitigation measures as set out in the assessment, that would need to be adhered to.](#)

#### Flood Risk:

The site is at risk of flooding from a number of sources, [fluvial](#) (40% of the site is in Flood Zone 2) ~~60% is in Flood Zone 1~~, groundwater and surface water}. An FRA would be required and appropriate mitigation, including SUDs provided.

#### Highways /Transport:

Access to the site is seen as an issue. Blossom Lane would need to be widened, which would involve acquisition of additional land from neighbouring dwellings. ~~An alternative route could be provided via THE002 to High Street.~~

The traffic generated from the site ~~w~~ould have a significant impact on the [local](#) highway network. A Transport Assessment would be required (taking into account the consented development at Lakeside South (THE011)).

Theale is well served by public transport, with bus routes and a railway station. However the nearest bus stop is approximately 700m from the site.

#### Ecology:

The site is within a BAP habitat and a BOA.

#### Archaeology:

No known archaeology on the site, however the surrounding area has many archaeological features and

## Site Selection – Site Commentary

finds. An assessment of the site would be required.

### Education:

Theale primary school is at capacity on its current site. [A new site is being actively sort for a new primary school to accommodate the existing pupils numbers and future pupil growth in the area.](#) Theale Green Secondary school has capacity.

### Environmental Health:

The site is adjacent to the M4, there is potential for noise and air pollution on the site. Appropriate mitigation and design techniques would be required.

As a former sewage treatment works there is potential for contamination on the site. The agent states that contamination on the site would not impede development.

### Minerals and Waste:

The site is underlain by gravel deposits. There is a history of extraction in the area. Consideration of policy 1 and 2 of the RMLP would be required.

No known waste issues

### Land use planning consultation zone:

The site is not within an AWE consultation zone.

### Environment Agency:

The EA strongly recommend that this site is not allocated for development. There is an ordinary watercourse within the site and a major aquifer. There is a high risk of groundwater contamination. Land adjacent to the site has previously been investigated for potential contamination.

Any development proposed at this site ~~would need to~~ [should](#) incorporate at least an 8 metre buffer from the top of Sulham Brook river bank and conserve and enhance biodiversity.

### Thames Water:

Concern regarding Water Supply capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of any development.

A water supply strategy would be required.

Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A drainage strategy would be required.

### Parish Council:

The Parish Council is of the view that this site, along with THE002 and THE005 should be considered as one site. They have concerns regarding flooding, noise impact from the M4, overhead power lines, access and the potential for contamination.

[No comments made on this site at preferred options.](#)

### [Preferred Options consultation key issues:](#)

## Site Selection – Site Commentary

### **SA/SEA:**

The SA/SEA indicates a predominantly neutral sustainability effect. There are no significant sustainability issues on the site. The site is close to local services and facilities within Theale, with good opportunities for walking, cycling and public transport all giving the site a positive score in terms of sustainability. [The Landscape Assessments on the site has indicated that only part of the site would be suitable for development, with significant buffers required to mitigate the impact on the AONB.](#) The site is a brownfield site, on previously contaminated land, meaning that development of the site could have a positive impact on soil quality and improve the character of the area. The site is close to the M4 which, without appropriate mitigation could lead to significant noise and air quality issues and negative effect on sustainability. The site is also at risk from flooding, from a number of sources, which without appropriate mitigation would lead to a negative impact on sustainability. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

No specific proposals have been submitted for the site.

	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a> <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significant sustainability issues on the site. The site is close to local services and facilities within Theale, with good opportunities for walking, cycling and public transport all giving the site a positive score in terms of sustainability. The site is close to the M4 which, without appropriate mitigation could lead to significant noise and air quality issues and a negative effect on sustainability. The site is also at risk from flooding, from a number of sources, which without appropriate mitigation would lead to a negative impact on sustainability. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Eastern Area

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	Eastern Area	<b>Settlement:</b>	Theale	<b>Parish:</b>	Theale
<b>Site ID:</b>	THE002	<b>Site Address:</b>	Whitehart Meadow, Theale	<b>Development Potential:</b>	224 dwellings (5.6ha at 40dph)

### Recommendation:

The site is not recommended for allocation

### Justification:

The site is adjacent to the M4 meaning noise and air quality issues on the site. A pylon is located in the centre of the site.

The Environment Agency strongly recommends that this site is not allocated as 90% of the site is in flood zone 2. [A sequential test would be required to allocate the site. Other suitable sites with a lower risk of flooding are available in Theale and across the district, so the Council would be unable to carry out the sequential test.](#)

### Discussion:

#### Site Description:

The site is located to the east of Theale. It is close to the centre of Theale where there are a range of local services and facilities. There is also good access to the countryside.

Overhead cables and an electricity pylon are present on the site.

#### Landscape:

The northern corner of the site is within the AONB. The site is in an area of medium / low landscape sensitivity. [If the site was recommended for allocation a Landscape Assessment would be required to determine the appropriate developable area of the site.](#)

#### Flood Risk:

The site is within flood zone 2 and at risk from groundwater and surface water flooding. An FRA would be required with appropriate mitigation, including SUDs provided.

#### Highways /Transport:

No comments ~~have been received~~ [made](#) on this site.

There are a number of public transport options within Theale, with regular bus services and a railway station.

#### Ecology:

The site is within a BAP habitat and wetland and within a BOA. ~~An extended phase 1 habitat survey would be required.~~ [An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected](#)

#### Archaeology:

Part of the site has been subject to previous work with some positive results. Further work would be required.

#### Education:

~~Theale primary school is at capacity.~~ [A site is actively being sought for a new primary school site in Theale, a number of locations are being discussed. The new school will be built to accommodate the existing pupil numbers and future pupil growth in the area and is necessary to address current capacity issues.](#) There is capacity at Theale Green secondary school.

#### Environmental Health:

The site is adjacent to the M4 which could lead to noise and air quality issues. Appropriate mitigation, including design techniques, would be required.

#### Minerals and Waste:

The site is underlain by gravel deposits. There is a history of extraction in the area. Consideration of policy 1 and 2 of the RMLP would be required.

## Site Selection – Site Commentary

No known waste issues.

### **Land use planning consultation zone:**

The site is not within an AWE consultation zone

### **Environment Agency:**

The EA strongly recommend that this site is not allocated for development. There is an ordinary watercourse within the site, a major aquifer and a high risk of groundwater contamination. [If the site was to be allocated a sequential test would need to be carried out.](#)

The site has previously been investigated for potential contamination.

Any development proposed at this site should incorporate at least an 8 metre buffer from the top of Sulham Brook river bank and conserve and enhance biodiversity.

### **Thames Water:**

Concern regarding Water Supply capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of any development.

A water supply strategy would be required.

Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A drainage strategy would be required.

### **Parish Council:**

The Parish Council view that this site, alongside THE001 and THE005, are seen as one site. They have concerns with regard to flooding, noise impact from the M4, overhead power lines and access.

[No comments made at preferred options stage.](#)

### **Preferred Options consultation key issues:**

- [Flood risk](#)
- [Suitability for housing development questioned](#)
- [Presence of power lines](#)
- [Loss of settlement gap](#)
- [Loss of village character](#)

[Detailed comments received from the site promoter objecting to the rejection of the site as a preferred option on the ground of flood risk.](#)

[For the consultation responses and Council's response, please see the Statement of Consultation.](#)

### **SA/SEA:**

The SA/SEA indicates a predominantly neutral sustainability effect. There are no significant sustainability issues on the site. The site is close to local services and facilities within Theale, with good opportunities for walking, cycling and public transport all giving the site a positive score in terms of sustainability. The site is close to the M4 which, without appropriate mitigation could lead to significant noise and air quality issues and a negative effect on sustainability. The site is also at risk from flooding, from a number of sources, which without appropriate mitigation would lead to a negative impact on sustainability. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

~~No specific proposals have been submitted for this site.~~

[At preferred options the site promoter submitted information stating that the western half of the site could be developed for approx. 125 dwellings, leaving a suitable buffer strip, of public open space, adjacent to the pylons/overhead cables and M4.](#)

## Site Selection – Site Assessment

<b>Spatial Area</b>	Eastern Area	<b>Settlement:</b>	Theale	<b>Parish:</b>	Theale
---------------------	--------------	--------------------	--------	----------------	--------

<b>Site ID:</b>	THE003	<b>Site Address:</b>	North Lakeside, The Green, Theale
-----------------	--------	----------------------	-----------------------------------

<b>Development Potential:</b>	42 <a href="#">15</a> dwellings (1.4ha at 30dph)	<b>SHLAA Assessment:</b>	Potentially Developable
-------------------------------	--	--------------------------	-------------------------

### Summary of Site Assessment

Key Issues:	<ul style="list-style-type: none"> <li>- Greenfield</li> <li>- Surface water flood risk (site is adjacent to a lake)</li> <li>- TPOs</li> </ul>
-------------	---

### Site Assessment

<b>Parish Council consultation response:</b>	The main concern of this site is the access via St Ives Close.
--	--

A) Automatic exclusion			
Criteria		Yes/No*	Comments
Less than 5 dwellings		N	
Planning Permission		N	
Within flood zone 3		N	
Within significant national or international habitat / environmental / historical protection	SSSI	N

**Key: Effects of option on SA objectives**

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	The site is located close to the local facilities in Theale		The site's location gives opportunities for walking and cycling and provides easy access to local services and facilities. Therefore, in terms of environmental and social sustainability development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	<b>+</b>	The site is close to local playing fields, but is not as close as site THE009		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	Close to local amenity space and children's play area. Development of the would be unlikely to have an impact on GI	<a href="#">Development in line with the recommendations of the landscape assessment could improve GI.</a>	
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>+</b>	Site close to local facilities and services (employment, shops, school), but will not provide new facilities		Theale's location within West Berkshire means that development here would have easy access to the strategic road network for a range of employment opportunities. Therefore, development of the site could have a positive impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>+</b>	There are a number of public transport options in Theale – railway station and several bus services		The site is close to local services and facilities which encourages walking and cycling. There is therefore a positive impact on environmental and social sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	<b>?</b>	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity	<b>0</b>	There are TPOs on the site.	Appropriate buffers would be required.	<del>It is unlikely that the site would have an impact on</del>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	and geodiversity assets across West Berkshire?				<del>any aspect of sustainability subject to the protection of the trees with TPOs</del>
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	0-	The site has low landscape sensitivity. The land adjacent to the site has planning permission for residential development. The site is within the setting of the AONB. The Landscape Character Assessment (2015) indicates only part of the site would be suitable for development.	<p><u>Appropriate mitigation would be required as set out in the Landscape Assessment including:</u></p> <ul style="list-style-type: none"> <li>• <u>Limiting the developable area</u></li> <li>• <u>Retain a landscape buffer of at least 10m to the lake</u></li> <li>• <u>Provide new tree planting to the western and eastern boundaries</u></li> <li>• <u>Create accessible open space on the remainder of the site</u></li> <li>• <u>Retain tree and shrubs</u></li> <li>• <u>Access from anglers car park</u></li> <li>• <u>Density to reflect semi-rural edge of Theale</u></li> </ul>	Development could have the potential to impact negatively on environmental sustainability due to the location of the site in relation to the AONB. Adequate mitigation measures, and retention of the trees protected by TPOs would minimise this impact.
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	+	The site is well related to the existing settlement.		It is unlikely that the site would have an impact on any aspect of sustainability
	Will it conserve and enhance the significance of the District's heritage assets?	0	There are no heritage assets		
	Will it promote, conserve and enhance the District's cultural assets?	0	There are no cultural assets in Theale		
	Will it provide for increased access to and enjoyment of the historic environment?	0	The site is unlikely to have an impact on access to the historic environment		
7. To protect and improve	Will the site be at risk from,	0	The site is unlikely to have an impact		It is unlikely that the site

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
air, water and soil quality, and minimise noise levels throughout West Berkshire	or impact on, air quality?		on air quality		would have an impact on any aspect of sustainability
	Will the site be at risk from, or impact on, noise levels?	<b>0</b>	The site is unlikely to have an impact on noise levels		
	Will there be an impact on soil quality?	<b>0</b>	The site is unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	<b>0</b>	The site is unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	The site is greenfield		The site could have a negative impact on environmental sustainability as it is a Greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	-	A small area of the site <u>is</u> adjacent to the lake <u>and</u> is at risk from surface water flooding.	An FRA and appropriate mitigation, including SUDs would be required. <a href="#">10m buffer required to the lakeside as a result of the landscape assessment work carried out.</a>	Flooding can have a negative impact on all elements of sustainability. Mitigation measures, including SUDs will be required to reduce this risk and make sure that development on this site does not have an impact on flooding elsewhere.
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<b>0</b>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<b>0</b>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significant sustainability impacts resulting from this site. The site is close to local services and facilities within Theale, with good opportunities for walking, cycling and public transport all having a positive impact on sustainability. [The site is within the setting of the AONB, therefore, there is potential for a negative impact on environmental sustainability and the AONB. Mitigation measures, as set out in the Landscape Assessment, will mitigate this impact.](#) There is a small risk of surface water flooding on the site, which could have a negative impact on sustainability without appropriate mitigation measures. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Eastern Area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	Eastern Area	<b>Settlement:</b>	Theale	<b>Parish:</b>	Theale
----------------------	--------------	--------------------	--------	----------------	--------

<b>Site ID:</b>	THE003	<b>Site Address:</b>	North Lakeside, The Green, Theale	<b>Development Potential:</b>	42 <a href="#">15</a> dwellings (1.4ha at 30dph)
-----------------	--------	----------------------	-----------------------------------	-------------------------------	--

**Recommendation:**

The site is recommended for allocation

**Justification:**

The site is well related to the existing settlement, close to local services and facilities within Theale. [The developable area of the site has been reduced in size after a Landscape Assessment was carried out of the site.](#)

**Discussion:**

**Site Description:**

The site is located to the south west of Theale, close to the A4 and the centre of Theale. The site has good access to a number of services and facilities within the village and access to the open countryside.

**Landscape:**

The site is in an area of low landscape sensitivity. [Following the preferred options a Landscape Assessment was carried out for the site. This states that only part of the site would be suitable for development, subject to a number of mitigation measures as set out in the Landscape Character Assessment \(2015\).](#)

**Flood Risk:**

A small area of the south of the site is within a surface water flood risk area. The site is also at risk from groundwater flooding. An FRA and appropriate mitigation would be required, including SUDs.

**Highways /Transport:**

The traffic impact on the highway network is considered to be marginal. Consideration would need to be given to traffic accessing The Green in relation to school traffic.

Access can be obtained through St Ives Close, which would need to be brought up to adoptable standards. Additional or alternative access could be obtained from the consented development of Lakeside South (THE011).

Theale is well served by public transport with a regular bus service and a railway station.

**Ecology:**

No known ecological issues.

**Archaeology:**

No known archaeological issues

**Education:**

Theale primary school is at capacity. [A new site is being actively sort for a new primary school to accommodate the existing pupil numbers and future pupil growth in the area.](#) There is capacity at Theale Green secondary school.

**Environmental Health:**

The site is close to the A4, which could have an impact on air quality and noise. Appropriate mitigation measures would reduce this issue.

The site has previously been extracted, with a degree of infilling, which may raise issues of contamination and remediation requirements.

**Minerals and Waste:**

The site is underlain by gravel deposits with a previous history of extraction. Consideration of policy 1 & 2 of the RMLP would be required.

## Site Selection – Site Commentary

### Land use planning consultation zone:

Site is not within an AWE consultation zone

### Environment Agency:

The site is within FZ1 and SPZ3. There is an ordinary watercourse within the site, a major aquifer and a high risk of groundwater contamination.

[Although the EA have not raised any objections to development within SPZs, care would need to be taken to ensure no opportunities for contamination of groundwater occurred.](#)

### Thames Water:

~~No comment on water supply.~~ Concern regarding Water Supply capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of any development.

A water supply strategy would be required.

Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A drainage strategy would be required.

### Parish Council:

The Parish Council are concerned about access to the site via St Ives Close.

### [Preferred Options consultation key issues:](#)

### SA/SEA:

The SA/SEA indicates a predominantly neutral sustainability effect. There are no significant sustainability impacts resulting from this site. The site is close to local services and facilities within Theale, with good opportunities for walking, cycling and public transport all having a positive impact on sustainability. [The Landscape Assessments on the site has indicated that only part of the site would be suitable for development, with significant buffers required to mitigate the impact on the AONB.](#) There is a small risk of surface water flooding on the site, which could have a negative impact on sustainability without appropriate mitigation measures.

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### Proposed development (from SHLAA submission):

The site is proposed for 49 dwellings in a mix of types and sizes. Access is anticipated to come from The Green, to the west of the site and St Ives Close.

## Site Selection – Site Assessment

<b>Spatial Area</b>	Eastern Area	<b>Settlement:</b>	Theale	<b>Parish:</b>	Theale
---------------------	--------------	--------------------	--------	----------------	--------

<b>Site ID:</b>	THE004	<b>Site Address:</b>	Land to the south of the High Street, Theale
-----------------	--------	----------------------	--

<b>Development Potential:</b>	29 dwellings (0.48ha at 60dph)	<b>SHLAA Assessment:</b>	Potentially Developable
-------------------------------	--------------------------------	--------------------------	-------------------------

### Summary of Site Assessment

Key Issues:

- Within the settlement boundary
- The EA strongly recommend this site is not allocated for development. This is because 50% of the site is in FZ2

### Site Assessment

<b>Parish Council consultation response:</b>	The location of Theale Community Hall needs to be considered in any development on this site. Detrimental impact on the rear view of existing housing, access and flooding were highlighted as issues.

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	The site is located close to the local facilities in Theale		The site's location gives opportunities for walking and cycling and provides easy access to local services and facilities. Therefore, in terms of environmental and social sustainability development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	<b>+</b>	The site is close to local playing fields, but is not as close as site THE009		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	Close to local amenity space and children's play area. Development of the site would be unlikely to have an impact on GI		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>+</b>	Site close to local facilities and services (employment, shops, school), but will not provide new facilities		Theale's location within West Berkshire means that development here would have easy access to the strategic road network for a range of employment opportunities. Therefore, development of the site could have a positive impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>+</b>	There are a number of public transport options in Theale – railway station and several bus services		The site is close to local services and facilities which encourages walking and cycling. There is therefore a positive impact on environmental and social sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	<b>?</b>	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets	<b>0</b>			Development could have a negative impact on environmental sustainability

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	across West Berkshire?				
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	-	The undeveloped site prevents the coalescence of Theale and Calcot	Development of a small part of the site could help to reduce the impact. <a href="#">A Landscape Assessment would be required to determine the area of the site suitable for development if the site were to be allocated.</a>	by reducing the gap between Theale and Calcot. Development of a small area of the site would help to mitigate this impact.
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	-	Development of the site would expand Theale towards the M4/A4 junction.	Development of a small part of the site close to Theale itself would reduce the impact	Development of the whole site could have a negative impact on sustainability. Development of a small part of the site adjacent to the settlement boundary would help neutralise this impact.
	Will it conserve and enhance the significance of the District's heritage assets?	0	Archaeological features on site and in immediate area. Further investigation required.		
	Will it promote, conserve and enhance the District's cultural assets?	0	There are no cultural assets in Theale		
	Will it provide for increased access to and enjoyment of the historic environment?	0	The site is unlikely to have an impact on access to the historic environment		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	-	The site is bounded by the A4 and M4	Air quality mitigation would be required, including design techniques. Development of a small area adjacent to Theale would reduce the impact	Development near to a motorway junction could have a negative impact on environmental and sustainability. Mitigation measures would reduce this impact, as would development of a small area of the site adjacent to Theale.
	Will the site be at risk from, or impact on, noise levels?	-	The site is bounded by the A4 and M4	Noise mitigation would be required, including design techniques. Development of a small area adjacent to Theale would reduce the impact.	
	Will there be an impact on soil quality?	0	The site is unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	The site is unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land	-	The site is greenfield		The site could have a negative impact on

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	and buildings?				environmental sustainability as it is a Greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	-	<del>The whole of the site is within Flood Zone 2. 90% of the site is within FZ2 and 10% of the site is in FZ1.</del> The site is also at risk from ground and surface water flooding. There was evidence of standing water on the site in Winter/Spring 2014.	An FRA would be required with appropriate mitigation measures, including SUDs to be provided. Sites in Flood Zone 2 will only be considered for development if there are no suitable alternatives. <a href="#">A sequential test would need to be carried out if the site were to be allocated.</a>	Flooding can have a negative impact on all elements of sustainability. Mitigation measures including SUDs, reduce this impact.
11. <a href="#">To ensure a strong, diverse and sustainable economic base</a>	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">effect on economic sustainability.</a>		

### Summary

There are no significant sustainability issues highlighted. The site is close to local services and facilities within Theale, with good opportunities for walking, cycling and public transport. All having a positive impact on sustainability. There are a number of potential negative impacts on sustainability, unless mitigation measures are introduced. The site is close to the M4/A4 motorway junction, which would lead to noise and air quality issues. Development of the site would also reduce the gap between Calcot and Theale which would have an impact on environmental sustainability. Development of a small area of the site adjacent to Theale itself would help to mitigate these impacts, along with other mitigation measures that could be considered. Flood risk is an issue on the site and could have a negative impact on sustainability without appropriate mitigation measures. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Eastern Area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	Eastern Area	<b>Settlement:</b>	Theale	<b>Parish:</b>	Theale
----------------------	--------------	--------------------	--------	----------------	--------

<b>Site ID:</b>	THE005	<b>Site Address:</b>	Land at Junction 12 (M4), Theale	<b>Development Potential:</b>	154 dwellings (3.86ha at 40dph)
-----------------	--------	----------------------	-------------------------------------	-------------------------------	------------------------------------

### Recommendation:

[At preferred options a small part of the site was recommended as an option for allocation. The site is no longer recommended for allocation.](#) ~~The site is recommended for allocation for a small area adjacent to Theale for 40 – 50 dwellings.~~

### Justification:

The site is well related to Theale and close to local services and facilities. Development of a small part of the site reduces the impact on some of the negative factors impacting on the site and would help to improve the pedestrian / cycle route along High Street between Theale and Calcot.

[The Environment Agency have raised an objection to development of this site. The majority of the site is within flood zone 2, therefore, in order to allocate the site the Council would be required to carry out a sequential test. Other sites, with a lower risk of flooding, are available in Theale and elsewhere in the District, therefore, the sequential test cannot be carried out.](#)

[The consideration of a smaller site would not make a significant difference to the SA/SEA for the site, and does not overcome the flood risk objection from the Environment Agency.](#)

### Discussion:

#### Site Description:

The site is located to the south east of Theale adjacent to the M4/A4 junction. The site is close to the centre of Theale where there is a good range of local services and facilities, and good access to the open countryside.

Over head cables pass through the site and a pylon is present on the eastern part of the site.

#### Landscape:

The site is in an area of low landscape sensitivity.

#### Flood Risk:

90% of the site is within FZ2 and 10% of the site is in FZ1. The site is also at risk from surface and groundwater flooding. Part of the site was flooded in Jan/Feb 2014. An FRA and appropriate mitigation would be required, including SUDs.

[The Environment Agency has requested that any site to be allocated within a flood zone is accompanied by a sequential test. Other sites are available in Theale and across the District, therefore, the test cannot be carried out.](#)

#### Highways /Transport:

Development of 40 – 50 dwellings is expected to have a limited impact on the highway network.

[Adequate](#) Access can be obtained onto High Street. Development fronting High Street would improve High Street as a pedestrian and cyclist route from Theale to Calcot.

There are a number of public transport options in Theale including regular bus services and a railway station.

#### Ecology:

No known ecology issues.

#### Archaeology:

Archaeological features recorded on site and in the immediate area suggest high potential. Further assessment and evaluation would be required.

#### Education:

Theale primary school is at capacity. [A new site is being actively sort for a new primary school to](#)

## Site Selection – Site Commentary

[accommodate the existing pupils numbers and future pupil growth in the area.](#) There is capacity at Theale Green secondary school.

### Environmental Health:

The site is adjacent to the M4 and A4, therefore, noise and air pollution could be an issue. Mitigation measures would need to be provided.

No known contamination issues.

### Minerals and Waste:

The site is underlain by gravel deposits. There is a history of extraction in the area. Policies 1 & 2 of the RMLP would need to be considered.

### Land use planning consultation zone:

The site is in the outer AWE consultation zone. Consultation with ONR would not be required for the site.

### Environment Agency:

The EA strongly recommend that this site is not allocated for development [due to flood risk on the site.](#) There is an ordinary watercourse within the site, a major aquifer and a high risk of groundwater contamination. Land adjacent to the site has previously been investigated for potential contamination.

### Thames Water:

Concern regarding Water Supply capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of any development.

A water supply strategy would be required.

No wastewater infrastructure issues envisaged.

### Parish Council:

The Parish council is of the view that this site, alongside THE001 and THE002 should be considered as one. They have concern with regard to flooding, noise impact from the M4, overhead power lines and access.

### [Preferred Options consultation key issues:](#)

- [Consultation Process](#)
- [Medical Services](#)

- [Landscape/Environment](#)
- [Pollution](#)
- [Alternative locations](#)
- [Leisure/Recreation](#)

[Comments received from the site promoter objecting to the reduction of developable land suggested by the Council as a preferred option on the grounds of flood risk.](#)

*[For the consultation responses and Council's response, please see the Statement of Consultation.](#)*

### SA/SEA:

The SA/SEA indicates a predominantly neutral sustainability impact. There are no significant sustainability issues highlighted. The site is close to local services and facilities within Theale, with good opportunities for walking, cycling and public transport. All having a positive impact on sustainability. There are a number of potential negative impacts on sustainability, unless mitigation measures are introduced. The site is close to the M4/A4 motorway junction, which would lead to noise and air quality issues. Development of the site would also reduce the gap between Calcot and Theale which would have an impact on environmental sustainability. Development of a small area of the site adjacent to Theale itself would help to mitigate these impacts, along with other mitigation measures that could be considered. Flood risk is an issue on the site and could have a negative impact on sustainability without appropriate mitigation measures. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the](#)

## Site Selection – Site Commentary

[site, it is not seen to promote key business sectors and business development in the longer term.](#)

[The outcomes of the SA/SEA would not be significantly different if a smaller site was considered.](#)

**Proposed development (from SHLAA submission):**

The site is being promoted for 196 dwellings as part of a mixed use scheme including a hotel and some employment floor space. Noise from the M4 is proposed to be mitigated through design, orientation and layout of buildings and materials. Potential impact on flood risk is proposed to be mitigated using various measures.

### Summary of Site Assessment

Key Issues:	<ul style="list-style-type: none"> <li>- Greenfield</li> <li>- Flood risk (ground and surface water). Evidence of water logging Jan/Feb 2014</li> <li>- Presence of oil pipeline</li> <li>- SPZ2 and 3</li> </ul>
-------------	---

### Site Assessment

<b>Parish Council consultation response:</b>	<p>Suggested that this site would make an ideal site for a new build primary school with associated playing fields and car park. Car parking area could also be used for staff and pupils at the sixth form college adjacent to Deadmans Lane and Theale Green School and this would ease the parking in the village, especially The Green and Meadow Way. There are flooding issues on a section of the site (waterlogged Jan/Feb 2014).</p> <p>Concern that this site should not be developed in addition to THE011 as this would be too much development in this area.</p>
--	---

A) Automatic exclusion			
Criteria		Yes/No*	Comments
Less than 5 dwellings		N

	and geodiversity assets across West Berkshire? Will it conserve and enhance the local distinctiveness of the character of the landscape?	2-	The site has medium landscape sensitivity, and is adjacent to the AONB. <a href="#">The site is within the setting of the AONB. The Landscape Character Assessment (2015) indicates only part of the site would be suitable for development.</a>	<p>Appropriate landscaping to reduce the impact on the AONB would be required. <a href="#">Appropriate mitigation would be required as set out in the Landscape Assessment, including:</a></p> <ul style="list-style-type: none"> <li>• <a href="#">Reduced developable area, to retain an open landscape buffer to Englefield Park</a></li> <li>• <a href="#">Creation of open space and GI in the western part of the site</a></li> <li>• <a href="#">Woodland copses and open grassland to be provided in the open space</a></li> <li>• <a href="#">Retain and enhance tree planting along the road network</a></li> <li>• <a href="#">Preferred access from South Lakeside access point.</a></li> </ul>	development should not have any impact on environmental sustainability as a result of the character of the landscape. To ensure this landscaping mitigation would be required <a href="#">Development could have the potential to impact negatively on environmental sustainability due to the location of the site in relation to the AONB. Adequate mitigation measures would minimise this impact.</a>
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	0	The site is located on the edge of Theale adjacent to a small amount of residential development		Development is unlikely to have an impact on any element of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	0	There are no heritage assets		
	Will it promote, conserve and enhance the District's cultural assets?	0	There are no cultural assets in Theale		
	Will it provide for increased	0	The site is unlikely to have an impact		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	access to and enjoyment of the historic environment?		on access to the historic environment		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	?	The site lies at the A4/A340 roundabout. The A4 runs along the south eastern boundary of the site.	Noise and air quality mitigation may be required	Development could have a negative impact on sustainability due to the potential for poor air quality and noise. Appropriate mitigation would reduce this impact.
	Will the site be at risk from, or impact on, noise levels?	?	The site lies at the A4/A340 roundabout. The A4 runs along the south eastern boundary of the site.	Noise and air quality mitigation may be required.	
	Will there be an impact on soil quality?	0	The site is unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	The site is unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	The site is greenfield		The site could have a negative impact on environmental sustainability as it is a Greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	-	Groundwater flood risk. Evidence of water logging January/February 2014.	An FRA and appropriate mitigation, including SUDs would be required.	Flooding can have a negative impact on all elements of sustainability. Mitigation measures including SUDs, reduce this impact.
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	0	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	0	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for</a>		<a href="#">economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significant issues highlighted. The site is close to local services and facilities within Theale, with good opportunities for walking, cycling and public transport, all of which have a positive impact on sustainability. The site is adjacent to the AONB, meaning there could be a negative impact on the character of the landscape and environmental sustainability. Mitigation measures should reduce this impact. The site is also at risk from flooding, with some evidence of flooding having taken place. Flooding can impact negatively on sustainability, but mitigation measures work to reduce this impact. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Eastern Area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	Eastern Area	<b>Settlement:</b>	Theale	<b>Parish:</b>	Theale
----------------------	--------------	--------------------	--------	----------------	--------

<b>Site ID:</b>	THE009	<b>Site Address:</b>	Field between A340 and The Green	<b>Development Potential:</b>	125 <del>70</del> dwellings (4.17ha at 30dph)
-----------------	--------	----------------------	----------------------------------	-------------------------------	---

### Recommendation:

The site is recommended for allocation

### Justification:

The site is close to local services and facilities in Theale. There are no significant issues on the site that could not be overcome.

[The Landscape Character Assessment \(2015\) states that only the eastern part of the site is suitable for development to ensure no negative impacts on the character or setting of the AONB. As a result the development potential on the site has been reduced.](#)

### Discussion:

#### Site Description:

The site is located to the west of Theale. Adjacent to the A340/A4 roundabout. The site is close to local services and facilities within Theale village and has good access to the countryside.

#### Landscape:

The site is within an area of medium landscape sensitivity adjacent to the AONB. [Following the preferred options a Landscape Character Assessment \(2015\) was carried out for the site. This states that only the eastern part of the site would be suitable for development, subject to a number of mitigation measures as set out in the Landscape Assessment.](#)

#### Flood Risk:

The site is within FZ1 and at risk from groundwater and surface water flooding. Standing water was reported on the site Jan/Feb 2014. An FRA and appropriate mitigation, including SUDs, would be required

#### Highways /Transport:

The traffic generated by the development would be likely to have a significant impact on the highway network. A Transport Assessment would be needed to assess the impact taking into account the consented Lakeside south development to the south of the site.

Access would be preferred from The Green, but consideration of access in relation to Lakeside south would be required.

#### Ecology:

No known ecological issues

#### Archaeology:

Low archaeological potential on the site.

#### Education:

Theale primary school is at capacity. [A new site is being actively sort for a new primary school to accommodate the existing pupil numbers and future pupil growth in the area.](#) There is capacity at Theale Green secondary school.

#### Environmental Health:

The proximity of the site to the A340/A4 junction could lead to noise and air quality issues. Mitigation measures would need to be considered [at planning application stage.](#)

No known issues of contamination

#### Minerals and Waste:

The site is underlain by gravel deposits. There is a history of mineral extraction in the area. Consideration of policy 1 & 2 of the RMLP would be required.

## Site Selection – Site Commentary

### Land use planning consultation zone:

The site is not within an AWE consultation zone.

### Environment Agency:

90% of the site is within SPZ2 and 10% of the site is within SPZ3. There is a major aquifer and a high risk of groundwater contamination. An adjacent site has previously been investigated for potential contamination. [The Environment Agency does not have an in principle objections to development in SPZs.](#)

### Thames Water:

Concern regarding Water Supply capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of any development.

A water supply strategy would be required.

Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A drainage strategy would be required

### Parish Council:

The Parish Council is concerned that this site should not be developed in addition to THE011 as it would result in too much development in this area.

### Preferred Options consultation key issues:

- [Wastewater infrastructure](#)
- [Ecology](#)
- [Healthcare](#)
- [Schools](#)

- [Pollution](#)

[Comments received from the site promoter offering strong support for the inclusion of the site.](#)

[For the consultation responses and Council's response, please see the Statement of Consultation.](#)

### SA/SEA:

The SA/SEA indicates a predominantly neutral sustainability impact. There are no significant issues highlighted. The site is close to local services and facilities within Theale, with good opportunities for walking, cycling and public transport, all of which have a positive impact on sustainability. [The Landscape Assessments on the site has indicated that only part of the site would be suitable for development, with significant buffers required to mitigate the impact on the AONB.](#) The site is adjacent to the AONB, meaning there could be a negative impact on the character of the landscape and environmental sustainability. Mitigation measures should reduce this impact. The site is also at risk from flooding, with some evidence of flooding having taken place. Flooding can impact negatively on sustainability, but mitigation measures work to reduce this impact.

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### Proposed development (from SHLAA submission):

No specific proposals for this site have been submitted.

## Summary of Site Assessment

Key Issues:

- AWE Middle consultation zone
- Site considered alongside BUR002A and BUR004.

## Site Assessment

<b>Parish Council consultation response:</b>	Access to the site could be an issue. Waste water and flooding are potential issues. The site is reasonably well screened. The Parish Council would rather see smaller sites (BUR004 and 002A) developed than the whole site. <a href="#">At preferred options stage the Parish Council stated that assuming both Man's Hill and Firlands were refused they would prefer to see development directed to this site as development would be less visually obtrusive and on a smaller scale. Development of this site would not result in the loss of active agricultural land and would not reduce the space between Burghfield Common and Burghfield Village.</a>

	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

The site would have a positive impact on sustainability in terms of access to local services and facilities, including access to the countryside. The site is not at risk from flooding, which gives a positive impact on all elements of sustainability. Without mitigation measures the site could have a negative impact on environmental sustainability in terms of biodiversity and ecology.

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** East Kennet Valley

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EKV	<b>Settlement:</b>	Burghfield Common	<b>Parish:</b>	Burghfield
----------------------	-----	--------------------	-------------------	----------------	------------

<b>Site ID:</b>	BUR002	<b>Site Address:</b>	Land to the rear of The Hollies Nursing Home, Reading Road, RG7 3BH	<b>Development Potential:</b>	75 <del>60</del> dwellings (when developed with BUR002A and BUR004) (2.5ha at 30dph)
-----------------	--------	----------------------	---	-------------------------------	--

**Recommendation:**

The site is recommended for allocation, with [including](#) BUR002A and BUR004.

**Justification:**

The site is well related to existing services and facilities. There are no significant issues on the site. [The site area has been reduced to exclude the woodland, which is covered by a TPO and should be retained.](#)

**Discussion:**

**Site Description:**

The site is located to the east of Burghfield Common, well related to the existing settlement and close to local services and facilities, including local schools.

**Landscape:**

No assessment of the landscape character has taken place for this area

**Flood Risk:**

The site is in FZ1. There is anecdotal evidence of standing water on the site. An FRA would be required to take into account surface water flooding. SUDs would need to be provided.

**Highways /Transport:**

The impact on the highway has been considered for this site and BUR002A and BUR004. The impact of additional traffic on the highway network is expected to limited, but a Transport Assessment would be required.

Regular buses pass near to the site with services to Tadley, Mortimer, Mortimer railway station and Reading.

Footways are present throughout the village.

**Ecology:**

Part of the site is a Woodland BAP habitat and there is a badger sett present on the site. Reptiles and bats may also be present.

~~An extended phase 1 habitat survey would be required and appropriate mitigation provided.~~ [An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected](#)

The site is adjacent to ancient woodland and [contains woodland and](#) trees [covered](#) ~~protected~~ by TPOs. Appropriate buffers would need to be provided.

**Archaeology:**

There are no known archaeological issues on the site.

**Education:**

Infant school provision within the village is at capacity, there is some capacity at the junior school and the secondary school is close to capacity.

**Environmental Health:**

There are no known air quality, noise or contamination issues.

## Site Selection – Site Commentary

### **Minerals and Waste:**

Part of the site is underlain with gravel deposits. Consideration of policies 1 & 2 of the RMLP would be required.

No known waste issues.

### **Land use planning consultation zone:**

The site is within the middle AWE consultation zone. [No concern has been raised by ONR as to development of this scale in Burghfield Common.](#) ~~Consultation with ONR is required and will take place on the principle of development in the East Kennet Valley as part of the preferred options consultation.~~

### **Environment Agency:**

The site is within FZ1. ~~And~~ 50% in SPZ2 and 50% in SPZ3.

### **Thames Water:**

Comments cover BUR002, BUR002A and BUR004.

~~No issues identified relating to Water Supply capability.~~ [Concerns regarding water supply Capability. The current water supply network in the area is unlikely to be able to support the demand anticipated from this development. Water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of development.](#)

Concerns regarding Wastewater services, possible hydraulic flooding downstream. The existing network is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A [water supply and](#) drainage strategy would be required.

### **Parish Council:**

The Parish Council sees that access to the site could be an issue, with waste water and flooding potential issues. The site is reasonably well screened. The Parish Council would rather see smaller sites (such as BUR004 and BUR002A) developed than the whole site.

[At preferred options stage the Parish Council stated that assuming both Man's Hill and Firlands were refused they would prefer to see development directed to this site as development would be less visually obtrusive and on a smaller scale. Development of this site would not result in the loss of active agricultural land and would not reduce the space between Burghfield Common and Burghfield Village.](#)

### **Preferred Options consultation key issues:**

- [Principle of development including village identity, loss of separation, other sites and impact on settlement character.](#)
- [Highways and transport, including impact on local roads, poor public transport and road safety.](#)
- [Infrastructure – impact on services and facilities including schools, doctors and utilities.](#)
- [Flood risk – concerns over surface water drainage.](#)
- [Landscape and setting. Concern over topography. Site will have the least visual impact.](#)
- [Ecology – loss of habitat and impact on ancient woodland.](#)
- [Historic environment.](#)
- [Pollution – noise, light, air](#)
- [Personal – impact on the Hollies.](#)
- [Support for rejecting Mans Hill and Firlands.](#)
- [Complaints about the consultation – timing etc.](#)

[For the consultation responses and Council's response please see the Statement of Consultation.](#)

### **SA/SEA:**

The SA/SEA does not highlight any significant sustainability issues. There are likely to be positive impacts on sustainability due to the location of the site for access to local services and facilities and opportunities for walking, cycling and public transport. Without appropriate mitigation there could be a negative impact on environmental sustainability due to the potential impact on biodiversity and ecology.

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

## Site Selection – Site Commentary

**Proposed development (from SHLAA submission):**

The whole site (inc. BUR004 and BUR002A) is being promoted for between 85 and 115 dwellings depending on whether the whole site, or only part, is to be developed. [The wooded areas of the site are proposed to be retained.](#)

	Will it provide for increased access to and enjoyment of the historic environment?	<b>0</b>	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	<b>0</b>	Unlikely to have an impact		Unlikely to be any significant sustainability issues
	Will the site be at risk from, or impact on, noise levels?	<b>0</b>	Unlikely to have an impact		
	Will there be an impact on soil quality?	<b>0</b>	Unlikely to have an impact		
	Will there be an impact on water quality?	<b>0</b>	Unlikely to have an impact		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>-</b>	Site is greenfield		Development on greenfield land could have negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	<b>?</b>	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	<b>0</b>	The site is not formally at risk from flooding although there is anecdotal evidence that the site can be boggy.	SUDs would need to be provided.	Flooding can have a negative impact on all elements of sustainability. Appropriate mitigation

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
					including SUDs should reduce this impact.
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing, No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects. The site would have a positive impact on sustainability in terms of access to local services and facilities, including access to the countryside. There is potentially a negative impact from the site being Greenfield. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** East Kennet Valley

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EKV	<b>Settlement:</b>	Burghfield Common	<b>Parish:</b>	Burghfield
----------------------	-----	--------------------	-------------------	----------------	------------

<b>Site ID:</b>	BUR002A	<b>Site Address:</b>	Land adjacent to Primrose Croft, Reading Road, Burghfield Common, RG7 3BH	<b>Development Potential:</b>	25.6 dwellings (0.86 at 30dph)
-----------------	---------	----------------------	---	-------------------------------	--------------------------------

**Recommendation:**  
The site is recommended for allocation, with BUR002 and BUR004.

**Justification:**  
The site is well related to existing services and facilities. There are no significant issues on the site.

**Discussion:**

**Site Description:**  
The site is located to the east of Burghfield Common, well related to the existing settlement and close to local services and facilities, including local schools.

**Landscape:**  
No assessment of the landscape character has taken place for this area

**Flood Risk:**  
The site is not at risk from flooding although there is anecdotal evidence of standing water on the site. SUDs would need to be provided.

**Highways /Transport:**  
The impact on the highway has been considered for this site and BUR002 and BUR004. The impact of additional traffic is expected to have a limited impact, but a Transport Assessment would be required.  
  
Regular buses pass near to the site with services to Tadley, Mortimer, Mortimer railway station and Reading.  
  
Footways are present throughout the village.

**Ecology:**  
~~An extended phase 1 habitat survey would be required and appropriate mitigation provided.~~  
[An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected.](#)  
[Woodland on the site is protected by TPOs, but is not ancient woodland.](#) ~~The site is adjacent to ancient woodland and tress protected by TPOs.~~

**Archaeology:**  
There are no known archaeological issues on the site.

**Education:**  
Infant school provision within the village is at capacity, there is some capacity at the junior school and the secondary school is close to capacity.

**Environmental Health:**  
There are no known air quality, noise or contamination issues.

**Minerals and Waste:**  
Part of the site is underlain with gravel deposits. Consideration of policies 1 & 2 of the RMLP would be required.  
  
No known waste issues.

**Land use planning consultation zone:**  
The site is within the middle AWE consultation zone. Consultation with ONR is required and will take place

## Site Selection – Site Commentary

on the principle of development in the East Kennet Valley as part of the preferred options consultation.

### Environment Agency:

The site is within FZ1. and 50% in SPZ2 and 50% in SPZ3.

### Thames Water:

Comments cover BUR002, BUR002A and BUR004.

~~No issues identified relating to Water Supply capability.~~ Concerns regarding water supply capability. The current water supply network in the area is unlikely to be able to support the demand anticipated from this development. Water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of development.

Concerns regarding Wastewater services, possible hydraulic flooding downstream. The existing network is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A water supply and drainage strategy would be required.

### Parish Council:

The Parish Council sees that access to the site could be an issue, with waste water and flooding potential issues. The site is reasonably well screened. The Parish Council would rather see smaller sites (such as BUR004 and BUR002) developed that the whole site.

At preferred options stage the Parish Council stated that assuming both Man's Hill and Firlands were refused they would prefer to see development directed to this site as development would be less visually obtrusive and on a smaller scale. Development of this site would not result in the loss of active agricultural land and would not reduce the space between Burghfield Common and Burghfield Village.

### Preferred Options consultation key issues:

- Principle of development including village identity, loss of separation, other sites and impact on settlement character.
- Highways and transport, including impact on local roads, poor public transport and road safety.
- Infrastructure – impact on services and facilities including schools, doctors and utilities.
- Flood risk – concerns over surface water drainage.
- Landscape and setting. Concern over topography. Site will have the least visual impact.
- Ecology – loss of habitat and impact on ancient woodland.
- Historic environment.
- Pollution – noise, light, air
- Personal – impact on the Hollies.
- Support for rejecting Mans Hill and Firlands.
- Complaints about the consultation – timing etc.

For the consultation responses and Council's response please see the Statement of Consultation.

### SA/SEA:

The SA/SEA does not highlight any significant sustainability issues. The site would have a positive impact on sustainability in terms of access to local services and facilities, including access to the countryside. There is potentially a negative impact from the site being Greenfield. Housing development contributes towards economic sustainability during the construction stage of the site and throughout the lifetime of the development as it will provide a workforce and increased population using local economies.

~~There are likely to be positive impacts on sustainability due to the location of the site for access to local services and facilities and opportunities for walking, cycling and public transport. Without appropriate mitigation there could be a negative impact on environmental sustainability due to the potential impact on biodiversity and ecology.~~

### Proposed development (from SHLAA submission):

The site is promoted as an individual site, or as part of a wider site covered by BUR002 and including BUR004. The larger site is ~~The whole site (inc. BUR004 and BUR002) is being promoted for between 85 and 115 dwellings depending on whether the whole site, or only part, is to be developed.~~ Individually the site is promoted for approx. 35 dwellings.

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	The site has easy access to the countryside, and is close to local services and facilities which would enable walking and cycling		The site is close to local services and facilities including a local leisure centre and playing field so development of the site is likely to have a positive impact on social and environmental sustainability.
	Will it increase opportunities for access to sports facilities?	<b>+</b>	Accessible to facilities in village, including leisure centre and football pitch		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	Site is close to local amenity space and children's play area.		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>+</b>	Accessible to local facilities and within walking distance of schools. Limited employment opportunities		The proximity to local facilities means that the site should have a positive impact on social and economic sustainability
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>+</b>	There is a regular bus service in Burghfield Common but no railway station. There are a number of opportunities for walking and cycling.		There are opportunities for sustainable travel with regular bus services to Reading. This should have a generally positive impact on environmental sustainability although there will undoubtedly be a heavy reliance on the private car for many journeys.
	Will it reduce the number of road traffic accidents and improve safety?	<b>?</b>	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	<b>0</b>	Adjacent to area of ancient woodland. <a href="#">A tree with a TPO site on the eastern site boundary.</a>	Extended Phase 1 Habitat Survey and appropriate buffers required.	With appropriate buffers to the ancient woodland it is unlikely that there will be an impact on any element of sustainability.
	Will it conserve and	<b>0</b>			

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	enhance the local distinctiveness of the character of the landscape?				
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	+	The site is well related to the existing settlement.		Unlikely to be any significant sustainability issues
	Will it conserve and enhance the significance of the District's heritage assets?	0	Unlikely to have an impact		
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact		Unlikely to be any significant sustainability issues
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact		
	Will there be an impact on soil quality?	0	Unlikely to have an impact		
	Will there be an impact on water quality?	0	Unlikely to have an impact		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	<a href="#">Site is greenfield</a>		Development on greenfield land could have negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	0	No evidence of flood risk	SUDs would need to be provided	There is no flood risk on the site; therefore there should not be an impact on any element of sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects. The site would have a positive impact on sustainability in terms of access to local services and facilities, including access to the countryside and for opportunities to use walking, cycling and public transport. The site is not at risk from flooding, which is also positive in terms of sustainability. There are potentially negative impacts from the site being greenfield. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** East Kennet Valley

**Duration:** Permanent

**Timing:** Short to Long term

## **Site Selection – Sustainability Appraisal / Strategic Environmental Assessment**

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EKV	<b>Settlement:</b>	Burghfield Common	<b>Parish:</b>	Burghfield
----------------------	-----	--------------------	-------------------	----------------	------------

<b>Site ID:</b>	BUR004	<b>Site Address:</b>	Land opposite 44 Lamden Way, Burghfield Common, RG7 3LZ	<b>Development Potential:</b>	10 dwellings (0.32ha at 30dph)
-----------------	--------	----------------------	---	-------------------------------	--------------------------------

### Recommendation:

The site is recommended for allocation, with BUR002 and BUR002A.

### Justification:

The site is well related to existing services and facilities. There are no significant issues on the site. [15m buffers would be required to the adjacent ancient woodland.](#)

### Discussion:

#### Site Description:

The site is located to the east of Burghfield Common, well related to the existing settlement and close to local services and facilities, including local schools.

#### Landscape:

No assessment of the landscape character has taken place for this area

#### Flood Risk:

The site is not at risk from flooding. SUDs would need to be provided.

#### Highways /Transport:

The impact on the highway has been considered for this site and BUR002 and BUR002A. The impact of additional traffic is expected to have a limited impact on the highway network, but a Transport Assessment would be required.

Regular buses pass near to the site with services to Tadley, Mortimer, Mortimer railway station and Reading.

Footways are present throughout the village.

#### Ecology:

~~An extended phase 1 habitat survey would be required and appropriate mitigation provided.~~ [An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected](#)

The site is adjacent to ancient woodland and so buffers would need to be provided.

#### Archaeology:

There are no known archaeological issues on the site.

#### Education:

Infant school provision within the village is at capacity, there is some capacity at the junior school and the secondary school is close to capacity.

#### Environmental Health:

There are no known air quality, noise or contamination issues.

#### Minerals and Waste:

No known mineral deposits.

No known waste issues.

#### Land use planning consultation zone:

The site is within the middle AWE consultation zone. ~~Consultation with ONR on this site by itself is not~~

## Site Selection – Site Commentary

~~required. As a whole with BUR002, BUR002A, consultation is required and will take place on the principle of development in the East Kennet Valley as part of the preferred options consultation.~~ [ONR have not raised any concern about this level of development taking place in Burghfield Common.](#)

### Environment Agency:

No comment made

### Thames Water:

Comments cover BUR002, BUR002A and BUR004.

~~No issues identified relating to Water Supply capability.~~ [Concerns regarding water supply Capability. The current water supply network in the area is unlikely to be able to support the demand anticipated from this development. Water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of development.](#)

Concerns regarding Wastewater services, possible hydraulic flooding downstream. The existing network is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A [water supply and](#) drainage strategy would be required.

### Parish Council:

The Parish Council sees that access to the site could be an issue, with waste water and flooding potential issues. The site is reasonably well screened. The Parish Council would rather see smaller sites (such as BUR004 and BUR002A) developed that the whole site.

[At preferred options stage the Parish Council stated that assuming both Man's Hill and Firlands were refused they would prefer to see development directed to this site as development would be less visually obtrusive and on a smaller scale. Development of this site would not result in the loss of active agricultural land and would not reduce the space between Burghfield Common and Burghfield Village.](#)

### Preferred Options consultation key issues:

- [Principle of development including village identity, loss of separation, other sites and impact on settlement character.](#)
- [Highways and transport, including impact on local roads, poor public transport and road safety.](#)
- [Infrastructure – impact on services and facilities including schools, doctors and utilities.](#)
- [Flood risk – concerns over surface water drainage.](#)
- [Landscape and setting. Concern over topography. Site will have the least visual impact.](#)
- [Ecology – loss of habitat and impact on ancient woodland.](#)
- [Historic environment.](#)
- [Pollution – noise, light, air](#)
- [Personal – impact on the Hollies.](#)
- [Support for rejecting Mans Hill and Firlands.](#)
- [Complaints about the consultation – timing etc.](#)

[For the consultation responses and Council's response please see the Statement of Consultation.](#)

### SA/SEA:

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

The site would have a positive impact on sustainability in terms of access to local services and facilities, including access to the countryside and for opportunities to use walking, cycling and public transport. The site is not at risk from flooding, which is also positive in terms of sustainability. There are potentially negative impacts from the site being Greenfield. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### Proposed development (from SHLAA submission):

The site is being promoted both as a small site, and as part of the larger BUR002, ~~BUR002A as a whole,~~ which is being promoted for between 85 and 115 dwellings.

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects. The site is quite close to local services and facilities, although is on the very edge of the village. There are opportunities for walking, cycling and using of public transport. The extension of the village outside the existing building line could have a negative impact on social sustainability, but changing the character of the village. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** East Kennet Valley

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EKV	<b>Settlement:</b>	Burghfield Common	<b>Parish:</b>	Burghfield
----------------------	-----	--------------------	-------------------	----------------	------------

<b>Site ID:</b>	BUR005	<b>Site Address:</b>	Land between Reading Road and Bully Copse, Burghfield Common, Reading, RG7 3BG	<b>Development Potential:</b>	70+ dwellings (2.35ha at 30dph)
-----------------	--------	----------------------	--	-------------------------------	---------------------------------

**Recommendation:**  
The site is not recommended for development.

**Justification:**  
The site is not as well related to the existing settlement pattern as other sites within the village. Development of the site would extend the village well beyond the existing building line.

**Discussion:**

**Site Description:**  
The site is located to the east of Burghfield Common, on the edge of the existing settlement. The site is quite close to local services and facilities.

**Landscape:**  
No assessment of the landscape character of this area has been made.

**Flood Risk:**  
The site is within FZ1. SUDs would be required to take account of runoff from the site.

**Highways /Transport:**  
Specific Highways comments have not been made for this site.

Access concerns were raised by the Parish Council due to the access from a hill and blind corners.

**Ecology:**  
Part of the site is within a BAP habitat.

**Archaeology:**  
No known archaeological issues.

**Education:**  
Infant school provision within the village is at capacity, there is some capacity at the junior school and the secondary school is close to capacity.

**Environmental Health:**  
No known air quality, noise or contamination issues.

**Minerals and Waste:**  
Site is partially underlain by gravel. Policies 1 & 2 of the RMLP would need to be considered

No known waste issues

**Land use planning consultation zone:**  
The site is in the middle AWE consultation zone. Consultation with ONR would be required. Consultation on the principle of development in the East Kennet Valley will take place as part of the preferred options consultation.

**Environment Agency:**  
The site is within SPZ1.

**Thames Water:**  
TW not consulted on this site

**Parish Council:**  
The Parish Council raised concern that development of the site would extend the village eastwards.

## Site Selection – Site Commentary

Concern was also raised in relation to access to the site as it is on a hill and there are blind corners in the vicinity.

[At preferred options the Parish Council did not comment on this site.](#)

### **Preferred Options consultation key points:**

*[Received from the site promoter only.](#)*

- [Inconsistent approach to site assessment](#)
- [Not within flood risk area](#)
- [No evidence of ecological/arboriculture constraint](#)
- [Visually well contained](#)
- [Minimal impact on residents](#)
- [Appropriate access](#)
- [Close to services and facilities](#)
- [Advanced discussions with leading house builder to promote the site](#)
- [Single ownership](#)
- [Further technical work being carried out](#)

*[For the consultation responses and Council's response, please see the Statement of Consultation.](#)*

### **SA/SEA:**

The SA/SEA indicates a predominantly neutral sustainability impact. There are no significant issues with this site. The site is quite close to local services and facilities, although is on the very edge of the village. There are opportunities for walking, cycling and using of public transport. The extension of the village outside the existing building line could have a negative impact on social sustainability, changing the character of the village. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The site is proposed for between 50 and 100 dwellings, allowing for areas of informal open space, affordable housing and with potential for other uses on the site.

<b>Spatial Area:</b>	EKV	<b>Settlement:</b>	Burghfield Common	<b>Parish:</b>	Sulhamstead
----------------------	-----	--------------------	-------------------	----------------	-------------

<b>Site ID:</b>	BUR006	<b>Site Address:</b>	Land adjacent to Bolt Hole, Hollybush Lane, Burghfield Common, RG7 3JS	<b>Development Potential:</b>	58 60 dwellings (1.92ha at 30dph)
-----------------	--------	----------------------	--	-------------------------------	-----------------------------------

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site has easy access to the countryside, and is close to local services and facilities which would enable walking and cycling		The site is close to local services and facilities including a local leisure centre and playing field so development of the site is likely to have a positive impact on social and environmental sustainability.
	Will it increase opportunities for access to sports facilities?	+	Very accessible to leisure centre and school.		
	Will it protect and enhance green infrastructure across the district?	0	Site is close to local amenity spaces and children's play areas. PROW on western side of site.	Right of way would need to be maintained.	
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	Accessible to local facilities and very close to school. Limited local employment opportunities		The proximity to local facilities means that the site should have a positive impact on social and economic sustainability
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	There is a regular bus service in Burghfield Common but no railway station. There are a number of opportunities for walking and cycling. There is no pavement on the west side of Hollybush Lane.	Footpath would need to be provided along Hollybush Lane	There are opportunities for sustainable travel with regular bus services to Reading. This should have a generally positive impact on environmental sustainability although there will undoubtedly be a heavy reliance on the private car for many journeys.
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.	Potential to include a safe crossing of Hollybush Lane.	
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	-	Site is within Biodiversity Opportunity Area and there are TPOs on site. There is potential for badgers and bats on the site.	Extended Phase 1 Habitat Survey required. Appropriate mitigation would be required should protected species be	Development of the site could have a negative impact on environmental sustainability. Appropriate

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
				found on the site. Buffers for the TPOs would be required.	mitigation would help to minimise this risk.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	<b>0</b>	Unlikely to have an impact		
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	-	Development of the site would extend the village to the west, well beyond the existing building line.		There is potential for development of this site to have a negative impact on sustainability. Mitigation measures would be able to overcome some of the impact, although to overcome the out of keeping extension to the west of the village additional sites in this area would need to be developed.
	Will it conserve and enhance the significance of the District's heritage assets?	?	Some archaeological potential from the adjacent site, BUR007	Further work would be required to identify the extent of archaeology, if any, on the site.	
	Will it promote, conserve and enhance the District's cultural assets?	<b>0</b>	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	<b>0</b>	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	<b>0</b>	Unlikely to have an impact		Unlikely to be any significant sustainability issues
	Will the site be at risk from, or impact on, noise levels?	<b>0</b>	Unlikely to have an impact		
	Will there be an impact on soil quality?	<b>0</b>	Unlikely to have an impact		
	Will there be an impact on water quality?	<b>0</b>	Unlikely to have an impact		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Site is greenfield		Development on greenfield land has negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions? Unlikely to be any significant sustainability issues	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will the site be subject to / at risk from flooding	<b>0</b>	There is no official flood risk on the site, although there is anecdotal evidence of drainage issues.	SUDs would need to be provided, and an FRA may need to be considered.	Flooding can have a negative impact on all elements of sustainability. Appropriate mitigation can reduce this risk, and should neutralise any impact on sustainability.
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<b>0</b>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<b>0</b>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing, No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects. The site will have positive impacts in relation to access to local services and facilities and opportunities for walking, cycling and public transport. There are potential negative impacts on environmental sustainability in relation to protected species on the site, and mitigation measures would be required to minimise this impact. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** East Kennet Valley

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EKV	<b>Settlement:</b>	Burghfield Common	<b>Parish:</b>	Sulhamstead
<b>Site ID:</b>	BUR006	<b>Site Address:</b>	Land adjacent to Bolt Hole, Hollybush Lane, Burghfield Common, RG7 3JS	<b>Development Potential:</b>	58 <del>60</del> dwellings (1.92ha at 30dph)

### Recommendation:

The site is not recommended for allocation

### Justification:

The site is well related to the village, close to the infant and secondary schools as well as other local facilities. However, development of the site would extend the village to the west, and without other neighbouring sites being developed this would extend the village's building line.

The site is unpopular locally and other sites within the village are seen as preferable to this one.

### Discussion:

#### Site Description:

The site is located to the west of Burghfield Common, well related to local services and facilities, especially the local infant and secondary schools. A public right of way runs along the western boundary of the site. This would need to be protected should the site be developed.

#### Landscape:

No assessment has been made of the landscape character in this area.

#### Flood Risk:

The site is within FZ1. There is some anecdotal evidence that there are drainage issues on the site. SUDs would be required to take account of run off generated within the site.

#### Highways /Transport:

This site has been assessed alongside BUR007. The traffic generated from the two sites is considered to have a significant impact on Hollybush Lane and the nearby Reading Road / Hollybush Lane traffic signal crossroads.

Hollybush Lane would need to be widened throughout using available highway land; traffic calming would need to be replaced. Consideration would also need to be given to parking, traffic and pedestrians from the schools.

#### Ecology:

There are potentially badgers and bats on the site. [An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected.](#) ~~An extended phase 1 habitat survey is required.~~ The site is adjacent to trees protected by TPOs. Appropriate mitigation and buffers would be required.

#### Archaeology:

There is some archaeological potential from BUR007 adjacent to the site. Further work would be required, but it is unlikely that there would be an impact on deliverability.

#### Education:

Infant school provision within the village is at capacity, there is some capacity at the junior school and the secondary school is close to capacity.

#### Environmental Health:

There are no known air quality, noise or contamination issues on the site.

#### Minerals and Waste:

This site is underlain with gravel, with a significant potential for extraction. Policies 1 & 2 of the RMLP would need to be considered.

No known waste issues

## Site Selection – Site Commentary

### **Land use planning consultation zone:**

The site is in the outer AWE consultation zone. Consultation with ONR is not required.

Consultation with ONR on the principle of development within the East Kennet Valley will take place as part of the Preferred Options consultation.

### **Environment Agency:**

The site is within SPZ3.

### **Thames Water:**

No issues identified relating to Water Supply capability.

Small local sewers. Concerns regarding Wastewater services. The existing network is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A drainage strategy would be required

### **Parish Council:**

The Parish Council see this site linked to BUR007. They would not like to see either site developed. There is concern relating to additional traffic along Hollybush Lane. There is no natural boundary to the site and therefore, there is concern that if the site is developed additional land beyond the site would be developed. Surface water and drainage issues exist on the site.

[At preferred options the parish council did not comment on this site.](#)

### **Preferred Options consultation key points:**

[No comments received on this site.](#)

### **SA/SEA:**

The SA/SEA indicates a predominately neutral impact on sustainability. There are no significant sustainability issues. The site will have positive impacts in relation to access to local services and facilities and opportunities for walking, cycling and public transport. There are potential negative impacts on environmental sustainability in relation to protected species on the site, mitigation measures would be required to minimise this impact. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The site is being promoted for approximately 82 – 87 mixed use dwellings including key worker housing, elderly person accommodation and affordable housing. The small wooded area would be retained for open space.

# Site Selection – Site Assessment

<b>Spatial Area</b>	EKV	<b>Settlement:</b>	Burghfield Common	<b>Parish:</b>	Sulhamstead

<b>Site ID:</b>	BUR007	<b>Site Address:</b>	Land at Firlands, Burghfield Common, Reading, RG7 3JW
-----------------	--------	----------------------	---

<b>Development Potential:</b>	6300 dwellings (20ha at 30dph)	<b>SHLAA Assessment:</b>	Potentially Developable
-------------------------------	--------------------------------	--------------------------	-------------------------

## Summary of Site Assessment

### Key Issues:

- Scale of proposed development in relation to size and function of the settlement
- Greenfield
- Potential flood risk (surface and ground water)
- TPOs (on part of the site)
- Overhead Cables (on part of the site)
- AWE outer consultation zone

## Site Assessment

<b>Parish Council consultation response:</b>	Parish Council response linked to BUR006. Parish Council are strongly against development of this site. Concern regarding traffic along Hollybush Lane. There is no natural boundary to the site, therefore, concern about continued sprawl beyond the current site in the future. Surface water and drainage problems exist on the site.
--	---

A) Automatic exclusion			
Criteria		Yes/No*	Comments
Less than 5 dwellings		N	
Planning Permission		N <u>P</u>	<a href="#">Permission granted on appeal for up to 90 dwellings on part of the site (14/01730/OUTMAJ)</a>
Within flood zone 3		N

	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

The site is well related to the existing settlement with good access to local services and facilities which has a positive impact on sustainability. Opportunities for walking, cycling and public transport are also positive in terms of sustainable travel. There are potential negative impacts on environmental sustainability in relation to protected species on the site. Mitigation measures would be required to minimise this impact. There is a negative impact on sustainability as the site is greenfield. Mitigation measures, including good design methods, would help to reduce this impact. The site as a whole is very large, and so in many cases the level of the impact would depend on the size of development taking place. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Scale:** East Kennet Valley  
**Duration:** Permanent  
**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EKV	<b>Settlement:</b>	Burghfield Common	<b>Parish:</b>	Sulhamstead
----------------------	-----	--------------------	-------------------	----------------	-------------

<b>Site ID:</b>	BUR007	<b>Site Address:</b>	Land at Firlands, Burghfield Common, Reading, RG7 3JW	<b>Development Potential:</b>	600 <del>300</del> dwellings (20ha at 30dph)
-----------------	--------	----------------------	---	-------------------------------	--

### Recommendation:

The site is not recommended for allocation

### Justification:

The site is well related to the village, close to the infant and secondary schools as well as other local facilities. However, development of this site would extend the village to the west. Development potential on the site is greater than is required for Burghfield Common, as a Rural Service Centre within the Settlement Hierarchy.

The site is unpopular locally and other sites within the village are seen as preferable to this one.

### Discussion:

#### Site Description:

The site is located to the east of Burghfield Common, close to local services and facilities including the infant and secondary schools. A public right of way passes through the site, and this would need to be protected should development take place.

#### Landscape:

No landscape character assessment has been done for this area.

#### Flood Risk:

The site is within FZ1. The site is at risk from surface water flooding and there is anecdotal evidence that there are drainage issues on the site.

An FRA and appropriate mitigation, including SUDs, would be required.

#### Highways /Transport:

This site has been considered alongside BUR006.

The traffic generated is likely to have a significant impact on Hollybush Lane and the nearby Reading Road/Hollybush Lane traffic signal crossroads. Hollybush Lane would need to be widened, the traffic calming replaced and consideration given to the parking, traffic and pedestrians from the school.

There are footways throughout the village.

There are good bus services linking the village to Mortimer Railway Station and Reading Town Centre. The nearest bus stop is approximately 700m from the site.

#### Ecology:

Badgers and Bats are present on the site. Benham's Gully would need to be protected.

The site is within a BOA.

~~An extended phase 1 habitat survey would be required with appropriate mitigation provided.~~ [An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected](#)

#### Archaeology:

Possible enclosure recorded in the area. The size of the site would indicate there is some potential. Further assessment would be required, but unlikely to impact on delivery.

#### Education:

Infant school provision within the village is at capacity, there is some capacity at the junior school and the secondary school is close to capacity.

## Site Selection – Site Commentary

### **Environmental Health:**

No known air quality, noise or contamination issues, although a former landfill site is located to the immediate west of the site.

### **Minerals and Waste:**

The site is underlain by gravel deposits. There is significant potential for extraction. Land to the west of the site has previously been worked for minerals. Policies 1 & 2 of the RMLP need to be considered.

A former landfill site is located to the west of the site. While the waste is inert there are possible issues that would need to be considered.

### **Land use planning consultation zone:**

The site is in the outer AWE consultation zone. Consultation with ONR would be required should the whole site be developed.

Consultation with ONR will take place on the principle of development in the East Kennet Valley as part of the Preferred Options consultation.

### **Environment Agency:**

The site is within SPZ2 and adjacent to a historic landfill site.

### **Thames Water:**

Concern regarding Water Supply capacity. Current water supply network is unlikely to be able to support demand from this site. Water infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of any development.

Concern regarding Wastewater Services, possibility of downstream flooding. Current wastewater network in this area is unlikely to be able to support demand from this site. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of any development.

A water supply and drainage strategy would be required.

### **Parish Council:**

The Parish Council see this site linked to BUR006. They would not like to see either site developed. There is concern relating to additional traffic along Hollybush Lane. There is no natural boundary to the site and therefore, there is concern that should the site be developed additional land beyond the site would be developed. Surface water and drainage issues exist on the site.

[At preferred options the Parish Council did not comment on this site.](#)

### [Preferred Options consultation key issues:](#)

[Detailed comments received from the site promoter. Smaller site area \(as planning application 14/01730/OUTMAJ\) requested to be considered independently of the larger site \(see BUR007A for site assessments\).](#)

### **SA/SEA:**

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects. The site is well related to the existing settlement with good access to local services and facilities which has a positive impact on sustainability. Opportunities for walking, cycling and public transport are also positive in terms of sustainable travel. There are potential negative impacts on environmental sustainability in relation to protected species on the site. Mitigation measures would be required to minimise this impact. There is a negative impact on sustainability as the site is greenfield. Mitigation measures, including good design methods, would help to reduce this impact. The site as a whole is very large, and so in many cases the level of the impact would depend on the size of development taking place. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The site was previous subject to an invalid planning application for a local centre.

[Planning permission was granted on appeal for up to 90 dwellings on part of the site \(14/01730/OUTMAJ\). The Council are challenging this decision. The site promoter has made it clear that they wish to see](#)

## Site Selection – Site Commentary

[development of up to 300 dwellings in the longer term.](#)

# Site Selection – Site Assessment

<b>Spatial Area</b>	EKV	<b>Settlement:</b>	Burghfield Common	<b>Parish:</b>	Sulhamstead
---------------------	-----	--------------------	-------------------	----------------	-------------

<b>Site ID:</b>	BUR007A	<b>Site Address:</b>	Land at Firlands, Burghfield Common, Reading, RG7 3JW ( <a href="#">Smaller site</a> )
-----------------	---------	----------------------	--

<b>Development Potential:</b>	600 <del>130</del> dwellings (20 ha at 30)	<b>SHLAA Assessment:</b>	Potentially Developable
-------------------------------	--	--------------------------	-------------------------

## Summary of Site Assessment

### Key Issues:

- Scale of proposed development in relation to size and function of the settlement
- Greenfield
- Potential flood risk (surface and ground water)
- TPOs (on part of the site)
- Overhead Cables (on part of the site)
- AWE outer consultation zone

## Site Assessment

<b>Parish Council consultation response:</b>	Parish Council response linked to BUR006. <a href="#">Both Sulhamstead and Burghfield</a> Parish Councils are strongly against development of this site. Concern regarding traffic along Hollybush Lane. There is no natural boundary to the site, therefore, concern about continued sprawl beyond the current site in the future. Surface water and drainage problems exist on the site.

++	+	?	0	-	--
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site has easy access to the countryside, and is relatively close to local services and facilities which would enable walking and cycling		The site is close to local services and facilities including a local leisure centre and playing field so development of the site is likely to have a positive impact on social and environmental sustainability.
	Will it increase opportunities for access to sports facilities?	+	Very accessible to leisure centre and school.		
	Will it protect and enhance green infrastructure across the district?	?	Site is close to local amenity spaces and children's play areas. A PROW passes through the northern part of the site	The right of way would need to be preserved.	
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	Accessible to local facilities and very close to school. Limited local employment opportunities		The proximity to local facilities means that the site should have a positive impact on social and economic sustainability
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	There is a regular bus service in Burghfield Common but no railway station. There are a number of opportunities for walking and cycling. There is no pavement on the west side of Hollybush Lane.	Footpath would need to be provided along Hollybush Lane	There are opportunities for sustainable travel with regular bus services to Reading. This should have a generally positive impact on environmental sustainability although there will undoubtedly be a heavy reliance on the private car for many journeys.
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.	Potential to include a safe crossing of Hollybush Lane.	
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	-	Badgers present on site. Need to protect Benham's Gully. Site is within Biodiversity Opportunity Area and there are TPOs on site.	Extended Phase 1 Habitat Survey required. Appropriate mitigation would be required.	Potential for a negative impact on environmental sustainability. Mitigation measures would help to reduce this impact.
	Will it conserve and	?	The impact on the landscape will	Impact would be lessened with	

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	enhance the local distinctiveness of the character of the landscape?		depend on the scale of development <u>This site is covered with a TPO. Careful consideration of the removal of trees would be required to ensure that the character of the landscape was not negatively impacted on.</u>	smaller scale development <u>Careful design and landscaping would be required to ensure no negative impact on the character of the landscape.</u>	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	?+	The impact will depend on the scale of development <u>The area of the site being considered is well related to the existing settlement and with careful design should not impact on the character of the built environment</u>	Impact would be lessened with smaller scale development.	There is potential for a negative impact on sustainability depending on the scale of development. Mitigation measures and good design would help to reduce the impact.
	Will it conserve and enhance the significance of the District's heritage assets?	?	Possible enclosure record in area and size of the site suggests there could be some archaeological potential <u>to the north of the site</u>		
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact		Unlikely to be any significant sustainability issues
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact		
	Will there be an impact on soil quality?	0	Unlikely to have an impact		
	Will there be an impact on water quality?	0	Unlikely to have an impact		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Site is mainly greenfield		Development on greenfield land has negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions? Unlikely to be any significant sustainability issues	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will the site be subject to / at risk from flooding	-	Surface water flood risk areas and issues of drainage.	An FRA would be required. Appropriate mitigation including SUDs would need to be provided.	Flooding can cause a negative impact on all elements of sustainability. Mitigation measures, including SUDs, will help to reduce this impact.
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a> <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

The site is well related to the existing settlement with good access to local services and facilities which has a positive impact on sustainability. Opportunities for walking, cycling and public transport are also positive in terms of sustainable travel. There are potential negative impacts on environmental sustainability in relation to protected species on the site. Mitigation measures would be required to minimise this impact. There is a negative impact on sustainability as the site is greenfield. Mitigation measures, including good design methods, would help to reduce this impact. The site as a whole is very large, and so in many cases the level of the impact would depend on the size of development taking place, [a smaller site will obviously have less of a negative impact than a larger one.](#) [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business](#)

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

[development in the longer term.](#)

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** East Kennet Valley

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EKV	<b>Settlement:</b>	Burghfield Common	<b>Parish:</b>	Sulhampstead
----------------------	-----	--------------------	-------------------	----------------	--------------

<b>Site ID:</b>	BUR007A	<b>Site Address:</b>	Land at Firlands, Burghfield Common, Reading, RG7 3JW <a href="#">(Smaller site)</a>	<b>Development Potential:</b>	600 <a href="#">130</a> dwellings (20 ha at 30)
-----------------	---------	----------------------	---	-------------------------------	--

### Recommendation:

The site is not recommended for allocation

### Justification:

The site is well related to the village, close to the infant and secondary schools as well as other local facilities. However, development of this site would extend the village to the west. Development potential on the site is greater than is required for Burghfield Common, as a Rural Service Centre within the Settlement Hierarchy.

The site is unpopular locally and other sites within the village are seen as preferable to this one. [The site promoter has made it clear that in the longer term they would like to see the whole site developed for up to 300 dwellings.](#)

### Discussion:

#### Site Description:

The site is located to the east of Burghfield Common, close to local services and facilities including the infant and secondary schools. A public right of way passes through the [north of the](#) site, and this would need to be protected should development [of the whole site](#) take place.

#### Landscape:

No landscape character assessment has been done for this area.

#### Flood Risk:

The site is within FZ1. [Areas of](#) the site ~~is~~ [are](#) at risk from surface water flooding and there is anecdotal evidence that there are drainage issues on the site.

An FRA and appropriate mitigation, including SUDs, would be required.

#### Highways /Transport:

This site has been considered alongside BUR006.

The traffic generated is likely to have a significant impact on Hollybush Lane and the nearby Reading Road/Hollybush Lane traffic signal crossroads. Hollybush Lane would need to be widened, the traffic calming replaced and consideration given to the parking, traffic and pedestrians from the school.

There are footways throughout the village.

There are good bus services linking the village to Mortimer Railway Station and Reading Town Centre. The nearest bus stop is approximately 700m from the site.

#### Ecology:

Badgers and Bats are present on the site. Benham's Gully would need to be protected [should the larger site come forward](#).

The site is within a BOA.

~~An extended phase 1 habitat survey would be required with appropriate mitigation provided.~~ [An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected](#)

#### Archaeology:

Possible enclosure recorded in the area. The size of the site would indicate there is some potential. Further assessment would be required, but unlikely to impact on delivery.

## Site Selection – Site Commentary

### Education:

Infant school provision within the village is at capacity, there is some capacity at the junior school and the secondary school is close to capacity.

### Environmental Health:

No known air quality, noise or contamination issues, although a former landfill site is located to the immediate west of the site.

### Minerals and Waste:

The site is underlain by gravel deposits. There is significant potential for extraction. Land to the west of the site has previously been worked for minerals. Policies 1 & 2 of the RMLP need to be considered.

A former landfill site is located to the west of the site. While the waste is inert there are possible issues that would need to be considered.

### Land use planning consultation zone:

The site is in the outer AWE consultation zone. Consultation with ONR would be required should the whole site be developed.

Consultation with ONR will take place on the principle of development in the East Kennet Valley as part of the Preferred Options consultation.

### Environment Agency:

The site is within SPZ2 and adjacent to a historic landfill site.

### Thames Water:

Concern regarding Water Supply capacity. Current water supply network is unlikely to be able to support demand from this site. Water infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of any development.

Concern regarding Wastewater Services, possibility of downstream flooding. Current wastewater network in this area is unlikely to be able to support demand from this site. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of any development.

A water supply and drainage strategy would be required.

### Parish Council:

[Both Sulhamstead and Burghfield Parish Council are strongly against development on part of or all of this site.](#) The Parish Council see this site linked to BUR006. They would not like to see either site developed.

There is concern relating to additional traffic along Hollybush Lane. There is no natural boundary to the site and therefore, there is concern that should the site be developed additional land beyond the site would be developed. Surface water and drainage issues exist on the site.

[At preferred options the Parish Councils did not comment further on this site.](#)

### SA/SEA:

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects. The site is well related to the existing settlement with good access to local services and facilities which has a positive impact on sustainability. Opportunities for walking, cycling and public transport are also positive in terms of sustainable travel. There are potential negative impacts on environmental sustainability in relation to protected species on the site. Mitigation measures would be required to minimise this impact. There is a negative impact on sustainability as the site is greenfield. Mitigation measures, including good design methods, would help to reduce this impact. The site as a whole is very large, and so in many cases the level of the impact would depend on the size of development taking place, [a larger site will obviously have less of a negative impact than a larger one. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### Proposed development (from SHLAA submission):

The site was previous subject to an invalid planning application for a local centre ([12/00373/OUTMAJ](#)) A

## Site Selection – Site Commentary

[second planning application \(14/01730/OUTMAJ\) for 129 dwellings to the east of the site, adjacent to Hollybush Lane was submitted and validated in July 2014. The application was granted permission on appeal, for up to 90 dwellings. The Council have challenged this decision.](#)

[The site promoter have made it clear in their comments on the preferred options DPD that in the long term they would like to see the whole site developed for up to 300 dwellings.](#)

# Site Selection – Site Assessment

	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects, although there are both a number of positive and negative impacts as a result of development.

The site is close to local services and facilities within the village, and would provide opportunities for walking, cycling and public transport. Negative sustainability issues exist in relation to Road Safety, impact on landscape and the built environment, as well as being a greenfield site at risk of flooding. Mitigation measures would reduce some of the impact on

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

sustainability in some of these areas.

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** East Kennet Valley

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EKV	<b>Settlement:</b>	Burghfield Common	<b>Parish:</b>	Burghfield
<b>Site ID:</b>	BUR008	<b>Site Address:</b>	Land adjoining Mans Hill, Burghfield Common, RG7 3BD	<b>Development Potential:</b>	315 dwellings (10.5ha at 30dph)

**Recommendation:**

The site is not recommended for allocation

**Justification:**

The site is located on the edge of Burghfield, extending out into the countryside. The site is rural in nature and development would have an impact on the landscape character and the character of the built environment.

Development of the whole site is out of keeping with the village's role and function within the settlement hierarchy and other sites within Burghfield Common are considered to be better related to the existing settlement.

**Discussion:**

**Site Description:**

The site is located to the south east of Burghfield Common, spanning either side of Mans Hill. The northern part of the site is well related to the existing settlement, although the southern parts are poorly related.

Development on this scale would be out of keeping with the role and function of Burghfield Common as a Rural Service Centre within the settlement hierarchy.

**Landscape:**

No landscape character assessment work has been carried out for this area. However, development of the site would have an impact on the character of the landscape.

**Flood Risk:**

The site is at risk from surface water flooding. It is also within FZ1. An FRA and appropriate mitigation, including SUDs would be required.

**Highways /Transport:**

Highways have not been consulted on this site.

Access to the site, via Mans Hill, is poor and would need significant improvements and road safety is considered an issue.

**Ecology:**

The site is within a BOA and partly within a BAP habitat.

There is ancient woodland adjacent to the site. Appropriate buffers would be required.

**Archaeology:**

No known archaeological issues on the site

**Education:**

Infant school provision within the village is at capacity, there is some capacity at the junior school and the secondary school is close to capacity.

**Environmental Health:**

No known air quality, noise or contamination issues

**Minerals and Waste:**

Site is partially underlain by gravel, borehole data for the site indicates that the depth and quality of mineral deposits are such that policies 1 & 2 of the RMLP are not an issue.

No known waste issues.

**Land use planning consultation zone:**

## Site Selection – Site Commentary

The site is in the middle AWE consultation zone. Consultation with ONR would be required. Consultation with ONR on the principle of development in the East Kennet Valley will be carried out as part of the preferred options consultation.

### **Environment Agency:**

The site is within SPZ2 and has an ordinary watercourse within it.

### **Thames Water:**

TW not consulted on this site

### **Parish Council:**

The Parish Council raised concern relating to the access to the site via Mans Hill. The road is poor quality and would need to be upgraded. The site would extend Burghfield Common to the east, and any development on this site would be highly visible. The Parish Council would not like to see this site developed.

[At preferred options the parish council did not comment on this site.](#)

### **Preferred Options consultation key issues:**

- [Mans Hill is a genuine country lane which help Burghfield Common to retain some of its rural character](#)
- [Need to protect Burghfield Common's character.](#)

[Detailed comments were also received from the site promoter mainly regarding why details submitted as part of the planning application had not been taken into account in the site assessment process.](#)

[For the consultation responses and Council's response, please see the Statement of Consultation.](#)

### **SA/SEA:**

The SA/SEA did not highlight any significant sustainability issues with the site. The impact would predominantly be neutral. [The site is close to local services and facilities within the village, and would provide opportunities for walking, cycling and public transport. Negative sustainability issues exist in relation to Road Safety, impact on landscape and the built environment, as well as being a greenfield site at risk of flooding. Mitigation measures would reduce some of the impact on sustainability in some of these areas.](#)

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

[although there are a number of negative impacts on sustainability. The site scores positively in terms of access to local services and facilities and opportunities for walking, cycling and public transport, but development is likely to have a negative impact on the character of the landscape and built environment. The site is also within a surface water flood risk area, although mitigation could reduce this impact.](#)

### **Proposed development (from SHLAA submission):**

An outline planning ~~permission~~ [application](#) for the site was submitted in May 2014 for 210 dwellings (40% affordable) with access from Mans Hill ([14/00962/OUTMAJ](#)). [Application refused and dismissed at appeal. A second application was submitted in November 2014 for 197 dwellings \(40% affordable housing\) with access from Mans Hill \(14/03001/OUTMAJ\). The application was refused. The appeal for 14/00962 considered the smaller scheme for 197 dwellings. The appeal was dismissed. Second planning application received August 2015 for 70 dwellings on the southern part of the site 15/02019/OUTMAJ.](#)

### Summary

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects, although there are both a number of positive and negative impacts as a result of development.

The site is close to local services and facilities within the village, and would provide opportunities for walking, cycling and public transport. Negative sustainability issues exist in relation to Road Safety, impact on landscape and the built environment ([as the site is not adjacent to the existing settlement](#)), as well as being a greenfield site at risk of flooding. Mitigation measures would reduce some of the impact on sustainability in some of these areas.

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** East Kennet Valley

**Duration:** Permanent

**Timing:** Short to Long term

### Recommendation:

The site is not recommended for allocation

### Justification:

The site is located on the edge of Burghfield, extending out into the countryside. The site is rural in nature and development would have an impact on the landscape character and the character of the built environment, [as it is poorly related to the existing settlement pattern](#).

~~Development of the whole site is out of keeping with the village's role and function within the settlement hierarchy and e~~ Other sites within Burghfield Common are considered to be better related to the existing settlement.

### Discussion:

#### Site Description:

The site is located to the south east of Burghfield Common, ~~to the south of~~ [spanning either side of](#) Mans Hill. The ~~northern part of the site is well related to the existing settlement, although the southern parts~~ [site is](#) are poorly related [to the existing settlement pattern as it is not adjacent to it. It is considered likely that this site could be phase one of a larger development of the whole of BUR008 in the future. Development of the whole site \(BUR008\) would be](#) Development on this scale would be out of keeping with the role and function of Burghfield Common as a Rural Service Centre within the settlement hierarchy.

#### Landscape:

No landscape character assessment work has been carried out for this area. However, development of the site would have an impact on the character of the landscape.

#### Flood Risk:

The site is at risk from surface water flooding. It is also within FZ1. An FRA and appropriate mitigation, including SUDs would be required. [Flood mitigation is proposed as part of the planning application](#).

#### Highways /Transport:

Highways have not been consulted on this site, [but consideration of the highways impact will be considered as part of the planning application](#).

Access to the site, via Mans Hill, is poor and would need significant improvements and road safety is considered an issue.

#### Ecology:

The site is within a BOA and partly within a BAP habitat.

There is ancient woodland adjacent to the site. Appropriate buffers would be required.

#### Archaeology:

No known archaeological issues on the site

#### Education:

Infant school provision within the village is at capacity, there is some capacity at the junior school and the secondary school is close to capacity.

#### Environmental Health:

No known air quality, noise or contamination issues

#### Minerals and Waste:

Site is partially underlain by gravel. ~~b~~Borehole data for the site indicates that the depth and quality of mineral deposits are such that policies 1 & 2 of the RMLP are not an issue.

## Site Selection – Site Commentary

No known waste issues.

### Land use planning consultation zone:

The site is in the middle AWE consultation zone. ~~Consultation with ONR would be required. Consultation with ONR on the principle of development in the East Kennet Valley will be carried out as part of the preferred options consultation.~~ [At Preferred Options ONR confirmed that they do not have any issues with the amount of development proposed for Burghfield Common.](#)

### Environment Agency:

The site is within SPZ2 and has an ordinary watercourse within it.

### Thames Water:

TW not consulted on this site

### Parish Council:

The Parish Council raised concern relating to the access to the site via Mans Hill. The road is poor quality and would need to be upgraded. The site would extend Burghfield Common to the east, and any development on this site would be highly visible. The Parish Council would not like to see this site developed.

[At preferred options the parish council did not comment on this site.](#)

### Preferred Options consultation key issues:

- [Mans Hill is a genuine country lane which help Burghfield Common to retain some of its rural character](#)
- [Need to protect Burghfield Common's character.](#)

[Detailed comments were also received from the site promoter mainly regarding why details submitted as part of the planning application had not been taken into account in the site assessment process.](#)

[For the consultation responses and Council's response, please see the Statement of Consultation.](#)

### SA/SEA:

The SA/SEA did not highlight any significant sustainability issues with the site. The impact would predominantly be neutral, although there are a number of negative impacts on sustainability. [The site is close to local services and facilities within the village, and would provide opportunities for walking, cycling and public transport. Negative sustainability issues exist in relation to Road Safety, impact on landscape and the built environment \(as the site is not adjacent to the existing settlement\), as well as being a greenfield site at risk of flooding. Mitigation measures would reduce some of the impact on sustainability in some of these areas. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

~~The site scores positively in terms of access to local services and facilities and opportunities for walking, cycling and public transport, but development is likely to have a negative impact on the character of the landscape and built environment. The site is also within a surface water flood risk area, although mitigation could reduce this impact.~~

### Proposed development (from SHLAA submission):

[An outline planning permission for the site was submitted in August 2015 for 70 dwellings \(40% affordable\) with access from Mans Hill.](#)

[A previous application for the whole site \(BUR008\) was submitted in May 2014 for 210 dwellings \(40% affordable\) with access from Mans Hill \(14/00962/OUTMAJ\). This application was refused and dismissed at appeal. A second application for the whole site was submitted in November 2014 \(14/03001/OUTMAJ\). This application was refused. The appeal on 14/00962/OUTMAJ was asked to consider development of up to 197 dwellings. The appeal was dismissed.](#)

~~An outline planning permission for the site was submitted in May 2014 for 210 dwellings (40% affordable) with access from Mans Hill.~~

<b>Site ID:</b>	BUR011	<b>Site Address:</b>	Benhams Farm, Hollybush Lane, Burghfield Common	<b>Development Potential:</b>	79 <del>80</del> dwellings (2.63ha at 30dph)
-----------------	--------	----------------------	---	-------------------------------	--

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site has easy access to the countryside, and is close to local services and facilities which would enable walking and cycling		The site is close to local services and facilities including a local leisure centre and playing field so development of the site is likely to have a positive impact on social and environmental sustainability.
	Will it increase opportunities for access to sports facilities?	+	Very accessible to leisure centre and school.		
	Will it protect and enhance green infrastructure across the district?	0	Site is close to local amenity spaces and children's play areas.		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	Accessible to local facilities and very close to school. Limited local employment opportunities		The proximity to local facilities means that the site should have a positive impact on social and economic sustainability
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	0	There is a regular bus service in Burghfield Common but no railway station. There are a number of opportunities for walking and cycling. There is no pavement on the west side of Hollybush Lane.	Potential to provide footpath along Hollybush Lane	There are opportunities for sustainable travel with regular bus services to Reading. This should have a generally positive impact on environmental sustainability although there will undoubtedly be a heavy reliance on the private car for many journeys.
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.	Potential to include a safe crossing of Hollybush Lane.	
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	-	There are wetlands to the north of the site that would need to be protected. The site is within a BOA. There is potential for bats and badgers on the site.	Extended Phase 1 Habitat Survey required. There would be an opportunity to extend the POS to the north west in an easterly direction.	Development could have a negative impact on environmental sustainability unless appropriate mitigation measures are introduced.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	<b>0</b>	Unlikely to have an impact		
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	<b>-</b>	The site is not that well related to the existing settlement	Additional sites would need to be developed to improve this site's relationship to the existing built environment	There is potential for a negative impact on sustainability. Mitigation measures and good design would help to reduce the impact.
	Will it conserve and enhance the significance of the District's heritage assets?	<b>0</b>	Historic farmstead in south west corner of the site.	Further assessment required.	
	Will it promote, conserve and enhance the District's cultural assets?	<b>0</b>	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	<b>0</b>	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	<b>0</b>	Unlikely to have an impact		Unlikely to be any significant sustainability issues
	Will the site be at risk from, or impact on, noise levels?	<b>0</b>	Unlikely to have an impact		
	Will there be an impact on soil quality?	<b>0</b>	Unlikely to have an impact		
	Will there be an impact on water quality?	<b>0</b>	Unlikely to have an impact		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>-</b>	Site is greenfield		Development on greenfield land has negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions? Unlikely to be any significant sustainability issues	<b>?</b>	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	<b>0</b>	The site is adjacent to an area of surface water flood risk, but is not at risk itself	SUDs would be required	Flooding can have a negative impact on all elements of sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
					While the site is not at risk from flooding SUDs are required to ensure that development would not have a negative impact on flood risk elsewhere.
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

There are no significant sustainability issues on this site. The site is close to local services and facilities, with opportunities for walking, cycling and public transport, this has a positive impact on sustainability. Development of the site could lead to a negative impact on environmental sustainability unless suitable mitigation measures are introduced. The site is greenfield which will have a negative impact on sustainability. Mitigation measures such as good design techniques would help to mitigate this impact.

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** East Kennet Valley

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EKV	<b>Settlement:</b>	Burghfield Common	<b>Parish:</b>	Sulhamstead
<b>Site ID:</b>	BUR011	<b>Site Address:</b>	Benhams Farm, Hollybush Lane, Burghfield Common	<b>Development Potential:</b>	79 80 dwellings (2.63ha at 30dph)

### Recommendation:

The site is not recommended for allocation

### Justification:

Development of the site would extend the village to the west, and would not be that well related to the existing settlement, as it would change the character of the existing settlement pattern. Other sites within the village are better related to the existing settlement pattern.

[The current planning permission for the site would allow access to be retained to the larger site, however, the application currently under consideration \(August 2014\) would result in a private drive way being provided, this would not be an adequate access for the remainder of the site, and therefore, the site as a whole would be undeliverable.](#)

### Discussion:

#### Site Description:

The site is located to the west of Burghfield Common. The site is close to local services and facilities and has easy access to the countryside. A public right of way runs along the eastern boundary of the site, and would need to be protected should the site be developed.

#### Landscape:

No landscape character assessments have been carried out for this area

#### Flood Risk:

The site is within FZ1 and is adjacent to an area of surface water flood risk. Anecdotal evidence indicates that there are some drainage issues on the site. An FRA and SUDs would be required.

#### Highways /Transport:

Traffic generated by the development will have some impact on Hollybush Lane. Traffic calming would need to be replaced and consideration given to the parking, traffic and pedestrians associated with the school.

A suitable access, with appropriate sight lines would be possible onto Hollybush Lane.

There are regular bus services linking the village to Tadley, Mortimer, Mortimer railway station and Reading.

Footways are available throughout the village.

#### Ecology:

There are wetlands to the north of the site which would need to be protected. The site is within a BOA with potential for badger and bats. ~~An extended phase 1 habitat survey would be required.~~ [An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected](#)

There would be an opportunity to extend the public open space to the northwest in an easterly direction.

#### Archaeology:

There is a historic farmstead in the south west corner of the site. Further assessment would be required, but it is unlikely to impact on deliverability.

#### Education:

Infant school provision within the village is at capacity, there is some capacity at the junior school and the secondary school is close to capacity.

#### Environmental Health:

## Site Selection – Site Commentary

No known air quality, noise or contamination issues

### **Minerals and Waste:**

The site is underlain by gravel, with potential for extraction to take place. Consideration of policy 1 & 2 of the RMLP would be needed.

No known waste issues.

### **Land use planning consultation zone:**

The site is in the outer AWE consultation zone. Consultation with ONR is not required.

Consultation with ONR on the principle of development in the East Kennet Valley will take place as part of the preferred options consultation.

### **Environment Agency:**

The site is within FZ1

### **Thames Water:**

No issues identified relating to water supply capability.

Concerns regarding Wastewater services. The existing network is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A drainage strategy would be required.

### **Parish Council:**

The Parish Council see this site linked to BUR007. They would not like to see either site developed. There is concern relating to additional traffic along Hollybush Lane. There is no natural boundary to the site and therefore, there is concern that should the site be developed additional land beyond the site would be developed. Surface water and drainage issues exist on the site.

[At the preferred options stage the parish council did not comment on this site.](#)

### **Preferred Options consultation key issues:**

*[Comments only received from the site promoter.](#)*

- [All sites being considered are outside the settlement boundary](#)
- [Ecological report accompanied site submission](#)
- [Awaiting further information on archaeology](#)
- [Proposed allocations do not meet housing requirement in the area](#)
- [Site is well screened which would limit impact on countryside](#)
- [Access from Acorn Gardens](#)
- [Improved use of open space at Acorn Gardens/Bramble Close](#)
- [No impact on employment](#)
- [Close to education facilities](#)
- [Planning permission granted for access from Hollybush Lane, would be acceptable for 80 dwellings](#)
- [Site under option to developer.](#)

### **SA/SEA:**

The SE/SEA does not highlight any significant sustainability issues and shows a predominantly neutral impact on sustainability. There are a number of positive impacts on sustainability as the site is close to local services and facilities with opportunities for walking, cycling and public transport. Development could lead to a negative impact on environmental sustainability unless suitable ecological mitigation measures are introduced. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The site is proposed for a low density development of approximately 40 dwellings, including affordable housing.

## Site Selection – Site Commentary

Planning permission has been granted for demolition of May Collage and construction of two replacement dwellings and an access road (14/01395/FULD), a second similar application is going to appeal (14/03205/FULD). Two additional applications have been submitted for construction of 4 self build dwellings (15/00425/OUTD – refused going to appeal) and 3 self build dwellings (15/01698/OUTD – pending consideration (Aug 15)). Comments received during the preferred options consultation indicate that the access road granted permission by the above planning application (14/03205/FULD) would be acceptable to service 80 dwellings. The access proposed for application 15/01698 is not proposed to be an adopted road, and therefore, would not be suitable as an access road for development on the remainder of the site.

The impact on the agricultural holding could be mitigated by the land owner providing additional land elsewhere.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<b>?</b>	<a href="#">Housing development contributes towards economic development through the construction stage and through the lifetime of the development (providing a workforce and customers). The greenfield site is for housing only. Development of the site would result in the loss of land associated with agriculture, which would impact on the farming business of the tenant</a>	<a href="#">The land owner have confirmed that additional land could be provided to the farmer if required to mitigate the loss of agricultural land used as part of the farming business.</a>	
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

The site is close to local services and facilities with opportunities for walking, cycling and public transport all of which have a positive impact on sustainability. There is a potential negative impact on environmental sustainability without appropriate ecological mitigation measures. The site is greenfield which has a negative impact on environmental sustainability. Mitigation measures such as good design techniques would help to mitigate this impact. [Housing development contributes towards economic sustainability in the short term during the construction stage of the site it is not seen to promote key business sectors and business development in the longer term. Development of this site would result in the loss of agricultural land. The land owner has stated that mitigation in the form of additional land elsewhere close to the farm could be provided if required, however, this gives an uncertain sustainability impact.](#)

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** East Kennet Valley

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EKV	<b>Settlement:</b>	Burghfield Common	<b>Parish:</b>	Burghfield
----------------------	-----	--------------------	-------------------	----------------	------------

<b>Site ID:</b>	BUR015	<b>Site Address:</b>	Land adjoining Pondhouse Farm, Clay Hill Road, Burghfield Common	<b>Development Potential:</b>	287 dwellings (9.56ha at 30dph) <a href="#">100 dwellings</a>
-----------------	--------	----------------------	--	-------------------------------	---

**Recommendation:**

The site is recommended for allocation.

**Justification:**

The site is well related to the existing settlement, close to local services and facilities. There are no significant issues on the site.

[The site area proposed for development is approximately half of the original site submitted for development, following the field fence through the site.](#)

**Discussion:**

**Site Description:**

The site is located to the north east of Burghfield Common, close to local services and facilities within the village and with good access to the countryside.

A public right of way runs along the north eastern edge of the site and would need to be protected.

**Landscape:**

No landscape character assessments have been carried out for this area.

**Flood Risk:**

The site is within FZ1 and adjacent to an area at risk from surface water flooding. Anecdotal evidence suggests that there are drainage issues on the site.

SUDs would need to be provided on site.

**Highways /Transport:**

Traffic generated from development of the site is considered to be limited, but would need to be assessed via a TA [Transport Assessment](#).

Appropriate sight lines could be achieved onto Clayhill Road.

There are regular bus services to Tadley, Mortimer, Mortimer railway station and Reading.

**Ecology:**

OMER's gully is located within the site and would need to be protected. The site is adjacent to ancient woodland, TPOs and a Local wildlife site. Appropriate buffers would need to be provided.

**Archaeology:**

No known archaeology, assessment work would need to be carried out.

**Education:**

Infant school provision within the village is at capacity, there is some capacity at the junior school and the secondary school is close to capacity.

**Environmental Health:**

No known air quality, noise or contamination issues

**Minerals and Waste:**

The site is partly underlain by gravel deposits. Consideration of policies 1 & 2 of the RMLP would be required.

No known waste issues

## Site Selection – Site Commentary

### Land use planning consultation zone:

The site is within the middle AWE consultation zone ~~meaning consultation with ONR would be required. This will be done as part of the preferred options consultation.~~ [ONR did not raise any concern at preferred options regarding this level of development in Burghfield Common.](#)

### Environment Agency:

20% of the site is within SPZ2 and 80% of the site is within SPZ3. There is also an ordinary watercourse within the site.

### Thames Water:

Concerns regarding Water Supply capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of any development.

Concerns regarding Wastewater services. The existing network is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A water supply and drainage strategy would be required.

### Parish Council:

The Parish Council see this as one of the preferred sites for development, should development be required in the village. The site is seen as being suitable for approximately 50 dwellings.

[At the preferred options the Parish Council stated that assuming both Mans Hill and Firlands were refused they would prefer to see development to be directed to BUR002/002A/004, as it was considered that development on this site would be more visually obtrusive, larger scale and would result in the loss of agricultural land as well as reduce the space between Burghfield Common and Burghfield Village.](#)

### Preferred Options consultation key issues:

- [General – pressure on village. Received less publicity than Firlands and Mans Hill so people less well informed.](#)
- [Principle of development – over development, Greenfield site etc](#)
- [Highways and Transport – congestion, traffic generation, won't encourage walking and cycling, road safety. Clayhill Road considered busy, public transport \(mixed views\), parking issues \(parents at school etc\).](#)
- [Infrastructure – pressure on services and facilities including concern over sewerage.](#)
- [Ecology – loss of wildlife, proximity to ancient woodland. Impacts could be mitigated?](#)
- [Landscape/setting – concern over prominence and impact on setting.](#)
- [Employment – concern raised by farmer over the impact on Pondhouse Farm.](#)
- [Flooding- drainage issues.](#)
- [Pollution – air, noise, light.](#)

[For consultation responses and Council response, please see the Statement of Consultation.](#)

### SA/SEA:

The SA/SEA does not highlight any significant sustainability issues. The site is close to local services and facilities with opportunities for walking, cycling and public transport all of which have a positive impact on sustainability. There is a potential negative impact on environmental sustainability without appropriate ecological mitigation measures. [The site is greenfield which has a negative impact on environmental sustainability. Mitigation measures such as good design techniques would help to mitigate this impact. Housing development contributes towards economic sustainability during the construction stage of the site and through the lifetime of the development as it will provide a workforce and increased population using local economies. Housing development contributes towards economic sustainability in the short term during the construction stage of the site it is not seen to promote key business sectors and business development in the longer term. Development of this site would result in the loss of agricultural land. The land owner has stated that mitigation in the form of additional land elsewhere close to the farm could be provided if required, however, this gives an uncertain sustainability impact.](#)

### Proposed development (from SHLAA submission):

The site is proposed for housing on all or part of the site, where this is supported by local people. Development of the site would conserve and enhance the habitats along the adjoining stream and create new habitats on site. [The site promoter supports the allocation of the site for approximately 100 dwellings.](#)

## Site Selection – Site Commentary

[The land owner has confirmed that alternative land could be made available for the tenant farmer should the site be allocated for development.](#)

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	Site is within walking distance to local services and facilities as well as open countryside		The site is located on the edge of Mortimer, but within walking or cycling distance of local services and facilities and open countryside that would help to support an active healthy lifestyle, therefore, the site would have a positive impact on social and environmental elements of sustainability.
	Will it increase opportunities for access to sports facilities?	+	Site is close to sports facilities at the recreation ground, rights of way and open countryside.		
	Will it protect and enhance green infrastructure across the district?	?	A right of way crosses the site	Right of way would need to be protected through scheme design	
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	There are a range of services and employment opportunities close to Mortimer, although employment facilities within Mortimer itself are limited.		The proximity to local employment opportunities means that the site should have a positive economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	Regular bus services pass through the village. There is a station close to the village, although not within the village itself. There are local facilities and services within walking or cycling distance of the site.		The site has regular bus services and a railway station close to the village, therefore, along with opportunities for walking and cycling there should be a positive impact on environmental sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	0	The site is unlikely to have an impact on biodiversity or geodiversity.	An extended Phase 1 Habitat Survey would be required.	Development is unlikely to have an impact on any element of sustainability, although a habitat survey could indicate protected
	Will it conserve and	-	The site is surrounded three sides by	<a href="#">Mitigation measures would be</a>	

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	enhance the local distinctiveness of the character of the landscape?		countryside. Development of the site would have an impact, but the degree of this impact is unknown.	<a href="#">required as advised by a Landscape and Visual Impact Assessment.</a>	species on the site, which could mean development may have a negative impact on environmental sustainability.
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	+	The site is located on the edge of but quite well related to, the existing settlement.		Unlikely to have an impact on any element of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	0	The site is unlikely to have an impact on the District's heritage assets. There is archaeology to the south of the site.		
	Will it promote, conserve and enhance the District's cultural assets?	0	The site is unlikely to have an impact on the District's cultural assets		
	Will it provide for increased access to and enjoyment of the historic environment?	0	The site is unlikely to have an impact on the District's cultural assets		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	The site is unlikely to have an impact on air quality		Unlikely to have an impact on any element of sustainability
	Will the site be at risk from, or impact on, noise levels?	0	The site is unlikely to have an impact on noise		
	Will there be an impact on soil quality?	0	The site is unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	The site is unlikely to have an impact on water quality		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	The site is Greenfield		The Greenfield nature of the site means that there could be a negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will the site be subject to / at risk from flooding	?	The southern edge of site is adjacent to an area of surface water flood risk.	SUDs would need to be provided.	Good design of any proposed development should mean there is no impact on any element of sustainability.
<a href="#">11. To ensure a strong, diverse and sustainable economic base</a>	Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a> <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	Will it promote and support the vitality and viability of the District's commercial centres?	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects, [whether the development potential is 150 as originally assessed, or 110 as suggested by the site promoter](#),

The site scores positively in terms of the promotion of active, healthy lifestyles and opportunities for walking, cycling or public transport. There is potential for development on the site to have a negative impact on the character of the countryside, but should any development take place mitigation measures would need to be put in place. The site itself is not at risk from flooding, but is adjacent to an area which is at risk from surface water flooding; development without appropriate mitigation could lead to an increase risk of flooding, with a corresponding negative impact on sustainability.

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EKV	<b>Settlement:</b>	Mortimer	<b>Parish:</b>	Stratfield Mortimer
<b>Site ID:</b>	MOR001	<b>Site Address:</b>	Land at Kiln Lane, Mortimer	<b>Development Potential:</b>	151 dwellings (5.04ha at 30dph) <a href="#">110 dwellings</a>

**Recommendation:**

The site is not recommended for allocation

**Justification:**

Other sites within the village are close to local services and facilities. Development of this site would have an impact on the character of the landscape as it is surrounded by countryside on three sides.

[Mortimer Parish Council are in the process of producing a Neighbourhood Development Plan which will allocate a site or sites within Mortimer for approximately 100 dwellings. The Council are not looking to allocate sites in Mortimer.](#)

**Discussion:**

**Site Description:**

The site is located to the eastern edge of Mortimer, quite close to local services and facilities within the village, including the junior school which is approximately 800m from the site, recreation ground and local shop. A footpath crosses the site, which would need to be preserved should the site be developed.

[The development potential has been reduced as a result of the preferred options consultation as the site promoter has confirmed they would like the site considered for 110 dwellings.](#)

**Landscape:**

The site is surrounded on three sides by countryside, meaning that there could be an impact on the character of the landscape without appropriate mitigation.

**Flood Risk:**

The site is within FZ1. ~~Additionally,~~ It is adjacent to an area at risk from surface water flooding.

**Highways /Transport:**

Traffic generation from the site is expected to be limited. Access to the site could be provided with appropriate sight lines onto The Street.

There are bus stops near to the site with a regular bus service to ~~Tadley, Burghfield, Mortimer train station~~ and Reading.

There is a footway opposite the site, which is narrow in places.

A Transport Assessment would be required.

**Ecology:**

There are no known ecological issues on the site. ~~although an extended phase 1 habitat assessment would be required.~~ [An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected](#)

**Archaeology:**

The site is within a sensitive HLC type of early enclosure, adjacent to a former brickworks. Further assessment would be required, but it is unlikely to impact on deliverability.

**Education:**

The Infant school in Mortimer is at capacity. There is a small amount of capacity at the Junior School. Secondary school provision is provided by The Willink in Burghfield Common which is close to capacity.

**Environmental Health:**

No known air quality, noise or contamination issues.

## Site Selection – Site Commentary

### **Minerals and Waste:**

No known mineral deposits

No known waste issues.

### **Land use planning consultation zone:**

The site is within the outer AWE consultation zone. The development potential of the site is below the threshold for consultation with ONR.

~~General consultation with ONR on the principle of development within Mortimer will take place as part of the Preferred Options consultation.~~ [ONR have not raised any concerns regarding the proposed level of development in Mortimer.](#)

### **Environment Agency:**

The site is within SPZ2.

### **Thames Water:**

No comments received on this site.

### **Parish Council:**

The Parish Council see this site as extending the boundary of Mortimer. Access is poor and could only be gained from The Street, which would be on a bend. A drain runs through the site taking water to the brook to the south of the site resulting in drainage issues on the site.

[At preferred options the Parish Council did not comment specifically on this site. However, they stated that the allocation of development should be done through the Neighbourhood Development Plan, rather than through the DPD.](#)

### **Preferred Options consultation key issues:**

- [Access onto The Street](#)
- [Portable water across the site](#)
- [Overhead cables/potential buried electricity cable](#)
- [Flooding](#)
- [Impact on ecology \(badgers, owls, deer\)](#)

[Detailed comments were received from the site promoter requesting that the site be reconsidered with a reduced development potential of 110 dwellings.](#)

[For the consultation responses and the Council's response, please see the Statement of Consultation.](#)

### **SA/SEA:**

The SA/SEA indicates a predominantly neutral impact and does not highlight any significant issues, [whether the development potential is assessed as 150 as in the original assessment or for the 110 dwellings promoted by the site promoter](#). Development could have a negative impact on the character of the landscape as it is surrounded by countryside on three sites. Mitigation would be required to minimise this impact. There are a number of positive impacts on sustainability due to the site's location in relation to accessibility to local services and facilities. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

~~No specific proposals for the site have been submitted.~~ [Site promoted for up to 110 dwellings through the Preferred Options consultation.](#)

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	Site is opposite the recreation ground and within walking distance of local services and facilities.		The site is located on the edge of Mortimer, but within walking or cycling distance of local services and facilities and open countryside that would help to support an active healthy lifestyle, therefore, the site would have a positive impact on social and environmental elements of sustainability.
	Will it increase opportunities for access to sports facilities?	<b>+</b>	The site is opposite the recreation ground.		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	A right of way runs along the western edge of the site.	Right of way would need to be protected though site design	
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>+</b>	There are a range of services and employment opportunities close to Mortimer, although employment facilities within Mortimer itself are limited.		The proximity to local employment opportunities means that the site should have a positive impact on economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>+</b>	Regular bus services pass through the village. There is a station close to the village, although not within the village itself. There are local facilities and services within walking or cycling distance of the site.		The site has regular bus services and a railway station close to the village, therefore, along with opportunities for walking and cycling there should be a positive impact on environmental sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	<b>?</b>	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	<b>-</b>	The site is adjacent to a BOA and trees protected by TPOs.	Appropriate buffers for the TPOs would be required. The location of the BOA means that there would be opportunities on the site to improve biodiversity.	With appropriate mitigation development is unlikely to have an impact on any element of sustainability. Without mitigation there would be a negative impact
	Will it conserve and	<b>0</b>	The site would extend the <a href="#">boundary</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	enhance the local distinctiveness of the character of the landscape?		<a href="#">of the village slightly into the countryside, however, it is unlikely that this would have an impact on the character of the landscape, as the field is well contained and screened.</a>		on environmental sustainability.
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	+	Site is well related to the existing settlement		Unlikely to have an impact on any element of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	0	The site is close to pre-historic burial finds, but the site itself is unlikely to have an impact on heritage assets		
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact on cultural assets		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact on the historic environment.		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will there be an impact on air quality?	0	Unlikely to have an impact on air quality		Unlikely to have an impact on any element of sustainability
	Will there be an impact noise levels?	0	Unlikely to have an impact on noise levels		
	Will there be an impact on soil quality?	0	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Site is Greenfield		The Greenfield nature of the site means that there could be a negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will the site be subject to / at risk from flooding	-	Southern half of the site is within an area of surface water flood risk.	An FRA and appropriate mitigation including SUDs would need to be provided.	Part of the site is subject to flood risk, which could lead to a negative impact on social and environmental sustainability should any future development on the site flood. Appropriate mitigation should reduce this impact.
11. <a href="#">To ensure a strong, diverse and sustainable economic base</a>	Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	Will it promote and support the vitality and viability of the District's commercial centres?	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

The site scores positively in relation to the promotion of active, healthy lifestyles as it is close to local services and facilities. The southern part of the site is an area of surface water flood risk which could have a negative impact on any development that may take place on the site, without appropriate mitigation provided. There is also a potentially negative impact on biodiversity and geodiversity unless appropriate mitigation is provided.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** East Kennet Valley

**Duration:** Permanent

**Timing:** Short to Long term.

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EKV	<b>Settlement:</b>	Mortimer	<b>Parish:</b>	Stratfield Mortimer
----------------------	-----	--------------------	----------	----------------	---------------------

<b>Site ID:</b>	MOR005	<b>Site Address:</b>	Land adjoining West End Road, Mortimer	<b>Development Potential:</b>	47 50 dwellings (1.57ha at 30dph)
-----------------	--------	----------------------	--	-------------------------------	--------------------------------------

### Recommendation:

The site is [not](#) recommended for allocation

### Justification:

The site is well related to the existing settlement, close to local services and facilities. There are no significant issues on the site.

The site is within FZ1. While the site is at risk from surface water flooding, there is no evidence of the site flooding. An FRA would be required, with appropriate mitigation including SUDs.

[Mortimer Parish Council are in the process of producing a Neighbourhood Development Plan which will allocate a site or sites within Mortimer for approximately 100 dwellings. The Council are not looking to allocate sites in Mortimer.](#)

### Discussion:

#### Site Description:

The site is located to the south west of Mortimer. It is well related to the existing settlement with development on two sides. The site is close to local services and facilities (including the infant school, recreation ground and local shop).

A footpath runs along the eastern boundary of the site and would need to be preserved should the site be developed.

#### Landscape:

No assessment work has been carried out on the character of the landscape.

#### Flood Risk:

The southern part of the site is within a surface water flood risk area. The site is within FZ1. An FRA would be required and appropriate mitigation including SUDs provided. Careful design of any development will also help to reduce the risk of flooding.

#### Highways /Transport:

The impact of traffic generated from the site is considered to be limited, although a Transport Assessment would be required.

Access onto West End Road can be achieved with appropriate sight lines.

The site is close to bus stops with a regular service to Tadley, Burghfield, ~~Mortimer train station~~ and Reading.

#### Ecology:

There are no known ecological issues on the site. Adjacent to the site there are trees protected by TPOs, although with appropriate buffers this would not impact on deliverability. [The site is adjacent to a Biodiversity Opportunity Area.](#)

#### Archaeology:

Some archaeological features are present on the site, and the site is close to prehistoric burial mounds. However, this is unlikely to impact on deliverability.

#### Education:

The Infant school in Mortimer is at capacity. There is a small amount of capacity at the Junior School. Secondary school provision is provided by The Willink in Burghfield Common which is close to capacity.

#### Environmental Health:

There are no known air quality, noise or contamination issues.

## Site Selection – Site Commentary

### Land use planning consultation zone:

The site is in the outer AWE consultation zone, but due to the development potential consultation with ONR is not required.

~~General consultation with ONR on the principle of development within Mortimer will take place as part of the Preferred Options consultation.~~ [ONR have not raised any concerns regarding the proposed level of development in Mortimer.](#)

### Environment Agency:

The site is within SPZ2.

### Thames Water:

~~No water supply infrastructure issues envisaged.~~ [Concern regarding Water Supply Capability. The existing network is unlikely to be able to support the demand. Water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.](#)

Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A [water supply and](#) drainage strategy would be required

### Parish Council:

The Parish Council sees this as extending the village to the west. The site is not considered to be well related to the main area of the village.

[At preferred options the Parish Council did not comment specifically on this site. However, they stated that the allocation of development should be done through the Neighbourhood Development Plan, rather than through the DPD.](#)

### Preferred Options consultation key issues:

- [The NDP should allocate sites in Mortimer](#)
- [Impact on village community](#)
- [Spatial strategy of development in Mortimer](#)
- [Use of brownfield land first](#)
- [Impact on local character](#)
- [Impact on traffic/congestion](#)
- [Parking pressures](#)
- [Poor public transport services](#)
- [Pressure on infrastructure \(schools, doctors, sewage system\)](#)
- [Flood risk](#)
- [Impact on wildlife](#)

[Comments from site promoter supported the allocation of the site.](#)

[For the consultation responses and the Council's response, please see the Statement of Consultation.](#)

### SA/SEA:

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

The site scores positively in relation to the promotion of active, healthy lifestyles as it is close to local services and facilities. The southern part of the site is an area of surface water flood risk which could have a negative impact on any development that may take place on the site, without appropriate mitigation provided. There is also a potentially negative impact on biodiversity and geodiversity unless appropriate mitigation is provided. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### Proposed development (from SHLAA submission):

The site is proposed for a mix of dwellings types and sizes, including affordable homes.

## Summary of Site Assessment

### Key Issues:

- Greenfield
- Surface water flood risk
- Access
- Overhead cables
- AWE outer consultation zone

## Site Assessment

<b>Parish Council consultation response:</b>	<p>This site is seen as the most logical site for the village. Access to the site is ok. Tower House, The Street immediately to the north of the site have been demolished and there is planning permission to replace them with 4 new detached dwellings (applicant is T.A. Fisher). The proposed 170 dwellings are considered too many for the site. Traffic is not seen as a huge issue, as long as a smaller number of houses were proposed. Access to the railway station is not great.</p> <p><a href="#">At preferred options the Parish Council did not comment specifically on this site. However, they stated that the allocation of development should be done through the Neighbourhood Development Plan, rather than through the DPD.</a></p>

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site is opposite the recreation ground and close to local services and facilities.		The site is located on the edge of Mortimer, but within walking or cycling distance of local services and facilities and open countryside that would help to support an active healthy lifestyle, therefore, the site would have a positive impact on social and environmental elements of sustainability.
	Will it increase opportunities for access to sports facilities?	+	The site is opposite the recreation ground		
	Will it protect and enhance green infrastructure across the district?	0	A right of way runs along the eastern boundary of the site	The right of way would need to be preserved as part of any site design.	
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	There are a range of services and employment opportunities close to Mortimer, although employment facilities within Mortimer itself are limited.		The proximity to local employment opportunities means that the site should have a positive economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	Regular bus services pass through the village. There is a station close to the village, although not within the village itself. There are local facilities and services within walking or cycling distance of the site.		The site has regular bus services and a railway station close to the village, therefore, along with opportunities for walking and cycling there should be a positive impact on environmental sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	-	There are TPOs to the west of the site. The site is near to a site with Great Crested Newts.	Appropriate buffered would need to be provided. An extended phase 1 habitat survey would be required.	Development could have a negative impact on environmental sustainability, if appropriate buffers and ecological
	Will it conserve and	0	The site is surrounded by residential

				including SUDs would be required.	appropriate mitigation and good design this impact can be minimised.
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

Due to its central location within the village the site scores positively in relation to opportunities for walking and cycling and healthy, active lifestyles. There is potential for flood risk on the site, which could have a negative impact unless appropriate mitigation measures are implemented. Mitigation would also be required in terms of ecology and biodiversity to ensure there would not be a negative impact on environmental sustainability.

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### Summary of effects:

**Effect:** Predominantly neutral

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Likelihood:** High

**Scale:** East Kennet Valley

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EKV	<b>Settlement:</b>	Mortimer	<b>Parish:</b>	Stratfield Mortimer
<b>Site ID:</b>	MOR006	<b>Site Address:</b>	Land to the south of St John's Church of England School, Victoria Road, Mortimer	<b>Development Potential:</b>	<del>90-110</del> dwellings (3ha at 30dph)

### Recommendation:

The site is not recommended for allocation

### Justification:

~~The site is located to the south of Mortimer, surrounded by residential development on three sides. Close to local services and facilities within the village.~~

~~Access issues would need to be resolved.~~

Mortimer Parish Council are in the process of producing a Neighbourhood Development Plan which will allocate a site or sites within Mortimer for approximately 100 dwellings. The Council will not be allocating development in Mortimer.

### Discussion:

#### Site Description:

The site is well related to Mortimer village surrounded on three sides by residential development. The site has good access to local services and facilities as well as the open countryside.

A footpath runs along the eastern boundary of the site and would need to be preserved should any development take place.

Telegraph poles cross the site and would need to be taken into account.

Only the northern part of the site is proposed for development.

#### Landscape:

No landscape assessment has been done.

#### Flood Risk:

The site is within FZ1. The site is at risk from surface water flooding along two small linear lines. An FRA and appropriate mitigation, including SUDs, would be required.

#### Highways /Transport:

~~Access to this site is a significant issue, with no obvious access point. The Avenue is a private street, which is unsuitable for additional traffic without being brought up to an adoptable standard. Sight lines at The Avenue / The Street junction are also limited.~~

~~There is concern regarding additional traffic impact in close proximity to the infant school.~~

At preferred options access was a significant constraint to development of this site. However, the site promoter has confirmed that access will be gained to the site via the TA Fisher site to the north of the site. This access point is way from the infant school and therefore, would reduce any possible road safety issues with having access close to the school.

There are bus stops with a regular bus service to Tadley, Burghfield, Mortimer train station and Reading near to the site.

#### Ecology:

The site is close to a site with Great Crested Newts. ~~An extended phase 1 habitat survey is required.~~ An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected.

There are trees protected by TPOs adjacent to the site, but with appropriate buffers this should not have an impact on deliverability.

## Site Selection – Site Commentary

### Archaeology:

There is no known archaeology on this site.

### Education:

The Infant school in Mortimer is at capacity. There is a small amount of capacity at the Junior School. Secondary school provision is provided by The Willink in Burghfield Common which is close to capacity.

### Environmental Health:

There are no known air quality, noise or contamination issues.

### Minerals and Waste:

No known mineral deposits.

No known waste issues.

### Land use planning consultation zone:

The site is in the outer AWE consultation zone, but due to the development potential consultation with ONR is not required.

~~General consultation with ONR on the principle of development within Mortimer will take place as part of the Preferred Options consultation.~~ [ONR have not raised any concerns regarding the proposed level of development in Mortimer.](#)

### Environment Agency:

The site is within SPZ2 and [there is](#) an ordinary watercourse [present on the site](#).

### Thames Water:

~~No comments regarding water supply have been received.~~ [Concern regarding Water Supply Capability. The existing network is unlikely to be able to support the demand. Water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.](#)

Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A [water supply and](#) drainage strategy would be required

### Parish Council:

This site is seen as the most logical site for the village. Access is considered to be ok. The proposed 170 dwellings are considered too many for the site. Traffic is not seen as huge issues, as long as a smaller number of houses are proposed. Access to the railway station is not good.

[At preferred options the Parish Council did not comment specifically on this site. However, they stated that the allocation of development should be done through the Neighbourhood Development Plan, rather than through the DPD.](#)

[Discussions with the NDP steering group suggest that this site is their preferred site for allocation, to include land safeguarded for a new infant school and doctors surgery.](#)

### Preferred Options consultation key issues:

- [NDP should allocate development](#)
- [Impact on character of Mortimer](#)
- [Level of development is not justified](#)
- [Spatial strategy](#)
- [Use of brownfield land before developing on Greenfield sites](#)
- [Pressure on infrastructure \(Schools, doctors, sewage\)](#)
- [Should move the junior school to this site and build on the junior school site](#)
- [Traffic/congestion](#)
- [Access cannot be achieved](#)
- [Parking](#)
- [Limited public transport](#)

## Site Selection – Site Commentary

- [Loss of green space](#)
- [Flood risk](#)
- [Impact on wildlife](#)
- [Consultation process](#)

[Response from the site promoter supports the allocation of the site, and is willing to work with who even allocates the site \(the Council or the NDP\).](#)

[For the consultation responses and the Council's response, please see the Statement of Consultation.](#)

### **SA/SEA:**

The SA/SEA indicates a predominantly neutral sustainability impact and does not highlight any significant sustainability issues. Due to its central location within the village the site scores positively in relation to opportunities for walking and cycling and healthy, active lifestyles. There is potential for flood risk on the site, which could have a negative impact unless appropriate mitigation measures are implemented. Mitigation would also be required in terms of ecology and biodiversity to ensure there would not be a negative impact on environmental sustainability. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

~~There are many positive impacts as the site is well related to local services and facilities within the village. A small area of flood risk is a potential negative impact, but with appropriate design and mitigation measures, including SUDs, this impact would be minimised. There is potential for a negative impact on ecology and biodiversity, but with appropriate mitigation again this impact would be minimised.~~

### **Proposed development (from SHLAA submission):**

The site is proposed for a mix of dwellings types and sizes, including affordable housing.

### Summary

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

There are a number of positive impacts as the site is close to local services and facilities and well related to existing development. The main negative impact of the site is that there is a risk and history of surface water flooding. Mitigation measures could help to reduce this risk. ~~The NPPF sequential test requires that where there are options without a risk of flooding these are considered before sites with a risk of flooding.~~ Development without appropriate mitigation could also have a negative impact on ecology and biodiversity. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** East Kennet Valley

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EKV	<b>Settlement:</b>	Mortimer	<b>Parish:</b>	Stratfield Mortimer
----------------------	-----	--------------------	----------	----------------	---------------------

<b>Site ID:</b>	MOR008	<b>Site Address:</b>	Land to the north east of Spring Lane, Mortimer	<b>Development Potential:</b>	15 dwellings (0.5ha at 30dph)
-----------------	--------	----------------------	---	-------------------------------	-------------------------------

**Recommendation:**

The site is not recommended for allocation

**Justification:**

[Mortimer Parish Council are in the process of producing a Neighbourhood Development Plan which will allocate a site or sites within Mortimer for approximately 100 dwellings. The Council are not proposing to allocate sites in Mortimer.](#)

~~While the site is well related to existing services and facilities and well related to existing development surface water flooding is a concern. There are other sites within the village which do not have the same level of flood risk, or history of flooding which are considered more appropriate for development in line with the sequential approach.~~

**Discussion:**

**Site Description:**

The site is located to the north of Mortimer and is well related to the existing settlement of Mortimer. There is good access to local services and facilities, including access to the countryside.

The footpath along the eastern boundary of the site.

**Landscape:**

No landscape assessment work has been carried out for this site.

**Flood Risk:**

The site is within FZ1. The site is at risk from surface water flooding and Spring Lane has a history of flooding, including of properties. An FRA would be required and appropriate mitigation could reduce this risk.

[An FRA was submitted as part of the preferred options consultation, this has been reviewed by the Council's Highways Drainage Team and is considered acceptable.](#)

**Highways /Transport:**

It is anticipated that the impact of additional traffic generation would be limited.

Regular bus services to Tadley, Burghfield; ~~Mortimer train station~~ and Reading pass near to the site.

**Ecology:**

~~There are no known ecology issues on the site. An extended phase 1 habitat survey would be required.~~ [An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected](#)

There are trees protected by TPOs adjacent to the site. With appropriate buffers it is not considered that this would impact on deliverability.

**Archaeology:**

There is possible archaeology on the site, but no previous work has been done.

**Education:**

The Infant school in Mortimer is at capacity. There is a small amount of capacity at the Junior School. Secondary school provision is provided by The Willink in Burghfield Common which is close to capacity.

**Environmental Health:**

There are no known air quality, noise or contamination issues

**Minerals and Waste:**

## Site Selection – Site Commentary

No known mineral deposits.

No known waste issues.

### **Land use planning consultation zone:**

The site is in the outer AWE consultation zone, but due to the development potential consultation with ONR is not required.

~~General consultation with ONR on the principle of development within Mortimer will take place as part of the Preferred Options consultation.~~ [ONR have not raised any concerns regarding the proposed level of development in Mortimer.](#)

### **Environment Agency:**

The site is within SPZ2 and has an ordinary watercourse [is present on the site](#).

### **Thames Water:**

No water supply infrastructure issues envisaged.

No wastewater infrastructure issues envisaged.

### **Parish Council:**

The parish council are concerned about flood risk on this site. Flooding occurred in 2007 with water flowing down spring lane. EA drainage works are proposed for part of this site.

[At preferred options the Parish Council did not comment specifically on this site. However, they stated that the allocation of development should be done through the Neighbourhood Development Plan, rather than through the DPD.](#)

### **Preferred Options consultation key issues:**

- [Site does not suffer from surface water flooding \(when ditches maintained\)](#)

[The Site promoter submitted comments and a FRA, asking the site to be reassessed in light of the FRA.](#)

[For the consultation responses and the Council's response, please see the Statement of Consultation.](#)

### **SA/SEA:**

The SA/SEA indicates a predominantly neutral sustainability impact does not highlight any significant sustainability issues. There are a number of positive impacts as the site is close to local services and facilities and well related to existing development. The main negative impact of the site is that there is a risk and history of surface water flooding. Mitigation measures could help to reduce this risk. ~~The NPPF sequential test requires that where there are options without a risk of flooding these are considered before sites with a risk of flooding.~~ Development without appropriate mitigation could also have a negative impact on ecology and biodiversity. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The site is proposed for a mix of dwellings types and sizes including affordable housing.

-------------------------------	-------------------------------	--------------------------	---------------------------

## Summary of Site Assessment

### Key Issues:

- AWE inner consultation zone.

## Site Assessment

<b>Parish Council consultation response:</b>	Parish Council like this site, although there are concerns that any development here could set a precedent. Should the site ever come forward the parish council would like a car park for the recreation ground to be built. Parish Council would like to see more affordable housing in the village for local people.

## Summary of Site Assessment

### Key Issues:

- AWE inner consultation zone

## Site Assessment

<b>Parish Council consultation response:</b>	Parish Council would object if this site ever came forward. Development here would spoil the views from the village into open countryside, and would break away from the largely linear nature of development within the village. However, the Parish Council would like to see more affordable housing for local people within the village, so there could be potential for a rural exception site to the north, adjacent to Wasing Lane. The Parish Council would like to see a car park behind the Parish Hall should the site ever be developed.

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	The site is close to the village hall and park, but there are limited facilities within walking distance of the site. The site is also close to the Canal towpath.		The site is located on the edge of Woolhampton, close to local services and facilities and the open countryside that would help to support an active healthy lifestyle. Therefore, the site would have a positive impact on social and environmental sustainability.
	Will it increase opportunities for access to sports facilities?	<b>0</b>	The site is close to the village hall and park, but there are limited sports facilities within the village		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	There is limited GI within the village and the site would not be big enough to provide any new GI.		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>+</b>	There are limited facilities within the village, although the site has good access to the Railway line and strategic road network (A4)		The proximity to local employment opportunities means that the site should have a positive economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>+</b>	There is a regular bus service serving the village and the railway station is close to the site. There are opportunities for walking and cycling within the village although there are a limited number of facilities within the village itself.		The site has regular bus services and a railway station close to the village, therefore, along with opportunities for walking and cycling there should be a positive impact on environmental sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	<b>?</b>	The access to the site would be onto the A4. Additional traffic could result in road safety concerns, but any development would have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	<b>-</b>	Adjacent to Ancient Woodland, Local Wildlife Site and BOA	Appropriate buffers would be required	Development could have a negative impact on environmental sustainability unless appropriate buffers to the ancient woodland are
	Will it conserve and	<b>0</b>	The site is unlikely to have an impact		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	enhance the local distinctiveness of the character of the landscape?		on the character of the landscape		provided.
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	+	The site is well related to the existing development.		Development would be unlikely to have an impact on any element of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	0	There are no heritage assets in Woolhampton		
	Will it promote, conserve and enhance the District's cultural assets?	0	There are no culture assets in Woolhampton		
	Will it provide for increased access to and enjoyment of the historic environment?	0	The site is unlikely to have an impact on access to the historic environment although it is near to the Canal.		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	-	The site is adjacent to the A4, so there is potential for air quality to impact on the site	Careful design and appropriate mitigation should reduce the impact.	Development of the site could have a negative impact on social sustainability due to potential noise and air pollution. With appropriate mitigation this risk should be minimised.
	Will the site be at risk from, or impact on, noise levels?	-	The site is adjacent to the A4, so there is potential for noise pollution on the site.	Careful design and appropriate mitigation should reduce the impact.	
	Will there be an impact on soil quality?	0	The site is unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	The site is unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	The site is Greenfield		The Greenfield nature of the site means that there could be a negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will the site be subject to / at risk from flooding	<b>0</b>	There is no flood risk on this site.	SUDs would be required to manage the site's drainage.	Unlikely to have an impact on any element of sustainability.
<a href="#">11. To ensure a strong, diverse and sustainable economic base</a>	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<b>0</b>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<b>0</b>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significant sustainability effects on the site, and in many cases development on this site will not have an impact on the sustainability objectives. The proximity of the site to local services and facilities will bring sustainability benefits – the site will encourage active healthy lifestyles and opportunities for walking, cycling and public transport. The site could potentially have a negative impact on environmental sustainability in terms of biodiversity unless appropriate mitigation measures are provided to protect the adjacent designated areas. The proposals for the site have taken this into account, so it is anticipated that this potential negative impact would be neutralised with mitigation. The site's proximity to the A4 gives another potential negative impact on social sustainability in terms of air and noise pollution. With appropriate mitigation it is likely that this impact would be required. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** East Kennet Valley

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EKV	<b>Settlement:</b>	Woolhampton	<b>Parish:</b>	Midgham
----------------------	-----	--------------------	-------------	----------------	---------

<b>Site ID:</b>	WOOL001	<b>Site Address:</b>	Land to the north of Bath Road, Woolhampton	<b>Development Potential:</b>	20 dwellings (0.66ha at 30dph)
-----------------	---------	----------------------	---	-------------------------------	--------------------------------

**Recommendation:**

~~The site is recommended as an option for allocation (Alternative to WOOL006)~~  
[At preferred options the site was recommended as an option for allocation.](#)  
[The site is no longer recommended for allocation.](#)

**Justification:**

[At preferred options this site and WOOL006 were recommended as alternatives, with the decision of which site to be allocated to be made following the consultation. Following the consultation there is a preference from the Parish Council and members of the public for development to take place on WOOL006. This site is located adjacent to ancient woodland, and while buffers could mitigate the impact, it is not a restriction faced by WOOL006.](#)

~~The site is well related to the existing development in Woolhampton, close to local services and facilities. There are no significant issues with the site.~~

**Discussion:**

**Site Description:**

The site is located to the west of Woolhampton, north of the A4. Adjacent to existing development on New Road Hill. The site is opposite the village hall and had good access to local services and facilities including the Kennet and Avon Canal. The site is situated on a slope.

Electricity pylons run along the site boundary and an oil pipeline crosses the site. These would need to be taken into consideration should the site be developed.

**Landscape:**

No assessment of the landscape character has been made

**Flood Risk:**

The site is within FZ1. SUDs would be required to manage the site's drainage should it be developed.

**Highways /Transport:**

The proposed site should not have a significant impact on the highway network. Access should be taken from New Road Hill rather than the A4.

Footways would need to be provided to link the site into the existing footway network.

There are a number of public transport options, with a regular bus service and train station in the village.

**Ecology:**

The site is adjacent to ancient woodland a local wildlife site, BOA and trees protected by TPOs. . Appropriate buffers would be required.

**Archaeology:**

No known archaeology on the site.

**Education:**

Primary school provision in the village is at or near to capacity. Secondary school pupils have a choice of schools across the district. The site is on the boundary between Kennet School and Theale Green's catchment areas.

**Environmental Health:**

The proximity of the site to the A4 could lead to air quality or noise issues without appropriate mitigation. There is potential for contamination which would need to be assessed and appropriate mitigation provided should the site be developed.

**Minerals and Waste:**

## Site Selection – Site Commentary

No known mineral deposits

No known waste issues

### Land use planning consultation zone:

The site is in the middle AWE consultation zone. ~~It is above the threshold for consultation with ONR, therefore, consultation on the site would be required.~~ [ONR have not raised any concerns regarding the proposed level of development in Woolhampton.](#)

~~Consultation with ONR will take place as part of the Preferred Options Consultation.~~

### Environment Agency:

Within SPZ3 and an adjacent site has previously been investigated for potential contamination.

### Thames Water:

[No concern raised regarding water supply capacity.](#)

Concern regarding ~~waste~~Waste Water Supply capability. Current ~~waste~~waste water supply network in this area is unlikely to be able to support the demand from this site. ~~Waste~~Waste water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of any development.

A ~~drainage~~water supply strategy would be required.

~~No wastewater infrastructure issues envisaged.~~

### Parish Council:

The parish council did not comment on this site [prior to the preferred options](#).

[At preferred options the Parish Council commented that development of the site would extend the village westwards, and that the site is located in Midgham Parish so any CIL monies raised from development of the site would be unlikely to be spent in Woolhampton. Concern was also raised over additional traffic movements onto New Road Hill. The Parish Council stated a preference for WOOL006 to be allocated for development.](#)

### Preferred Options consultation key issues:

- [The site is not in Woolhampton, so any CIL money from the site would not be spent in the village](#)
- [Oil pipeline present on northern part of the site](#)
- [Proposed development to dense](#)
- [Impact on adjacent Ancient woodland/Local Wildlife site](#)
- [Need to improve village infrastructure \(Car parking, transport links, local amenities\)](#)
- [Sewage capacity in Station Road](#)
- [Flooding from New Road Hill across the A4](#)
- [Access close to junction with New Road Hill/A4.](#)
- [Additional traffic impact at New Road Hill/A4 junction](#)
- [Unable to provide pavement along New Road Hill](#)

[For consultation responses and the Council's response, please see the Statement of Consultation.](#)

### SA/SEA:

The SA/SEA indicates a predominantly neutral sustainability impact. There are no significant sustainability effects on the site, and in many cases development on this site will not have an impact on the sustainability objectives. The proximity of the site to local services and facilities will bring sustainability benefits – the site will encourage active healthy lifestyles and opportunities for walking, cycling and public transport. The site could potentially have a negative impact on environmental sustainability in terms of biodiversity unless appropriate mitigation measures are provided to protect the adjacent designated areas. The proposals for the site have taken this into account, so it is anticipated that this potential negative impact would be neutralised with mitigation. The site's proximity to the A4 gives another potential negative impact on social sustainability in terms of air and noise pollution. With appropriate mitigation it is likely that this impact would be required. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

## Site Selection – Site Commentary

**Proposed development (from SHLAA submission):**

The site is being promoted for approximately 20 dwellings. The developable area has taken into account the biodiversity and oil pipeline restrictions on the site.

## Site Assessment

<b>Parish Council consultation response:</b>	No Comments made on this site
--	-------------------------------

A) Automatic exclusion			
Criteria		Yes/No*	Comments
Less than 5 dwellings		N/Y	
Planning Permission		N	
Within flood zone 3		N	
Within significant national or international habitat / environmental / historical protection	SSSI	N	
	SAC	N	
	SPA	N	
	Registered Battlefield	N	
	Grade 1 / II* Park and Gardens	N	
Landscape	Adverse impact on the character of AONB (from LSA)	N	
SHLAA Assessment	Not Currently developable	N	
Land Use	Protected Employment Land	N	
AWE consultation zone	Inner	N	
Relative scale in relation to settlement role and function	Inappropriate in scale to the role and function of settlement within the settlement hierarchy.	N	
Within settlement boundary		N	Adjacent to the settlement boundary

\* Any Yes response will rule the site out.

B) Considerations			
Criteria		Yes / No / Adjacent / Unknown	Comments
Land use	Previously Developed Land	A	Combined Greenfield/Brownfield Land
	Racehorse Industry	N	
Flood risk	Flood Zone 2	Y	The EA strongly recommends that this site is not allocated for development. 65% of the site is within FZ2.
	Groundwater flood risk	N	
	Surface water flood risk	N	
	Critical Drainage Area	N	
Contamination / pollution	Air Quality	Y	Site is adjacent to the railway line
	Contaminated Land	A	There is potential for pollution on the site, due to its use for rail industry storage.
	Other	Y	Noise could be an issue due to the proximity of the railway line.
Highways / Transport	Access issues	Y	Access would appear to be difficult as an adoptable road would be required. Access would need to be onto Station Road just north of the railway station and level crossing. Loss of any car parking at the station would be opposed.
	Highway network suitability	N	Development would generate approximately 60 daily vehicle movements, including around 6 during the 08:00 to 09:00 AM peak. This is unlikely to have a significant impact on the highway network.
	Public Transport network	Y	30 min bus service between Newbury and Reading and railway station linking Woolhampton to Reading and London Paddington and Newbury and the west.
	Footways/Pavements	Y	There are narrow footways throughout Woolhampton. Footways would need to be provided to link the site to the existing footway network.

## Site Selection – Site Assessment

<b>Landscape</b>	Located in AONB	N

### Key: Effects of option on SA objectives

++	+	?	0	-	--
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well-being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site is close to the village hall and park, but there are limited facilities within walking distance of the site. The site is also close to the Canal towpath.		The site is located on the edge of Woolhampton, close to local services and facilities and the open countryside that would help to support an active healthy lifestyle. Therefore, the site would have a positive impact on social and environmental sustainability.
	Will it increase opportunities for access to sports facilities?	0	The site is close to the village hall and park, but there are limited sports facilities within the village		
	Will it protect and enhance green infrastructure across the district?	0	There is limited GI within the village and the site would not be big enough to provide any new GI. The site does have easy access to the Canal.		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	There are limited facilities within the village, although the site has good access to the Railway line and strategic road network (A1)		The proximity to local employment opportunities means that the site should have a positive economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	There is a regular bus service serving the village and the railway station is close to the site. There are opportunities for walking and cycling within the village although there are a limited number of facilities within the village itself. The site is close to the Canal.		The site has regular bus services and a railway station close to the village, therefore, along with opportunities for walking and cycling there should be a positive impact on environmental sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	?	The site is close to the level crossing at the railway station, therefore there would be potential for road safety concerns	Consultation with Network Rail would be required.	
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets	?	Site is within a BOA	BOAs provide opportunities for improvements to biodiversity. An extended phase 1 habitat	Development has the potential to have a negative impact on environmental

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	across West Berkshire?			survey would be required.	sustainability, or to have a positive impact depending on the findings of the habitat survey and the mitigation measures introduced.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	0	The site is unlikely to have an impact on the character of the landscape		
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	+	Development of the site is likely to improve the character of the surrounding built environment. The site is well related to existing development.		Development would be unlikely to have an impact on any element of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	0	There are no heritage assets in Woolhampton		
	Will it promote, conserve and enhance the District's cultural assets?	0	There are no culture assets in Woolhampton		
	Will it provide for increased access to and enjoyment of the historic environment?	0	The site is unlikely to have an impact on access to the historic environment although it is near to the Canal.		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	?	While the site is adjacent to the railway line stopping trains are hourly and so unlikely to have an impact on air quality.	Air quality mitigation may be required.	The site could have a mixed impact on various elements on sustainability. Noise and air pollution could have a negative impact on social sustainability unless appropriate mitigation measures are introduced. Cleaning up of contamination would have an opportunity to improve the environmental sustainability of the site.
	Will the site be at risk from, or impact on, noise levels?	-	The site is adjacent to the railway line.	A noise survey and appropriate mitigation would be required.	
	Will there be an impact on soil quality?	+ / ?	The site has potential for contamination, therefore development of the site would improve the soil quality.	If there is contamination on the site development would have the opportunity to improve the soil quality as part of the clean up process.	
	Will there be an impact on water quality?	0	The site is unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	+	The site is previously developed land		Developing previously developed land has benefits of all elements of sustainability.
10. To reduce emissions contributing to climate	Will it reduce West Berkshire's contribution to	?	The level of impact depends on location, building materials /	Mitigation could also include Transport Assessment / Travel	Without consideration of sustainability construction

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
change and ensure adaptation measures are in place to respond to climate change	greenhouse gas emissions?		construction, transport / design	Plans.	techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	-	The site is within flood zone 2.	An FRA and appropriate mitigation, including SUDs, would be required.	Flooding can have an impact on all elements of sustainability. An FRA will highlight the mitigation measures required to minimise the risk. The sequential test in the NPPF states that sites with a risk of flooding should only be considered if there are no suitable alternatives.

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects. The site is close to local services and facilities offering positive effects in terms of sustainability and scores positively in terms of health, active lifestyles and opportunities for walking, cycling and public transport. The site is also previously developed land and development of the site could result in an improvement to the soil quality and general character of the area surrounding the site. However, there are potential negative impacts due to the site's location within flood zone 2 and the proximity to the railway line. Flooding has the potential to impact on all elements of sustainability, and air and noise pollution can impact on environmental and social sustainability. Mitigation measures would need to be considered to reduce the impact.

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** East Kennet Valley

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EKV	<b>Settlement:</b>	Woolhampton	<b>Parish:</b>	Woolhampton
----------------------	-----	--------------------	-------------	----------------	-------------

<b>Site ID:</b>	WOOL002	<b>Site Address:</b>	Station Yard, Woolhampton	<b>Development Potential:</b>	10 dwellings (0.33ha at 30dph) <a href="#">≤5 dwellings</a>
-----------------	---------	----------------------	------------------------------	-------------------------------	--

**Recommendation:**

The site is not recommended for allocation

**Justification:**

While the site is well related to the existing settlement and close to local services and facilities, access to the site and the risk of flooding mean that the site is not considered suitable for allocation.

The Environment Agency recommends that this site is not allocated.

**Discussion:**

**Site Description:**

The site is located to the south west of Woolhampton adjacent to the railway line. The site has good access to local services and facilities including the Kennet and Avon Canal.

**Landscape:**

No assessment has been made regarding the landscape character of the area.

**Flood Risk:**

65% of the site is within FZ2, and there is a history of flooding in the area related to the Thames Water network.

An FRA would be required and appropriate mitigation, including SUDs provided should the site be developed.

**Highways /Transport:**

The potential traffic generated by the site is not considered to have a significant impact on the highway network.

Access to the site is a concern, due to the width of the current access road and the proximity to the level crossing at the station. An adoptable road would be required, which would need additional land to be acquired.

**Ecology:**

Part of the site is within a BOA. An extended phase 1 habitat survey would be required.

**Archaeology:**

No known archaeological issues on the site.

**Education:**

Primary school provision in the village is at or near to capacity. Secondary school pupils have a choice of schools across the district. The site is on the boundary between Kennet School and Theale Green's catchment areas.

**Environmental Health:**

There is potential for contaminated land on the site due to previous land uses. Further assessment would be required.

The site's proximity to the railway line could lead to air and noise pollution issues. Appropriate surveys and mitigation work would be required.

**Minerals and Waste:**

The site is partly underlain with gravel deposits. Consideration of RMLP policies 1 & 2 required.

No known waste issues.

## Site Selection – Site Commentary

### **Land use planning consultation zone:**

The site is within the middle AWE consultation zone. The development potential is below the threshold for consultation with ONR.

General consultation with ONR on all sites within the East Kennet Valley will take place as part of the preferred options consultation.

### **Environment Agency:**

Strong recommendation that the site is not allocated due to the site's location in flood zone 2. The site is within SPZ2, has an ordinary watercourse running through it and has previously been investigated for potential contamination.

### **Thames Water:**

No water supply infrastructure issues envisaged.

Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A drainage strategy would be required

### **Parish Council:**

The parish council did not comment on this site.

### **SA/SEA:**

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects. The site is close to local services and facilities offering positive effects in terms of sustainability and scores positively in terms of health, active lifestyles and opportunities for walking, cycling and public transport. The site is also previously developed land and development of the site could result in an improvement to the soil quality and general character of the area surrounding the site. However, there are potential negative impacts due to the site's location within flood zone 2 and the proximity to the railway line. Flooding has the potential to impact on all elements of sustainability, and air and noise pollution can impact on environmental and social sustainability. Mitigation measures would need to be considered to reduce the impact.

### **Proposed development (from SHLAA submission):**

No specific proposal for the site has been submitted.

10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	<b>?</b>	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will the site be subject to / at risk from flooding	- -	Half the site is within FZ2 and 3. The NPPF states that residential development is not appropriate in Flood zone 3 due to the significant flood risk	An FRA and significant flood mitigation, including SUDs, would be required. Development on the site would need to pass the sequential and exception tests.	<p>Flooding can have an impact on all elements of sustainability. Mitigation could help to reduce the impact, but it is unlikely to be about to neutralise the impact.</p> <p>The NPPF requires sites with a risk of flooding are only considered if there are no other suitable alternatives.</p>
11. To ensure a strong, diverse and sustainable economic base	<u>Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</u>	<u>0</u>	<u>Not considered relevant</u>		<u>The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</u>
	<u>Will it promote and support key business sectors and utilise employment land effectively and efficiently?</u>	<u>0</u>	<u>The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</u>  <u>The development of the site for housing will have an overall neutral effect on economic sustainability.</u>		
	<u>Will it promote and support the vitality and viability of the District's commercial centres?</u>	<u>0</u>	<u>Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</u> <u>The development of the site for housing only will have a neutral effect on economic sustainability.</u>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

### Summary

Overall the site is likely to have a neutral effect on sustainability; however the effect on sustainability of flooding is shown to be significantly negative. There is a history of flooding on the site. Mitigation measures could help to reduce the risk of flooding, but they are unlikely to be able to neutralise the impact. While the site scores positively on healthy, active lifestyles and opportunities for walking, cycling and public transport the risk of flooding outweighs the positive impacts the site could have. There are other sites within Woolhampton that are not within flood zone 3 that will be considered for development over and above this site. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** predominantly neutral

**Likelihood:** High

**Scale:** East Kennet Valley

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EKV	<b>Settlement:</b>	Woolhampton	<b>Parish:</b>	Midgham
----------------------	-----	--------------------	-------------	----------------	---------

<b>Site ID:</b>	WOOL003	<b>Site Address:</b>	Land adjoining Woolhampton Allotments, Bath Road, Woolhampton	<b>Development Potential:</b>	12 dwellings (0.4ha at 30dph)
-----------------	---------	----------------------	---	-------------------------------	-------------------------------

**Recommendation:**

The site is not recommended for allocation

**Justification:**

Most of the site is at risk from flooding, either in flood zone 2 or 3. There is a history of flooding on the site. The Environment Agency strongly recommends that this site is not allocated. Other sites within Woolhampton are not at risk from flooding and therefore are considered more suitable sites for allocation in line with the NPPF.

[No additional information was submitted at preferred options to change the recommendation for this site.](#)

**Discussion:**

**Site Description:**

The site is located to the western edge of Woolhampton to the south of the A4. The site is adjacent to the village hall and allotments. The site has good access to the open countryside including the Kennet and Avon Canal.

**Landscape:**

Specific landscape assessment work has not been carried out for this site.

**Flood Risk:**

The majority of the site is within flood zone 3 or 2 with a history of flooding on the site. Even with an FRA and flood mitigation other sites within the village do not have the same level of flood risk.

**Highways /Transport:**

Highways were not consulted on this site.

Woolhampton is serviced by a regular bus service and there is a train station in the village.

**Ecology:**

There are no known ecological or environmental designations on the site.

**Archaeology:**

There are no known archaeological issues on the site.

**Education:**

Primary school provision in the village is at or near to capacity. Secondary school pupils have a choice of schools across the district. The site is on the boundary between Kennet School and Theale Green's catchment areas.

**Environmental Health:**

The site is adjacent to the A4, therefore, noise and air pollution could be an issue. Relevant air and noise surveys would be required and appropriate mitigation provided.

**Minerals and Waste:**

The site is partially underlain with gravel deposits. Consideration of policies 1 & 2 of the RMLP required.

No known waste issues.

**Land use planning consultation zone:**

The site is within the middle AWE consultation zone. The development potential is below the threshold for consultation with ONR.

General consultation regarding development in the East Kennet Valley will take place as part of the Preferred Options consultation.

## Site Selection – Site Commentary

### **Environment Agency:**

Strong recommendation that the site is not allocated due to location within flood zone 2 and 3. Adjacent land has previously been investigated for potential contamination.

### **Thames Water:**

TW not consulted on this site

### **Parish Council:**

The parish council did not comment on this site.

### **Preferred Options Consultation Key Issues:**

*Comments received from site promoter*

- [Site did not flood in recent bad conditions](#)
- [No visual impact due to road level and hedgerow/trees](#)
- [Site is less prominent than the preferred options](#)
- [If whole site is not developable due to flooding the residue could be used for some form of public access](#)

### **SA/SEA:**

Overall the site is likely to have a neutral effect on sustainability; however the effect on sustainability of flooding is shown to be significantly negative. There is a history of flooding on the site. Mitigation measures could help to reduce the risk of flooding, but they are unlikely to be able to neutralise the impact. While the site scores positively on healthy, active lifestyles and opportunities for walking, cycling and public transport the risk of flooding outweighs the positive impacts the site could have. There are other sites within Woolhampton that are not within flood zone 3 that will be considered for development over and above this site. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

No specific proposals have been submitted for the site.

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site is close to the village hall and park, but there are limited facilities within walking distance of the site. The site is also close to the Canal towpath.		The site is located on the edge of Woolhampton, close to local services and facilities and the open countryside that would help to support an active healthy lifestyle. Therefore, the site would have a positive impact on social and environmental sustainability.
	Will it increase opportunities for access to sports facilities?	0	The site is close to the village hall and park, but there are limited sports facilities within the village		
	Will it protect and enhance green infrastructure across the district?	0	There is limited GI within the village and the site would not be big enough to provide any new GI. The site does have easy access to the Canal.		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	There are limited facilities within the village, although the site has good access to the Railway line and strategic road network (A4)		The proximity to local employment opportunities means that the site should have a positive economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	There is a regular bus service serving the village and the railway station is close to the site. There are opportunities for walking and cycling within the village although there are a limited number of facilities within the village itself. The site is close to the Canal.		The site has regular bus services and a railway station close to the village, therefore, along with opportunities for walking and cycling there should be a positive impact on environmental sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	?	All development has the potential to impact on road safety.	Well designed development and appropriate mitigation measures should mean that there is no impact on road safety.	
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets	-	Site is within a BOA and adjacent to a SSSI	Buffers may be required for the SSSI.	Without appropriate mitigation development of the site would have a

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	across West Berkshire?				negative impact on environmental sustainability due to the location adjacent to the SSSI.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	0	The site is unlikely to have an impact on the character of the landscape		
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	+	Development of the site is likely to improve the character of the surrounding built environment.		Development is unlikely to have an impact on any element of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	0	There are no heritage assets in Woolhampton		
	Will it promote, conserve and enhance the District's cultural assets?	0	There are no culture assets in Woolhampton		
	Will it provide for increased access to and enjoyment of the historic environment?	0	The site is unlikely to have an impact on access to the historic environment although it is near to the Canal.		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	-	The site is adjacent to the A4, so there is potential for air quality to impact on the site	Air quality mitigation may be required. Could involve design techniques.	Development of the site could have a negative impact on all elements of sustainability, particularly environmental and social, unless appropriate mitigation was provided to air and noise issues.
	Will the site be at risk from, or impact on, noise levels?	-	The site is adjacent to the A4, so there is potential for noise pollution on the site.	Noise mitigation may be required. Could involve design techniques.	
	Will there be an impact on soil quality?	0	The site is unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	The site is unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	The site is Greenfield		The Greenfield nature of the site means that there could be a negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will the site be subject to / at risk from flooding	-	The site is within flood zone 2 and the within an area of surface water flood risk.	An FRA and appropriate mitigation would be required.  There is no evidence that the site has flooded.	Flooding can have a negative impact on all elements of sustainability. With appropriate mitigation this risk can be reduced. The NPPF requires sites with a risk of flooding are only considered if there are no other suitable alternatives.
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a predominantly neutral effect on sustainability and the SA/SEA does not highlight any significant sustainability issues with the site. The site gives opportunities for active, healthy lifestyles due to its proximity to local services and facilities and to the open countryside and canal. The site is well served by public transport, with both bus and train services stopping in the village. All these have a positive impact on sustainability. The location of the site adjacent to the A4 could have a negative impact on social and environmental sustainability. With mitigation and good design this impact could be minimised. The site is also within flood zone 2 and in an area of surface water flood risk, flooding can have a negative impact on all elements of sustainability. Appropriate mitigation can help to reduce this risk, as can considering sites where there is no risk of flooding

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

before those where there is a risk. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

**Summary of effects:**

**Effect:** predominantly neutral

**Likelihood:** High

**Scale:** East Kennet Valley

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EKV	<b>Settlement:</b>	Woolhampton	<b>Parish:</b>	Woolhampton
----------------------	-----	--------------------	-------------	----------------	-------------

<b>Site ID:</b>	WOOL005	<b>Site Address:</b>	Land adjacent to Victoria Park, Bath Road	<b>Development Potential:</b>	11 dwellings (0.36ha at 30dph)
-----------------	---------	----------------------	---	-------------------------------	--------------------------------

**Recommendation:**

The site is not recommended for allocation

**Justification:**

The site is not immediately adjacent to the settlement boundary and therefore is poorly related to the existing residential area.

The Environment Agency strongly recommends that this site is not allocated. This is due to 10% of the site being within FZ3 and 90% of the site being within F2. [The Council is unable to carry out the required sequential test as other suitable sites with a lower risk of flooding area available.](#)

[No additional information submitted at preferred options to change the recommendation for this site.](#)

**Discussion:**

**Site Description:**

The site is located to the east of Woolhampton opposite the garage and petrol station. The site is located near to local services and facilities and has good access to the open countryside including the Kennet and Avon Canal.

**Landscape:**

The character of the landscape has not been assessed

**Flood Risk:**

90% of the site is within flood zone 2 with a small part (10%) at the south west corner of the site being in FZ3. The site is also at risk from surface water flooding.

A strategic sequential test will be required to be undertaken to demonstrate that there are no other suitable and available sites in areas of lower probability of flooding throughout the district.

An FRA would be required with appropriate mitigation including SUDs.

**Highways /Transport:**

The highways impact has not been assessed.

**Ecology:**

The site is adjacent to a SSSI, with potential for hydrological effects. The site is within a BOA.

**Archaeology:**

There are no known archaeological issues on the site.

**Education:**

Primary school provision in the village is at or near to capacity. Secondary school pupils have a choice of schools across the district. The site is on the boundary between Kennet School and Theale Green's catchment areas.

**Environmental Health:**

The site is adjacent to the A4, noise and air quality surveys would be required and appropriate mitigation, including design techniques

**Minerals and Waste:**

The site is partly underlain by gravel deposits. Consideration of policies 1 & 2 of the RMLP required.

No known waste issues.

**Land use planning consultation zone:**

The site is in the middle AEW consultation zone. The development potential is below the threshold for

## Site Selection – Site Commentary

consultation with ONR.

General consultation with ONR regarding sites in the East Kennet Valley will take place as part of the preferred options consultation.

**Environment Agency:**

Strong recommendation that the site is not allocated. The site is within SPZ3 and an adjacent site has been investigated for potential contamination.

**Thames Water:**

No water supply infrastructure issues envisaged.

No wastewater infrastructure issues envisaged.

**Parish Council:**

The parish council did not comment on this site.

**Preferred Options Consultation Key Issues:**

[No comments received for this site.](#)

**SA/SEA:**

Overall the site is likely to have a predominantly neutral effect on sustainability and the SA/SEA does not highlight any significant sustainability issues with the site. The site gives opportunities for active, healthy lifestyles due to its proximity to local services and facilities and to the open countryside and canal. The site is well served by public transport, with both bus and train services stopping in the village. All these have a positive impact on sustainability. The location of the site adjacent to the A4 could have a negative impact on social and environmental sustainability. With mitigation and good design this impact could be minimised. The site is also within flood zone 2 and in an area of surface water flood risk, flooding can have a negative impact on all elements of sustainability. Appropriate mitigation can help to reduce this risk, as can considering sites where there is no risk of flooding before those where there is a risk. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

**Proposed development (from SHLAA submission):**

No specific proposals have been submitted.

## Summary of Site Assessment

Key Issues:

- Greenfield
- AWE middle consultation zone
- Oil pipeline runs through the site

## Site Assessment

<b>Parish Council consultation response:</b>	<p>No comments made on this site <a href="#">prior to the preferred options consultation</a>.</p> <p><a href="#">At preferred options the Parish Council stated that this site would provide the least impact on the village, as long as the existing hedge was retained. The site was considered to be the Parish Council's preferred option for development, although some concerns were raised regarding the need for flood mitigation. The Parish Council would like to see the site developed in an east/west orientation, with development on the southern part of the site only, retaining the north of the site as open space for wildlife and flood prevention. This would also take into account the presence of the oil pipeline on the north of the site. The Parish Council would like to see development limited to 25 dwellings, or which 10 should be affordable homes. The sewage system should be self-contained, unless Thames Water has resolved the current sewerage issues in the village.</a></p>

### Summary

Overall the site is likely to have a predominantly neutral effect on sustainability and the SA/SEA does not highlight any significant sustainability issues with the site. The site is sustainable in terms of access to local services and facilities including the open countryside for supporting an active, healthy lifestyle and access to education and employment. There are opportunities for walking, cycling and public transport. The site's location next to the A4 means that there could be a negative impact on sustainability in relation to air quality and noise pollution, without appropriate mitigation and design. [There is an unknown impact on biodiversity, as there is potential for protected species on the site, and given the proximity of the site to the SSSI. A Hydrological assessment and Screening for HRA are required to ensure adequate mitigation measures are provided.](#) The development of the site for housing will have a neutral effect on economic sustainability. Whilst

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

[housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** East Kennet Valley

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EKV	<b>Settlement:</b>	Woolhampton	<b>Parish:</b>	Woolhampton
----------------------	-----	--------------------	-------------	----------------	-------------

<b>Site ID:</b>	WOOL006	<b>Site Address:</b>	Land to the north of A4, Woolhampton	<b>Development Potential:</b>	65 dwellings (2.2ha at 30dph) <a href="#">30 dwellings</a>
-----------------	---------	----------------------	--------------------------------------	-------------------------------	---

**Recommendation:**

The site is recommended as an option for allocation for approximately 30 dwellings (~~Alternative to WOOL001~~)

**Justification:**

The site is well related to the existing settlement, close to local services and facilities.

Development of the whole site would be out of keeping with the role and function of the village within the settlement hierarchy, resulting in only part of the site being recommended for allocation. [The Parish Council and site promoter have stated a preference for development in an east/west direction along the A4, rather than north/south as originally proposed in the Preferred Options DPD. The orientation of the developable area has been altered to take this into account.](#)

**Discussion:**

**Site Description:**

The site is located to the east of Woolhampton on the edge of the village between the existing development and the garage/petrol station. The site has good access to local services and facilities, including access to the Kennet and Avon Canal.

**Landscape:**

No landscape character assessments have been carried out for this site.

**Flood Risk:**

The site is in flood zone 1. An FRA would be required and appropriate mitigation including SUDs provided.

**Highways /Transport:**

Highways have not provided comments on this site, due to its late submission

There are a number of public transport options in the village, with a regular bus service and a train station.

**Ecology:**

~~Comments from Ecology have not been provided for this site, due to its late submission.~~ [There is potential for Great Crested Newts on the site. An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected.](#)

[The site is adjacent to the area covered by the West Berkshire Living Landscape Project. Development will need to support and make a positive contribution to this project.](#)

[While development is unlikely to adversely affect the Woolhampton Reed Bed Site of Special Scientific Interest \(SSSI\), to the south of the site, a Hydrological Assessment and and Habitats Regulation Assessment \(HRA\) screening would be required at planning application stage.](#)

The site is located adjacent to a BOA.

**Archaeology:**

Location suggests that there is some potential for archaeological features or deposits. An archaeological desk based assessment should be completed by the applicant. This should inform as to whether any further field assessment is required.

**Education:**

Primary school provision in the village is at or near to capacity. Secondary school pupils have a choice of schools across the district. The site is on the boundary between Kennet School and Theale Green's catchment areas.

## Site Selection – Site Commentary

### Environmental Health:

The site is located adjacent to the A4 which could lead to noise and air quality issues unless appropriate mitigation and design principles are implemented.

### Minerals and Waste:

Comments from minerals and waste have not been provided for this site, due to its late submission.

### Land use planning consultation zone:

The site is in the middle AWE consultation zone. Consultation with ONR would be required and will be carried out on the principle of development in Woolhampton as part of the preferred options consultation.

### Environment Agency:

EA not consulted on this site

[The site is located in SPZ2, although the EA have stated that this is not of concern.](#)

### Thames Water:

No water supply infrastructure issues envisaged

Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A drainage strategy would be required

### Parish Council:

The parish council did not comment on this site [prior to the preferred options consultation.](#)

[At preferred options the Parish Council stated that this site would provide the least impact on the village, as long as the existing hedge was retained. The site was considered to be the Parish Council's preferred option for development, although some concerns were raised regarding the need for flood mitigation. The Parish Council would like to see the site developed in an east/west orientation, with development on the southern part of the site only, retaining the north of the site as open space for wildlife and flood prevention. This would also take into account the presence of the oil pipeline on the north of the site. The Parish Council would like to see development limited to 25 dwellings, or which 10 should be affordable homes. The sewage system should be self-contained, unless Thames Water have resolved the current sewerage issues in the village.](#)

### Preferred Options consultation key issues:

- [Need to reduce impact on A4 \(vibrations, noise, air pollution\) for development by planting](#)
- [This site is more suitable, sustainable and logical than WOOL001](#)
- [Parish Council support allocation of this site](#)
- [Oil pipeline present across the north of the site](#)
- [Sewage pumping station does not have capacity to deal with further housing](#)
- [Wide buffer cone could act as wildlife corridor](#)
- [Hydrological links need to be assessed \(proximity to Woolhampton Reed Bed SSSI\)](#)
- [Design should be in keeping with existing dwellings in the village](#)
- [Linear development east/west along A4 preferred to north/south development](#)
- [Potential for future development on remainder of the site](#)
- [Access safer than at WOOL001, directly on to A4 –](#)
- [Development along A4 could encourage drivers to stick to 30mph speed limit](#)

[Full consultation responses and the council response can be found in the statement of consultation.](#)

### SA/SEA:

Overall the site is likely to have a predominantly neutral effect on sustainability and the SA/SEA does not highlight any significant sustainability issues with the site. The site is sustainable in terms of access to local services and facilities including the open countryside for supporting an active, healthy lifestyle and access to education and employment. There are opportunities for walking, cycling and public transport. The site's location next to the A4 means that there could be a negative impact on sustainability in relation to air quality and noise pollution, without appropriate mitigation and design. [There is an unknown impact on biodiversity, as there is potential for protected species on the site, and given the proximity of the site to the SSSI. A](#)

## Site Selection – Site Commentary

Hydrological assessment and Screening for HRA are required to ensure adequate mitigation measures are provided. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.

**Proposed development (from SHLAA submission):**

~~The whole site is being promoted for a range of dwellings types and sizes, including affordable housing, appropriate to the locality.~~

The site is promoted for between 30 and 40 dwellings (1.6ha at a density of 20 – 25dph) in an east/west orientation along the A4. This orientation takes into account the oil pipeline to the north. Access would be provided to the east of the site away from the entrance to Watermill Court.

	water quality?		quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	The site is greenfield		The site could have a negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on building materials, construction, design and transport issues.	Mitigation could include Transport assessment/Travel Plans	Without consideration of sustainability construction techniques, development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	-	Flood Zone 2 and 3 on the eastern edge of site. Groundwater emergence zone. Surface water flooding.	Sustainable drainage (SUDs) techniques would be required.  EA have recommended the site not be allocated. There could be potential on the majority of the site that is in Flood Zone 1. The site promoter has confirmed that no development would take place within the flood zones.	Mitigation measures could help; to reduce the negative impact on environmental sustainability
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significant positive or negative effects.

The site is well located for services, employment and public transport options. There are opportunities for walking and cycling. The site is in close proximity to open countryside and has access to sport and recreational facilities, which would help promote a healthy active lifestyle. There are public transport options in Hungerford and the site is within walking distance of the railway station. All of this means that there would be a positive impact on sustainability.

A landscape assessment has concluded that the development could be accommodated subject to mitigation/enhancement measures. Water voles are present in the eastern ditch but could be protected with mitigation. The site is located within a groundwater and surface water flooding area. Flood zones 2 and 3 are present along the eastern boundary. [Mitigation in the form of SUDs would be required, and the developable area reduced to take into account the flood zones. The development of the site for housing will have a neutral effect on economic sustainability.](#)

[Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Hungerford	<b>Parish:</b>	Hungerford
<b>Site ID:</b>	HUN001	<b>Site Address:</b>	Rear of Westbrook Farmhouse, Smitham Bridge Road, Hungerford, RG17 0QP	<b>Development Potential:</b>	25-26 dwellings (1.31ha at 20dph)

### Recommendation:

The site is not recommended for allocation

### Justification:

There is potential to consider a more comprehensively planned development along with HUN008, should this become available following review of Protected Employment Areas [as part of the Local Plan](#).

The site is located partly within flood zone 2 and 3 and is subject to a risk from groundwater and surface water flooding. Environment Agency advice is not to allocate for development.

[There are concerns over access to the site, as Smitham Bridge Road is very narrow. This is not a constraint that the other sites considered for allocation in Hungerford have.](#)

### Discussion:

#### Site Description:

The site is located adjacent to the settlement boundary of Hungerford giving easy access to local services, facilities and the open countryside. It is adjacent to the Hungerford Trading Estate which has also been promoted for residential development. Should this become available following a review of Protected Employment Areas there is an opportunity for considering the two sites together in a more comprehensive manner.

#### Landscape:

The Landscape Assessment indicates that development on this site, subject to appropriate mitigation measures, would result in little harm to the natural beauty of the AONB.

Any development on this site should be subject to the following conditions and protection and enhancement of the following features:

- Hedgerow along the western boundary and the bank and hedgerow along North Standen Road.
- Views from the west through ensuring that no roof tops are visible over the hedgerow. New tree planting to mitigate any impact would not be sufficient mitigation.
- Access from the north-east corner of the site.

#### Flood Risk:

The eastern edge of the site is within flood zone 2 and flood zone 3. It is also within a groundwater emergence zone and is subject to surface water flooding. SuDS techniques would need to be included to mitigate the potential impact of flooding should the site be developed. Environment Agency advice is not to allocate [the site](#) for development. [The site promoter has confirmed that no development would take place within the flood zones.](#)

#### Highways /Transport:

[Concern regarding access to the site. Smitham Bridge Road is a narrow single carriageway country lane as it approaches the site.](#)

No specific comments have been made on this site

#### Ecology:

Water voles are present in eastern ditch. A 6m corridor would be required along ditch edge to protect them.

#### Archaeology:

No known archaeological issues

#### Education:

Local primary provision is at capacity, [although expansion work is being carried out to increase capacity at the Primary school.](#) but There are spaces at John O'Gaunt.

## Site Selection – Site Commentary

### **Environmental Health:**

No known air or noise issues

### **Minerals and Waste:**

Site partially underlain by gravel and therefore Policies 1 and 2 of Replacement Minerals Local Plan for Berkshire are relevant.

### **Land use planning consultation zone:**

Site is not within an AWE consultation zone

### **Environment Agency:**

EA strongly advise that the site is not allocated for development due to the location of part of the site within flood zones 2 and 3. A sequential test would need to be undertaken to provide justification as to why lower risk sites are unavailable. If development were to take place they would expect no development, including essential infrastructure and water-compatible development within flood zones 2 and 3. Any development should incorporate at least an 8 metre buffer from the top of the river bank of the Shalbourne and conserve and enhance biodiversity. High risk of groundwater contamination [as a major aquifer is located below the site.](#)

### **Thames Water:**

No specific comments have been made on this site

### **Parish Council:**

The Town Council state development here would be prominent within the AONB, any development here would need to be carefully considered, along with the density. The community has expected for some time that the site would be developed. The southern/western boundaries of the site have a strong tree line. Flood risk from the river needs to be considered. This site is seen as the most logical extension to the settlement as long as the landscape is taken into consideration.

[At preferred options the Town Council stated that they would like to see this site allocated, along with a number of smaller sites at Eddington. The site is considered to be within easy walking distance of the town centre, with a lower landscape impact than the preferred options sites. The Town Council would like to see higher densities on the sites in order to reduce the amount of greenfield land required for development.](#)

### **Preferred Options consultation key issues:**

[Town Council would like to see the site developed, but majority of responses supported the rejection of the site. Detailed response received from site promoter rebutting rejection of the site.](#)

[Full consultation response and the council response can be found in the statement of consultation.](#)

### **SA/SEA:**

There are no significant positive or negative effects. The site is well located for services, employment and public transport options. There are opportunities for walking and cycling. The site is in close proximity to open countryside and has access to sport and recreational facilities, which would help promote a healthy active lifestyle. There are public transport options in Hungerford and the site is within walking distance of the railway station. All of this means that there would be a positive impact on sustainability. A landscape assessment has concluded that the development could be accommodated subject to mitigation/enhancement measures. Water voles are present in the eastern ditch but could be protected with mitigation. The site is located within a groundwater and surface water flooding area. Flood zone 2 and 3 are present along the eastern boundary. [Mitigation in the form of SuDS would be required, and the developable area reduced to take into account the flood zones. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The site is being promoted for a residential development of approximately 57 dwellings with an element of affordable housing. The agent has confirmed the site is available immediately.

[At preferred options the site promoter suggested the site should be allocated for 35 dwellings \(between 20 and 30dph\) with a range of 2 – 4 bed dwellings. No development would take place within the flood zones. The site promoter has said that it is unlikely development of the site could be carried out in conjunction with](#)

## Site Selection – Site Commentary

[HUN008 due to the presence of the river and questions over viability and land ownership.](#)

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	Ready access to countryside and relatively accessible to facilities in Hungerford		The site's location to the east of Eddington, north of Hungerford, provides opportunities for walking and cycling but is not as readily accessible to sports and other facilities in the town as sites adjacent to Hungerford itself. In terms of environmental and social sustainability, development of the site would have a slightly positive impact.
	Will it increase opportunities for access to sports facilities?	<b>0</b>	Some distance from main sports provision in Hungerford		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	No adjacent rights of way		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>+</b>	The site is some distance from the primary and secondary schools but close to employment opportunities in Charnham Park		The site is located some distance from education facilities but within walking distance of employment opportunities and the town centre. This means that the site could have a positive impact on economic, social and environmental sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>+</b>	There are a number of transport options from this site. It is within walking and cycling distance of facilities in Hungerford, including the rail station, although not as accessible to these as some of the sites adjacent to Hungerford itself. There are a <a href="#">limited</a> number of local buses serving Hungerford, and a		Likely to have positive impact on social and environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			train station with services to Newbury, Reading and London Paddington, as well as to the west.		
	Will it reduce the number of road traffic accidents and improve safety?	?	Site is adjacent to busy road.	Opportunity for mitigation to improve road safety	
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	0 -	Proximity to <a href="#">BOA</a> , SSSI and SAC, <del>(on opposite side of A4)</del> . There are trees on the site, approximately 15 year old trees which <del>it would be a shame to lose</del> <a href="#">should remain</a>	Mitigation would be required to ensure no impact on the SSSI or SAC.  <a href="#">HRA screening would be required at planning application stage.</a>	Development of the site could have a negative impact on sustainability without appropriate mitigation measures in line with recommendations of Landscape Sensitivity Assessment.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	-	Within AONB but development would retain the pattern of small scale development at Eddington	Would require careful design to respect the site's semi-rural location opposite the Kennet Valley and role as a part of the gateway to Hungerford. Would require soft frontage to the A4.	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	0	Unlikely to have an impact		Unlikely to have significant impact on environmental or social sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	?	Flint tools have been found on the site	Further archaeological investigation required	
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from or impact on air quality?	-	Proximity to A4 could lead to air quality issues	Mitigation measures could be included in design, e.g. inclusion of buffer zones	The negative impact on environmental sustainability from proximity to the A4 would need to be addressed and mitigated in the design of any development.
	Will the site be at risk from or impact on noise levels?	-	Potential noise impact from adjacent A4	Mitigation measures could be included in design, e.g. inclusion of buffer zones	
	Will there be an impact on	0	Unlikely to have impact on soil		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	soil quality? Will there be an impact on water quality?	<b>0</b>	quality Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>+</b>	Previously developed land- the site is part of the grounds of the veterinary centre, <del>although</del> <u>however, the part of the site proposed for development is currently garden.</u> <del>this part is not developed.</del>		Positive impact on environmental sustainability as it is a brownfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	<b>?</b>	The level of impact depends on building materials, construction, design and transport issues.	Mitigation could include Transport assessment/Travel Plans	Without consideration of sustainability construction techniques, development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	<b>-</b>	Ground water emergence zone, potential ground water and surface water flood risk, although no evidence of flooding	Sustainable drainage (SUDs) techniques would be required	
11. To ensure a strong, diverse and sustainable economic base	<u>Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</u>	<u><b>0</b></u>	<u>Not considered relevant</u>		<u>The site is for housing only however the development of housing contributes towards economic sustainability through the construction stage and the lifetime of the development.. Development of new housing needs to ensure there is no impact on the Vet surgery, as this could have an impact on economic sustainability. It is unlikely, which is why this has been assessed as a neutral impact.</u>
	<u>Will it promote and support key business sectors and utilise employment land effectively and efficiently?</u>	<u><b>0</b></u>	<u>Housing development contributes towards economic development through the construction stage and through the lifetime of the development (providing a workforce and customers). While the Vet surgery itself is not included within the site area there would be an impact on the surgery that could impact on the business that could outweigh the benefits of building new houses.</u>		
	<u>Will it promote and support the vitality and viability of the District's commercial centres?</u>	<u><b>0</b></u>	<u>Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for</u>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significant positive or negative effects.

The site is reasonably well located for services, education and public transport options, although not as well related as other sites adjacent to Hungerford itself. It is close to employment opportunities to the north of Hungerford, but some distance from schools. There are, however, opportunities for walking and cycling. The site is in close proximity to open countryside. The site is previously developed land being part of the grounds of the Veterinary Centre. All of this means that there would be a positive impact on sustainability.

A landscape assessment has concluded that the development could be accommodated subject to mitigation/enhancement measures. Any development would require careful design to respect the site's semi-rural location opposite the Kennet Valley and its role as a part of the gateway to Hungerford.

There could be negative environmental impacts from the proximity to the A4 but these could potentially be mitigated by good design. [There is a potential negative impact due to the proximity of the site to a SSSI and SAC, mitigation measures would be required to reduce this impact, including screening for HRA at planning application stage should the site be allocated. The development of the site for housing will have a neutral effect on economic sustainability.](#)

[Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Hungerford	<b>Parish:</b>	Hungerford
<b>Site ID:</b>	HUN003	<b>Site Address:</b>	Hungerford Veterinary Centre, Bath Road, Hungerford	<b>Development Potential:</b>	5 dwellings (0.25ha at 20dph)

**Recommendation:**

**[Following the preferred options consultation the site is not recommended for allocation](#)**

[At preferred options the site was recommended as an option for allocation as part of the Eddington sites \(HUN005, 006, 015, 020\). This site is recommended for inclusion within the settlement boundary. Sites at Eddington are considered an alternative to a site to the south of Hungerford.](#)

**Justification:**

~~The site is reasonably well located for access to facilities and services in Hungerford, although not as well related as sites adjacent to Hungerford itself. This site is of a scale that would be compatible with adjacent development in Eddington. Given the scale of potential development it is recommended that inclusion within the settlement boundary could be more appropriate than allocation.~~

[The site is not adjacent to Hungerford itself, and without development of other sites in the Eddington group is not adjacent to the Eddington settlement boundary. However, it is reasonably well located for access to the services and facilities within Hungerford.](#)

[Additional technical evidence and consultation responses have highlighted a number of issues related to the development of this site, in combination with the other Eddington Sites. These include proximity to the Kennet and Lambourn Floodplain Site of Special Scientific Interest and Special Area of Conservation, traffic impact on the High Street and relationship to Hungerford itself. Should the site be developed screening for HRA would be required. While none of these factors are showstoppers, they are additional constraints which the other preferred options site does not have and could impact on viability or deliverability of the site/s.](#)

[Development of the whole group of sites would result in the loss of the Garden Centre, which is a local employment and amenity site.](#)

**Discussion:**

**Site Description:**

This small site is located close to the settlement boundary of Eddington to the north of Hungerford. It is a brownfield site, forming part of the grounds of the veterinary clinic. It is located immediately to the north of the A4.

**Landscape:**

The Landscape Sensitivity Assessment indicates that, with careful design, the development would result in little harm to the natural beauty of the AONB. Development on this site would be of a scale that is in keeping with the existing development pattern at Eddington. The design would need to take the oil pipeline into consideration and respect the site's semi-rural location opposite the Kennet Valley and role as part of the gateway to Hungerford.

**Flood Risk:**

The site is in a groundwater emergence zone. SuDS techniques would need to be included to mitigate against the potential impact of flooding should the site be developed.

**Highways /Transport:**

~~Site together with HUN015, HUN020, HUN005 and HUN006 could accommodate up to 82 houses and the impact of all these sites would need to be assessed via a Transport Assessment.~~

[The site has been considered alongside HUN015, HUN020, HUN005 and HUN006 as the 'Eddington Sites'. The traffic impact of the sites would need to be assessed via a Transport Assessment.](#)

[Work carried out by the Council indicates that development to the south of Hungerford would be likely to cause less impact than development to the north due to distance from Education provision, and perceived barriers of the river, canal and railway line.](#)

## Site Selection – Site Commentary

### **Ecology:**

The site is adjacent to a Biodiversity Opportunity Area and in close proximity to the Kennet and Lambourn Site of Special Scientific Interest and Special Area of Conservation. Although the site is separated from these specially designated areas by the A4.

HRA screening would need to be undertaken at the planning application stage to ascertain the impact of development upon the SAC.

There are mature trees on site which ~~it would be a shame to lose~~ should remain as part of any new development.

### **Archaeology:**

Flint tools found on the site. Further assessment required.

### **Education:**

Local primary provision is at capacity Expansion work is taking place at the primary school to create additional capacity. There are ~~but there are~~ spaces at John O'Gaunt secondary school.

### **Environmental Health:**

Noise survey and potentially air quality survey would be required due to the proximity of the site to the A4.

### **Minerals and Waste:**

Site partially underlain by gravel and therefore Policies 1 and 2 of Replacement Minerals Local Plan for Berkshire are relevant.

### **Land use planning consultation zone:**

Site is not within an AWE consultation zone

### **Environment Agency:**

No specific comments have been made on this site

### **Thames Water:**

~~No water supply or wastewater infrastructure issues envisaged~~ Thames Water have concerns regarding water supply capability and wastewater infrastructure capacity. Water supply and wastewater infrastructure would be required to ensure sufficient capacity of brought forward ahead of the development. A water supply and drainage strategy would be required.

### **Parish Council:**

The Town Council view is that sites to the north of Hungerford are preferable to those to the south as they have easy access to the M4 without contributing to congestion through Hungerford town centre. Site is within walking distance of the town centre. This site is previously developed land.

The Town Council support the allocation of this site for 5 dwellings, alongside the other Eddington Sites (HUN005, 015 and 020) as it makes use of brownfield land.

### **Preferred Options consultation key issues:**

(Comments made in relation to The Eddington sites (HUN003, 005, 006, 015, 020).

- Site is largely brownfield (garden centre/vet)
- Previous development has had a visual impact on AONB need to learn from mistakes
- Preference for smaller sites
- Development of HUN005 would have a significant impact on the landscape – should not be included
- Town boundary should not be extended
- Impact on AONB
- Poor relationship to Hungerford itself
- Lack of screening, would be highly visible on approach to Hungerford
- Traffic/congestion
- Road safety regarding crossing the A4
- Access to education (long way from the site, parents unlikely to walk their children)
- Parking in the town centre
- Impact on quality of life

## Site Selection – Site Commentary

- [Pressure on infrastructure](#)
- [Loss of garden centre/vet](#)
- [Pressure on sewage system](#)
- [Oil pipeline](#)
- [Flood risk](#)
- [Potential impact on River Kennet SSSI/SAC](#)
- [Site promoter for HUN005 would like to see larger area for development](#)

### **SA/SEA:**

There are no significant positive or negative effects. The site is reasonably well located for services, education and public transport options, although not as well related as other sites adjacent to Hungerford itself. It is close to employment opportunities to the north of Hungerford, but some distance from schools. There are, however, opportunities for walking and cycling. The site is in close proximity to open countryside. The site is previously developed land being part of the grounds of the Veterinary Centre. All of this means that there would be a positive impact on sustainability. A landscape assessment has concluded that the development could be accommodated subject to mitigation/enhancement measures. Any development would require careful design to respect the site's semi-rural location opposite the Kennet Valley and its role as a part of the gateway to Hungerford.

There could be negative environmental impacts from the proximity to the A4 but these could potentially be mitigated by good design. [There is a potential negative impact due to the proximity of the site to a SSSI and SAC, mitigation measures would be required to reduce this impact, including screening for HRA at planning application stage should the site be allocated. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

Proposed for modest development. Agent [has](#) confirmed that site available. [Development of the site would not impact on the existing Veterinary surgery.](#)

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	Ready access to countryside and relatively accessible to facilities in Hungerford		The site's location to the east of Eddington, north of Hungerford, provides opportunities for walking and cycling but is not as readily accessible to sports and other facilities in the town as sites adjacent to Hungerford itself. In terms of environmental and social sustainability, development of the site would have a slightly positive impact.
	Will it increase opportunities for access to sports facilities?	+			
	Will it protect and enhance green infrastructure across the district?	0	No adjacent rights of way		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The site is some distance from the primary and secondary schools but close to employment opportunities in Charnham Park		The site is located some distance from education facilities. This location provides access to the strategic road network. This means that the site could have a positive impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	There are a number of transport options from this site. It is within walking and cycling distance of facilities in Hungerford, including the rail station, although not as accessible to these as some of the sites adjacent to Hungerford itself. There are a <u>limited</u> number of local buses serving Hungerford, and a train station with services to Newbury, Reading and London		Likely to have positive impact on social and environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			Paddington, as well as to the west.		
	Will it reduce the number of road traffic accidents and improve safety?	?	Site is adjacent to busy road. Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.	Opportunity for mitigation to improve road safety	
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	0 =	No known habitats or species- Adjacent <u>proximity</u> to BOA, <u>SSSI and SAC</u>	<a href="#">Mitigation measures would be required to ensure no negative impacts on the SSSI and SAC.</a>  <a href="#">HRA screening would be required at planning application stage.</a>	Potential negative impact on environmental sustainability could be mitigated in line with recommendations of Landscape Sensitivity Assessment.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	- / -	Development on the whole of the site would have significant impact as site is elevated. Development would be visible from Hungerford Common	The western part of the site could potentially be developed but it is important that the scale of development is in keeping with the existing settlement pattern at Eddington. Any development would need to be broken up by tree planting and with provision of a soft edge on the eastern boundary	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	-	Potential impact as scale is significant in relation to the existing settlement pattern at Eddington.	Would require careful design and mitigation in line with recommendations of Landscape Sensitivity Assessment.	Unlikely to have significant impact on environmental or social sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	?	Requires further archaeological assessment		
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels	Will the site be at risk from or impact on air quality?	-	Proximity to A4 could lead to air quality issues	Mitigation measures could be included in design, e.g. inclusion of buffer zones	The negative impact on environmental sustainability from proximity to the A4

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
throughout West Berkshire	Will the site be at risk from or impact on noise levels?	-	Potential noise impact from adjacent A4	Mitigation measures could be included in design, e.g. inclusion of buffer zones	would need to be addressed and mitigated in the design of any development.
	Will there be an impact on soil quality?	0	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Greenfield land		Negative impact on environmental sustainability as it is a Greenfield site
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on building materials, construction, design and transport issues.	Mitigation could include Transport assessment/Travel Plans	Without consideration of sustainability construction techniques, development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	-	Ground water emergence zone, potential ground water and surface water flood risk, although no evidence of flooding	Sustainable drainage (SUDs) techniques would be required	
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	0	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	0	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a> <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	0	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

### Summary

If the whole site were to be developed there could be a significant negative effect.

The landscape sensitivity assessment shows that it would not be appropriate to develop this entire site and any development would need to be limited to the area to the north of the existing development on the A4, rather than extending development eastwards. The site is reasonably well located for services, education and public transport options, although not as well related as other sites adjacent to Hungerford itself. It is close to employment opportunities to the north of Hungerford, but some distance from schools. There are, however, opportunities for walking and cycling. The site is in close proximity to open countryside. All of this means that there would be a positive impact on sustainability.

There could be negative environmental impacts from the proximity to the A4 but these could potentially be mitigated by good design. [The proximity of the site to the Kennet and Lambourn SSSI and SAC could result in a negative impact on environmental sustainability. Mitigation measures would be required and HRA screening would be required at planning application stage.](#)

[Whilst housing development contributes towards economic development in the short term through the construction of the site, is it not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral and negative

**Likelihood:** High

**Scale:** AONB spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Hungerford	<b>Parish:</b>	Hungerford
<b>Site ID:</b>	HUN005	<b>Site Address:</b>	Folly Dog Leg Field, RG17 0PJ	<b>Development Potential:</b>	36 <del>36</del> dwellings (1.8ha at 20dph)

### Recommendation:

[Following the preferred options consultation the site is not recommended for allocation](#)

~~This site to be considered as an option for allocation in the DPD. Sites at Eddington are considered an alternative to a site to the south of Hungerford.~~

[At preferred options the site was recommended as an option for allocation as part of the Eddington sites \(HUN003, 006, 015, 020\).](#)

### Justification:

~~The site is reasonably well located for access to facilities and services in Hungerford, although not as well related as sites adjacent to Hungerford itself. The landscape assessment states that little harm to the AONB would be created by developing this site, subject to limiting the developable area and appropriate mitigation measures.~~

~~The town council preference is for sites to the north of Hungerford which will have less impact on town centre congestion.~~

[The site is adjacent to the Eddington settlement boundary, rather than being adjacent to Hungerford itself. However, it is reasonably well located for access to the services and facilities within Hungerford.](#)

[The developable area of the site has been further reduced since the Preferred Options consultation, reducing the capacity of the site. There is concern over the access to the site, as the proposed access point to the site, is outside the acceptable developable area, therefore, development on the site is subject to development of the other sites to the south of the site.](#)

[Additional technical evidence and consultation responses have highlighted a number of issues related to the development of this site, in combination with the other Eddington Sites. These include proximity to the Kennet and Lambourn Floodplain Site of Special Scientific Interest and Special Area of Conservation, traffic impact on the High Street and relationship to Hungerford itself. Should the site be developed screening for HRA would be required. While none of these factors are showstoppers, they are additional constraints which the other preferred option site does not have and could impact on viability or deliverability of the site/s.](#)

[Development of the whole group of sites would result in the loss of the Garden Centre, which is a local employment and amenity site.](#)

### Discussion:

#### Site Description:

The site is located adjacent to the settlement boundary of Eddington, to the north of Hungerford. The eastern part of the site is immediately adjacent to the A4 whereas the western part lies to the north of existing development at Eddington, including sites HUN003, HUN015 and HUN020. The site is greenfield land with a significant slope. The design will need to take into account the fuel pipelines which cross the site.

#### Landscape:

The Landscape Sensitivity Assessment indicates that development on part of the site, ~~the area to the west,~~ subject to appropriate mitigation measures, would ~~result in little harm to the natural beauty of the AONB.~~ [be acceptable in landscape terms. The developable area has been further reduced since the preferred options consultation due to further landscape work having taken place.](#)

It is important that development on this site should be of a scale that is in keeping with the existing development pattern at Eddington, that development does not extend eastwards along the A4 and that there is provision of a soft edge on the eastern boundary.

#### Flood Risk:

The site is in a ground water emergence zone. SuDS techniques would need to be included to mitigate against the potential impact of flooding should the site be developed.

## Site Selection – Site Commentary

### Highways /Transport:

~~Site together with HUN015, HUN020, HUN003 and HUN006 could accommodate up to 82 houses and the impact of all these sites would need to be accessed via a Transport Assessment~~

The site has been considered alongside HUN015, HUN020, HUN005 and HUN006 as the 'Eddington Sites'. The traffic impact of the sites would need to be assessed via a Transport Assessment.

Work carried out by the Council indicates that development to the south of Hungerford would be likely to cause less impact than development to the north due to distance from Education provision, and perceived barriers of the river, canal and railway line.

### Ecology:

~~No identified issues~~

The site is adjacent to a Biodiversity Opportunity Area and in close proximity to the Kennet and Lambourn Site of Special Scientific Interest and Special Area of Conservation. Although the site is separated from these specially designated areas by HUN003, HUN015, HUN020 and the A4.

HRA screening would need to be undertaken at the planning application stage to ascertain the impact of development upon the SAC.

### Archaeology:

This has been assessed and subject to field evaluation, further more detailed investigation will be required if consent granted.

### Education:

~~Local primary provision is at capacity~~ Expansion work is currently taking place at the primary school to increase capacity. There are ~~but there are~~ spaces at John O'Gaunt

### Environmental Health:

Noise survey would be required due to the proximity of the A4.

### Minerals and Waste:

Site partially underlain by gravel and therefore Policies 1 and 2 of Replacement Minerals Local Plan for Berkshire are relevant.

### Land use planning consultation zone:

Site is not within an AWE consultation zone

### Environment Agency:

No specific comments have been made on this site

### Thames Water:

~~No water supply infrastructure issues envisaged~~ Thames Water have ~~concerns~~ regarding water supply infrastructure and Wastewater services. The existing network in this area is unlikely to be able to support demand. Water supply and D-~~drainage~~ infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development. A detailed water supply and drainage strategy would be required.

### Parish Council:

The Town Council view is that sites to the north of Hungerford are preferable to those to the south as they have easy access to the M4 without contributing to congestion through Hungerford town centre. They do not favour extension of development to the north up the slope of any extension along the A4 which would create ribbon development.

At preferred options the Town Council supported the allocation of this site for 20 dwellings.

### Preferred Options consultation key issues:

(Comments made in relation to The Eddington sites (HUN003, 005, 006, 015, 020).

- Site is largely brownfield (garden centre/vet)
- Previous development has had a visual impact on AONB need to learn from mistakes

## Site Selection – Site Commentary

- [Preference for smaller sites](#)
- [Development of HUN005 would have a significant impact on the landscape – should not be included](#)
- [Town boundary should not be extended](#)
- [Impact on AONB](#)
- [Poor relationship to Hungerford itself](#)
- [Lack of screening, would be highly visible on approach to Hungerford](#)
- [Traffic/congestion](#)
- [Road safety regarding crossing the A4](#)
- [Access to education \(long way from the site, parents unlikely to walk their children\)](#)
- [Parking in the town centre](#)
- [Impact on quality of life](#)
- [Pressure on infrastructure](#)
- [Loss of garden centre/vet](#)
- [Pressure on sewage system](#)
- [Oil pipeline](#)
- [Flood risk](#)
- [Potential impact on River Kennet SSSI/SAC](#)
- [Site promoter for HUN005 would like to see larger area for development](#)

### SA/SEA:

If the whole site were to be developed there could be a significant negative effect. The landscape sensitivity assessment shows that it would not be appropriate to develop this entire site and any development would need to be limited to the area to the north of the existing development on the A4, rather than extending development eastwards. The site is reasonably well located for services, education and public transport options, although not as well related as other sites adjacent to Hungerford itself. It is close to employment opportunities to the north of Hungerford, but some distance from schools. There are, however, opportunities for walking and cycling. The site is in close proximity to open countryside. All of this means that there would be a positive impact on sustainability. There could be negative environmental impacts from the proximity to the A4 but these could potentially be mitigated by good design. [The proximity of the site to the Kennet and Lambourn SSSI and SAC could result in a negative impact on environmental sustainability. Mitigation measures would be required and HRA screening would be required at planning application stage. Whilst housing development contributes towards economic development in the short term through the construction of the site, is it not seen to promote key business sectors and business development in the longer term.](#)

### Proposed development (from SHLAA submission):

The site was the subject of an outline application in December 2009 for up to 82 dwellings (the developable area extending further eastwards than assessed as acceptable in the Landscape Sensitivity Assessment). The agent has confirmed that the site is available and viable with a reduced site area, but would require a road access to the east of the site from the A4. The landowners would be prepared to offer land to the east of the developable area as open space.

[At preferred options the site promoter expressed disappointment over the reduced site area, stating that access would need to come directly from the A4. They did confirm however, that the smaller site area would still be viable. Since these comments the developable area has been further reduced, which could impact on viability.](#)

[The site promoter has also stated that should the site be developed the Chilton Estates would wish to retain some of the new housing in its ownership to rent.](#)

# Site Selection – Site Assessment

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

### Summary

There are no significant positive or negative effects.

The site is reasonably well located for services, education and public transport options, although not as well related as other sites adjacent to Hungerford itself. It is close to employment opportunities to the north of Hungerford, but some distance from schools. There are, however, opportunities for walking and cycling. The site is in close proximity to open countryside. All of this means that there would be a positive impact on sustainability.

The landscape sensitivity assessment points out that the views from Hungerford Common could be impacted and that mitigation in the form of tree planting and retention of the existing tree boundary would be needed [to reduce the negative impact on the landscape character. There is a potential unknown impact on biodiversity and geodiversity as further assessment work is required on the site to determine whether there are any protected species on the site. The proximity to the Kennet and Lambourn SSSI and SAC means that HRA screening would be required at planning application stage should the site be allocated for development. The development of the site for housing will have a neutral effect on economic sustainability.](#)

[Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### **Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Hungerford	<b>Parish:</b>	Hungerford
<b>Site ID:</b>	HUN006	<b>Site Address:</b>	Land at Eddington, Hungerford	<b>Development Potential:</b>	<a href="#">10.9 dwellings (0.42ha at 20dph)</a>

**Recommendation:**

[Following the preferred options consultation the site is not recommended for allocation](#)

This site to be considered as an option for allocation in the DPD. Sites at Eddington are considered an alternative to a site to the south of Hungerford. [At preferred options the site was recommended as an option for allocation alongside HUN003, 005, 015, 020.](#)

**Justification:**

The site is reasonably well located for access to facilities and services in Hungerford, although not as well related as sites adjacent to Hungerford itself. The landscape assessment states that little harm to the AONB would be created by developing this site, subject to appropriate mitigation measures.

The town council preference is for sites to the north of Hungerford which will have less impact on town centre congestion.

[The site is adjacent to the Eddington settlement boundary, rather than being adjacent to Hungerford itself. However, it is reasonably well located for access to the services and facilities within Hungerford.](#)

[Additional technical evidence and consultation responses have highlighted a number of issues related to the development of this site, in combination with the other Eddington Sites. These include proximity to the Kennet and Lambourn Floodplain Site of Special Scientific Interest and Special Area of Conservation, traffic impact on the High Street and relationship to Hungerford itself. Should the site be developed screening for HRA would be required. While none of these factors are showstoppers, they are additional constraints which the other preferred option site does not have and could impact on viability or deliverability of the site/s.](#)

[Development of the whole group of sites would result in the loss of the Garden Centre, which is a local employment and amenity site.](#)

**Discussion:**

**Site Description:**

The site is located adjacent to the settlement boundary of Eddington, to the north of Hungerford. It lies immediately to the north of, and with potential access from [Cotrell Close](#), at the site allocated in [through](#) the WBDLP [West Berkshire District Local Plan](#). The site is greenfield land and on a significant slope.

**Landscape:**

The Landscape Sensitivity Assessment indicates that views from Hungerford Common could be impacted but, with appropriate mitigation measures, would result in little harm to the natural beauty of the AONB. Development on this site would be of a scale that is in keeping with the existing development pattern at Eddington.

**Flood Risk:**

The site is in a ground water emergence zone. SuDS techniques would need to be included to mitigate against the potential impact of flooding should the site be developed.

**Highways /Transport:**

~~Site together with HUN015, HUN020, HUN003 and HUN005 could accommodate up to 82 houses and the impact of all these sites would need to be accessed via a Transport Assessment~~

[The site has been considered alongside HUN015, HUN020, HUN005 and HUN006 as the 'Eddington Sites'. The traffic impact of the sites would need to be assessed via a Transport Assessment.](#)

[Work carried out by the Council indicates that development to the south of Hungerford would be likely to cause less impact than development to the north due to distance from Education provision, and perceived barriers of the river, canal and railway line.](#)

## Site Selection – Site Commentary

### Ecology:

An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected ~~Extended Phase 1 Habitat Survey required.~~

The site is in close proximity to a Biodiversity Opportunity Area, Special Area of Scientific Interest and Special Area of Conservation, although separated by existing development and the A4. HRA screening would need to be undertaken at the planning application stage to ascertain the impact of development upon the SAC.

### Archaeology:

Site is close to previous archaeological discoveries of some importance. Further assessment required.

### Education:

~~Local primary provision is at capacity.~~ Expansion at the primary school is taking place to increase capacity. There but there are spaces at John O'Gaunt

### Environmental Health:

Noise survey would be required

### Minerals and Waste:

Site partially underlain by gravel and therefore Policies 1 and 2 of Replacement Minerals Local Plan for Berkshire are relevant.

### Land use planning consultation zone:

Site is not within an AWE consultation zone

### Environment Agency:

No specific comments have been made on this site

### Thames Water:

~~No water supply or wastewater infrastructure issues envisaged~~ Thames Water have raised concerns regarding water supply and wastewater capability in relation to the Eddington Sites (HUN003, 005, 006, 015, 020). Water supply and waste water infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of development. A water supply and drainage strategy would be required.

### Parish Council:

The Town Council view is that sites to the north of Hungerford are preferable to those to the south as they have easy access to the M4 without contributing to congestion through Hungerford town centre. Their concerns related to the steep access to the site and views across Hungerford Common.

At preferred options stage the Town council did not specifically comment on this site, but it was not listed as one of their preferred sites for allocation.

### Preferred Options consultation key issues:

(Comments made in relation to The Eddington sites (HUN003, 005, 006, 015, 020).

- Site is largely brownfield (garden centre/vet)
- Previous development has had a visual impact on AONB need to learn from mistakes
- Preference for smaller sites
- Development of HUN005 would have a significant impact on the landscape – should not be included
- Town boundary should not be extended
- Impact on AONB
- Poor relationship to Hungerford itself
- Lack of screening, would be highly visible on approach to Hungerford
- Traffic/congestion
- Road safety regarding crossing the A4
- Access to education (long way from the site, parents unlikely to walk their children)
- Parking in the town centre
- Impact on quality of life
- Pressure on infrastructure

## Site Selection – Site Commentary

- [Loss of garden centre/vet](#)
- [Pressure on sewage system](#)
- [Oil pipeline](#)
- [Flood risk](#)
- [Potential impact on River Kennet SSSI/SAC](#)
- [Site promoter for HUN005 would like to see larger area for development](#)

### **SA/SEA:**

There are no significant positive or negative effects. The site is reasonably well located for services, education and public transport options, although not as well related as other sites adjacent to Hungerford itself. It is close to employment opportunities to the north of Hungerford, but some distance from schools. There are, however, opportunities for walking and cycling. The site is in close proximity to open countryside. All of this means that there would be a positive impact on sustainability. The landscape sensitivity assessment points out that the views from Hungerford Common could be impacted and that mitigation in the form of tree planting and retention of the existing tree boundary would be needed [to reduce the negative impact on the landscape character. There is a potential unknown impact on biodiversity and geodiversity as further assessment work is required on the site to determine whether there are any protected species on the site. The proximity to the Kennet and Lambourn SSSI and SAC means that HRA screening would be required at planning application stage should the site be allocated for development. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

No specific proposals were [have been](#) submitted.

[At preferred options, the site promoter supported the allocation of the site, either as a standalone site for 9 dwellings, or as part of the wider site. It was confirmed that adequate access can be obtained off Cottrell Close, independently of the adjacent sites.](#)

# Site Selection – Site Assessment

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Hungerford	<b>Parish:</b>	Hungerford

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	Close to sports centre and ready access to countryside		The site's location to the south of Hungerford gives opportunities for walking and cycling and gives easy access to local services and facilities. Therefore, in terms of environmental and social sustainability, development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	+	Close to sports centre		
	Will it protect and enhance green infrastructure across the district?	0	Right of way through site		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	There is access to education, employment and a wide range of facilities.		The site is located close to education facilities as well as other services and facilities within Hungerford.. This means that the site could have a positive impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	There are a number of transport options from this site. It is within walking and cycling distance of facilities in Hungerford, including the rail station. There are a <a href="#">limited</a> number of local buses serving Hungerford, and a train station with services to Newbury, Reading and London Paddington, as well as to the west.		The site's proximity to local services and facilities will encourage walking or cycling. This could lead to a positive impact on social and environmental sustainability, but is unlikely to have any impact on economic sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	<b>0</b>	No known habitats		Potential negative impact on environmental sustainability could be mitigated in line with recommendations of Landscape Sensitivity Assessment. Development of a smaller area may have a beneficial effect in softening the southern edge of Hungerford
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	<b>-</b>	Development over the whole of this site would result in significant harm to the natural beauty of the AONB. <a href="#">Development of part of the site is considered acceptable.</a>	<p>Development on a smaller part of this site should be subject to the following conditions and protection and enhancement of the following features.</p> <ul style="list-style-type: none"> <li>• Creation of a woodland buffer to define the new edge of the settlement</li> <li>• Careful design of the gateway approach</li> <li>• Retention of views through the site to the wider landscape</li> <li>• Retention of existing mature tree cover</li> <li>• Careful design to respect the site's semi-rural location.</li> </ul> <p>. It is important that development on this site does not link visually and physically with any development on HUN 022 as the cumulative effect would result in greater harm to the AONB</p>	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	<b>0</b>	Unlikely to have an impact – adjacent to new residential development	Would require high quality of design	In order to maintain the level of social and environmental sustainability of the area, any potential development should consider the impact on the wider AONB.
	Will it conserve and enhance the significance of the District's heritage assets?	<b>?</b>	Cropmarks would need investigation	Requires further archaeological assessment	
	Will it promote, conserve and enhance the District's cultural assets?	<b>0</b>	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of	<b>0</b>	Unlikely to have an impact		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	the historic environment?				
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from or impact on air quality?	<b>0</b>	Unlikely to have an impact on air quality		It is unlikely that the site would have a significant impact on environmental sustainability
	Will the site be at risk from or impact on noise levels?	<b>0</b>	Unlikely to have an impact on noise levels		
	Will there be an impact on soil quality?	<b>0</b>	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	<b>0</b>	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Greenfield land		Negative impact on environmental sustainability as it is a Greenfield site
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on building materials, construction, design and transport issues.		Without consideration of sustainable construction techniques, development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	<b>0</b>	The site is not at risk from flooding	Sustainable drainage (SUDs) techniques would be required	
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<b>0</b>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<b>0</b>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significant positive or negative effects if only the northern part of the site is considered for development.

The site is well located for services, education and public transport options, although the majority of employment facilities are to the north of Hungerford. There are, however, opportunities for walking and cycling. The site is in close proximity to open countryside and has access to sport and recreational facilities, which would help promote a healthy active lifestyle. All of this means that there would be a positive impact on sustainability.

The landscape impact assessment of development on this site shows that it would not be appropriate to develop this entire site, and any design would need to incorporate the suggested mitigation. [The development of the site for housing will have a neutral effect on economic sustainability.](#)

[Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Hungerford	<b>Parish:</b>	Hungerford
----------------------	------	--------------------	------------	----------------	------------

<b>Site ID:</b>	HUN007	<b>Site Address:</b>	Land east of Salisbury Road, Hungerford	<b>Development Potential:</b>	100.4 dwellings (5.1ha at 20dph)
-----------------	--------	----------------------	---	-------------------------------	----------------------------------

**Recommendation:**

[The site is recommended for allocation through the housing Site Allocations DPD.](#)

Northern part of the site is recommended as an option for allocation in the DPD. Site is considered an alternative to the sites at Eddington. [At preferred options the site was recommended as an option for allocation.](#)

**Justification:**

The site is well located for access to facilities and services in Hungerford, particularly to schools. The landscape assessment states that little harm to the AONB would be created by developing this site, subject to limiting the developable area and appropriate mitigation measures.

[There are fewer environmental constraints \(no environmental designations close to the site\) and the Council's Transport Assessment work indicates that development of this site would be likely to have lesser of an impact on the High Street than development to the north of Hungerford.](#)

**Discussion:**

**Site Description:**

The site is located to the south of Hungerford adjacent to new residential development [at Kennedy Meadows](#) that was allocated in the ~~WBDPL~~ [West Berkshire District Local Plan \(1991 – 2006\)](#). The site is currently in agricultural use. The whole site area is 27 hectares but only part [of the site to the north](#) is proposed for development.

**Landscape:**

The Landscape Assessment indicates that a smaller area between Salisbury Road and the school might be possible. This may have a beneficial effect in softening the southern edge of Hungerford. It is important that development on this site does not link visually and physically with any development on HUN022 as the cumulative effect would result in greater harm to the AONB.

Development on a smaller part of this site should be subject to the following conditions and protection and enhancement of the following features.

- Creation of a woodland buffer to define the new edge of the settlement
- Careful design of the gateway approach
- Retention of views through the site to the wider landscape
- Retention of existing mature tree cover
- Careful design to respect the site's semi-rural location

**Flood Risk:**

The site is not at risk from flooding

**Highways /Transport:**

The impact of such as scheme would need to be assessed by a Transport Assessment. Most traffic would travel to and from the site via Hungerford. Access can be obtained onto the A338. The type of junction would need to be considered and the speed limit would need to be relocated south of the site.

The footway would need to be widened alongside the A338 to the site

There are footways and bus stops within the vicinity where bi hourly services pass to Hungerford and Newbury. The site is also within walking and cycling distance of Hungerford.

[Transport Assessment work carried out by the Council indicates that development on this site would result in fewer traffic movements through the High Street than development to the north of Hungerford due to the proximity of this site to education provision.](#)

**Ecology:**

No issues identified.

## Site Selection – Site Commentary

### Archaeology:

Potentially significant archaeological interest, Aerial photographic evidence for range of features including a circular enclosure. Further assessment required.

### Education:

Local primary provision is at capacity, [Expansion work is being carried out at the Primary school to increase capacity.](#) but there [There](#) are spaces at John O'Gaunt.

[The site promoter has confirmed that they would be willing to safeguard some of the land for future education provision.](#)

### Environmental Health:

No issues identified

### Minerals and Waste:

No issues identified

### Land use planning consultation zone:

Site is not within an AWE consultation zone

### Environment Agency:

[Part of the site](#) Site is within groundwater source protection zones 2 and 3

### Thames Water:

~~Concern regarding Water Supply capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of any development. A water supply strategy would be required.~~

[Thames Water have not raised any concerns regarding water supply capability.](#)

Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development. A drainage strategy would be required

### Parish Council:

The Town Council raised concern with developing sites to the south of the town. Traffic implications of sites of this size are also a serious concern as all of the traffic would need to go through the town centre and exacerbate the existing issues. The site is seen as being a long way from the existing centre of Hungerford and not easily accessible. Development currently reaches the crest of the hill and the Town Council do not feel it should go any further. It was acknowledged that the site was close to the secondary school, but the distance to the town centre was seen as to great to overcome this.

[At preferred options the Parish Council did not specifically comment on this site, however, they made it clear that they would prefer to see development to the north of Hungerford, as they believe this would result in fewer traffic movements through the High Street.](#)

### Preferred Options consultation key issues:

- [Development outside settlement boundary in AONB](#)
- [No consideration of brownfield land](#)
- [SA/SEA lack of justification for rejecting sites](#)
- [Traffic/congestion \(all traffic needing to use High Street to get to A4/M4\)](#)
- [Road Safety for those walking/cycling](#)
- [Lack of parking in town centre](#)
- [Lack of public transport \(specifically bus services\)](#)
- [Loss of arable land](#)
- [Pressure on infrastructure](#)
- [Positive that the site could provide land for a school/school expansion](#)
- [Sewage capacity](#)
- [Flood risk \(surface water\)](#)
- [Lack of employment opportunities in Hungerford](#)
- [Consultation – development will impact on all residents, not just those living within 100m](#)

## Site Selection – Site Commentary

### **SA/SEA:**

There are no significant positive or negative effects if only the northern part of the site is considered for development. The site is well located for services, education and public transport options, although the majority of employment facilities are to the north of Hungerford. There are, however, opportunities for walking and cycling. The site is in close proximity to open countryside and has access to sport and recreational facilities, which would help promote a healthy active lifestyle. All of this means that there would be a positive impact on sustainability. The landscape impact assessment of development on this site shows that it would not be appropriate to develop this entire site, and any design would need to incorporate the suggested mitigation. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The site had been promoted for approximately 250 homes at a density of 30 dwellings per hectare, with possible provision for primary school and retirement or care home. The land is available immediately.

<b>Development Potential:</b>	10.4 dwellings (0.56ha at 20dph)	<b>SHLAA Assessment:</b>	Potentially Developable
-------------------------------	----------------------------------	--------------------------	-------------------------

## Summary of Site Assessment

Key Issues:

- Protected employment area
- Flood risk (FZ2, groundwater and surface water)
- AONB

**Exclude from site selection due to location within protected employment area**

## Site Assessment

<b>Parish Council consultation response:</b>	Site is considered by some of the landowners to be third tier industrial units. Some units are currently vacant and there does not appear to be a rush to redevelop the site. HGV movements to the site can cause issues / conflict with the surrounding residential development. The site is no working effectively as an employment site at present but it could in the future.

# Site Selection – Site Assessment

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Hungerford	<b>Parish:</b>	Hungerford
----------------------	------	--------------------	------------	----------------	------------

<b>Site ID:</b>	HUN011	<b>Site Address:</b>	Land off Marsh Lane, Hungerford, RG17 0QN
-----------------	--------	----------------------	---

<b>Development Potential:</b>	20.4 dwellings (0.83ha at 20dph)	<b>SHLAA Assessment:</b>	Not currently developable
-------------------------------	----------------------------------	--------------------------	---------------------------

## Summary of Site Assessment

### Key Issues:

- Adjacent to SSSI
- Loss of allotments
- Flood risk (adjacent to FZ3, FZ2 and groundwater). Although the site does not have a history of flooding there is evidence of the site becoming boggy and wet.
- AONB
- Relationship to existing centre of settlement
- Proximity to railway line

## Site Assessment

<b>Parish Council consultation response:</b>	Access is a significant constraint. The Town Council would not like to see this site developed. The area has a very rural feel and is popular with walkers. Flooding issues are of great concern, especially given the proximity to the canal. Development here could exacerbate the flooding risk. During Winter 2013/14 the site did not actually flood, although the water levels were high enough for it to be close. The site was very boggy.

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	Ready access to countryside and relatively accessible to facilities in Hungerford		The site's location to the east of Eddington, north of Hungerford, provides opportunities for walking and cycling but is not as readily accessible to sports and other facilities in the town as sites adjacent to Hungerford itself. In terms of environmental and social sustainability, development of the site would have a slightly positive impact.
	Will it increase opportunities for access to sports facilities?	+	There are sports facilities within Hungerford		
	Will it protect and enhance green infrastructure across the district?	0	Unlikely to have impact		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The site is some distance from the primary and secondary schools but close to employment opportunities in Charnham Park		The site is located some distance from education facilities. This location provides access to the strategic road network. This means that the site could have a positive impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	There are a number of transport options from this site. It is within walking and cycling distance of facilities in Hungerford, including the rail station, although not as accessible to these as some of the sites adjacent to Hungerford itself. There are a <u>limited</u> number of local buses serving Hungerford, <del>and a train station with services to Newbury, Reading and London</del>		Likely to have positive impact on social and environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<del>Paddington, as well as to the west.</del>		
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.	Opportunity for mitigation to improve road safety	
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	0 -	Adjacent to Biodiversity Opportunity Area <u>and SSSI. In close proximity to SAC</u>	Buildings would need bat surveys if they were to be lost. <a href="#">Mitigation would be required to ensure no negative impacts on the SSSI or SAC. HRA screening would be required at planning application stage.</a>	Unlikely to be impact on environmental sustainability if mitigated in line with recommendations of Landscape Sensitivity Assessment.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	0	Development would retain the pattern of small scale development at Eddington.	Would need careful design to respect the site's semi-rural location opposite the Kennet Valley and role as part of the gateway to the settlement and to avoid detracting from the thatched property.	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	0	Unlikely to have an impact as scale is in keeping with existing settlement pattern.	Design would need to consider impact on thatched property.	Unlikely to have significant impact on environmental or social sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	?	Some archaeological potential on the site	Further archaeological assessment required	
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from or impact on air quality?	-	Proximity to A4 could lead to air quality issues	Mitigation measures could be included in design, e.g. inclusion of buffer zones	The negative impact on environmental sustainability from proximity to the A4 would need to be addressed and mitigated in the design of any development.
	Will the site be at risk from or impact on noise levels?	-	Potential noise impact from adjacent A4	Mitigation measures could be included in design, e.g. inclusion of buffer zones	
	Will there be an impact on	0	Unlikely to have an impact on soil		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	soil quality?		quality		
	Will there be an impact on water quality?	<b>0</b>	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>-</b>	Greenfield land. The site is a residential garden		Negative impact on environmental sustainability as it is a Greenfield site
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	<b>?</b>	The level of impact depends on building materials, construction, design and transport issues.	Mitigation could include Transport assessment/Travel Plans	Without consideration of sustainability construction techniques, development could have a negative impact on environmental sustainability
	Will the site be subject to / at risk from flooding	<b>-</b>	Ground water emergence zone, potential ground water and surface water flood risk, although no evidence of flooding	Implementation of sustainable urban drainage systems to mitigate flood risk	Flood risk can have a negative impact on all elements of sustainability. Mitigation measures reduce this impact.
<a href="#">11. To ensure a strong, diverse and sustainable economic base</a>	Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?	<b><u>0</u></b>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	<b><u>0</u></b>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	Will it promote and support the vitality and viability of the District's commercial centres?	<b><u>0</u></b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

### Summary

There are no significant sustainability effects.

The site is reasonably well located for services, education and public transport options, although not as well related as other sites adjacent to Hungerford itself. It is close to employment opportunities to the north of Hungerford, but some distance from education facilities. There are, however, opportunities for walking and cycling. The site is in close proximity to open countryside. All of this means that there would be a positive impact on sustainability.

Development would need careful design in accordance with the recommendations of the Landscape Sensitivity Assessment. [The site is adjacent to a BOA and SSSI and close to a SAC, mitigation would be required to ensure the potential negative impacts of development are mitigated. HRA screening would be required at planning application stage. The development of the site for housing will have a neutral effect on economic sustainability.](#)

[Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### **Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Hungerford	<b>Parish:</b>	Hungerford
<b>Site ID:</b>	HUN015	<b>Site Address:</b>	Land at Bath Road, Eddington	<b>Development Potential:</b>	75 dwellings (0.33ha at 20dph)

**Recommendation:**

**Following the preferred options consultation the site is not recommended for allocation.**

~~This site is recommended for inclusion within the settlement boundary. Sites at Eddington are considered an alternative to a site to the south of Hungerford.~~

~~At preferred options the site was recommended as an option for allocation alongside HUN003, 005, 006, 020.~~

**Justification:**

~~The site is reasonably well located for access to facilities and services in Hungerford, although not as well related as sites adjacent to Hungerford itself. This site is of a scale that would be compatible with adjacent development in Eddington. Given the scale of potential development it is recommended that inclusion within the settlement boundary could be more appropriate than allocation.~~

~~The site is adjacent to the Eddington settlement boundary, rather than being adjacent to Hungerford itself. However, it is reasonably well located for access to the services and facilities within Hungerford.~~

~~Additional technical evidence and consultation responses have highlighted a number of issues related to the development of this site, in combination with the other Eddington Sites. These include proximity to the Kennet and Lambourn Floodplain Site of Special Scientific Interest and Special Area of Conservation, traffic impact on the High Street and relationship to Hungerford itself. Should the site be developed screening for HRA would be required. While none of these factors are showstoppers, they are additional constraints which the other preferred option site does not have and could impact on viability or deliverability of the site/s.~~

~~Development of the whole group of sites would result in the loss of the Garden Centre, which is a local employment and amenity site.~~

~~Following the review of settlement boundaries it is not considered that the site would meet the criteria for inclusion within the settlement boundary.~~

**Discussion:**

**Site Description:**

This small site is located adjacent to the settlement boundary of Eddington to the north of Hungerford. It is residential garden site located immediately to the north of the A4

**Landscape:**

The Landscape Sensitivity Assessment indicates that, with careful design, the development would result in little harm to the natural beauty of the AONB. Development on this site would be of a scale that is in keeping with the existing development pattern at Eddington. The design would need to take the oil pipeline into consideration.

**Flood Risk:**

The site is in flood zone 1. The site is in a ground water emergence zone. SuDS techniques would need to be included to mitigate against the potential impact of flooding should the site be developed.

**Highways /Transport:**

~~The traffic impact on the site together with HUN015, HUN020, HUN005 and HUN006 would need to be accessed via a Transport Assessment~~

~~The site has been considered alongside HUN015, HUN020, HUN005 and HUN006 as the 'Eddington Sites'. The traffic impact of the sites would need to be assessed via a Transport Assessment.~~

~~Work carried out by the Council indicates that development to the south of Hungerford would be likely to cause less impact than development to the north due to distance from Education provision, and perceived barriers of the river, canal and railway line.~~

## Site Selection – Site Commentary

### Ecology:

Buildings would need bat surveys if they were to be lost.

[The site is adjacent to a Biodiversity Opportunity Area and in close proximity to the Kennet and Lambourn Site of Special Scientific Interest and Special Area of Conservation. Although the site is separated from these specially designated areas by HUN003, HUN015, HUN020 and the A4.](#)

[HRA screening would need to be undertaken at the planning application stage to ascertain the impact of development upon the SAC.](#)

### Archaeology:

Some archaeological potential on the site. Further assessment required.

### Education:

~~Local primary provision is at capacity,~~ [Expansion work is being carried out at the primary school to increase capacity.](#) ~~but~~ [There are spaces at John O'Gaunt](#)

### Environmental Health:

Noise survey would be required [due to the proximity of the A4.](#)

### Minerals and Waste:

Site partially underlain by gravel and therefore Policies 1 and 2 of Replacement Minerals Local Plan for Berkshire are relevant.

### Land use planning consultation zone:

Site is not within an AWE consultation zone

### Environment Agency:

No specific comments have been made on this site

### Thames Water:

~~No water supply or wastewater infrastructure issues envisaged~~ [Thames Water have raised concerns regarding water supply and wastewater capability of development in conjunction with EUA003, 005, 006 and 020. Water supply and wastewater infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of development. A water supply and drainage strategy would be required.](#)

### Parish Council:

The Town Council view is that sites to the north of Hungerford are preferable to those to the south as they have easy access to the M4 without contributing to congestion through Hungerford town centre.

[At preferred options the Town Council supported the allocation of this site.](#)

### Preferred Options consultation key issues:

[\(Comments made in relation to The Eddington sites \(HUN003, 005, 006, 015, 020\).](#)

- [Site is largely brownfield \(garden centre/vet\)](#)
- [Previous development has had a visual impact on AONB need to learn from mistakes](#)
- [Preference for smaller sites](#)
- [Development of HUN005 would have a significant impact on the landscape – should not be included](#)
- [Town boundary should not be extended](#)
- [Impact on AONB](#)
- [Poor relationship to Hungerford itself](#)
- [Lack of screening, would be highly visible on approach to Hungerford](#)
- [Traffic/congestion](#)
- [Road safety regarding crossing the A4](#)
- [Access to education \(long way from the site, parents unlikely to walk their children\)](#)
- [Parking in the town centre](#)
- [Impact on quality of life](#)
- [Pressure on infrastructure](#)
- [Loss of garden centre/vet](#)

## Site Selection – Site Commentary

- [Pressure on sewage system](#)
- [Oil pipeline](#)
- [Flood risk](#)
- [Potential impact on River Kennet SSSI/SAC](#)
- [Site promoter for HUN005 would like to see larger area for development](#)

### **SA/SEA:**

There are no significant sustainability effects. The site is reasonably well located for services, education and public transport options, although not as well related as other sites adjacent to Hungerford itself. It is close to employment opportunities to the north of Hungerford, but some distance from education facilities. There are, however, opportunities for walking and cycling. The site is in close proximity to open countryside. All of this means that there would be a positive impact on sustainability. Development would need careful design in accordance with the recommendations of the Landscape Sensitivity Assessment. [The site is adjacent to a BOA and SSSI and close to a SAC, mitigation would be required to ensure the potential negative impacts of development are mitigated. HRA screening would be required at planning application stage. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The proposal is for amendment of the settlement boundary in this location.

There has been an application (12/01982/FULD) for two dwellings on this site which was refused and dismissed at appeal. The main grounds for refusal were that the development was contrary to policy and the potential harm to the AONB. The Inspector commented on the inappropriate design of the proposal but stated that the suitability of the appeal site for housing might have to be considered in the longer term as part of the ongoing review of the delivery of new houses in the District.

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	Easy access to countryside and relatively accessible to facilities in Hungerford		The site's location to the east of Eddington, north of Hungerford, provides opportunities for walking and cycling but is not as readily accessible to sports and other facilities in the town as sites adjacent to Hungerford itself. In terms of environmental and social sustainability, development of the site would have a slightly positive impact.
	Will it increase opportunities for access to sports facilities?	<b>0</b>	Some distance from main sports provision in Hungerford		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	No adjacent rights of way		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>+</b>	The site is some distance from the primary and secondary schools but close to employment opportunities in Charnham Park		The site is located some distance from education facilities. This location provides access to the strategic road network. This means that the site could have a positive impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>+</b>	There are a number of transport options from this site. It is within walking and cycling distance of facilities in Hungerford, including the rail station, although not as accessible to these as some of the sites adjacent to Hungerford itself. There are a number of local buses serving Hungerford, and a train station with services to Newbury,		Likely to have positive impact on social and environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			Reading and London Paddington, as well as to the west.		
	Will it reduce the number of road traffic accidents and improve safety?	?	Site is adjacent to busy road.	Opportunity for mitigation to improve road safety	
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	0-	Proximity to <a href="#">BOA</a> , SSSI and SAC, <del>on opposite side of A4.</del>	<a href="#">Mitigation would be required to minimise the impact on the SSSI and SAC. HRA screening would be required.</a>	Any Impact on environmental sustainability could be mitigated in line with recommendations of Landscape Sensitivity Assessment.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	0 ?	<a href="#">The site is located within the AONB.</a> Redevelopment with more sympathetic building materials and internal tree planting may reduce the current visual impact.	Would require sensitive treatment as the site is a prominent part of the gateway along the A4 into Hungerford. Should be inclusion of significant tree planting and a soft frontage to the A4.	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	0	Redevelopment with more sympathetic building materials and internal tree planting may reduce the current visual impact.		Unlikely to have significant impact on environmental or social sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	?	Flint tools have been found on the site	Further archaeological investigation required	
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from or impact on air quality?	-	Proximity to A4 could lead to air quality issues	Mitigation measures could be included in design, e.g. inclusion of buffer zones	The negative impact on environmental sustainability from proximity to the A4 would need to be addressed and mitigated in the design of any development.
	Will the site be at risk from or impact on noise levels?	-	Potential noise impact from adjacent A4	Mitigation measures could be included in design, e.g. inclusion of buffer zones	
	Will there be an impact on soil quality?	?	Could be soil quality issues given current use as garden centre		
	Will there be an impact on water quality?	0	Unlikely to have an impact on water quality.		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	+	Previously developed land		Positive impact on environmental sustainability as it is a brownfield site
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on building materials, construction, design and transport issues.	Mitigation could include Transport assessment/Travel Plans	Without consideration of sustainability construction techniques, development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	-	Ground water emergence zone, potential ground water and surface water flood risk, although no evidence of flooding	Implementation of sustainable urban drainage systems to mitigate flood risk	Flooding can have a negative impact on all elements of sustainability.
11. To ensure a strong, diverse and sustainable economic base which meets objectively assessed economic needs	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	-	<a href="#">Development of this site would result in the loss of the garden centre, which would result in the loss of employment opportunities in Hungerford</a>	<a href="#">Replacement facility would need to be provided to mitigate the impact</a>	<a href="#">Development of this site for housing would result in the loss of the garden centre and the employment opportunity it generates for the local community. This would have a negative impact on economic sustainability. While there are economic benefits from the building of housing by providing a workforce and increasing population, this does not mitigate the impact as a result of an employment facility.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	-	<a href="#">Development of this site would result in the loss of the garden centre, which would result in the loss of employment opportunities in Hungerford.</a>	<a href="#">Replacement facility would need to be provided to mitigate the impact</a>	
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	-	<a href="#">While not within a protected employment area, development of this site would result in the loss of the garden centre, which would result in the loss of employment opportunities in Hungerford</a>	<a href="#">Replacement facility would need to be provided to mitigate the impact</a>	

### Summary

There are no significant sustainability effects.

The site is reasonably well located for services, education and public transport options, although not as well related as other sites adjacent to Hungerford itself. It is close to employment opportunities to the north of Hungerford, but some distance from education facilities. There are, however, opportunities for walking and cycling. The site is in close proximity to open countryside. The site is previously developed land and there are opportunities for sensitive design to reduce the current visual impacts on this prominent part of the gateway along the A4 into Hungerford.

There could be negative environmental impacts from the proximity to the A4, [and the SSSI and SAC](#) but these could potentially be mitigated. [HRA screening would be required, by good design.](#) [Loss of the employment opportunity at the garden centre will have a negative impact on economic sustainability, without an alternative facility being provided \(of which](#)

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

[there is no evidence to suggest it would be\) there is limited scope for mitigation.](#)

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Hungerford	<b>Parish:</b>	Hungerford
<b>Site ID:</b>	HUN020	<b>Site Address:</b>	Hungerford Garden Centre, Bath Road, Hungerford, RG17 0HE	<b>Development Potential:</b>	15.7 dwellings (0.86ha at 20dph)

**Recommendation:**

[Following the preferred options consultation the site is not recommended for allocation](#)

~~This site to be considered for allocation or inclusion within the settlement boundary. Sites at Eddington are considered an alternative to a site to the south of Hungerford.~~

[At preferred options the site was recommended as an option for allocation along site HUN003, 005, 006, and 015.](#)

**Justification:**

~~The site is reasonably well located for services, employment and public transport options.~~

~~The site is previously developed land. The landscape assessment states that little harm to the AONB would be created by developing this site, and there is potential for reducing the current visual impact.~~

[The site is not adjacent to Hungerford itself, and without development of other sites in the Eddington group is not adjacent to the Eddington settlement boundary. However, it is reasonably well located for access to the services and facilities within Hungerford.](#)

[Additional technical evidence and consultation responses have highlighted a number of issues related to the development of this site, in combination with the other Eddington Sites. These include proximity to the Kennet and Lambourn Floodplain Site of Special Scientific Interest and Special Area of Conservation, traffic impact on the High Street and relationship to Hungerford itself. Should the site be developed screening for HRA would be required. While none of these factors are showstoppers, they are additional constraints which the other preferred option site does not have and could impact on viability or deliverability of the site/s.](#)

[Development of this site would result in the loss of the Garden Centre, which is a local employment and amenity site.](#)

**Discussion:**

**Site Description:**

The site is currently in use as a garden centre and is therefore a brownfield site. It lies immediately to the north of the A4 in Eddington, to the north of Hungerford. [Development of the site would most likely involve the loss of the Garden Centre.](#)

**Landscape:**

~~The Landscape Sensitivity Assessment indicates that development would result in little harm to the natural beauty of the AONB and, [on the site would be acceptable,](#) with sensitive design and internal tree planting may reduce the current visual impact on this prominent part of the gateway along the A4 into Hungerford.~~

Development on this site would be of a scale that is in keeping with the existing development pattern at Eddington.

**Flood Risk:**

The site is in flood zone 1. The site is in a ground water emergence zone. SuDS techniques would need to be included to mitigate against the potential impact of flooding should the site be developed.

**Highways /Transport:**

~~The traffic impact of the site together with HUN015, HUN020, HUN005 and HUN006 would need to be accessed via a Transport Assessment~~

[The site has been considered alongside HUN015, HUN020, HUN005 and HUN006 as the 'Eddington Sites'. The traffic impact of the sites would need to be assessed via a Transport Assessment.](#)

[Work carried out by the Council indicates that development to the south of Hungerford would be likely to cause less impact than development to the north due to distance from Education provision, and perceived barriers of the river, canal and railway line.](#)

## Site Selection – Site Commentary

### Ecology:

~~No issues raised~~ [The site is adjacent to a Biodiversity Opportunity Area and in close proximity to the Kennet and Lambourn Site of Special Scientific Interest and Special Area of Conservation. Although the site is separated from these specially designated areas by the A4.](#)

[HRA screening would need to be undertaken at the planning application stage to ascertain the impact of development upon the SAC.](#)

### Archaeology:

~~More information needed~~ [Flint tools have been found on the site, further investigation is required.](#)

### Education:

~~Local primary provision is at capacity,~~ [Expansion work taking place at the primary school will increase capacity.](#) ~~but t~~ [There are spaces at John O'Gaunt](#)

### Environmental Health:

Noise [and Air quality](#) survey would be required

### Minerals and Waste:

Site partially underlain by gravel and therefore Policies 1 and 2 of Replacement Minerals Local Plan for Berkshire are relevant

### Land use planning consultation zone:

Site is not within an AWE consultation zone

### Environment Agency:

No specific comments have been made on this site

### Thames Water:

~~No water supply infrastructure issues envisaged~~ [Concern regarding water supply and](#) ~~Concern regarding~~ [Wastewater services in relation to the Eddington sites \(EUA003, 005, 006, 015, 020\).](#) The existing network in this area is unlikely to be able to support demand. [Water supply and D](#)-~~d~~ [rainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development. A \[water supply and drainage strategy\]\(#\) would be required.](#)

### Parish Council:

The Town Council view is that sites to the north of Hungerford are preferable to those to the south as they have easy access to the M4 without contributing to congestion through Hungerford town centre. They would not, however, like to lose the garden centre.

[At preferred options the Town Council supported the allocation of this site](#)

### Preferred Options consultation key issues:

[\(Comments made in relation to The Eddington sites \(HUN003, 005, 006, 015, 020\).](#)

- [Site is largely brownfield \(garden centre/vet\)](#)
- [Previous development has had a visual impact on AONB need to learn from mistakes](#)
- [Preference for smaller sites](#)
- [Development of HUN005 would have a significant impact on the landscape – should not be included](#)
- [Town boundary should not be extended](#)
- [Impact on AONB](#)
- [Poor relationship to Hungerford itself](#)
- [Lack of screening, would be highly visible on approach to Hungerford](#)
- [Traffic/congestion](#)
- [Road safety regarding crossing the A4](#)
- [Access to education \(long way from the site, parents unlikely to walk their children\)](#)
- [Parking in the town centre](#)
- [Impact on quality of life](#)
- [Pressure on infrastructure](#)
- [Loss of garden centre/vet](#)

## Site Selection – Site Commentary

- [Pressure on sewage system](#)
- [Oil pipeline](#)
- [Flood risk](#)
- [Potential impact on River Kennet SSSI/SAC](#)

[Site promoter for HUN005 would like to see larger area for development](#)

### **SA/SEA:**

There are no significant sustainability effects. The site is reasonably well located for services, education and public transport options, although not as well related as other sites adjacent to Hungerford itself. It is close to employment opportunities to the north of Hungerford, but some distance from education facilities. There are, however, opportunities for walking and cycling. The site is in close proximity to open countryside. The site is previously developed land and there are opportunities for sensitive design to reduce the current visual impacts on this prominent part of the gateway along the A4 into Hungerford. There could be negative environmental impacts from the proximity to the A4 [and the SSSI and SAC](#) but these could potentially be mitigated. [HRA screening would be required.](#) ~~by good design.~~ [Loss of the employment opportunity at the garden centre will have a negative impact on economic sustainability, without an alternative facility being provided \(of which there is no evidence to suggest it would be\) there is limited scope for mitigation.](#)

### **Proposed development (from SHLAA submission):**

Suggested could be allocated for a range of purposes to meet locally identified need. Site could be suitable for housing, employment retail or leisure uses. Suggested that settlement boundary be revised to include Veterinary Hospital and Hungerford Garden Centre site.

## Summary of Site Assessment

### Key Issues:

- AONB – Landscape Assessment indicates only part of the site is suitable for development
- Water supply
- [Access to the site can be achieved from the roundabout at Kennedy Meadow, however, development of the southern part of the site is not considered acceptable in landscape terms.](#)
- [Development of the site should not link physically or visually with HUN007.](#)

## Site Assessment

<b>Parish Council consultation response:</b>	<p>Town Council concerned with development going south of the town, especially in relation to the amount of traffic that could be generated that would need to travel through the town centre. A reservoir is located beneath HUN022. The site is a long way out of the existing centre and not easily accessible. Concern about the impact on the views within the AONB. While the site is close to the school, the distance to the town centre outweighs this benefit.</p> <p><a href="#">At preferred options the Town Council did not specifically comment on this site, although it was not included in their list of preferred sites.</a></p>

-----------------	--------	----------------------	--	-------------------------------	----------------------------------

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	The site has easy access to the countryside and is close to local services and facilities which would enable walking and cycling.		The site's location to the south of Hungerford gives opportunities for walking and cycling and gives easy access to local services and facilities. Therefore, in terms of environmental and social sustainability, development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	<b>+</b>	There are sports facilities available within Hungerford.		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	Unlikely to have an impact		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>+</b>	There is access to education, employment and a wide range of facilities.		The site is located close to education facilities as well as other services and facilities within Hungerford. This location provides access to the strategic road network. This means that the site could have a positive impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>+</b>	There are a <u>limited</u> number of local buses serving Hungerford, and a train station with services to Newbury, Reading and London Paddington, as well as to the west.		The site's proximity to local services and facilities will encourage walking or cycling. This could lead to a positive impact on social and environmental sustainability, but is unlikely to have any impact on economic sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	<b>?</b>	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.	Improvements to road safety could be made.	
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity	<b>0</b>	Unlikely to have an impact		Development without the mitigation measures set out

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	and geodiversity assets across West Berkshire?				in the Landscape Assessment would have a negative impact on environmental sustainability.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	-	Development over the whole site would result in significant harm to the natural beauty of the AONB. <a href="#">Part of the site would be acceptable. The landscape assessment states that there should be no physical or visual link with HUN007.</a>	Development on a smaller part of this site should be subject to the following conditions and protection and enhancement of the following features. <ul style="list-style-type: none"> <li>• Creation of a woodland buffer to define the new edge of the settlement</li> <li>• Careful design of the gateway approach</li> <li>• Retention of views through the site to the wider landscape</li> <li>• Careful design to respect the site's semi-rural location</li> <li>• Retention of open landscape corridor to the river Shalbourne</li> <li>• Extensive internal native tree planting to soften views from North Standen Road</li> </ul>	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	<b>0</b>	Unlikely to have an impact		In order to maintain the level of social and environmental sustainability of the area, any potential development should consider the impact on the wider AONB.
	Will it conserve and enhance the significance of the District's heritage assets?	?	Probable Medieval field system & nearby prehistoric activity	Further investigation required.	
	Will it promote, conserve and enhance the District's cultural assets?	<b>0</b>	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	<b>0</b>	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	<b>0</b>	Unlikely to have an impact on air quality		It is unlikely that the site would have an impact on any aspect of sustainability
	Will the site be at risk from, or impact on, noise levels?	<b>0</b>	Unlikely to have an impact on noise levels		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will there be an impact on soil quality?	<b>0</b>	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	<b>0</b>	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>-</b>	Greenfield land		The site could have a negative impact on environmental sustainability as it is a Greenfield site
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	<b>?</b>	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	<b>0</b>	The site is not at risk from flooding	An FRA and SUDs would need to be provided.	Unlikely to have an impact on any element of sustainability.
<u>11. To ensure a strong, diverse and sustainable economic base</u>	Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?	<b>0</b>	<u>Not considered relevant</u>		<u>The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</u>
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	<b>0</b>	<u>The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</u>  <u>The development of the site for housing will have an overall neutral effect on economic sustainability.</u>		
	Will it promote and support the vitality and viability of the District's commercial centres?	<b>0</b>	<u>Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</u> <u>The development of the site for housing only will have a neutral effect on economic sustainability.</u>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

### Summary

There are no significant sustainability effects.

The site is well located for services, education and public transport options, although the majority of employment facilities are to the north of Hungerford. There are, however, opportunities for walking and cycling. The site is in close proximity of open countryside and has access to sport and recreational facilities, which would help promote a healthy active lifestyle. All of which give a positive impact on sustainability.

The landscape assessment indicates that only part of the site would be suitable for development and a number of mitigation measures would be required to ensure development did not have a negative impact on environmental sustainability. [The development of the site for housing will have a neutral effect on economic sustainability.](#)

[Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### **Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB - Hungerford

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Hungerford	<b>Parish:</b>	Hungerford
<b>Site ID:</b>	HUN022	<b>Site Address:</b>	Land to the west of Salisbury Road, Hungerford	<b>Development Potential:</b>	50 <del>2</del> dwellings (2.6ha at 20dph)

### Recommendation:

The site is not recommended for allocation

### Justification:

The site does not relate as well to the existing residential development as other sites around Hungerford, therefore, other sites are considered more appropriate for allocation.

[Access to the site is proposed to be through part of the site which is not considered acceptable for development in landscape terms. Therefore, access to the site could only be achieved by development of adjacent sites.](#)

[There are concerns regarding the cumulative impact of this site and HUN007, with development of both sites only being acceptable if there are no physical or visual links between the sites.](#)

### Discussion:

#### Site Description:

The site is located to the south west of Hungerford, close to local services and facilities, and open countryside.

#### Landscape:

The site is in the AONB. The Landscape Assessment indicates that approximately half the site (to the north) would be suitable for development. The mitigation measures set out in the assessment would need to be adhered to. The landscape assessment states that there must be no visual or physical link between any development at this site and HUN007.

#### Flood Risk:

The site is in flood zone 1. An FRA would be required and SUDs would need to be provided.

#### Highways /Transport:

The transport impact would need to be assessed through a transport assessment. Access could be taken from the existing roundabout on the A338, although the roundabout would need to be enlarged to provide a fourth arm.

[Access from the A338 roundabout would result in development of part of the site which is not considered suitable for development.](#)

#### Ecology:

No known ecological issues.

#### Archaeology:

There is an ancient field system on the site and Iron Age activity just to the north. Further assessment would be required.

#### Education:

~~Local primary school provision is at capacity.~~ [Expansion work is taking place at the primary school to increase capacity.](#) There is capacity at the secondary school.

#### Environmental Health:

No known air, noise or contamination issues.

#### Minerals and Waste:

No known mineral or waste issues.

#### Land use planning consultation zone:

The site is not within an AWE consultation zone

## Site Selection – Site Commentary

### **Environment Agency:**

No specific comments have been made on this site. The site is in SPZ2, there is a high risk of contamination to groundwater.

### **Thames Water:**

Significant concern regarding water supply capability, especially water resource capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is highly likely to be required to ensure sufficient capacity is brought forward ahead of any development.

A detailed water supply strategy would be required.

No wastewater infrastructure issues envisaged.

### **Parish Council:**

Town Council concerned with development going south of the town, especially in relation to the amount of traffic that could be generated that would need to travel through the town centre. A reservoir is located beneath HUN022. The site is a long way out of the existing centre and not easily accessible. Concern about the impact on the views within the AONB. While the site is close to the school, the distance to the town centre outweighs this benefit.

[At preferred options the Town Council did not specifically comment on this site, although it was not included in their list of preferred sites.](#)

### **[Preferred options consultation key issues:](#)**

[No comments were made on this site at preferred options.](#)

### **SA/SEA:**

There are no significant sustainability effects. The site is well located for services, education and public transport options, although the majority of employment facilities are to the north of Hungerford. There are, however, opportunities for walking and cycling. The site is in close proximity of open countryside and has access to sport and recreational facilities, which would help promote a healthy active lifestyle. All of which give a positive impact on sustainability. The landscape assessment indicates that only part of the site would be suitable for development and a number of mitigation measures would be required to ensure development did not have a negative impact on environmental sustainability. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The north eastern part of the site (by the water works, totalling 3.75ha) is proposed for development. Advance planting is proposed along the southern and western edges to help define the area.

----------------------	------	--------------------	------------	----------------	------------

<b>Site ID:</b>	HUN028	<b>Site Address:</b>	Land south of Chilton Way, Hungerford	<b>Development Potential:</b>	75 6 dwellings (3.78ha at 20dph)
-----------------	--------	----------------------	---------------------------------------	-------------------------------	----------------------------------

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site has easy access to the countryside and is close to local services and facilities which would enable walking and cycling.		The site's location to the south of Hungerford gives opportunities for walking and cycling and gives easy access to local services and facilities. Therefore, in terms of environmental and social sustainability, development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	+	There are sports facilities available within Hungerford.		
	Will it protect and enhance green infrastructure across the district?	0	Unlikely to have an impact		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	There is access to education, employment and a wide range of facilities.		The site is located close to education facilities as well as other services and facilities within Hungerford. This location provides access to the strategic road network. This means that the site could have a positive impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	There are <a href="#">limited</a> a number of local buses serving Hungerford, and a train station with services to Newbury, Reading and London Paddington, as well as to the west. <a href="#">There are good walking/cycling routes through Hungerford.</a>		The site's proximity to local services and facilities will encourage walking or cycling. This could lead to a positive impact on social and environmental sustainability, but is unlikely to have any impact on economic sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	<b>0</b>	A Tree Preservation Order is adjacent to the site		Development of the site without the mitigation measures outlined in the landscape assessment would have a negative impact on environmental sustainability.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	-	Development over the whole site would result in significant harm to the natural beauty of the AONB. <a href="#">Part of the site is considered acceptable for development in landscape terms</a>	Development on a smaller part of this site should be subject to the following conditions and protection and enhancement of the following features. <ul style="list-style-type: none"> <li>• Creation of a woodland buffer to define the new edge of the settlement</li> <li>• Careful design of the gateway approach</li> <li>• Retention of views through the site to the wider landscape</li> <li>• Careful design to respect the site's semi-rural location</li> <li>• Retention of open landscape corridor to the river Shalbourne</li> <li>• Extensive internal native tree planting to soften views from North Standen Road</li> </ul>	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	-	The site is poorly related to the exiting settlement pattern.	Development of adjacent sites would be required to link this site to the existing build environment.	Development would have a negative impact on environmental sustainability, by changing the character of the area. Mitigation would require other neighbouring sites to be developed.
	Will it conserve and enhance the significance of the District's heritage assets?	?	Probable Medieval field system & nearby prehistoric activity		
	Will it promote, conserve and enhance the District's cultural assets?	<b>0</b>	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	<b>0</b>	Unlikely to have an impact		
7. To protect and improve air, water and soil quality,	Will the site be at risk from, or impact on, air quality?	<b>0</b>	Unlikely to have an impact on air quality		It is unlikely that the site would have an impact on

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, noise levels?	<b>0</b>	Unlikely to have an impact on noise levels		any aspect of sustainability
	Will there be an impact on soil quality?	<b>0</b>	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	<b>0</b>	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>-</b>	Greenfield		The site could have a negative impact on environmental sustainability as it is a Greenfield site
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	<b>?</b>	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	<b>-</b>	Groundwater emergence zone	An FRA and SUDs would be required.	Flood risk on the site means that there could be a negative impact on all elements of sustainability without mitigation measures.
11. <a href="#">To ensure a strong, diverse and sustainable economic base</a>	Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?	<b><u>0</u></b>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	<b><u>0</u></b>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	Will it promote and support the vitality and viability of the District's commercial centres?	<b><u>0</u></b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significant sustainability effects.

The site is well located for services, education and public transport options, although the majority of employment facilities are to the north of Hungerford. There are, however, opportunities for walking and cycling. The site is in close proximity of open countryside and has access to sport and recreational facilities, which would help promote a healthy active lifestyle. All of which give a positive impact on sustainability.

The site is located in the AONB, without development in line with the recommendations in the landscape assessment there would be a negative impact on environmental sustainability. The site is not located adjacent to the settlement boundary, meaning without other sites being developed the development of this site would have a negative impact on environmental sustainability. The site is within a groundwater emergence zone. Mitigation measures would be required to ensure there would not be a negative impact on all elements of sustainability. [The development of the site for housing will have a neutral effect on economic sustainability.](#)

[Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB - Hungerford

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Hungerford	<b>Parish:</b>	Hungerford
----------------------	------	--------------------	------------	----------------	------------

<b>Site ID:</b>	HUN028	<b>Site Address:</b>	Land south of Chilton Way, Hungerford	<b>Development Potential:</b>	75.6 dwellings (3.78ha at 20dph)
-----------------	--------	----------------------	---------------------------------------	-------------------------------	----------------------------------

### Recommendation:

The site is not recommended for allocation

### Justification:

The site does not relate as well to the existing residential development as other sites around Hungerford, therefore, other sites are considered more appropriate for allocation.

[The site is proposed as one of a number of sites proposed for development to the west of Hungerford, including HUN001, HUN002 and HUN026. Development on this scale would be out of keeping with the role and function of Hungerford as a rural service centre. Development on HUN026 is not considered acceptable in landscape terms.](#)

[There are access concerns regarding the site as it relies on access being provided through other neighbouring sites. Access via HUN022 would not be acceptable, as the proposed access point is within part of the site not considered acceptable for development in landscape terms.](#)

### Discussion:

#### Site Description:

The site is located to the south west of Hungerford, close to local services and facilities, and open countryside.

#### Landscape:

The site is in the AONB. The Landscape Assessment indicates that development of the north west part of the site would be acceptable, subject to the mitigation measures set out in the assessment.

#### Flood Risk:

The site is in flood zone 1. The river Shelburne runs through the site, an 8m buffer between the river and any development would be required. The site is within a groundwater emergence zone. An FRA would be required and SUDs would need to be provided.

#### Highways /Transport:

The transport impact would need to be assessed through a transport assessment. Access could be taken from the existing roundabout on the A338, although the roundabout would need to be enlarged to provide a fourth arm.

[Access to the site is a concern, as it requires access via a neighbouring site, either HUN022 or HUN026. HUN026 is not considered acceptable for development in landscape terms, and the proposed access to HUN022 is located within an area of the site not considered suitable for development in landscape terms. Therefore, access to the site is a significant constraint.](#)

#### Ecology:

A 6m corridor would be required along the ditch edge to protect Water Voles.

#### Archaeology:

Probably medieval field system and nearby prehistoric activity. Further assessment would be required.

#### Education:

Local primary school provision is at capacity [Expansion works are taking place at the primary school to increase capacity.](#) There is capacity at the local secondary school.

#### Environmental Health:

No known air, noise or contamination issues.

#### Minerals and Waste:

No known mineral or waste issues.

## Site Selection – Site Commentary

### **Land use planning consultation zone:**

The site is not within an AWE consultation zone

### **Environment Agency:**

No specific comments have been made on this site. The site is in SPZ2, there is a high risk of contamination to groundwater.

### **Thames Water:**

Significant concern regarding water supply capability, especially water resource capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is highly likely to be required to ensure sufficient capacity is brought forward ahead of any development.

A detailed water supply strategy would be required.

No wastewater infrastructure issues envisaged.

### **Parish Council:**

The Town Council did not comment on this site as it was submitted after the consultation events. However, the comments on HUN026 and HUN022 are listed below as they are relevant to the location of this site. HUN022 – concern with development taking pace to the south of Hungerford, especially in relation to traffic generation through the town centre. There is a reservoir below HUN022. HUN026 – Topography of the site could make it difficult to develop. Development would be prominent in the views of within the AONB. Development on the site would need to be carefully considered, along with the density.

[At preferred options the parish council did not specifically comment on this site, however, it did not appear in their list of preferred sites for allocation.](#)

### **Preferred Options consultation key issues:**

[No comments were received on this site.](#)

### **SA/SEA:**

There are no significant sustainability effects. The site is well located for services, education and public transport options, although the majority of employment facilities are to the north of Hungerford. There are, however, opportunities for walking and cycling. The site is in close proximity of open countryside and has access to sport and recreational facilities, which would help promote a healthy active lifestyle. All of which give a positive impact on sustainability. The site is located in the AONB, without development in line with the recommendations in the landscape assessment there would be a negative impact on environmental sustainability. The site is not located adjacent to the settlement boundary, meaning without other sites being developed the development of this site would have a negative impact on environmental sustainability. The site is within a groundwater emergence zone. Mitigation measures would be required to ensure there would not be a negative impact on all elements of sustainability. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The site is proposed as one of several sites to come forward together [for comprehensive development to the west of Hungerford.](#) (HUN001, HUN022 and HUN026) [although](#) ~~N~~no specific proposals have been submitted for ~~the~~is site.

# Lambourn Site Assessments

# Site Selection – Site Assessment

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Lambourn	<b>Parish:</b>	Lambourn
----------------------	------	--------------------	----------	----------------	----------

<b>Site ID:</b>	LAM002A	<b>Site Address:</b>	Land at Meridian House and Stud, Greenways, Lambourn
-----------------	---------	----------------------	--

<b>Development Potential:</b>	26 dwellings (1.3ha at 20dph)	<b>SHLAA Assessment:</b>	Potentially Developable ment
-------------------------------	-------------------------------	--------------------------	------------------------------

## Summary of Site Assessment

Key Issues:

- [Site forms part of the Stud and is potentially used as part of the racehorse industry - contrary to policy CS12](#)
- [Site is within the AONB, however the Landscape Sensitivity Assessment concludes that development of this site would not cause harm to the natural beauty of the AONB, subject to mitigation measures outlined within the assessment.](#)
- Flood risk - [part of the site is within a](#) groundwater [emergence zone](#) and [part within a](#) critical drainage area. [A Flood Risk Assessment would be required to support any development on the site](#)
- [Access](#)

## Site Assessment

<b>Parish Council consultation response:</b>	<p>Access to the site is the primary concern with this site. Access via Coppington Gardens would impact on Bockhampton Road and Station Road. On road parking in this area is common, effectively making it a one way road. Extra traffic generation is of great concern.</p> <p>There could be potential access from Greenways, although this is not an adopted road.</p> <p>Concern about future development to the south if the site were to be developed as it is raised and could have visual impacts.</p> <p>Development could impact on drainage and run-off.</p> <p>The parish council would be against development of this site, although the site did received <a href="#">receive</a> the highest preference by respondents to the questionnaire sent out.</p>

The level of impact depends on location, building materials / construction, transport / design	Mitigation could <del>also</del> include Transport Assessment / Travel Plans <a href="#">to reduce car traffic and ensure compliance with policies of the Core Strategy.</a>	Without consideration of sustainability construction techniques <a href="#">and the promotion of alternative modes of transport.</a> development could have a negative impact on environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will the site be subject to / at risk from flooding	-	<u>Part of t</u> The site is within <u>a</u> groundwater emergence zone and within a critical drainage area. Anecdotal evidence of flooding during Jan/Feb 2014.	An FRA and appropriate <u>flood</u> mitigation <u>measures</u> including SUDs would need to be provided.	Development on the site could have a negative impact on all elements of sustainability unless appropriate mitigation is provided.
<u>11. To ensure a strong, diverse and sustainable economic base</u>	<u>Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</u>	<u>0</u>	<u>Not considered relevant</u>		<u>The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</u>
	<u>Will it promote and support key business sectors and utilise employment land effectively and efficiently?</u>	<u>0</u>	<u>The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</u>  <u>The development of the site for housing will have an overall neutral effect on economic sustainability.</u>		
	<u>Will it promote and support the vitality and viability of the District's commercial centres?</u>	<u>0</u>	<u>Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</u>		

### Summary

Overall there are no significant sustainability issues with this site, and it is likely to have a predominantly neutral effect on sustainability.

The site is ~~well related~~ close to local services and facilities within the village, including access to the countryside, all of which would enable walking and cycling and promote healthy, active lifestyles which would have a positive impact on sustainability. In addition, the development is close to local employment opportunities provided through the racehorse industry and local services/facilities, which will have a positive impact on economic and social sustainability.

Potential negative impacts could occur in relation to the environmental sustainability due to the site's location in the AONB. As long as appropriate mitigation measures are introduced in line with the Landscape Sensitivity Assessment the impact should be mitigated. Flooding could also have a negative impact on all elements of sustainability unless

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

appropriate mitigation measures are provided.

**Summary of effects:**

**Effect:** Predominantly neutral

**Scale:** AONB - Lambourn

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Lambourn	<b>Parish:</b>	Lambourn
<b>Site ID:</b>	LAMN002A	<b>Site Address:</b>	Land at Meridian House and Stud, Greenways, Lambourn	<b>Development Potential:</b>	26 dwellings (1.3ha at 30dph)

### Recommendation:

The site is not recommended for allocation

### Justification:

Development of this site, albeit only a small part of the original site area proposed, would potentially result in the loss of land associated with the racehorse industry. Loss of land associated with the racehorse industry would be contrary to policy CS12 of the Core Strategy. Policy CS12 aims to prevent pressure for redevelopment of existing facilities to other uses and the fragmentation of existing sites. Such pressures could lead to the decline of the industry locally, threaten the character and form of the settlement and increase pressure for replacement facilities in environmentally sensitive areas.

A revised site area and layout plan was submitted by the site promoter as part of the Preferred Options consultation in order to address the concerns raised through the site assessments. However it is considered that the proposals do not go far enough to address the concerns. The LSA states that the scale of the whole site as assessed related well to the settlement pattern. However it is felt that the revised proposals, whilst addressing concerns over access, are out of character with the existing settlement pattern. Other sites in Lambourn are considered to be more appropriate for development.

~~Concern over traffic impact and access mean that other sites within the village are considered more appropriate for development.~~

### Discussion:

#### Site Description:

The site is located to the south of Lambourn, close to local services and facilities and with good access to the open countryside. Development in this smaller site area would still potentially result in the loss of land associated with the racehorse industry which is contrary to Core Strategy policy CS12.

#### Landscape:

The site is located in the AONB. The Landscape Sensitivity Assessment (LSA) indicates that development of the site would be acceptable as long as the mitigation measures listed in the assessment are adhered to.

#### Flood Risk:

Whilst the site is in flood zone 1, although part of the site does sit is within a groundwater emergence zone and part within a critical drainage area. An Flood Risk Assessment (FRA) would be required as part of any planning application and SUDs provided should development take place. There is a high risk to groundwater of contamination and this would need to be taken into account as part of the FRA.

#### Highways /Transport:

No specific comments made on this site.

~~Concern over access to the site and traffic impact along local roads.~~

The site area and number of dwellings proposed on the site has been reduced by the site promoter during the Preferred Options Consultation. It is proposed the access will now consist of two private drives accessing 9 units in total. The Council's Highways Team have not raised any concerns over this proposed access arrangement.

#### Ecology:

The site is potential chalk grassland and as a result An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected

~~A full ecological survey would be required.~~

#### Archaeology:

There are iron age and roman archaeology to the north of the site which requires further investigation. A Heritage Impact Assessment would be required as part of any planning application.

## Site Selection – Site Commentary

### **Education:**

Local primary school provision is close to or at capacity. No comments made regarding secondary school provision.

### **Environmental Health:**

No known air, noise or contamination issues.

### **Minerals and Waste:**

No known mineral or waste issues

### **Land use planning consultation zone:**

The site is not within an AWE consultation zone

### **Environment Agency:**

No specific comments made on this site. The site is over a major aquifer, with a high risk of potential groundwater contamination. [As a result a FRA would be required as part of any planning application.](#)

### **Thames Water:**

Concern regarding Water Supply capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of any development.

A water supply strategy would be required.

Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A drainage strategy would be required

### **Parish Council:**

Access to the site is the primary concern with this site. Access via Coppington Gardens would impact on Bockhampton Road and Station Road. On road parking in this area is common, effectively making it a one way road. Extra traffic generation is of great concern. There could be potential access from Greenways, although this is not an adopted road. Concern about future development to the south if the site were to be developed as it is raised and could have visual impacts. Development could impact on drainage and run-off. The Parish Council would be against development of this site, although the site did ~~received~~ [receive](#) the highest preference by respondents to the questionnaire sent out.

### **Preferred Options Consultation Key Issues:**

- [Access issues and highways concerns](#)
- [New site area and layout plan proposed, reducing the number of dwellings on the site to 9 units](#)
- [Proposed new access via two private drives](#)
- [Proposed lower density](#)

[For the consultation responses and Council's response, please see the Statement of Consultation.](#)

### **SA/SEA:**

[Overall there are no significant sustainability issues with this site, and it is likely to have a predominantly neutral effect on sustainability.](#)

[The site is close to local services and facilities within the village, including access to the countryside, all of which would enable walking and cycling and promote healthy, active lifestyles which would have a positive impact on sustainability. In addition, the development is close to local employment opportunities provided through the racehorse industry and local services/facilities, which will have a positive impact on economic and social sustainability.](#)

[Potential negative impacts could occur in relation to the environmental sustainability due to the site's location in the AONB. As long as appropriate mitigation measures are introduced in line with the Landscape Sensitivity Assessment the impact should be mitigated. Flooding could also have a negative impact on all elements of sustainability unless appropriate mitigation measures are provided.](#)

~~The SA/SEA indicates a predominantly neutral sustainability impact. There are no significant issues with~~

## Site Selection – Site Commentary

~~this site. The site is well related to local services and facilities within the village, including the countryside, all of which would enable walking and cycling and promote healthy, active lifestyles which would have a positive impact on sustainability. Potential negative impacts could occur in relation to the environmental sustainability due to the site's location in the AONB. As long as appropriate mitigation measures are introduced in line with the Landscape Assessment the impact should be mitigated. Flooding could also have a negative impact on all elements of sustainability unless appropriate mitigation measures are provided.~~

**Proposed development (from SHLAA submission):**

No specific proposals have been submitted for this site [through the SHLAA](#). It has been confirmed that access could be taken from The Classics using land in the ownership and control of the landowner.

[The Site Promoter responded to the Preferred Options consultation and provided a layout plan which identified a smaller site area, along with a lower density of development and a lower number of dwellings \(9 units\). In addition, new access arrangements were proposed identifying access via two private drives. The Site Promoter confirmed that drainage/flood risk is not an issue on the site.](#)

-------------------------------	--	--------------------------	-------------------------

### Summary of Site Assessment

Key Issues:	<ul style="list-style-type: none"> <li>- Flood risk (Part of the site lies within Flood Zone 2 and Flood Zone 3, as well as a groundwater emergence zone and an area of surface water flood risk. A Flood Risk Assessment will be required as part of any planning application. The site is adjacent to the River Lambourn which is a SSSI and SAC)</li> <li>- An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary.</li> <li>- A Habitats Regulations Assessment (HRA) will be required to accompany any planning application.</li> <li>- Variety of archaeological features in close proximity and on the site. High archaeological potential. Heritage Impact Assessment required as part of any planning application.</li> </ul>
-------------	--

### Site Assessment

<b>Parish Council consultation response:</b>	<p>Parish Council has various concerns with this site, as does the local community. These are primarily focused on drainage issues and the potential visual impact of development. The land is very wet, and within a ground water emergence zone. The River Lambourn is a SSSI so there are concerns about what impact any drainage solutions could have on this. During Feb 2014 there was standing water on the site.</p> <p>Concern about the loss of agricultural land which is currently used for agricultural purposes. There is no formal footpath on the access route to the site.</p> <p>This was the least favoured site for development by the residents responding to the survey. The parish council indicated that there is the possibility of Saxon remains on the site.</p>

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site has easy access to the countryside, and is close to local services and facilities which would enable walking and cycling.		The site is close to local services and facilities including a local leisure centre and playing field, <a href="#">as well as good access to the countryside</a> , meaning that Development of the site is likely to have a positive impact on social and environmental sustainability.
	Will it increase opportunities for access to sports facilities?	+	The site is close to the leisure centre		
	Will it protect and enhance green infrastructure across the district?	0	Unlikely to have an impact on GI	<a href="#">Development of the site provides opportunities to enhance the existing PROW and bridle-path network through the creation of new routes linking to existing.</a>	
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The site is close to local services and facilities within the village. <del>There are a number of local opportunities within the racehorse industry and small scale local industry</del> <a href="#">The racehorse industry is the main source of local employment in the area, but the local services and facilities provide more limited employment opportunities.</a>		The proximity <a href="#">of the site to local services and facilities</a> and to local employment opportunities means that the site should have a positive economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	0+	Within the village there are a number of opportunities for walking and cycling. <a href="#">However, there are limited public transport opportunities to and from the village.</a> To access a wider range of higher level services there would be reliance on the car. <del>While there are public transport opportunities within the village, the</del>	<a href="#">Development of the site provides opportunities to enhance the existing PROW and bridle-path network through the creation of new routes linking to existing.</a>	There are opportunities for walking and cycling to local services and facilities, <a href="#">however there are limited public transport opportunities leading to a high degree of car dependency, especially for higher order goods.</a>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will it reduce the number of road traffic accidents and improve safety?	?	<p>service is 2 hourly</p> <p>Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.</p>		<p><u>Overall it is unlikely that development of this site would have an impact on any element of sustainability. However, the site does provide the opportunity to enhance the exiting PROW which could have a positive impact on environmental and social sustainability. which should have a positive impact on sustainability. Due to the location of Lambourn there would be a degree of high ear dependency.</u></p>
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	-	<p>The site is adjacent to the River Lambourn, <u>which is a</u> SSSI and SAC, and</p> <p><u>The site is also adjacent to</u> a BOA. Development of the site would lead to loss of Grade 2 and 3 agricultural land.-S</p> <p><u>The site is a potential</u> designated as UKBAP grassland.</p>	<p><del>Full ecological survey required</del> An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected</p> <p>A significant stand-off between the SSSI/SAC and the development would be required.</p> <p>A Habitats Regulations Assessment (HRA) will be required to accompany any planning application.</p> <p>Any development would have to prove that it would not cause harm to the River Lambourn</p>	<p>Due to the site's location, adjacent to the SSSI and SAC <del>without careful design</del> development could have a negative impact on these areas, <u>however with careful design and appropriate mitigation measures the impact on the environmental sustainability could be reduced.</u></p>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
				SSSI/SAC	
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	-	The site is located within the AONB.  The Landscape <a href="#">Sensitivity Assessment (LSA)</a> indicates that <del>development of this site would be acceptable</del> <a href="#">the site could be developed without detriment to the natural beauty of the AONB, subject to some mitigation measures.</a>	<del>Landscape assessment. The LSA</del> indicates the following protection enhancement would be required <a href="#">as part of any development</a> : - <a href="#">The</a> retention of existing riverside vegetation - <a href="#">The</a> provision of connection for pedestrians to link the existing housing with the valley floor to the north.	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	0	The site is adjacent to the existing settlement, so <a href="#">development would not be out of character with the existing settlement pattern.</a> †Unlikely to have an impact on the character of the built environment.		Development of the site is unlikely to have an impact on any element of sustainability. <a href="#">However further investigation will be required through a Heritage Impact Assessment to ensure there will be no negative impacts on the District's heritage assets.</a>
	Will it conserve and enhance the significance of the District's heritage assets?	?	The site is in an area of high archaeological potential	Further investigation would be required <a href="#">through an archaeological desk based assessment as a minimum and field evaluation if necessary</a>	
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact <a href="#">on the District's cultural environment</a>		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact <a href="#">on access to the historic environment</a>		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact <a href="#">on air quality</a>		Development of the site is unlikely to have an impact on any element of sustainability.
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact <a href="#">on noise levels</a>		
	Will there be an impact on soil quality?	0	Unlikely to have an impact <a href="#">on soil quality</a>		
	Will there be an impact on water quality?	0	Unlikely to have an impact <a href="#">on water quality</a>		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Ⓒ <a href="#">This is a greenfield site</a>		The <del>g</del> <a href="#">Greenfield</a> nature of the site means that there could be a negative impact

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
					on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could <del>also</del> include Transport Assessment / Travel Plans <a href="#">to reduce car traffic and ensure compliance with policies of the Core Strategy.</a>	Without consideration of sustainability construction techniques <a href="#">and the promotion of alternative modes of transport</a> , development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	-	The <a href="#">northern and north</a> eastern edge of the site is within Flood <a href="#">Zones</a> 2 and 3. <a href="#">The site is also within the site</a> in a groundwater emergence zone and surface water flood risk area.	<del>An</del> FRA and appropriate <a href="#">flood</a> mitigation <a href="#">measures</a> including SUDs would need to be provided. <a href="#">No development will take place within the Flood Zones</a>	Development on the site could have a negative impact on all elements of sustainability unless appropriate mitigation is provided. Developing outside <del>the area within</del> <a href="#">Flood Zones</a> 2 and 3 will help to reduce the flood risk and potential impact on sustainability.
11. To ensure a strong, diverse and sustainable economic base	Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?	0	Not considered relevant		The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	0	The site is greenfield and there will be no loss of employment land through the development of the site for housing, No employment use development is proposed for the site.  The development of the site for housing will have an overall neutral effect on economic sustainability.		
	Will it promote and support the vitality and viability of the District's commercial centres?	0	Housing development provides additional workforce and customers which has the potential to support commercial centres however the site		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.		

### Summary

Overall there are no significant sustainability issues with this site [and it is likely to have a predominantly neutral effect on sustainability.](#)

The site is well related to local services and facilities within the village, including [access to](#) the countryside, all of which would enable walking and cycling and promote healthy, active lifestyles which would have a positive impact on sustainability. [In addition, the development is close to local employment opportunities provided through the racehorse industry and local services/facilities, which will have a positive impact on economic and social sustainability.](#)

Potential negative impacts could occur in relation to the environmental sustainability due to the site's location within the AONB and the proximity of the site to the SSSI and SAC. As long as appropriate mitigation measures are introduced, including those set out within the Landscape [Sensitivity](#) Assessment, the impact should be mitigated [and deliver positive effects on sustainability.](#) Flooding could also have a negative impact on all elements of sustainability unless appropriate mitigation measures are provided. [Developing outside Flood Zones 2 and 3 will help to reduce the flood risk and potential impact on sustainability.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB - Lambourn

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	<a href="#">AONB</a> <sup>N&amp;T</sup>	<b>Settlement:</b>	Lambourn	<b>Parish:</b>	Lambourn
<b>Site ID:</b>	LAM005	<b>Site Address:</b>	Land adjoining Lynch Lane, Lambourn	<b>Development Potential:</b>	<a href="#">Approx. 60</a> <sup>56</sup> dwellings ( <a href="#">3.06</a> <sup>2.8</sup> ha at 20dph)

### Recommendation:

Site is recommended for allocation ~~(excluding the area of the site at risk from flooding).~~

### Justification:

The site is well related to existing services and facilities within Lambourn.

Whilst the site is within the AONB a Landscape Sensitivity Assessment has been carried out and indicates that development on the site would be acceptable in landscape terms, subject to mitigation measures to ensure the protection of existing landscape features. In addition the LSA states that both sites LAM007 and LAM005 could only be developed in part concurrently or either one or the other selected.

The northern and north eastern part of the site lie within Flood Zones 2 and 3 and within an area of surface water flood risk, whilst the whole site lies within a groundwater emergence zone. No development will take place within the Flood Zones and a Flood Risk Assessment (FRA) will be required to support a planning application, along with implementation of appropriate flood risk mitigation measures.

Development on the site will not adversely affect the SSSI/SAC. A Habitats Regulations Assessment (HRA) will be required to accompany any planning application. The development will need to provide a significant buffer/stand-off between the development and the SSSI/SAC. An extended phase 1 habitat survey would also be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected.

The site has been identified as having a high archaeological potential and therefore further investigation will be required as part of a planning application via an archaeological desk based assessment as a minimum and field evaluation if necessary.

~~Development can take place on the site without needing to develop the area of the site within the flood zone.~~

### Discussion:

#### Site Description:

The site is located to the north east of Lambourn. Close to local services and facilities including [good access to the](#) open countryside.

#### Landscape:

The site is located within the AONB, ~~although the~~ A Landscape Sensitivity Assessment (LSA) has been carried out on the site and indicates that development on the site would be acceptable as long as mitigation measures as listed in the assessment are adhered to. It states that development on the site should retain the existing riverside vegetation and provision of connections for pedestrians to link the existing housing with the valley floor to the north.

In addition, the overall conclusions of the LSA recommend that the larger sites within Lambourn, LAM007 and LAM005, are either only developed in part concurrently, or either one or the other selected, to continue the pattern of sequential small developments in the village.

#### Flood Risk:

The northern and north eastern part of the site lie within Flood Zones 2 and 3 and within an area of surface water flood risk, whilst the whole site lies within a groundwater emergence zone. Approximately 10% of the site is within flood zone 3, with a further 1% in flood zone 2. No development will take place within the Flood Zones and a Flood Risk Assessment (FRA) will be required to support a planning application, along with implementation of appropriate flood risk mitigation measures. The FRA should include consideration of all sources of flooding, including groundwater flood risk.

~~10% of the site is within flood zone 3, with a further 1% in flood zone 2. An ordinary water course passes through the site. An FRA would be required and appropriate mitigation, including SUDs would need to be provided. Should development take place it would only be on the area of the site within flood zone 1.~~

## Site Selection – Site Commentary

### Highways /Transport:

Traffic generated by the site is expected to have a minimal impact on the highway network. Access to the site can be obtained via The Park and Essex Place. Some improvements may be required to the Essex Place/Big Lane junction [as the visibility at the junction appears to be limited. Further consideration of the site following the Preferred Options consultation by the Highways Team has identified Lynch Lane as another possible access to/from the site.](#)

[The Highways Team have confirmed that in accordance with Manual for Streets it is preferable to have more than one access serving the development to enhance permeability through the site.](#)

There are limited public transport opportunities within the village, with a 2 hourly bus service linking the village to Newbury. There is also an intermittent link to Swindon Railway Station. There are local opportunities for walking and cycling within the village, [with footways and bus stops within the vicinity where services are available to places such as Newbury and Hungerford.](#)

[There are no formal PRoW that pass through the site however there is an opportunity with the development of this site to improve the network of bridle paths and public rights of way within the area which would benefit the community and racing industry as a whole.](#)

### Ecology:

The site is [potentially](#) within a UKBAP grassland site, [and lies](#) adjacent to the River Lambourn SSSI and SAC. [A Habitats Regulations Assessment \(HRA\) will be required to accompany any planning application.](#) ~~A full ecological survey would be required and details setting out that any development would not harm the SSSI or SAC.~~

[In addition, an extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected. In addition, following Preferred Options consultation it has been concluded that a significant buffer/stand-off would be required between the SSSI/SAC and the development.](#)

### Archaeology:

The site is in an area of high archaeological potential requiring further investigation. [It has been concluded that a variety of archaeological features are in close proximity and on the site and therefore a Heritage Impact Assessment would be required as part of any planning application.](#)

### Education:

Local primary school provision is close to or at capacity. No comments made regarding secondary school provision.

### Environmental Health:

No known air, noise or contamination issues.

### Minerals and Waste:

The site is partially underlain by gravel deposits. Consideration of policy 1 & 2 of the RMLP would be required.

No known waste issues [in relation to land use planning.](#)

### Land use planning consultation zone:

The site is not within an AWE consultation zone

### Environment Agency:

~~The EA strongly advise that the site is not allocated. Where the site is recommended for allocation a strategic sequential test would be required. There would need to be an allocation policy to clarify that there would be no development within the flood zones.~~ [As part of the Preferred Options consultation the Environment Agency \(EA\) responded stating that it is noted the developable area does not include the area in Flood Zone 3 and 2. The policy allocation should set out that there will be no development in Flood Zone 3 and 2. This is a change from advice provided by the EA prior to the consultation.](#)

The site is over a major aquifer with high potential for groundwater contamination. [As a result a FRA would be required as part of a planning application.](#)

## Site Selection – Site Commentary

### Thames Water:

Concern regarding Water Supply capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of any development.

A water supply strategy would be required [As part of the Preferred Options consultation Thames Water responded stating that they do not envisage infrastructure concerns regarding Water Supply capability in relation to this site. This is a change from advice provided by Thames Water prior to the consultation.](#)

Concern regarding Waste wWater services. The existing network in this area is unlikely to be able to support demand [anticipated from the development](#). Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A dDrainage sStrategy would be required [as part of any planning application to determine the exact impact on the infrastructure and the significant of the infrastructure to support the development.](#)

[Infiltration from groundwater into the network has been identified as a strategic issue within Lambourn, therefore an integrated Water Supply and Drainage Strategy would be required for this site.](#)

### Parish Council:

Parish Council has various concerns with this site, as does the local community. These are primarily focused on drainage issues and the potential visual impact of development. The land is very wet, and within a ground water emergence zone. The River Lambourn is a SSSI so there are concerns about what impact any drainage solutions could have on this. During Feb 2014 there was standing water on the site.

Concern about the loss of agricultural land which is currently used for agricultural purposes.

There is no formal footpath on the access route to the site.

This was the least favoured site for development by the residents responding to the survey.

The Pparish eouncil Council indicated that there is the possibility of Saxon remains on the site.

### Preferred Options Consultation key issues:

- [Principle of development](#)
- [Highways/Transport](#)
- [Infrastructure](#)
- [Landscape/Setting](#)
- [Flooding](#)
- [Ecology](#)
- [Employment](#)
- [Heritage](#)

[For the consultation responses and Council's response, please see the Statement of Consultation.](#)

### SA/SEA:

~~There are no significant sustainability issues with this site. The site is well related to local services and facilities within the village, including the countryside, all of which would enable walking and cycling and promote healthy, active lifestyles which would have a positive impact on sustainability. Potential negative impacts could occur in relation to the environmental sustainability due to the site's location within the AONB and the proximity of the site to the SSSI and SAC. As long as appropriate mitigation measures are introduced, including those set out within the Landscape Assessment, the impact should be mitigated. Flooding could also have a negative impact on all elements of sustainability unless appropriate mitigation measures are provided.~~

[Overall there are no significant sustainability issues with this site and it is likely to have a neutral effect on sustainability.](#)

[The site is well related to local services and facilities within the village, including access to the countryside, all of which would enable walking and cycling and promote healthy, active lifestyles which would have a positive impact on sustainability. In addition, the development is close to local employment opportunities provided through the racehorse industry and local services/facilities, which will have a positive impact on economic and social sustainability.](#)

As long as appropriate mitigation measures are introduced, including those set out within the Landscape Sensitivity Assessment, the impact should be mitigated and deliver positive effects on sustainability. Flooding could also have a](#)

## Site Selection – Site Commentary

negative impact on all elements of sustainability unless appropriate mitigation measures are provided. Developing outside Flood Zones 2 and 3 will help to reduce the flood risk and potential impact on sustainability.

**Proposed development (from SHLAA submission):**

The site is proposed through the SHLAA for 150 dwellings.

The Site Promoter responded to the Preferred Options consultation confirming the site was available, and there are no significant issues that would undermine the deliverability of the site. It was also confirmed that a Phase 1 Habitat Assessment had been carried out for the site, and this was subsequently provided to the Council. The site promoter also raised concern regarding the developable area and density of the site set out within the Preferred Options DPD.

## Site Selection – Site Assessment

<b>Spatial Area</b>	AONB	<b>Settlement:</b>	Lambourn	<b>Parish:</b>	Lambourn

## Summary of Site Assessment

### Key Issues:

- [Site is within the AONB – a Landscape Sensitivity Assessment \(LSA\) has concluded that](#) only part of the site is considered suitable for development. [The LSA also concludes that LAM005 and LAM007 are either only developed in part concurrently, or either one or the other selected.](#) Southern part of the site is used as part of the Racehorse industry – [development of the site would be contrary to policy CS12](#)
- [TPOs along northern and north eastern boundaries](#)
- [Site is possibly Chalk Grasasland – An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected](#)
- [Site is considered to have high archaeological potential, therefore further investigation will be required as part of any planning application - Heritage Impact Assessment required.](#)

## Site Assessment

<b>Parish Council consultation response:</b>	<p>Concerns over access – Folly Road is unsuitable for the whole of the site, it is too narrow and is a route used to get horses up to the gallops. The lower part of the site could be accessed from Rockfel Road. If only the frontage of Folly Road was developed the access might be acceptable. Development could result in increased run-off into Lambourn Village. The water mains are already fragile (10" main has burst 3 times in the last 6 months).</p> <p>The racehorse yard adjacent to the site is still in use, and there is concern that the yard could be lost should this site be developed.</p> <p>The Parish Council thought that ownership of the site might prove problematic to any development on the site coming forward.</p> <p>Overall conclusion was that if development is needed, then development of the site might be a possibility if the constraints are taken into account and if considered as two separate sites. This site was the 1<sup>st</sup> choice of 27% of questionnaire respondents and the 2<sup>nd</sup> choice of 21%.</p>

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	The site has easy access to the countryside, and is close to local services and facilities which would enable walking and cycling.		The site is close to local services and facilities including a local leisure centre and playing field, <a href="#">and has good access to the countryside</a> , meaning that development of the site is likely to have a positive impact on social and environmental sustainability.
	Will it increase opportunities for access to sports facilities?	<b>+</b>	The site is close to the leisure centre		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	Unlikely to have an impact on GI		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>+</b>	The site is close to <del>lots of</del> local services and facilities within the village. <del>There are a number of local opportunities within the racehorse industry and small scale local industry</del> <a href="#">The racehorse industry is the main source of local employment in the area, but the local services and facilities provide more limited employment opportunities.</a>		The proximity <a href="#">of the site to local services and facilities</a> and to local employment opportunities means that the site should have a positive economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>0 +</b>	Within the village there are a number of opportunities for walking and cycling. <a href="#">However, there are limited public transport opportunities to and from the village.</a> To access a wider range of higher level services there would be reliance on the car. <del>While there are public transport opportunities within the village, the service is 2 hourly</del>	<a href="#">Development of the site provides the opportunity to deliver new footpaths, linking the new dwellings with the existing settlement.</a>	There are opportunities for walking and cycling to local services and facilities, <a href="#">however there are limited public transport opportunities leading to a high degree of car dependency, especially for higher order goods.</a>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		<a href="#">Overall it is unlikely that development of this site would have an impact on any element of sustainability. However, the site does provide the opportunity to enhance the pedestrian linkages between the development and the existing settlement which could have a positive impact on sustainability.</a> which should have a positive impact on sustainability. Due to the location of Lambourn there would be a degree of high car dependency.
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	?	There are TPOs on the site. <del>P</del> <a href="#">and the site is a possible chalk grassland habitat</a>	Design to take into account trees protected by TPOs.  <a href="#">An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected</a> <del>Full ecological survey would be required.</del>	Without mitigation measures as set out in the Landscape <a href="#">Sensitivity</a> Assessment there would be <a href="#">the</a> potential for a negative impact on environmental sustainability.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	-	The site is within the AONB.  <a href="#">The Landscape Sensitivity Assessment work (LSA) indicates development on only part of the site would be suitable for development. result in little harm to the natural beauty of the AONB, Ssubject to a number of conditions/mitigation</a>	The Landscape <a href="#">Sensitivity</a> Assessment requires the protection and enhancement of certain features: - low density, linear housing (similar to that north of Folly Lane <a href="#">would be the most appropriate form of development at the higher</a>	

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">measures. It is recommended that only the land adjacent to Folly Road and below the 150m AOD contour in the south of the site to be considered for development.</a>	<ul style="list-style-type: none"> <li>- <a href="#">elevation)</a> higher density, similar to housing to the east, on the lower ground in the eastern part of the site</li> <li>- Views from surrounding countryside would need to be carefully considered</li> <li>- New planting would be important in integrating the buildings into the landscape, to including replacement of the conifer hedges.</li> <li>- An area between the two portions of the site for development would need to be left as open field or open space to reduce the overall impact of the development.</li> </ul>	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	<a href="#">0 ?</a>	<del>The impact on the built environment would depend on the design and size of the development proposed.</del> <a href="#">The site is adjacent to the existing settlement and some appropriate development would not be out of keeping with the existing settlement pattern</a>	<a href="#">Careful design will be required throughout the whole site, but with particular attention at the higher elevations</a>	Development of the site is unlikely to have an impact on any element of sustainability as long as design is in line with the policies of the Core Strategy. <a href="#">However, further investigation will be required through a Heritage Impact Assessment to ensure there will be no negative impacts on the District's heritage assets.</a>
	Will it conserve and enhance the significance of the District's heritage assets?	<a href="#">?</a>	The site is in an area of high archaeological potential with a variety of features close to and on the site.	Further investigation required <a href="#">through a Heritage Impact Assessment</a>	
	Will it promote, conserve and enhance the District's cultural assets?	<a href="#">0</a>	Unlikely to have an impact <a href="#">on the District's cultural environment</a>		
	Will it provide for increased access to and enjoyment of the historic environment?	<a href="#">0</a>	Unlikely to have an impact <a href="#">on access to the historic environment</a>		
7. To protect and improve air, water and soil quality,	Will the site be at risk of, or impact on, air quality?	<a href="#">0</a>	Unlikely to have an impact <a href="#">on air quality</a>		Development of the site is unlikely to have an impact

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
and minimise noise levels throughout West Berkshire	Will the site be at risk of, or impact on, noise levels?	<b>0</b>	Unlikely to have an impact <a href="#">on noise levels</a>		on any element of sustainability.
	Will there be an impact on soil quality?	<b>0</b>	Unlikely to have an impact <a href="#">on soil quality</a>		
	Will there be an impact on water quality?	<b>0</b>	Unlikely to have an impact <a href="#">on water quality</a>		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>-</b>	Greenfield Site		The <del>g</del> Greenfield nature of the site means that there could be a negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	<b>?</b>	The level of impact depends on location, building materials / construction, transport / design	Mitigation could <del>also</del> include Transport Assessment / Travel Plans <a href="#">to reduce car traffic and ensure compliance with policies of the Core Strategy..</a>	Without consideration of sustainability construction techniques <a href="#">and the promotion of alternative modes of transport</a> , development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	<b>0</b>	The <del>site</del> <a href="#">site is in Flood Zone 1, but a small part lies is-within an</a> adjacent to a groundwater flood risk area <del>emergence zone</del> and <a href="#">the site is adjacent to</a> a critical drainage area.	There is no evidence of flooding on the site. An FRA would be required <a href="#">and should take into consideration groundwater issues.</a> and SUDs would need to be provided.	Unlikely to have an impact on any element of sustainability.
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<b>0</b>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<b>0</b>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall there are no significant sustainability issues on this site [and development is likely to have a predominantly neutral effect on sustainability.](#)

The site is well related to local services and facilities within the village, including [access to](#) the countryside, all of which would enable walking and cycling and promote healthy, active lifestyles which would have a positive impact on sustainability. [In addition, the development is close to local employment opportunities provided through the racehorse industry and local services/facilities, which will have a positive impact on economic and social sustainability.](#)

Potential negative impacts could occur in relation to environmental sustainability due to the site's location in the AONB. Mitigation measures in line with the Landscape [Sensitivity](#) Assessment should reduce this impact [and deliver positive effects on sustainability.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB - Lambourn

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Lambourn	<b>Parish:</b>	Lambourn
----------------------	------	--------------------	----------	----------------	----------

<b>Site ID:</b>	LAM007	<b>Site Address:</b>	Land between Folly Road, Rockfel Road / Bridleways and Stork House Drive, Lambourn	<b>Development Potential:</b>	24 dwellings (1.2ha at 20dph)
-----------------	--------	----------------------	--	-------------------------------	-------------------------------

**Recommendation:**

The site is not recommended for allocation

**Justification:**

Although the site is located close to local services and facilities within Lambourn and relates well to the existing settlement, the site is largely in use as turnout paddocks for the adjacent yard. The equestrian industry plays a vital role within the local rural economy of Lambourn and surrounding areas. As such the loss of the site for housing development would be contrary to policy CS12 of the Core Strategy. Policy CS12 aims to prevent pressure for redevelopment of existing facilities to other uses and the fragmentation of existing sites. Such pressures could lead to the decline of the industry locally, threaten the character and form of the settlement and increase pressure for replacement facilities in environmentally sensitive areas.

Whilst the southern area of the site is used as turnout paddocks the Council's Highways Team have concerns regarding an access onto Folly Road which would impact on the delivery of the northern section of the site. In addition the LSA states that both sites LAM007 and LAM005 could only be developed in part concurrently or either one or the other selected.

**Discussion:**

**Site Description:**

The site is located to the west of Lambourn, close to local services and facilities and with good access to the open countryside. Development of the site would result in the loss of land involved in the racehorse industry, which would be contrary to policy CS12 of the Core Strategy.

**Landscape:**

The site is located in the AONB. The Landscape Sensitivity Assessment (LSA) indicates that development on the site would be acceptable as long as mitigation measures as listed in the assessment are adhered to. It states that development on part of the site would result in little harm to the natural beauty of the AONB. It is recommended that only land adjacent to Folly Road and below the 150m AOD contour in the south of the site be included. Any development on these parts of the site would be subject to conditions and the protection and enhancement of certain features as set out within the LSA.

In addition, the overall conclusions of the LSA recommend that the larger sites within Lambourn, LAM007 and LAM005, are either only developed in part concurrently, or either one or the other selected, to continue the pattern of sequential small developments in the village.

**Flood Risk:**

The site is in flood zone 1. A small part of the site lies within the adjacent to a groundwater emergence zone and the site is adjacent to a critical drainage area. A Flood Risk Assessment (FRA) would be required to support a planning application. The FRA should take into account flood risk from potential sources including groundwater flood risk, and the implementation of SUDs and/or appropriate mitigation measures would need to be provided as part of any development.

**Highways /Transport:**

The traffic impact on the highway network is expected to be limited. Access could be obtained onto Folly Road, ~~but there are no pavements and~~ but given the rural nature of the road of the road it probably would not be appropriate to introduce an access. ~~location of the site there would be limited scope to introduce them.~~ An alternative access would be available onto Rockfel Road through the recreation ground. This route would be preferred as this would connect the site into the footway network.

There are footways and bus stops within the vicinity but no footpaths along Folly Road. The addition of a pedestrian access onto Folly Road would be welcomed.

There are limited public transport opportunities within the village, with a 2 hourly bus service linking the

## Site Selection – Site Commentary

village to Newbury. There is also an intermittent link to Swindon Railway Station.

There are local opportunities for walking and cycling within the village.

### **Ecology:**

The site is possibly chalk grassland. [An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected](#)

~~A full ecological survey would be required.~~

### **Archaeology:**

The site is within an area of high archaeological potential. Further investigation is required. [It has been concluded that a variety of archaeological features are in close proximity and on the site and therefore a Heritage Impact Assessment would be required as part of any planning application.](#)

### **Education:**

Local primary school provision is close to, or at capacity. No comments made about secondary school provision.

### **Environmental Health:**

No known air, noise or contamination issues.

### **Minerals and Waste:**

No known mineral or waste issues.

### **Land use planning consultation zone:**

The site is not within an AWE consultation zone.

### **Environment Agency:**

No specific comments made on this site. The site is over a major aquifer, with high risk of contamination to groundwater. [As a result a FRA would be required as part of a planning application.](#)

### **Thames Water:**

No ~~W~~water ~~S~~supply ~~or Waste Water capability issues~~ infrastructure issues envisaged.

[This advice is slightly different to that provided prior to the Preferred Options consultation, when Thames Water had a concern regarding Waste Water capability.](#)

~~Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.~~

~~A drainage strategy would be required~~

### **Parish Council:**

Concerns over access – Folly Road is unsuitable for the whole of the site, it is too narrow and is a route used to get horses up to the gallops. The lower part of the site could be accessed from Rockfel Road. If only the frontage of Folly Road was developed the access might be acceptable. Development could result in increase run-off into Lambourn Village. The water mains are already fragile (10" main has burst 3 times in the last 6 months). The racehorse yard adjacent to the site is still in use, and there is concern that the yard could be lost should this site be developed. The Parish Council thought that ownership of the site might prove problematic to any development on the site coming forward. Overall conclusion was that if development is needed, then development of the site might be a possibility if the constraints are taken into account and if considered as two separate sites. This site was the 1<sup>st</sup> choice of 27% of questionnaire respondents and the 2<sup>nd</sup> choice of 21%.

### **Preferred Options Consultation Key Issues:**

- [Principle of development](#)
- [Settlement boundary](#)
- [Racehorse Industry](#)
- [Infrastructure](#)
- [Highways and Transport](#)

## Site Selection – Site Commentary

- [Landscape and setting](#)
- [Flooding](#)
- [Pollution](#)
- [Archaeology](#)
- [Ecology](#)

[For the consultation responses and Council's response, please see the Statement of Consultation.](#)

### **SA/SEA:**

[Overall there are no significant sustainability issues on this site and development is likely to have a predominantly neutral effect on sustainability.](#)

[The site is well related to local services and facilities within the village, including access to the countryside, all of which would enable walking and cycling and promote healthy, active lifestyles which would have a positive impact on sustainability. In addition, the development is close to local employment opportunities provided through the racehorse industry and local services/facilities, which will have a positive impact on economic and social sustainability.](#)

[Potential negative impacts could occur in relation to environmental sustainability due to the site's location in the AONB. Mitigation measures in line with the Landscape Sensitivity Assessment should reduce this impact and deliver positive effects on sustainability.](#)

~~The SA/SEA indicates a predominantly neutral effect on sustainability. There are no significant sustainability issues on this site. The site is well related to local services and facilities within the village, including the countryside, all of which would enable walking and cycling and promote healthy, active lifestyles which would have a positive impact on sustainability. Potential negative impacts could occur in relation to environmental sustainability due to the site's location in the AONB. Mitigation measures in line with the Landscape Assessment should reduce this impact.~~

### **Proposed development (from SHLAA submission):**

The site is proposed for a mix of dwellings and densities to suit the needs of the area.

# Site Selection – Site Assessment

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Lambourn	<b>Parish:</b>	Lambourn
----------------------	------	--------------------	----------	----------------	----------

<b>Site ID:</b>	LAM009	<b>Site Address:</b>	Land east of Hungerford Hill, Lambourn
-----------------	--------	----------------------	--

<b>Development Potential:</b>	30 dwellings (1.5ha at 20dph)	<b>SHLAA Assessment:</b>	Potentially Developable
-------------------------------	-------------------------------	--------------------------	-------------------------

## Summary of Site Assessment

Key Issues:

- AONB
- Critical drainage area [Access would need to be carefully considered given topography of the site – uncertain if access onto Hungerford Hill can be achieved. Access via Greenways would require the purchase of additional land](#)
- [The relationship with the existing settlement is poor. The site is separated from the main core of the village by low density housing to the north and east](#)
- Distance from play facilities

## Site Assessment

<b>Parish Council consultation response:</b>	<p>Access and impact on the landscape are the key concerns with this site. Access from Hungerford Hill is considered to be dangerous and the other access from Greenways is difficult as it is a very narrow point by the school. Access could be possible if land purchased off Greenways.</p> <p>The site slopes so there would be visual impact at the entrance to the village. It would be difficult to screen any development meaning the character of the village would be affected.</p> <p>There are drainage issues on the site, which could be made worse by development.</p>

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site has easy access to the countryside, and is close to local services and facilities which would enable walking and cycling.		The site is close to local services and facilities including a local leisure centre <a href="#">and has good access to the countryside</a> <del>and playing field</del> meaning that development of the site is likely to have a positive impact on social and environmental sustainability.
	Will it increase opportunities for access to sports facilities?	+	The site is close to the leisure centre		
	Will it protect and enhance green infrastructure across the district?	0	The site is adjacent to a <a href="#">Public Right of Way, which runs along part of the western boundary</a>	The ROW would need to be preserved.	
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The site is close to local services and facilities within the village. <del>There are a number of local opportunities within the racehorse industry and small scale local industry</del> <a href="#">The racehorse industry is the main source of local employment in the area, but the local services and facilities provide more limited employment opportunities.</a>		The proximity <a href="#">of the site to local services and facilities</a> and to local employment opportunities means that the site should have a positive economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	? -	Within the village there are a number of opportunities for walking and cycling. <a href="#">However there are limited public transport opportunities to and from the village.</a> To access a wider range of higher level services there would be reliance on the car. <del>While there are public transport opportunities within the village, the service is 2 hourly</del> Road <a href="#">and pedestrian</a> access to the site is	<a href="#">If an access can be obtained off Hungerford Hill, Road Safety improvements along Hungerford Hill would be required, along with the delivery of a footway</a> to encourage opportunities for walking and cycling.	The location of the site <a href="#">and concerns over suitable access</a> means that there are concerns over road safety. Road safety can have a <a href="#">negative</a> impact on all elements of sustainability.  Improvements to road safety <a href="#">and the delivery of</a>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			limited, and with potential implications on safety.		<a href="#">an appropriate access</a> would help reduce the sustainability impact.
	Will it reduce the number of road traffic accidents and improve safety?	?	Road access to the site <a href="#">is difficult to achieve</a> <del>is via a narrow lane, past the primary school.</del> There could be issues relating to Road Safety.	<a href="#">If an access can be obtained off Hungerford Hill, road safety improvements along Hungerford Hill would be required, along with the delivery of a footway to encourage opportunities for walking and cycling.</a>	
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	0	Unlikely to have an impact		Without mitigation measures as set out in the Landscape <a href="#">Sensitivity</a> Assessment there would be <a href="#">the</a> potential for a negative impact on environmental sustainability.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	-	The site is located within the AONB.  The Landscape <a href="#">Sensitivity</a> Assessment ( <a href="#">LSA</a> ) indicates that <del>development of this site would be acceptable</del> <a href="#">the site could be developed without detriment to the natural beauty of the AONB, subject to the mitigation measures set out within the LSA.</a>	<del>Landscape assessment</del> <a href="#">The LSA</a> indicates the following protection enhancement would be required <a href="#">as part of any development</a> : <ul style="list-style-type: none"> <li>- <a href="#">Low density</a> would be the most appropriate form of development in the higher parts of the site</li> <li>- Views from surrounding countryside would need to be carefully considered</li> <li>- New planting would be important in integrating the buildings into the landscape</li> <li>- Existing vegetation framework would need to be protected.</li> </ul>	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	?	The site is sloping, therefore there would be an impact on the built environment with new development on the <a href="#">higher more visible parts of the site.</a> <a href="#">The site is separated from the main core of the village by low density housing to the north and east.</a> The site is less well related to	<a href="#">Development at a very low density in keeping with surrounding settlement pattern, along with careful design.</a>	<a href="#">Development of the site could have a negative impact on the built environment given the existing settlement pattern.</a> <a href="#">In addition further investigation is required through a Heritage Impact</a>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			the settlement than other sites within the village.		<p><a href="#">Assessment to ensure there will be no negative impacts on the District's heritage assets.</a></p> <p>Development of the site is unlikely to have an impact on any element of sustainability.</p>
	Will it conserve and enhance the significance of the District's heritage assets?	?	The site is in an area of high archaeological potential, although the actual impact is unknown	Further work required <a href="#">through a Heritage Impact Assessment.</a>	
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact <a href="#">on the District's cultural environment</a>		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact <a href="#">on access to the historic environment</a>		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will there be an impact on air quality?	0	Unlikely to have an impact <a href="#">on air quality</a>		Development of the site is unlikely to have an impact on any element of sustainability.
	Will there be an impact noise levels?	0	Unlikely to have an impact <a href="#">on noise levels</a>		
	Will there be an impact on soil quality?	0	Unlikely to have an impact <a href="#">on soil quality</a>		
	Will there be an impact on water quality?	0	Unlikely to have an impact <a href="#">on water quality</a>		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Greenfield site		The greenfield nature of the site means that there could be a negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans <a href="#">to reduce car traffic and ensure compliance with policies of the Core Strategy.</a>	Without consideration of sustainability construction techniques <a href="#">and the promotion of alternative forms of transport,</a> development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	? -	<a href="#">The site is in Flood Zone 1. The site but more than half of the site is within a critical drainage area. Although is not within a flood risk area.</a>	Flood risk assessment (FRA) and flood mitigation would be required on site.	<a href="#">Development on the site could have a negative impact on all elements of sustainability unless appropriate mitigation measures are provided.</a> Unlikely to have an impact

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
					on any element of sustainability, although consideration of flood risk within the village would need to be considered to ensure no negative impact occurred in relation to sustainability
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall there are no significant [sustainability](#) impacts from this site [and it is likely to have a predominantly neutral effect on sustainability.](#)

The site is well related ~~located close~~ [located close](#) to local services and facilities within the village, ~~including~~ [and has good access to](#) the countryside, which should have a positive impact on sustainability. [However, it is separated from the main core of the village by low density housing to the north and east and could have a negative impact on the built environment.](#)

There are concerns over road safety [and the delivery of an appropriate access](#), which could have a negative impact on all elements of sustainability unless improvements are made

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

to the highway network [and suitable access arrangements implemented](#). This does also limit opportunity for encouraging walking and cycling, which could reduce the sustainability of the site.

[In addition, potential negative impacts could occur in relation to the environmental sustainability due to the site's location within the AONB. As long as appropriate mitigation measures are introduced, including those set out within the Landscape Sensitivity Assessment, the impact should be mitigated and deliver positive effects on sustainability.](#)

[Whilst the site itself is within Flood Zone 1 more than half of the site lies within a Critical Drainage Area, which increases the risk of flooding and could result in negative impacts upon all elements of sustainability. The implementation of appropriate mitigation measures could reduce the impacts of any such negative effects.](#) ~~While the site itself is not at risk from flooding, flood risk within the village is an issue and development here would need to have appropriate SUDs to ensure that development did not lead to worsening flooding elsewhere, as this would have a negative impact on sustainability.~~

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB - Lambourn

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Lambourn	<b>Parish:</b>	Lambourn
<b>Site ID:</b>	LAM009	<b>Site Address:</b>	Land east of Hungerford Hill, Lambourn	<b>Development Potential:</b>	30 dwellings (1.5ha at 20dph)

### Recommendation:

The site is not recommended for allocation

### Justification:

The site is steeply sloping, [resulting in concern over the ability to provide suitable access arrangements with potential access](#) and [potential](#) road safety issues.

[The relationship with the existing settlement is poor, and the site is separated from the main core of the village by low density housing to the north and east](#)

Other sites within the village are considered to have less of an impact on the landscape and built environment.

### Discussion:

#### Site Description:

The site is located to the south east of Lambourn, close to local services and facilities and [with good access to](#) the open countryside. [However the site is separate from the main core of the village by low density housing to the north and east, relating less well to the existing settlement pattern.](#)

~~Development would lead to the loss of land associated with the racehorse industry.~~

#### Landscape:

The site is within the AONB, ~~although~~ [The Landscape Sensitivity Assessment \(LSA\) indicates the site could be developed without detriment to the natural beauty of the AONB, subject to that development on the site would be acceptable as long as the mitigation measures as listed in the assessment are adhered to.](#)

#### Flood Risk:

The site is in flood zone 1. [However more than half of the site is within](#) ~~Adjacent to~~ a critical drainage area. [As a result an Flood Risk Assessment \(FRA\) would need to be provided as part of a planning application and SUDs/appropriate mitigation measures would need to be provided should be implemented where necessary.](#)

#### Highways /Transport:

No specific comments have been made on this site.

Concern over road safety implications of this site due [to the sites location](#). ~~to its location along a rural country road.~~ Significant improvements to Hungerford Hill would be required to encourage walking and cycling. [Concern over suitable access arrangements.](#)

There are limited public transport opportunities within the village, with a 2 hourly bus service linking the village to Newbury. There is also an intermittent link to Swindon railway station. There are local opportunities for walking and cycling within the village.

#### Ecology:

No known issues.

#### Archaeology:

The site is in an area of high archaeological potential. Previous development on the site means that it is unclear what the archaeological impact would be. Saxon brooch was recovered from field which may indicate burials. Further investigation would be required [through a Heritage Impact Assessment as part of any planning application.](#)

#### Education:

Local primary school provision is close to or at capacity. No comments made about secondary school provision.

## Site Selection – Site Commentary

### Environmental Health:

No known air, noise or contamination issues.

### Minerals and Waste:

No known mineral or waste issues.

### Land use planning consultation zone:

The site is not within an AWE consultation zone

### Environment Agency:

No specific comments made on this site. The site is over a major aquifer with a high risk of contamination to groundwater. [As a result a FRA would be required as part of a planning application.](#)

### Thames Water:

TW not consulted on this site.

### Parish Council:

Access and impact on the landscape are the key concerns with this site. Access from Hungerford Hill is considered to be dangerous and the other access from Greenways is difficult as it is a very narrow point by the school. Access could be possible if land purchased off Greenways. The site slopes so there would be visual impact at the entrance to the village. It would be difficult to screen any development meaning the character of the village would be affected. There are drainage issues on the site, which could be made worse by development.

### Preferred Options consultation Key Issues:

- [Relationship to the existing settlement](#)
- [Access](#)
- [Landscape](#)

[For the consultation responses and Council's response, please see the Statement of Consultation.](#)

### SA/SEA:

[Overall there are no significant sustainability impacts from this site and it is likely to have a predominantly neutral effect on sustainability.](#)

[The site is located close to local services and facilities within the village, and has good access to the countryside, which should have a positive impact on sustainability. However, it is separated from the main core of the village by low density housing to the north and east and could have a negative impact on the built environment.](#)

[There are concerns over road safety and the delivery of an appropriate access, which could have a negative impact on all elements of sustainability unless improvements are made to the highway network and suitable access arrangements implemented. This does also limit opportunity for encouraging walking and cycling, which could reduce the sustainability of the site.](#)

[In addition, potential negative impacts could occur in relation to the environmental sustainability due to the site's location within the AONB. As long as appropriate mitigation measures are introduced, including those set out within the Landscape Sensitivity Assessment, the impact should be mitigated and deliver positive effects on sustainability.](#)

[Whilst the site itself is within Flood Zone 1 more than half of the site lies within a Critical Drainage Area, which increases the risk of flooding and could result in negative impacts upon all elements of sustainability. The implementation of appropriate mitigation measures could reduce the impacts of any such negative effects.](#)

~~The SA/SEA indicates a predominantly neutral sustainability effect. There are no significant impacts from this site. The site is well related to local services and facilities within the village, including the countryside, which should have a positive impact on sustainability. There are concerns over road safety, which could have a negative impact on all elements of sustainability unless improvements are made to the highway network. This does also limit opportunity for encouraging walking and cycling, which could reduce the sustainability of the site. While the site itself is not at risk from flooding, flood risk within the village is an issue and development here would need to have appropriate SUDs to ensure that development did not~~

## Site Selection – Site Commentary

~~lead to worsening flooding elsewhere, as this would have a negative impact on sustainability.~~

**Proposed development (from SHLAA submission):**

The site is proposed for 45 dwellings.

- Racehorse industry
- Flood risk - [site lies within a](#) (groundwater [emergence zone, an area of](#) surface water [flood risk](#) and [a](#) critical drainage area).
- Evidence of significant standing water/[flooding](#) on the site [Jan/Feb in 2007 and](#) 2014. [A FRA would be required.](#)
- Distance from local amenity space
- TPO [along part of the south eastern boundary](#)

## Site Assessment

<b>Parish Council consultation response:</b>	Drainage and flooding are the main issues for this site. The site floods and is part of the natural flood protection for Lambourn Village. There was once an open gully on the site, but this has been filled in. The site is bowl shaped and there was standing water in the field during Jan/Feb 2014, and a few years ago to a depth of about 4ft. Whilst there are engineering solutions to prevent new dwellings from flooding the parish council were very concerned of the impact on flooding elsewhere in the village. The allotments adjacent to this site also flood. The parish council noted that the site is a significant green area in Lambourn and a feature of the village. In its favour the site does have good access.

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment: - Nature of effect (scale, likelihood of occurrence) - Duration (temporary, permanent, short/med/long term) - Cumulative - Synergistic - assumptions	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	The site has easy access to the countryside, and is close to local services and facilities which would enable walking and cycling.		The site is close to local services and facilities including a local leisure centre and playing field <a href="#">and has good access to the countryside</a> , meaning that development of the site is likely to have a positive impact on social and environmental sustainability.
	Will it increase opportunities for access to sports facilities?	<b>+</b>	The site is close to the leisure centre		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	Unlikely to have an impact on GI		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>+</b>	The site is close to local services and facilities within the village. <del>There are a number of local opportunities within the racehorse industry and small scale local industry</del> <a href="#">The racehorse industry is the main source of local employment in the area, but the local services and facilities provide more limited employment opportunities.</a>		The proximity <a href="#">of the site to local services and facilities</a> and to local employment opportunities means that the site should have a positive economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>+0</b>	Within the village there are a number of opportunities for walking and cycling. <a href="#">However, there are limited public transport opportunities to and from the village.</a> To access a wider range of higher level services there would be reliance on the car. <del>While there are public transport opportunities within the village, the</del>		There are opportunities for walking and cycling to local services and facilities, <a href="#">however there are limited public transport opportunities leading to a high degree of car dependency, especially for higher order goods.</a>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment: - Nature of effect (scale, likelihood of occurrence) - Duration (temporary, permanent, short/med/long term) - Cumulative - Synergistic - assumptions	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<del>service is 2 hourly</del>		
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		<a href="#">Overall it is unlikely that development of this site would have an impact on any element of sustainability</a> <del>which should have a positive impact on sustainability.</del> Due to the location of Lambourn there would be a degree of high car dependency.
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	0	There are TPOs on the site <a href="#">– along part of the south eastern boundary</a>	Design to protect the trees would be required.	There is potential for development on the site to have a negative impact on environmental sustainability <a href="#">given the site's location within the AONB.</a>
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	? –	The site is within the AONB.  <a href="#">A Landscape Sensitivity Assessment (LSA)</a> work has not been carried out on the site.		Landscape work has not been carried out on the site. <a href="#">Any mitigation measures which may arise as a result of an assessment could reduce the negative effects on sustainability</a> <del>as the flood risk / history of flooding on the site means the site is not being considered for allocation at this time.</del>
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	0	Unlikely to have an impact <a href="#">on the character of the built environment – the site is adjacent to the existing settlement boundary</a>	<a href="#">Sensitive design required given the site is adjacent to a conservation area.</a>	Development of the site is unlikely to have an impact on any element of sustainability.
	Will it conserve and enhance the significance of	0	Quite large plot but no known archaeology, but part of former open		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment: - Nature of effect (scale, likelihood of occurrence) - Duration (temporary, permanent, short/med/long term) - Cumulative - Synergistic - assumptions	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	the District's heritage assets?		fields, associated with more recent equestrian activity.		
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact <a href="#">on the District's cultural environment</a>		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact <a href="#">on access to the historic environment</a>		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact <a href="#">on air quality</a>		Development of the site is unlikely to have an impact on any element of sustainability.
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact <a href="#">on noise levels</a>		
	Will there be an impact on soil quality?	0	Unlikely to have an impact <a href="#">on soil quality</a>		
	Will there be an impact on water quality?	0	Unlikely to have an impact <a href="#">on water quality</a>		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Greenfield Site		The greenfield nature of the site means that there could be a negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could <del>also</del> include Transport Assessment / Travel Plans <a href="#">to reduce car traffic and ensure compliance with policies of the Core Strategy.</a>	Without consideration of sustainability construction techniques <a href="#">and promotion of alternative modes of transport</a> , development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	---	The site is within a groundwater emergence zone and in an area at risk from surface water flooding. <a href="#">The site is also located within a Critical Drainage Area.</a>  Flooding regularly occurs on part of the site, which can lead to highway flooding <a href="#">as it did in 2007</a>	The landowner is certain that flood risk could be mitigated, partly by developing certain sections of the site. <a href="#">A FRA has been submitted.</a>  An FRA and <a href="#">appropriate mitigation measures, including SUDs</a> would need to be	<a href="#">Given the history of flooding on the site, the flood risk on the site is significant, which</a> could have a <a href="#">negative</a> impact on all elements of sustainability.  Mitigation could be

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment: <ul style="list-style-type: none"> <li>- Nature of effect (scale, likelihood of occurrence)</li> <li>- Duration (temporary, permanent, short/med/long term)</li> <li>- Cumulative</li> <li>- Synergistic</li> <li>- assumptions</li> </ul>	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
				provided <a href="#">to support any planning application on the site</a>	considered <a href="#">which would reduce the negative impacts, although however</a> there are sites within the village which do not have a history of flooding, or are not within a flood risk area, which should be considered for development prior to this site.
11. To ensure a strong, diverse and sustainable economic base	Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?	0	Not considered relevant		The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	0	<p>The site is greenfield and there will be no loss of employment land through the development of the site for housing, No employment use development is proposed for the site.</p> <p>The development of the site for housing will have an overall neutral effect on economic sustainability.</p>		
	Will it promote and support the vitality and viability of the District's commercial centres?	0	<p>Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</p> <p>The development of the site for housing only will have a neutral effect on economic sustainability.</p>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

### Summary

Overall the site is likely to have a predominantly neutral effect on sustainability and the SA/SEA does not highlight any significant sustainability effects.

~~There is a significant risk of flooding on this site, which could impact negatively on all aspects of sustainability. Mitigation could be considered.~~ The site is well related to local services and facilities within the village, including access to the countryside, all of which would enable walking and cycling and promote healthy, active lifestyles which would have a positive impact on sustainability. In addition, the development is close to local employment opportunities provided through the racehorse industry and local services/facilities, which will have a positive impact on economic and social sustainability.

Potential negative impacts could occur in relation to environmental sustainability due to the Greenfield nature of the site and its location in the AONB. Development of the site also has the potential to negatively impact on sustainability due to the flood risk on the site, which gives rise to serious concerns. Mitigation could be considered to reduce the risk of flooding, however historical flooding has been due largely to groundwater flooding, augmented by surface water.

~~but much of the flood risk, and history of flooding is a result of groundwater flooding. There are no other significant issues on this site, but the risk of flooding outweighs the other positive factors on the site.~~

#### **Summary of effects:**

**Effect:** Predominantly negative neutral

**Likelihood:** High

**Scale:** AONB - Lambourn

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Lambourn	<b>Parish:</b>	Lambourn
<b>Site ID:</b>	LAM013	<b>Site Address:</b>	Windsor House Paddocks, Lambourn	<b>Development Potential:</b>	42 dwellings (2.1ha at 20dph)

### Recommendation:

The site is not recommended for allocation

### Justification:

Whilst the site is well related to the existing settlement, it sits within a groundwater emergence zone, an area of surface water flood risk and a Critical Drainage Area. Council records show that the site flooded in both 2007 and 2014 when severe flooding occurred across West Berkshire. In 2007 the flooding on this site occurred to such an extent that it also flooded the adjacent road (Crowle Road). The risk of flooding and the history of flooding on the site have therefore weighed strongly against the allocation of this site.

Whilst it is appreciated that very often technical solutions can be implemented to reduce the risk of flooding, it is considered that there are alternative sites within Lambourn which are more appropriate for allocation.

The site promoter responded to the Preferred Options consultation and submitted a revised layout plan, which reduced the number of dwellings on the site to 35 and included a large area in the centre of the site for flood mitigation. This revised layout plan does not reflect the current settlement pattern and further highlights the concern regarding flood risk.

The site suffers from significant flooding, from both ground and surface water sources.

### Discussion:

#### Site Description:

The site is located to the south west of Lambourn, close to local services and facilities, including access to the open countryside. The site sits on the valley floor, close to the centre of the village. Development of the site would result in the loss of land involved in the racehorse industry.

#### Landscape:

The site is in the AONB, although due to the risk and history of flooding on the site a Landscape Sensitivity Assessment work has not been carried out on the site. Should this site be taken forward for development an assessment would be required.

#### Flood Risk:

The site is in flood zone 1; however, there is a significant risk and history of flooding on the site, which has lead to highway flooding in Lambourn. The site is located within a groundwater emergence zone, an area of surface water flood risk and a Critical Drainage Area. Flooding is largely caused by rising groundwater, and occurs regularly on parts of the site. Records highlight that the site flooded in 2007 and during Jan/Feb 2014 much of the site was flooded.

#### Highways /Transport:

No specific comments have been made by the Highways Team on this site.

There are limited public transport opportunities within the village, with a 2 hourly bus service linking the village to Newbury. There is also an intermittent link to Swindon railway station. There are local opportunities for walking and cycling within the village.

#### Ecology:

No known issues.

#### Archaeology:

No known archaeological issues. Although development has the potential to impact on the character of settlement as the site is part of former open fields associated with more recent equestrian activity.

#### Education:

Local primary school provision is close to, or at capacity. No comments have been made about secondary school provision.

#### Environmental Health:

No known air, noise or contamination issues.

## Site Selection – Site Commentary

### **Minerals and Waste:**

The site is partially underlain by gravel deposits. Consideration of policies 1 & 2 of the RMLP would be required.

[No known waste issues](#)

### **Land use planning consultation zone:**

The site is not within an AWE consultation zone

### **Environment Agency:**

No specific comments on this site. The site is over a major aquifer with a high risk of contamination to groundwater. [A FRA would be required as part of any planning application should the site come forward.](#)

### **Thames Water:**

TW not consulted on this site

### **Parish Council:**

Drainage and flooding are the main issues for this site. The site floods and is part of the natural flood protection for Lambourn Village. There was once an open gully on the site, but this has been filled in. The site is bowl shaped and there was standing water in the field during Jan/Feb 2014, and a few years ago to a depth of about 4ft. Whilst there are engineering solutions to prevent new dwellings from flooding the parish council were very concerned of the impact on flooding elsewhere in the village. The allotments adjacent to this site also flood.

The parish council noted that the site is a significant green area in Lambourn and a feature of the village. In its favour the site does have good access

### **Preferred Options Consultation Key Issues:**

- [Flood mitigation](#)
- [Revised layout plan submitted](#)
- [Settlement boundary](#)
- [Site Assessment](#)

[For the consultation responses and Council's response, please see Statement of Consultation.](#)

### **SA/SEA:**

[Overall the site is likely to have a predominantly neutral effect on sustainability and the SA/SEA does not highlight any significant sustainability effects.](#)

[The site is well related to local services and facilities within the village, including access to the countryside, all of which would enable walking and cycling and promote healthy, active lifestyles which would have a positive impact on sustainability. In addition, the development is close to local employment opportunities provided through the racehorse industry and local services/facilities, which will have a positive impact on economic and social sustainability.](#)

[Potential negative impacts could occur in relation to environmental sustainability due to the Greenfield nature of the site and it's location in the AONB. Development of the site also has the potential to negatively impact on sustainability due to the flood risk on the site, which gives rise to serious concerns. Mitigation could be considered to reduce the risk of flooding, however historical flooding has been due largely to groundwater flooding, augmented by surface water.](#)

~~There is a significant risk of flooding on this site, which could impact negatively on all aspects of sustainability. Mitigation could be considered, but much of the flood risk, and history of flooding is a result of groundwater flooding. There are no other significant issues on this site, but the risk of flooding outweighs the other positive factors on the site.~~

### **Proposed development (from SHLAA submission):**

The site is proposed for approximately 45 dwellings.

[The site promoter responded to the Preferred Options consultation and provided a revised site layout plan. The revised layout plan showed a reduced the number of dwellings on the site \(35 dwellings\) and included a large area in the centre of the site for flood mitigation. The site promoter reiterated that the flood risk can](#)

Development Potential:	<a href="#">Approximately 5 dwellings</a>		

### Key: Effects of option on SA objectives

++	+	?	0	-	--
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	<a href="#">The site has easy access to the countryside, and is close to local services and facilities which would enable walking and cycling.</a>		<a href="#">The site is close to local services and facilities including a local leisure centre and playing field, as well as good access to the countryside. Development of the site is likely to have a positive impact on social and environmental sustainability.</a>
	Will it increase opportunities for access to sports facilities?	+	<a href="#">The site is close to the leisure centre</a>		
	Will it protect and enhance green infrastructure across the district?	0	<a href="#">Unlikely to have an impact on GI</a>		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	<a href="#">The site is close to local services and facilities within the village. The racehorse industry is the main source of local employment in the area, but the local services and facilities provide more limited employment opportunities.</a>		<a href="#">The proximity of the site to local services and facilities and to local employment opportunities means that the site should have a positive economic sustainability.</a>
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	0	<a href="#">Within the village there are a number of opportunities for walking and cycling. However, there are limited public transport opportunities to and from the village. To access a wider range of higher level services there would be reliance on the car.</a>		<a href="#">There are opportunities for walking and cycling to local services and facilities, however there are limited public transport opportunities leading to a high degree of car dependency, especially for higher order goods.</a>
	Will it reduce the number of road traffic accidents and improve safety?	?	<a href="#">Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.</a>		<a href="#">Overall it is unlikely that development of this site would have an impact on any element of sustainability.</a>
5. To protect and enhance	Will it conserve and		<a href="#">Unlikely to impact on sustainability</a>	<a href="#">A SUDS scheme would need to</a>	<a href="#">Without mitigation measure</a>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
the natural environment	enhance the biodiversity and geodiversity assets across West Berkshire?	<u>0</u>		<a href="#">be provided as part of any planning application, along with appropriate mitigation measures to protect the River Lambourn SAC/SSSI e.g. possibly petrol/oil receptors</a>	<a href="#">as set out in the Landscape Sensitivity Assessment there would be potential for a negative impact on environmental sustainability.</a>
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	-	<p><a href="#">The site is located within the AONB.</a></p> <p><a href="#">The Landscape Sensitivity Assessment (LSA) indicates that only the south western part of the site could be developed subject to conditions, as set out in the LSA</a></p>	<p><a href="#">The LSA indicates that development would be subject to the following protection and enhancement requirements:</a></p> <ul style="list-style-type: none"> <li>- <a href="#">Development being contained on the lower ground</a></li> <li>- <a href="#">Access being possible from Newbury Road</a></li> <li>- <a href="#">Development should take the form of a continuation of the linear built form on the north east side of Newbury Road but not the widening of the linearity</a></li> <li>- <a href="#">The retention of open space on the higher ground and the provision of a hedge with hedgerow trees to contain the housing on the north eastern edge, continuing along the south eastern edge to link with garden planting</a></li> <li>- <a href="#">A full detailed landscape and visual impact assessment will be required to inform the final capacity of the site.</a></li> </ul>	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	<u>0</u>	<p><a href="#">The site is adjacent to the existing settlement, and development would not be out of character with the existing settlement pattern.</a></p> <p><a href="#">Unlikely to have an impact on the</a></p>	<a href="#">Development should be linear adjacent to Newbury Road ensuring the existing settlement pattern is maintained</a>	<a href="#">Development of the site is unlikely to have an impact on any element of sustainability.</a>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">character of the built environment.</a>		
	Will it conserve and enhance the significance of the District's heritage assets?	<u>0</u>	<a href="#">Unlikely to have an impact on any element of sustainability</a>	<a href="#">Further investigation required as part of any planning application – geophysical survey followed by trial trenching</a>	
	Will it promote, conserve and enhance the District's cultural assets?	<u>0</u>	<a href="#">Unlikely to have an impact on the District's cultural environment</a>		
	Will it provide for increased access to and enjoyment of the historic environment?	<u>0</u>	<a href="#">Unlikely to have an impact on access to the historic environment</a>		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	<u>0</u>	<a href="#">Unlikely to have an impact on air quality</a>		<a href="#">Development of the site is unlikely to have an impact on any element of sustainability.</a>
	Will the site be at risk from, or impact on, noise levels?	<u>0</u>	<a href="#">Unlikely to have an impact on noise levels</a>		
	Will there be an impact on soil quality?	<u>0</u>	<a href="#">Unlikely to have an impact on soil quality</a>		
	Will there be an impact on water quality?	<u>0</u>	<a href="#">Unlikely to have an impact on water quality</a>		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	<a href="#">This is a greenfield site</a>		<a href="#">The greenfield nature of the site means that there could be a negative impact on environmental sustainability.</a>
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	<a href="#">The level of impact depends on location, building materials / construction, transport / design</a>	<a href="#">Mitigation could include Transport Assessment / Travel Plans to reduce car traffic and ensure compliance with policies of the Core Strategy.</a>	<a href="#">Without consideration of sustainability construction techniques and the promotion of alternative modes of transport, development could have a negative impact on environmental sustainability.</a>
	Will the site be subject to / at risk from flooding	-	<a href="#">The south western part of the site is within a groundwater emergence zone.</a>	<a href="#">A FRA and appropriate flood mitigation measures including SUDs would need to be provided.</a>	<a href="#">Development on the site could have a negative impact on all elements of sustainability unless appropriate mitigation is provided.</a>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
11. To ensure a strong, diverse and sustainable economic base	Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	Will it promote and support the vitality and viability of the District's commercial centres?	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

[Overall there are no significant sustainability issues with this site and it is likely to have a predominantly neutral effect on sustainability.](#)

[The site is well related to local services and facilities within the village, including access to the countryside, all of which would enable walking and cycling and promote healthy, active lifestyles which would have a positive impact on sustainability. In addition, the development is close to local employment opportunities provided through the racehorse industry and local services/facilities, which will have a positive impact on economic and social sustainability.](#)

[Potential negative impacts could occur in relation to the environmental sustainability due to the greenfield nature of the site and its location within the AONB. As long as appropriate mitigation measures are introduced, including those set out within the Landscape Sensitivity Assessment, the impact should be mitigated and deliver positive effects on sustainability.](#)

[Flooding could also have a negative impact on all elements of sustainability unless appropriate mitigation measures are provided.](#)

#### Summary of effects:

**Effect:** [Predominantly neutral](#)

**Likelihood:** [High](#)

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Scale:** [AONB - Lambourn](#)  
**Duration:** [Permanent](#)  
**Timing:** [Short to Long term](#)

## Site Selection – Site Commentary

<b>Spatial Area:</b>	<a href="#">AONB</a>	<b>Settlement:</b>	<a href="#">Lambourn</a>	<b>Parish:</b>	<a href="#">Lambourn</a>
----------------------	----------------------	--------------------	--------------------------	----------------	--------------------------

<b>Site ID:</b>	<a href="#">LAM015</a>	<b>Site Address:</b>	<a href="#">Land adjacent to Newbury Road, Lambourn</a>	<b>Development Potential:</b>	<a href="#">Approximately 5 dwellings</a>
-----------------	------------------------	----------------------	---	-------------------------------	---

### Recommendation:

[Part of this site is recommended for allocation in accordance with the Landscape Sensitivity Assessment \(2015\).](#)

### Justification:

[The site is adjacent to the existing settlement boundary and well related to existing services and facilities within Lambourn.](#)

[Whilst the site is within the AONB a Landscape Sensitivity Assessment has been carried out and indicates that development on part of the site would be acceptable in landscape terms, subject to mitigation measures to ensure the protection of existing landscape features. It states that the north eastern part of the site would result in harm to the natural beauty and special qualities of the AONB, but the south western part of the site adjacent to the road could be developed subject to a series of requirements set out within the LSA to conserve and enhance the AONB.](#)

[The south western part of the site sits within a groundwater emergence zone and therefore a Flood Risk Assessment \(FRA\) would be required as part of any planning application to demonstrate how all potential sources of flooding, including groundwater flood risk has been taken into account in the design of the development. A SUDS scheme would need to be implemented to ensure no adverse impact on the River Lambourn SSSI/SAC.](#)

### Discussion:

#### Site Description:

[The site is located to the south east of Lambourn. Close to local services and facilities including good access to the open countryside.](#)

#### Landscape:

[The site is located within the AONB. A Landscape Sensitivity Assessment \(LSA\) has been carried out on the site and indicates that development on part of the site would be acceptable in landscape terms, subject to mitigation measures to ensure the protection of existing landscape features.](#)

#### Flood Risk:

[The south western part of the site sits within a groundwater emergence zone and therefore a Flood Risk Assessment \(FRA\) would be required as part of any planning application.](#)

#### Highways /Transport:

[Traffic generated by the site is expected to have a minimal impact on the highway network.](#)

[Access to the site can be obtained from Newbury Road but given topography individual drives/access points will need to be carefully designed.](#)

[There are limited public transport opportunities within the village, with a 2 hourly bus service linking the village to Newbury. There is also an intermittent link to Swindon Railway Station.](#)

[There are local opportunities for walking and cycling within the village](#)

#### Ecology:

[No known issues. A SUDS scheme would need to be provided as part of any planning application, along with appropriate mitigation measures to protect the River Lambourn SAC/SSSI e.g. possibly petrol/oil receptors.](#)

#### Archaeology:

[No known issues. Further investigation would be required as part of any planning application, in the form of a geophysical survey followed by trial trenching.](#)

## Site Selection – Site Commentary

### **Education:**

[Local primary school provision is close to or at capacity. No comments made regarding secondary school provision.](#)

### **Environmental Health:**

[No known air, noise or contamination issues.](#)

### **Minerals and Waste:**

[No known issues](#)

### **Land use planning consultation zone:**

[The site is not within an AWE consultation zone](#)

### **Environment Agency:**

[The Environment Agency has not been consulted on this site.](#)

[The site is over a major aquifer with high potential for groundwater contamination. As a result a FRA would be required as part of a planning application.](#)

### **Thames Water:**

[Thames Water has not been consulted on this site specifically.](#)

[Infiltration of groundwater into the network has been identified as a strategic issue within Lambourn, therefore an integrated water supply and drainage strategy would be required for this site.](#)

### **Parish Council:**

[The Parish Council have not been consulted on this site as it was submitted after the Preferred Options consultation](#)

### **Preferred Options Consultation key issues:**

[This site did not form part of the Preferred Options consultation as it only submitted to the Council in September 2014 as a new site for consideration.](#)

[For the consultation responses and Council's response on Lambourn, please see the Statement of Consultation.](#)

### **SA/SEA:**

[Overall there are no significant sustainability issues with this site and it is likely to have a predominantly neutral effect on sustainability.](#)

[The site is well related to local services and facilities within the village, including access to the countryside, all of which would enable walking and cycling and promote healthy, active lifestyles which would have a positive impact on sustainability. In addition, the development is close to local employment opportunities provided through the racehorse industry and local services/facilities, which will have a positive impact on economic and social sustainability.](#)

[Potential negative impacts could occur in relation to the environmental sustainability due to the greenfield nature of the site and its location within the AONB. As long as appropriate mitigation measures are introduced, including those set out within the Landscape Sensitivity Assessment, the impact should be mitigated and deliver positive effects on sustainability.](#)

[Flooding could also have a negative impact on all elements of sustainability unless appropriate mitigation measures are provided.](#)

### **Proposed development (from SHLAA submission):**

[The site was not proposed or assessed through the SHLAA.](#)

[The site was submitted to the Council in September 2014 as a new site to be considered as part of the Housing Site Allocations DPD.](#)

# Pangbourne Site Assessments

# Site Selection – Site Assessment

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Pangbourne	<b>Parish:</b>	Pangbourne
----------------------	------	--------------------	------------	----------------	------------

<b>Site ID:</b>	PAN001	<b>Site Address:</b>	Land at Green Lane, Pangbourne, RG8 8JU
-----------------	--------	----------------------	---

<b>Development Potential:</b>	36 dwellings (1.8ha at 20dph)	<b>SHLAA Assessment:</b>	Potentially developable
-------------------------------	-------------------------------	--------------------------	-------------------------

## Summary of Site Assessment

Key Issues:

- [Location of the site within the North Wessex Downs](#) AONB
- Access / [H](#)ighway network suitability – serious concern raised by Highways and Transport Team

## Site Assessment

<b>Parish Council consultation response:</b>	<p>The site could be acceptable to the parish council for a smaller number of dwellings than given in the development potential for the site. Access along Green Lane would be of concern. <a href="#">Pangbourne Parish Council clarified at the preferred options stage that this comment was an informal remark to the effect that if it was ultimately decided to proceed with PAN001 and/or PAN002, the Parish Council would prefer smaller numbers to those envisaged in the current proposals.</a></p> <p><a href="#">At the preferred options stage, Pangbourne Parish Council strongly objected to the development of this site.</a></p>
--	---

A) Automatic exclusion			
Criteria		Yes/No*	Comments
Less than 5 dwellings		N	
Planning Permission		N	
Within flood zone 3		N	
Within significant national or international habitat / environmental / historical protection	SSSI	N	
	SAC	N	
	SPA	N	
	Registered Battlefield	N	
	Grade 1 / II* Park and Gardens	N	
Landscape	Adverse impact on the character of AONB (from LSA)	N/P	<a href="#">A Landscape Sensitivity Assessment (2011) indicates that development on the site would be acceptable subject to mitigation and enhancement measures.</a>
SHLAA Assessment	Not Currently developable	N	
Land Use	Protected Employment Land	N	
AWE consultation zone	Inner	N	
Relative scale in relation to settlement role and function	Inappropriate in scale to the role and function of settlement within the settlement hierarchy	N	
Within settlement Boundary		N	Adjacent to settlement boundary

\* Any Yes response will rule the site out

B) Considerations			
Criteria		Yes / No / Adjacent / Unknown	Comments
Land use	Previously Developed Land	N	Greenfield
	Racehorse Industry	N	
Flood risk	Flood Zone 2	N	
	Groundwater flood risk	N	
	Surface water flood risk	N	
	Critical Drainage Area	N	
Contamination / pollution	Air Quality	N	
	Contaminated Land	N	
	Other	N/A	
Highways / Transport	Access issues	Y	Access can be obtained via Bere Court Road onto Pangbourne Hill and via Green Lane onto the A340 Tidmarsh Road. There is concern that the roads are often narrow and may be unsuitable for such additional volumes of traffic. <a href="#">It is not possible to widen the roads in the area.</a>
	Highway network suitability	N	Development would generate approximately 216 daily vehicle movements, including about 22 during the 08:00 to 09:00 AM peak.
	Public Transport network	Y	Pangbourne has a railway station on the Reading – Oxford line.  Nearby, Pangbourne Hill has a limited bi-hourly bus service to places such as Reading. All other services serving Pangbourne are up to 900 metres away, which the Council's Highways team have commented is not ideal.

## Site Selection – Site Assessment

B) Considerations			
Criteria		Yes / No / Adjacent / Unknown	Comments
	Footways/Pavements	N	There are no footways in the vicinity and the Council's Highways and Transport team has advised that it is not possible to provide any.
Landscape	Located in AONB	Y	
	Area of High Landscape Sensitivity (if not in AONB) ( <i>from Core Strategy LSS</i> )	N/A	
	Other	N/A	
Green Infrastructure	Open Space / Playing field / Amenity Space nearby	U	Site is close to school playing fields although these do not have public access
	Rights of Way affected	N	
	Play areas nearby	N	
Ecology / Environmental / Geological	Protected species	N	
	Ancient woodland	N	
	Tree Preservation Orders	N	
	Local Wildlife Site	N	
	Nature Reserve	N	
	Other (eg. BOA)	Y N	<a href="#">The site is a BAP (Biodiversity Action Plan) habitat. An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected</a>
Relationship to surrounding area	Relationship to settlement	Y	Site is well related to the existing settlement
	Incompatible adjacent land uses	N	
Heritage	Archaeology	N	
	Conservation area	N	
	Listed buildings	N	
	Scheduled Monument	N	
Utility Services	Presence of over head cables / underground pipes	N	
	Water supply	Y	<a href="#">Thames Water</a> do not envisage any <a href="#">water supply infrastructure</a> concerns
	Wastewater	N	<a href="#">Thames Water</a> have concern regarding wastewater capability. <a href="#">An integrated strategy for water and wastewater would be required at planning application stage if the site is allocated.</a>
	Groundwater source protection zone (SPZ)	Y	SPZ1. High risk of contamination to groundwater. <a href="#">The Environment Agency has no principle objections to development within SPZs.</a>
AWE consultation Zone	Middle	N	
	Outer	N	
Proximity to railway line		N	
Minerals and Waste	Minerals preferred area	N	
	Mineral consultation area	Y	
	Minerals/Waste site	N	Site partially underlain by grave deposits. <a href="#">however the sites location at the edge of the deposit so there is limited possibility for the option to use minerals on site as part of the construction or prior extraction (depending upon the quality and depth of the deposit).</a>  Consideration of policies 1 & 2 of the <a href="#">Replacement Minerals Local Plan</a> required. <a href="#">There are no known waste issues nearby.</a>
	Other	N/A	
Relationship to / in combination effects of other sites	List of neighbouring sites: N/A	N/A	
Other (anything else to be considered)	<a href="#">At the preferred options stage, a consultation response was received that advised of there being restrictive covenants on site PAN001. The site promoters clients have been unable to confirm whether the covenants exist or not.</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Pangbourne	<b>Parish:</b>	Pangbourne
----------------------	------	--------------------	------------	----------------	------------

<b>Site ID:</b>	PAN001	<b>Site Address:</b>	Land at Green Lane, Pangbourne	<b>Development Potential:</b>	36 dwellings (1.8ha at 20 dph)
-----------------	--------	----------------------	--------------------------------	-------------------------------	--------------------------------

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	The site is close to facilities in Pangbourne and also affords access to the countryside		The site's location to the south west of Pangbourne gives opportunities for walking and cycling and gives access to local services and facilities. Therefore, in terms of environmental and social sustainability, development of the site would have an overall positive impact.
	Will it increase opportunities for access to sports facilities?	<b>0</b>	There are various sports facilities close to the site at Pangbourne College however these are not open to the general public. Public facilities are located at Pangbourne Recreation Ground and Pangbourne Primary School but these are on the other side of the settlement		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	The site will have a neutral impact upon green infrastructure		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>+</b>	There are local facilities and services in Pangbourne (employment, shops, school).		The site is located close to areas of employment and education as well as other services and facilities within Pangbourne. There are public transport opportunities. The <a href="#">proximity to local services and facilities means the site could should</a> have a positive impact on the District's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>+</b>	Bus services <a href="#">from Pangbourne Hill to Upper Basildon and Reading</a> within Pangbourne to major centres are bi-hourly.  Pangbourne is served by a train		The site is <a href="#">located</a> close to the local services and facilities in Pangbourne which will encourage walking or cycling. <a href="#">Development could result in</a>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			station with services to Oxford, Reading and London Paddington		<a href="#">an increased bus service.</a> <a href="#">Development could</a>
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns especially as the roads surrounding the site are often narrow and there are no footways in the vicinity. <a href="#">Roads cannot be widened and it is not possible to provide footways.</a> <del>Any development would also have the potential to improve road safety</del>		<del>Pangbourne is also well served by public transport and therefore impact positively on environmental and social sustainability.</del>
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	?	The site is a BAP ( <a href="#">Biodiversity Action Plan</a> ) Habitat	An Extended Phase 1 Habitat Survey will be required, <a href="#">together with together with further detailed surveys arising from that as necessary.</a> <a href="#">Appropriate avoidance and mitigation measures would need to be implemented, if appropriate to ensure any protected species were not adversely affected.</a>	Development would have a potentially negative impact on environmental sustainability unless mitigation measures set out in the Landscape Assessment are adhered to.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	-	A Landscape Assessment has concluded that development would be acceptable provided that mitigation / enhancement measures are adhered to.	The Landscape Assessment has identified the following mitigation / enhancement measures: <ul style="list-style-type: none"> <li>Views from the east and north-east should be protected through limits on the mass and height of the development and native boundary planting along the southern boundary</li> <li>Retention of on-site trees</li> <li>Retention of the hedgerow boundary along the north-western boundary</li> <li>Provision of a high level of internal tree and shrub planting to blend the site into the adjacent Breedon</li> </ul>	<a href="#">There would be potential for a negative impact on environmental sustainability due to the landscape and visual impact unless appropriate avoidance and mitigation measures were implemented so that any protected species were not adversely affected.</a>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
					site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	-?	Development is likely to increase greenhouse gas emissions. The level of impact depends on the building materials used, construction methods, transport and design	Mitigation could include Travel Plans to reduce car traffic and compliance with policies within the core strategy.	Without appropriate mitigation, development would have a negative impact on environmental sustainability. Mitigation measures will reduce this impact and could lead to a neutral impact.
	Will the site be subject to / at risk from flooding	+	The site is not at risk of flooding	<del>SUDs would need to be provided.</del> <u>If the site were to be allocated, then this would need to be accompanied by a Flood Risk Assessment. This is in line with Core Strategy policy CS16 (Flooding) which also requires the provision of Sustainable Drainage Systems (SuDS) in all new developments.</u>	<del>There is no flood risk on this site which has a positive impact on sustainability.</del> <u>Flooding can have an impact on all elements of sustainability unless appropriate mitigation measures are introduced.</u>
11. To ensure a strong, diverse and sustainable economic base	<u>Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</u>	<u>0</u>	<u>Not considered relevant</u>		<u>The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</u>
	<u>Will it promote and support key business sectors and utilise employment land effectively and efficiently?</u>	<u>0</u>	<u>The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</u>  <u>The development of the site for housing will have an overall neutral effect on economic sustainability.</u>		
	<u>Will it promote and support the vitality and viability of the District's commercial centres?</u>	<u>0</u>	<u>Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</u>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Development of this site would not lead to any significant sustainability issues.

~~There are positive impacts on sustainability as the site is close to local services and facilities enabling walking and cycling and the promotion of healthy, active lifestyles.~~

[The site is close to local facilities and services in Pangbourne. The nearest bus stop is located on Pangbourne Hill which is served by a bi-hourly service to Reading and Upper Basildon. Development could provide an opportunity to enhance the bus service. The site therefore scores positively on the social and economic elements of sustainability. The site is in close proximity to open countryside which will help to promote a healthy active lifestyle, and this will further enhance the positive score in relation to social sustainability.](#)

[Additional traffic could impact upon road safety, and this could be exacerbated due to road widening and the provision of footpaths is not possible. The uncertain impact upon the BAP Habitat could be mitigated against if required.](#)

[The Landscape Sensitivity Assessment indicates that development on the site would be suitable, although appropriate mitigation and enhancement measures would be required to ensure that the potential negative impact on environmental sustainability is avoided. Development would impact negatively upon environmental sustainability due to the site being greenfield. However, the adopted Core Strategy Development Plan Document is clear that for the district's housing requirement to be met, development on greenfield sites on the edge of settlements is necessary.](#)

~~There is potential for a negative impact on environmental sustainability unless the mitigation measures set out in the Landscape Assessment are adhered to. There is no flood risk on the site, which has a positive impact on sustainability.~~

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

[Development of the greenfield site for residential development is not considered to impact upon water quality, soil quality or noise levels, so the impact on environmental sustainability would be negligible.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB / Pangbourne

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Pangbourne	<b>Parish:</b>	Pangbourne
<b>Site ID:</b>	PAN001	<b>Site Address:</b>	Land at Green Lane, Pangbourne	<b>Development Potential:</b>	36 dwellings (1.8ha at 20dph)

**Recommendation:**

The site was shortlisted as a preferred option, but it is now not recommended for allocation ~~Site is recommended for allocation~~

**Justification:**

The site is located in a rural service centre in close proximity to local services and facilities. The Landscape Assessment has concluded that low rise development could be accommodated and would not be visually intrusive subject to mitigation and enhancement measures. The surrounding roads to the site are narrow and unsuitable for the additional volumes of traffic that would be generated by development. Road widening is not possible. There are no footways in the vicinity of the site and these could not be provided. The site is therefore considered unsuitable for development. However potential impact to the highway network remains of concern.

**Discussion:**

**Site Description:**

The site is located to the west of Pangbourne, ~~C~~close to local services and facilities including open countryside.

**Landscape:**

A Landscape Sensitivity Assessment (2011) has advised that the site is visually exposed; nonetheless low rise development in keeping with the surrounding area would not be visually intrusive. The Landscape Assessment sets out mitigation and enhancement measures that would be required if the site is developed.

**Flood Risk:**

The site is in Flood Zone 1. An Flood Risk Assessment FRA taking into account surface water flooding would be required and Sustainable Drainage Methods (SUDs) would need to be provided.

**Highways /Transport:**

~~Raised~~ Concerns raised in respect of highways suitability and access – although access can be obtained via Bere Court Road onto Pangbourne Hill and via Green Lane onto the A340 Tidmarsh Road, there is concern that the roads are often narrow surrounding this site and may be unsuitable for the additional volumes of traffic that the development of the site would generate. Road widening is not possible. Furthermore, there are no footways in the vicinity and it is not possible to provide any.

There is a railway station in Pangbourne with services to Oxford, Reading and London. A bi-hourly bus services passes near to the site.

**Ecology:**

The site is a BAP habitat, therefore ~~and so~~ an extended Phase 1 Habitat Survey would be required at the planning application stage together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, if necessary, to ensure any protected species were not adversely affected.

**Archaeology:**

There are no known archaeological issues

**Education:**

Local primary school provision is at capacity. A drainage culvert runs through the primary school

## Site Selection – Site Commentary

[site which limits the capacity of the school to expand.](#) No comments made about secondary school provision.

### Environmental Health:

There are no known air, noise or contamination issues

### Minerals and Waste:

The site is partially underlain by gravel deposits, [however the location of the site on the edge of the deposit means that there is limited possibility for the option to use minerals on the site as part of the construction or prior extraction \(depending upon the quality and depth of the deposit\).](#) Consideration of policies 1 & 2 of the [Replacement Minerals and Waste Local Plan RMLP](#) would be required.

[There are no known waste issues nearby.](#)

### Land use planning consultation zone:

The site is not within an AWE consultation zone.

### Environment Agency:

No specific comments made on this site. The site is [located within Groundwater Source Protection Zone \(SPZ\)1, whereby there is](#) with a high risk of contamination to groundwater. [The Environment Agency has no principle objection to development within SPZs.](#) ~~Investigation would be required.~~

### Thames Water:

No water supply infrastructure issues envisaged.

~~Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.~~

~~A drainage strategy would be required~~

[Initial consultation with Thames Water highlighted the capacity of the pumping station as a key issue. They have since advised that an integrated strategy for water and wastewater will need to be submitted alongside any planning application.](#)

### Parish Council:

[At the Strategic Housing Land Availability Assessment \(SHLAA\) consultation event held on 10 February 2014, Pangbourne Parish Council commented that](#) ~~the site could be acceptable to the parish council for a smaller number of dwellings than given in the development potential for the site. Access along Green Lane would be of concern.~~ [At preferred options, the parish council clarified that the claim they might be in favour of smaller developments on both PAN001 and PAN002 was an informal remark to the effect that if it was ultimately decided to proceed with PAN001 and/or PAN002, then the parish council would prefer smaller numbers than those envisaged in the proposals. The parish council strongly objected to the development of the site at preferred options.](#)

### Preferred options consultation key issues:

- [General – impact on house prices, site name incorrect \(not Jesmond Hill – this property is unconnected with site\).](#)
- [Consultation process and timing – school holidays, lack of time etc](#)
- [Covenants – one restricts more than two private residences on the site, and another allows owner of adjacent property right of passage across part of the site.](#)
- [Historic significance of Green Lane must be protected \(used by Abbot and monks of Reading Abbey\). Possible archaeological significance.](#)

## Site Selection – Site Commentary

- [Ecology – part of site BAP habitat, impact on species/wildlife corridors, mature oak trees.](#)
- [Flood risk – adjacent surface water flood risk area, development will increase flood risk in Pangbourne, no FRA.](#)
- [Gaps between settlements – coalescence, risk of sprawl to Reading.](#)
- [Geology – risk of swallow holes in area.](#)
- [Highways and transport – nearby roads unsuitable \(narrow widths, poor sight lines, private roads\), increase in congestion, road safety concerns \(more cars, speeding, poor sight lines\), reliance on car use \(distance from village centre, lack of footpaths, hills, lack of public transport\).](#)
- [Infrastructure at capacity and could not support an increased population – primary school, GP surgery, sewage network.](#)
- [Landscape – impact on AONB, errors within 2011 LSA.](#)
- [Harm to character of the area – density out of keeping with character and pattern of development on Pangbourne.](#)
- [Contrary to national and local planning policy.](#)
- [Personal – impact on quality of life.](#)
- [Principle of development – precedent, inappropriate strategy to consider sites in AONB, alternative sites available \(PDL\), previous applications for development on the site refused.](#)
- [Site selection process – flawed process for identifying sites \(Council should have identified suitable sites and then contacted landowners\).](#)
- [SA/SEA – results disputed, inconsistent conclusions \(reasons for rejecting other sites apply to PAN001\).](#)
- [Settlement boundaries.](#)

### SA/SEA:

[Development of this site would not lead to any significant sustainability issues.](#) The SA/SEA indicates a predominantly neutral sustainability effect. ~~There are no significant sustainability issues.~~

There are positive impacts on sustainability as the site is close to local services and facilities enabling walking and cycling and the promotion of healthy, active lifestyles.

[At preferred options stage it was assessed that the site is close to local services and facilities in Pangbourne thereby enabling walking and cycling opportunities and the subsequent promotion of healthy, active lifestyles. The close proximity of the site to open countryside will also help to promote a healthy active lifestyle.](#)

[Development could provide an opportunity to enable an enhanced bus service to be out in place, promoted and sustained. This results in a positive impact upon access to education, employment, services and facilities, as well as improving travel choice.](#)

~~There is potential for a negative impact on environmental sustainability unless the mitigation measures set out in the Landscape Assessment are adhered to.~~

[Development now has the potential to have a negative impact upon biodiversity assets due to the designation of the site as a BAP habitat; however an extended phase 1 habitat survey at the planning application stage, together with further detailed surveys if identified as being needed in the phase 1 survey, in addition to appropriate avoidance and mitigation measures if necessary will reduce the potential for a negative impact.](#)

[Given the sites location within the North Wessex Downs AONB, the landscape impact of any development is vitally important. The Landscape Sensitivity Assessment \(LSA\) indicates that the site would be suitable for development, although appropriate enhancement and mitigation measures would be required to ensure that the potential negative impact was reduced and neutralised where possible. The mitigation/enhancement measures identified in the LSA, in addition to the submission of a landscape and visual impact assessment alongside any planning](#)

## Site Selection – Site Commentary

[application would also ensure the impact of development upon the built environment is reduced.](#)

There is no flood risk on the site, which has a positive impact on sustainability.

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

**Proposed development (from SHLAA submission):**

[The SHLAA submission from the site promoter](#) ~~The site is proposed for 28 dwellings~~ [for the site](#), including affordable housing.

[At preferred options, the site promoter supported the inclusion of the site.](#)

# Site Selection – Site Assessment

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Pangbourne	<b>Parish:</b>	Pangbourne
----------------------	------	--------------------	------------	----------------	------------

<b>Site ID:</b>	PAN002	<b>Site Address:</b>	Land north of Pangbourne Hill and west of River View Road, Pangbourne
-----------------	--------	----------------------	---

<b>Development Potential:</b>	35 dwellings	<b>SHLAA Assessment:</b>	Potentially Developable
-------------------------------	--------------	--------------------------	-------------------------

## Summary of Site Assessment

Key Issues:

- [Location of the site within the North Wessex Downs](#) AONB – only part of the site is considered suitable for development [subject to mitigation and enhancement measures](#).
- Impact of development upon the restricted Pangbourne Hill / A340 Tidmarsh Lane junction
- [Presence of dormice on the site – further assessment required at the planning application stage](#).
- [A Roman cemetery is located to the north of the site and Medieval activity in the area – further assessment required at the planning application stage](#).

## Site Assessment

<b>Parish Council consultation response:</b>	<p>This site may be acceptable for a smaller number of houses. <a href="#">Pangbourne Parish Council</a> thought that access off River View Road would be better than Pangbourne Hill. Should development go ahead the parish council would like to see a footpath into Pangbourne. <a href="#">Pangbourne Parish Council clarified at the preferred options stage that this comment was an informal remark to the effect that if it was ultimately decided to proceed with PAN001 and/or PAN002, the Parish Council would prefer smaller numbers to those envisaged in the current proposals.</a></p> <p><a href="#">At the preferred options stage, Pangbourne Parish Council strongly objected to the development of this site.</a></p>

	Will it promote and support the vitality and viability of the District's commercial centres?	<b>0</b>	<u>Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</u> <u>The development of the site for housing only will have a neutral effect on economic sustainability.</u>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

### Summary

Development of this [site](#) would not lead to any significant sustainability issues. ~~There are positive impacts on sustainability as the site is close to local services and facilities enabling walking and cycling and the promotion of healthy, active lifestyles.~~

~~There is potential for a negative impact on environmental sustainability unless the mitigation measures set out in the Landscape Assessment are adhered to.~~

[The site is close to local facilities and services in Pangbourne, as well as being within walking distance of Pangbourne rail station and adjacent to a bus stop with a bi-hourly service to Reading and Upper Basildon. Development could provide an opportunity to enhance the bus service. The site therefore scores positively on the social and economic elements of sustainability. The site promoter has indicated that a planning application will provide public open space and a children's play area which will help to promote a healthy active lifestyle, as will the close proximity of the site to open countryside. This further enhances the positive score in relation to social sustainability.](#)

[Whilst there are uncertain impacts upon archaeology, dormice and road safety, there are mitigation measures that can be implemented so that the impacts on the environmental and social elements of sustainability are ameliorated against.](#)

[The Landscape Sensitivity Assessment indicates that development on part of the site would be suitable, although appropriate mitigation and enhancement measures would be required to ensure that the potential negative impact on environmental sustainability is avoided. Development would impact negatively upon environmental sustainability due to the site being greenfield. However, the adopted Core Strategy Development Plan Document is clear that for the district's housing requirement to be met, development on greenfield sites on the edge of settlements is necessary.](#)

The site is adjacent to an area at risk from surface water flooding; development on the site could lead to a worsening of flood risk elsewhere without appropriate mitigation measures. Should flooding occur, it would have a negative impact on all elements of sustainability.

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

[Development of the greenfield site for 35 residential dwellings is not considered to impact upon water quality, soil quality or noise levels, so the impact on environmental sustainability would be negligible.](#)

#### **Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB / Pangbourne

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Pangbourne	<b>Parish:</b>	Pangbourne
----------------------	------	--------------------	------------	----------------	------------

<b>Site ID:</b>	PAN002	<b>Site Address:</b>	Land north of Pangbourne Hill and west of River View Road, Pangbourne	<b>Development Potential:</b>	35 dwellings
-----------------	--------	----------------------	---	-------------------------------	--------------

### Recommendation:

Part of the site, in line with the landscape assessment, is recommended for allocation.

### Justification:

The site is located in a rural service centre in close proximity to local services and facilities. The Landscape [Sensitivity Assessment \(2011\)](#) has concluded that some development could be accommodated on the lower part of the site subject to mitigation and enhancement measures. ~~However potential impact on the highway network could be an issue.~~

[Initial concerns about the potential impact that development could have on the highway network have been rescinded following further work undertaken by the site promoter which demonstrates that the development of 35 dwellings would not have an impact.](#)

[It came to light during the preferred options consultation that dormice are present on the site. An Extended Phase 1 Habitat Survey will be required to accompany any planning application, with appropriate avoidance and mitigation measures implemented if required.](#)

[There is archaeological potential in the area, and further assessment would therefore be required at the planning application stage.](#)

### Discussion:

#### Site Description:

The site is located to the south west of Pangbourne, close to local services and facilities, including access to the countryside.

#### Landscape:

A Landscape [Sensitivity Assessment \(LSA\) \(2011\)](#) has concluded that development of the whole area would have an adverse impact on the western side of Pangbourne, most significantly in visual terms. However development of part of the site may be possible subject to identified mitigation measures in the [LSA Landscape Assessment](#).

#### Flood Risk:

The site is not at risk of flooding; however there is an area of surface water flooding adjacent to the site. A [Flood Risk Assessment \(FRA\)](#) would be required and [Sustainable Drainage Systems \(SUDs\)](#) would need to be provided [in line with Core Strategy policy CS16 \(Flooding\)](#).

#### Highways /Transport:

The proposal would have a marginal impact on the highway network, ~~however~~ [The Council's Highways and Transport team originally raised](#) ~~there is concerns~~ regarding the impact on the restricted Pangbourne Hill/A340 Tidmarsh Lane junction. [The site promoter undertook an assessment of the junction for a planning application for the development of 35 dwellings on the site which concluded that the increase in traffic at the junction would have little impact at the junction. The Council's Highways and Transport team concurred with the results of the assessment.](#)

~~There is a Pangbourne railway station is located within walking distance of the site with~~ and there are services to Oxford, Reading and London, ~~and A bi-hourly bus services runs along Pangbourne Hill which provides connections to Upper Basildon and Reading. pass near to the site.~~ [The Council's Public Transport Officer considers the site to be acceptable in public transport terms. Development could provide an opportunity to enable an enhanced bus service to be put in place, promoted and sustained.](#)

#### Ecology:

There are no ~~protected species or~~ ecological designations on the site. [Dormice are present on the site; therefore an extended phase 1 habitat survey would be required at the planning application stage together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation](#)

## Site Selection – Site Commentary

measures would need to be implemented, if necessary, to ensure any protected species were not adversely affected.

### **Archaeology:**

~~No known archaeological issues.~~ A Roman cemetery is located to the north of the site and there was Medieval activity in the area. A desk based assessment would be required, following field evaluation if necessary to accompany any planning application for the site.

### **Education:**

Local primary school provision is at capacity. A drainage culvert runs through the primary school site which limits the capacity of the school to expand. No comments made on secondary school provision.

### **Environmental Health:**

There is an electricity substation and a poultry farm on the site. There are no known air, noise or contamination issues.

### **Minerals and Waste:**

The site is underlain by gravel deposits, however the location of the site on the edge of the deposit means that there is limited possibility for the option to use minerals on the site as part of the construction or prior extraction (depending upon the quality and depth of the deposit). Consideration of policies 1 & 2 of the Replacement Minerals and Waste Local Plan RMLP would be required.

There are no known waste issues nearby.

### **Land use planning consultation zone:**

The site is not within an AWE consultation zone.

### **Environment Agency:**

No specific comments made on this site. The site is located within Groundwater Source Protection Zone (SPZ)1, whereby there is with a high risk of contamination to groundwater. The Environment Agency has no principle objection to development within SPZs.

### **Thames Water:**

~~Concern regarding Water Supply capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of any development.~~

~~A water supply strategy would be required.~~

Thames Water initially raised concerns around water supply capability, however following an update of their information they advised during the preferred options consultation that water supply problems are no longer envisaged.

~~Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.~~

~~A drainage strategy would be required~~

Initial consultation with Thames Water highlighted the capacity of the pumping station as a key issue. They have since advised that an integrated strategy for water and wastewater will need to be submitted alongside any planning application.

More recent evidence submitted by the site promoter (a report of into the capacity of the local potable water supply prepared by Thames Water) indicates that the network could accommodate up to 35 dwellings.

### **Parish Council:**

At the Strategic Housing Land Availability Assessment (SHLAA) consultation event held on 10 February 2014, Pangbourne Parish Council commented that this site may be acceptable for a smaller number of houses. The parish council thought that access off River View Road would be better than Pangbourne Hill. Should development go ahead the parish council would like to see a footpath into Pangbourne. At preferred options, the parish council clarified that the claim they might be in favour of smaller developments on both

## Site Selection – Site Commentary

PAN001 and PAN002 was an informal remark to the effect that if it was ultimately decided to proceed with PAN002 and/or PAN001, then the parish council would prefer smaller numbers than those envisaged in the proposals. The parish council strongly objected to the development of the site at preferred options.

### Preferred options consultation by key issues:

- General – impact on local amenity/property prices, overpopulated area.
- Consultation process and timing – school holidays, lack of time, etc.
- Loss of wildlife habitats and species – slowworms on site and badger sett near site entrance.
- Flood risk – development will increase surface water flooding in Pangbourne.
- Gaps between settlements – coalescence, risk of sprawl to Reading.
- Within green belt.
- Highways and transport – congestion will worsen, roads unsuitable for additional traffic (eg. narrow), road safety concerns (eg. more cars, speeding, poor sight lines, access onto Pangbourne Hill), infrequent bus service, lack of footpaths, reliance on car use (eg. distance from village centre, lack of footpaths).
- Infrastructure at capacity and could not support increased population – primary school, GP surgery, sewage network.
- Impact on AONB.
- Harm to character of area – density out of keeping with character and pattern of development on Pangbourne.
- Personal – impact on quality of life, loss of views.
- Contrary to national and local planning policy.
- Principle of development – precedent, alternative sites available (PDL), flawed process for identifying sites (Council should have identified suitable sites and then contacted landowners).
- SA/SEA – results disputed, site selection inconsistent (reasons for rejecting other sites apply to PAN002).
- Settlement boundaries.

The key issues raised and the Council's response to these, please see the Statement of Consultation.

### **SA/SEA:**

Development of this site would not lead to any significant sustainability issues.

~~There are positive impacts on sustainability as~~ At preferred options stage it was assessed that the site is close to local services and facilities in Pangbourne thereby enabling walking and cycling opportunities and the subsequent promotion of healthy, active lifestyles. The close proximity of the site to open countryside will also help to promote a healthy active lifestyle.

During the preferred options consultation, the site promoter indicated that a planning application would include provision for public open space and a children's play area. This change has resulted in a change to a positive impact upon green infrastructure.

There are public transport links close to the site, and development could provide an opportunity to enable an enhanced bus service to be out in place, promoted and sustained. This results in a positive impact upon access to education, employment, services and facilities, as well as improving travel choice.

It came to light during preferred options that dormice are present on the site. Development now has the potential to have a negative impact upon biodiversity assets; however an extended phase 1 habitat survey at the planning application stage, together with further detailed surveys if identified as being needed in the phase 1 survey, in addition to appropriate avoidance and mitigation measures if necessary will reduce the potential for a negative impact.

~~There is potential for a negative impact on environmental sustainability unless the mitigation measures set out in the Landscape Assessment are adhered to.~~

Given the sites location within the North Wessex Downs AONB, the landscape impact of any development is vitally important. The Landscape Sensitivity Assessment (LSA) indicates that part of the site would be suitable for development, although appropriate mitigation measures would be required to ensure that the potential negative impact was reduced and neutralised where possible. The mitigation/enhancement measures identified in the LSA, in addition to the submission of a landscape and visual impact assessment alongside any planning application will also ensure the impact of development upon the built environment is

## Site Selection – Site Commentary

[reduced.](#)

The site is adjacent to an area at risk from surface water flooding; development on the site could lead to a worsening of flood risk elsewhere without appropriate mitigation measures. Should flooding occur, it would have a negative impact on all elements of sustainability. [With the appropriate Flood Risk Assessment and mitigation measures \(including Sustainable Drainage Methods \(SUDs\)\) there should not be an impact on sustainability.](#)

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

[The SHLAA submission from the site promoter proposed a development of 74 family houses in a range of sizes and tenures \(with an average density of 21dph\). ~~has been proposed on the site as part of the SHLAA submission.~~](#)

[At preferred options, the site promoter submitted an illustrative masterplan for the development of 35 dwellings on a net developable area of 1.75 hectares. The developable area has been extended in a westerly direction to include a main access to the site between Pangbourne Cemetery and the SSE sub-station. The site promoter disagreed with the developable area extending as far north as depicted in the preferred options document, commenting that development should relate as closely as possible to the existing settlement pattern.](#)

[A hybrid planning application \(ref: 14/03135/OUTMAJ\) for the site comprising of \(i\) an outline application for 35 dwellings and combined public amenity space / play area with all matters reserved; and \(ii\) a full application for the principal means of pedestrian and vehicular access off Pangbourne Hill, a new footway, engineering and landscaping works along the Pangbourne Hill frontage, and car park to serve Pangbourne Cemetery was refused planning permission on 29 April 2015. The reason for refusal was on prematurity grounds – the first core planning principle of the National Planning Policy Framework is that planning should be genuinely plan-led. Allowing the proposal would have been premature to the adoption of the emerging Housing Site Allocations DPD. Furthermore, the Council could demonstrate a five year housing land supply meaning there was no urgent need to pre-empt the plan-led process to increase the housing supply by granting planning permission for the development.](#)

[For the submission version of the DPD, it is proposed to retain the developable area as it was originally illustrated in the preferred options document. The developable area is based upon the recommendations of the Landscape Sensitivity Study.](#)

# Bradfield Southend Site Assessments

## Site Selection – Site Assessment

<b>Spatial Area</b>	AONB	<b>Settlement:</b>	Bradfield Southend	<b>Parish:</b>	Bradfield
---------------------	------	--------------------	--------------------	----------------	-----------

<b>Site ID:</b>	BRS001	<b>Site Address:</b>	Land south of Southend Road
-----------------	--------	----------------------	-----------------------------

<b>Development Potential:</b>	128 dwellings (6.4ha at 20dph)	<b>SHLAA Assessment:</b>	Potentially Developable
-------------------------------	--------------------------------	--------------------------	-------------------------

### Summary of Site Assessment

**Key Issues:**

- AONB - Landscape assessment indicates development on this site would fail to conserve or enhance the special qualities or natural beauty of the AONB.
- Greenfield site
- Location of site in relation to Flood Zones 2 and 3, and the River Pang
- Size of site in relation to settlement size and function

### Site Assessment

<b>Parish Council consultation response:</b>	Concern over levels in the site and flood risk to the south of the site. There would be potential for development here to increase flood risk further down stream. Scale of the site would distort the village and is not in line with the existing linear development of the village (this is the layout preferred by the Parish Council). There is a lack of employment opportunities within the village which would mean people commuting out of the village for work. Potential for light pollution.

---------------------	------	--------------------	--------------------	----------------	-----------

<b>Site ID:</b>	BRS003	<b>Site Address:</b>	Land to the north of South End Road, Bradfield Southend
-----------------	--------	----------------------	---

<b>Development Potential:</b>	45 dwellings (2.24ha at 20dph)	<b>SHLAA Assessment:</b>	Potentially Developable
-------------------------------	--------------------------------	--------------------------	-------------------------

### Summary of Site Assessment

Key Issues:	<ul style="list-style-type: none"> <li>- AONB - Landscape Assessment has advised that there is potential for housing on part of the site subject to more detailed study. Subject to BRS004 being developed.</li> <li>- Surface water flood risk (evidence of standing water January / February 2014)</li> <li>- TPOs</li> <li>- Thames Water have raised significant concerns regarding water supply capability</li> <li>- <a href="#">Greenfield</a></li> </ul>
-------------	--

### Site Assessment

<b>Parish Council consultation response:</b>	<p>Concern over the proposed access to the site regarding the width and potential need to purchase other properties to improve the access. Tree Preservation Orders along eastern boundary and standing water are also potential issues. Concern that if this site was developed along with BRS004 and BRS005 there would be a disproportionate impact on the village. Potential for light and noise issues. Lack of suitable footpaths and on street parking for the school are also concerns.</p> <p><a href="#">No further comments received at preferred options.</a></p>

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			both this site and BRS004 would erode the linear settlement pattern of the village.		
	Will it conserve and enhance the significance of the District's heritage assets?	<b>0</b>	Low archaeological potential on the site		
	Will it promote, conserve and enhance the District's cultural assets?	<b>0</b>	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	<b>0</b>	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from or impact on air quality?	<b>0</b>	Unlikely to have an impact		Development of the site is unlikely to have an impact on any element of sustainability.
	Will the site be at risk from or impact on noise levels?	<b>0</b>	Unlikely to have an impact		
	Will there be an impact on soil quality?	<b>0</b>	Unlikely to have an impact		
	Will there be an impact on water quality?	<b>0?</b>	Unlikely to have an impact <a href="#">The site falls within Groundwater Source Protection Zone 3.</a>	<a href="#">The Environment Agency has no principle objections to development within SPZs.</a>	
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>-</b>	Site is greenfield		The greenfield nature of the site means that there could be a negative impact on environmental sustainability  <a href="#">The site could have a negative impact on environmental sustainability due to the greenfield nature of the site.</a>
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	<b>?</b>	The level of impact depends on the building materials used, construction methods, transport and design	Mitigation could include Travel Plans to reduce car traffic and compliance with policies within the core strategy.	Without consideration of sustainability construction techniques <a href="#">and the promotion of alternative modes of transport</a> , development could have a negative impact on environmental

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will the site be subject to / at risk from flooding	?	<p>The site is within an area of surface water flood risk.</p> <p>The Parish Council indicated that there was standing water on the site during January/February 2014,</p>	<p>A Flood Risk Assessment would be required and development would need to pass the sequential and exception tests. Mitigation including SuDS would need to be provided. <a href="#">The Council's highway engineer has advised the implementation of SuDS would reduce the available developable area, but would not preclude development on the site.</a></p>	<p>sustainability.</p> <p>Development on the site could have a negative impact on all elements of sustainability associated with flooding unless adequate flood alleviation works are carried out.</p>
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<p><a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing, No employment use development is proposed for the site.</a></p> <p><a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a></p>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

## **Site Selection – Sustainability Appraisal / Strategic Environmental Assessment**

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

There are a limited number of services and facilities within walking and cycling distance of the site, although it is recognised that for higher level services and employment there could be a level of car dependency to access Newbury and other centres, particularly given that the bus service is bi-hourly, although development could provide the opportunity to enhance the bus service. The site is in close proximity of open countryside to help promote a healthy and active lifestyle.

~~There are positive impacts on the site in relation to supporting active and healthy lifestyles given its proximity to open countryside. Given that the site location sits within a BOA Biodiversity Opportunity Area, means that biodiversity enhancements will be sought through policy CS17 of the Core Strategy which will positively impact on the environmental sustainability of the site.~~

~~There are potential negative impacts could occur in relation due to the access to employment, services and facilities. The site location within the AONB which means that development has the potential to have a negative impact upon environmental sustainability impact upon the landscape; however mitigation/enhancement measures, as outlined in the Landscape Capacity Assessment, would reduce the impact. Development also has the potential to negatively impact upon environmental sustainability due to the site being greenfield. However, the adopted Core Strategy Development Plan Document is clear that for the district's housing requirement to be met, development on greenfield sites on the edge of settlements is necessary.~~ Development of the site also has the potential to negatively impact upon the built character both cumulatively with site BRS004 and on its own, resulting in a potential negative effect on environmental sustainability.

~~In addition, the site is at risk from surface water flooding. Flooding has the potential to impact on all elements of sustainability. Any development will therefore need to provide SuDs and any planning application would need to be accompanied by a FRA in line with Core Strategy policy. Mitigation measures would need to be considered to reduce the impact.~~

Whilst there are uncertain impacts in respect of road safety and greenhouse gas emissions, there are mitigation measures that can be implemented so that the impacts on the environmental and social elements of sustainability are ameliorated against.

The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Bradfield Southend	<b>Parish:</b>	Bradfield
<b>Site ID:</b>	BRS003	<b>Site Address:</b>	Land to the north of South End Road, Bradfield Southend	<b>Development Potential:</b>	45 dwellings (2.24ha at 20dph)

### Recommendation:

The site is not recommended for allocation

### Justification:

Bradfield Southend is identified as a service village within the adopted Core Strategy. As a service village, only a small level of development is required. It is considered that there ~~is a~~ [are other](#) more suitable sites in Bradfield Southend for allocation.

The site is at risk of surface water flooding and the Parish Council reported standing water on the site in early 2014.

~~If the site was developed alongside BRS004, the linear settlement pattern would be eroded. If developed on its own, the site would be very poorly related to the existing settlement.~~

[The acceptable developable area is poorly related to existing residential development, without BRS004 being developed in order to improve this relationship. This would result in a level of development not in keeping with the role and function of Kintbury as a service village.](#)

### Discussion:

#### Site Description:

The site is located on the north western side of Bradfield Southend within the North Wessex Downs AONB, and lies adjacent to the existing settlement boundary and open countryside. It is accessed via a small industrial estate. The north west section of the site extends beyond the settlement limit. The site is divided into two sections by a tree belt which runs east / west. There are also strong tree belts containing the site to the east and north, with a partial hedgerow to the western boundary. The southern field is currently unused except for storage of a disused vehicle, and areas of scrub are emerging within the grassland.

#### Landscape:

~~A~~ [The Landscape Character Capacity Assessment \(LCA\) \(2014\) concluded that development on part of the site could be accommodated subject to the adjacent site BRS004 being developed. Development should be adjacent to the settlement edge, contained on the edge of the low ridge on which the village sits, and not extend down the valley side. Although development of the recommended area would result in some further 'backland' development, the settlement pattern would be generally retained. Development would need to be subject to:](#)

- [The provision of a substantial tree belt along the northern boundary, linking to the existing tree belt on the eastern boundary and with new tree planting in BRS004 beyond](#)
- [The preferred access being from South End Road, via the small industrial estate, subject to an assessment of the impact on existing trees](#)
- 

[If BRS004 and BRS005 remained undeveloped the site would be very poorly connected to the rest of the settlement and development on BRS003 would be unacceptable.](#)

~~has advised that development is unlikely to comprise the natural beauty and special qualities of the AONB due to the site's visual containment. However it is noted that development would result in the losses of significant tree belts, matrix of woodland and pasture which has links with the wider landscape, and visual and aural tranquillity. Furthermore, the topography would require modifications to enable housing development and there would be an impact upon the stream corridor to the northern boundary of the site.~~

Part of the site could be pursued further as a potential housing site subject to site BRS004 being developed and mitigation/enhancement measures, however this would be at the expense of the loss of the linear settlement pattern. Development of the site in isolation would mean that it would be very poorly connected to the rest of the village.

#### Flood Risk:

## Site Selection – Site Commentary

The site falls within an area of surface water flood risk. The Parish Council reported evidence of standing water in early 2014. [Sustainable Drainage Systems would be required as part of any potential development on the site.](#)

### Highways /Transport:

[Comments from the Council's Highways and Transport team made in respect of part of site BRS003 and site BRS004]

The site [BRS003 (part) and BRS004] can accommodate up to 34 houses that will generate circa 204 daily vehicle movements including circa 20 during the 08.00 to 09.00 AM peak.

Owing to the projected size of the development and the existing use, this proposal will have a marginal impact on the highway.

An adoptable access would be required to serve this site. The site could be accessed via Stretton Close; however there is concern that sight lines are limited onto South End Road.

An alternative access is possible to the west; however the land available may be too narrow. However sight lines are also limited onto South End Road.

Existing footways and bus stops are available nearby. Bus services are available to Newbury / Thatcham and Reading, however these services are infrequent.

### Ecology:

Given that the site sits within a Biodiversity Opportunity Area, biodiversity enhancements will be sought through policy CS17 of the Core Strategy. An Extended Phase 1 Habitat Survey would be required on this site.

### Archaeology:

No previous work undertaken but low archaeological potential.

### Education:

The primary school is likely to have some capacity due to current situation, although as the school improves this is unlikely to continue. The school site can support a one form entry primary school (capacity of 210). Up to 50 additional dwellings in the village would be acceptable in terms of the capacity of the school.

### Environmental Health:

No comments made on this site.

### Minerals and Waste:

~~No comments made on this site.~~ [The site is partially underlain by construction aggregates \(sand and gravel\). Policies 1 and 2 of the Replacement Minerals Local Plan are therefore relevant. Adjacent to the western boundary is a historic landfill site.](#)

### Land use planning consultation zone:

~~The site is not within an AWE consultation zone~~ [The site is within the outer AWE consultation zone. Core Strategy policy CS8 requires that the Office for Nuclear Regulation \(ONR\) must be consulted on proposals for residential development exceeding 500 people.](#)

### Environment Agency:

No specific comments made on this site. The site falls within groundwater source protection zone (SPZ) 3. [The Environment Agency has no principle objection to development within SPZs.](#)

### Thames Water:

[Following initial consultation with Thames Water](#) significant concern regarding water supply capability, especially water resource capability [was raised](#). Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is highly likely to be required to ensure sufficient capacity is brought forward ahead of any development.

There are known issues with Harts Hill Booster Station.

## Site Selection – Site Commentary

A detailed water supply strategy would be required.

[No additional comments were received at preferred options for this site.](#)

### Parish Council:

Concern over the proposed access to the site regarding the width and potential need to purchase other properties to improve the access. Tree Preservation Orders along eastern boundary and standing water are also potential issues. Concern that if this site was developed along with BRS004 and BRS005 there would be a disproportionate impact on the village. Potential for light and noise issues. Lack of suitable footpaths and on street parking for the school are also concerns.

[No further comments received at preferred options.](#)

### Preferred options consultation key issues:

- [BRS003, BRS004 and BRS005 in a comprehensive way as suggested in the 1999 Inspector's Report to the Local Plan.](#)
- [The Council's objection can be overcome by only allocating a proportion of the site.](#)
- [The Landscape Capacity Assessment and selection of BRS004 is inconsistent.](#)
- [The Landscape Capacity Assessment recommends development of BRS003, BRS004 and BRS005.](#)

### SA/SEA:

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

~~There are positive impacts on the site in relation to supporting active and healthy lifestyles given its proximity to open countryside. Given the site sits within a Biodiversity Opportunity Area, biodiversity enhancements will be sought through policy CS17 of the Core Strategy which will positively impact on the environmental sustainability of the site.~~

[There are a limited number of services and facilities within walking and cycling distance of the site, although it is recognised that for higher level services and employment there could be a level of car dependency to access Newbury and other centres, particularly given that the bus service is bi-hourly, although development could provide the opportunity to enhance the bus service. The site is in close proximity of open countryside to help promote a healthy and active lifestyle.](#)

[The sites location within a BOA means that biodiversity enhancements will be sought through policy CS17 of the Core Strategy which will positively impact on the environmental sustainability of the site.](#)

~~Potential negative impacts could occur in relation to the access to employment, services and facilities. The sites location in the AONB means that development has the potential to impact upon the landscape however mitigation/enhancement measures would reduce the impact.~~

~~Potential negative impacts could occur in relation to the access to employment, services and facilities. Development of the site also has the potential to negatively impact upon the built character both cumulatively with site BRS004 and on its own, resulting in a potential negative effect on environmental sustainability.~~

~~In addition, the site is at risk from surface water flooding. Flooding has the potential to impact on all elements of sustainability. Mitigation measures would need to be considered to reduce the impact.~~

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

[Bradfield Southend is identified as a service village within the settlement hierarchy. Service villages are identified as having a more limited range of services and some limited development potential. Therefore development of all the sites shortlisted for allocation would not be in keeping with the service village designation.](#)

**Proposed development (from SHLAA submission):**

## Site Selection – Site Commentary

The site promoter has proposed residential development (including affordable housing) and has advised that the site is available immediately.

### Summary of Site Assessment

Key Issues:

- [Greenfield site.](#)
- [Landscape impact – the site is within the AONB.](#) – Potential for housing on [a reduced area of the site to avoid significant adverse impacts on the AONB and the wider landscape](#) part of the site.
- Potential flood risk (standing water [on the site in](#) January/February 2014) – [Sustainable Drainage Systems and Flood Risk Assessment required at the planning application stage](#)
- Tree Preservation Orders on the site.
- Thames Water have raised significant concerns regarding water supply capability – [integrated strategy for water and wastewater would be required at the planning application stage.](#)

### Site Assessment

<b>Parish Council consultation response:</b>	<p><a href="#">At the SHLAA consultation event held on 10 February 2014, Bradfield Parish Council made the following comments:</a></p> <p><i>General comments:</i>  <a href="#">Generally happy with organic growth rather than large scale development. Size of the SHLAA sites a concern. Infrastructure of the village could not cope. There is one shop and pub. Concern expressed about light and noise pollution. Limited public transport which could be an issue if social housing provided in the village. Accessibility felt to be poor – specific issues include Union Road (limited volume) and South End Road (used as a rat run as parallel the A4). Impact on the AONB an issue.</a></p> <p><i>Site specific comments:</i>                      Site is well screened by trees and could be more acceptable for a small amount of development. The site regularly has standing water on it. Access to the site is considered acceptable.</p> <p><a href="#">No further comments received at preferred options.</a></p>

2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	<p><del>The site has easy access to the countryside which would enable walking and cycling</del></p> <p>There are limited facilities within Bradfield Southend; however these can be accessed by walking or cycling. There are no cycle routes within Bradfield Southend.</p> <p>The site is well placed for access to the countryside.</p>		<p>The site's location <a href="#">to the north west of Bradfield Southend</a> gives opportunities for walking and cycling and gives easy access to local services / and facilities, <a href="#">a recreation ground and play area</a>.</p> <p>Therefore, in terms of environmental and social sustainability, development of the site would have a positive impact.</p>
	Will it increase opportunities for access to sports facilities?	<b>0</b>	The site is close to the recreation ground and play area <a href="#">off South End Road</a> , but some distance from sports facilities. Sports facilities at Bradfield College are <a href="#">located</a> over 2km away		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	Unlikely to have an impact		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>- 0</b>	<p><a href="#">There is a primary school, village hall, village store, church, and pub within Bradfield Southend.</a></p> <p>There <del>is</del> <a href="#">are</a> limited <a href="#">employment opportunities</a> facilities within the village and <a href="#">therefore</a> access to employment would be mainly by car</p>		<p><a href="#">The site is located close to facilities however these are limited. There are limited employment opportunities and public transport options are limited.</a></p> <p><a href="#">The site is therefore unlikely to have any impact upon the district's economic sustainability.</a></p>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			-		The limited opportunity for local employment means that the site could have a negative impact on economic sustainability
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	0-	<p><a href="#">There is limited public transport access (there is a 2 hourly bus service between Newbury and Reading that runs between 8:00 and 18:30. Development could provide an opportunity to enable an enhanced bus service to be put in place, promoted and sustained.</a></p> <p><del>Within the village there are a number of</del> <a href="#">There are</a> opportunities for walking and cycling <a href="#">to access limited local services and facilities</a>. To access a wider range of higher level services there would be reliance on the car. <del>While there are public transport opportunities within the village, the bus service is 2 hourly.</del></p>	<p><a href="#">Bus services are limited although it is possible that development could result in an increased bus service.</a></p>	Due to the location of Bradfield Southend <a href="#">and limited range of facilities/services</a> there would be a degree of high car dependency. This could result in a negative impact on environmental sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	?	<p>Additional traffic could result in road safety concerns but, development would also have the potential to improve road safety.</p> <p><del>Sight lines are limited onto South End Road</del></p>	<p><a href="#">Road safety improvements would be considered as part of a site transport assessment or statement at the planning application stage.</a></p>	
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	0?	<p>The site has Tree Preservation Orders (TPO) on trees within its boundary and sits within a Biodiversity Opportunity Area (BOA).</p>	<p><a href="#">The majority of TPOS on the site fall outside of the developable area.</a></p> <p><a href="#">An Extended Phase 1 Habitat Survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be</a></p>	<p>Policy CS17 of the Core Strategy requires <a href="#">that</a> enhancements to biodiversity are made on sites within BOAs.</p> <p><del>Development could have a potential negative impact upon the landscape, however mitigation and enhancement measures</del></p>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment: -	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	-	<p>The site is within the AONB.</p> <p>The Landscape Capacity Assessment (LCA) (2014) concluded that development on part of the site could be accommodated subject to important measures to conserve and enhance the natural beauty and special qualities of the AONB. advised that development on the site is unlikely to compromise the natural beauty and special qualities of the AONB due to its visual containment subject to mitigation. However it is noted that development would result in the losses of significant tree belts (including Tree Preservation Order Trees), matrix of woodland and pasture which has links with the wider landscape, and visual and aural tranquillity.</p> <p>Part of the site could be pursued as a potential housing site</p>	<p><u>implemented, to ensure any protected species were not adversely affected.</u></p> <p>A <u>The LCA Landscape Capacity Assessment</u> advises of <u>has identified</u> the following mitigation/enhancement measures:</p> <ul style="list-style-type: none"> <li>• Development could be accommodated adjacent to the settlement edge but maintaining the small woodland group in the eastern corner as a public open space.</li> <li>• Retention and enhancement of the existing tree belt and woodland group in the northern corner.</li> <li>• Preferred access from Stretton Close.</li> <li>• Full detailed landscape and visual impact assessment will be required to inform the final capacity of the site.</li> </ul>	<p><del>would minimise the effect.</del></p> <p><u>There would be potential for a negative impact on environmental sustainability unless the site was developed in line with the Landscape Capacity Assessment (2014)</u></p>
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	0 ?	<p>The site is located behind the existing building line but adjacent to the settlement boundary. It is well related to the existing settlement and is unlikely to have an impact on the character of the built environment.</p> <p>However, if the <u>whole</u> site was developed alongside sites BRS003 and BRS005, the linear settlement pattern would be eroded.</p>	<p>The site should be developed in isolation rather than alongside BRS003 and BRS005 to avoid the erosion of the traditional linear settlement pattern.</p> <p><u>Through careful design, development should conserve and enhance the built environment of the surrounding area.</u></p>	<p><u>There would be potential for a negative impact on environmental sustainability unless the site was developed in line with the Landscape Capacity Assessment (2014)</u></p>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
				<a href="#">A landscape and visual impact assessment would be required alongside any planning application.</a>	
	Will it conserve and enhance the significance of the District's heritage assets?	0	There is low archaeological potential on the site		
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact <a href="#">on the districts cultural assets</a>		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact <a href="#">on the historic environment</a>		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from or impact on air quality?	0	Unlikely to have an impact on <a href="#">air quality</a>		Development of the site is unlikely to have an impact on any element of sustainability.
	Will the site be at risk from or impact on noise levels?	0	Unlikely to have an impact <a href="#">on noise levels</a>		
	Will there be an impact on soil quality?	0	Unlikely to have an impact <a href="#">on soil quality</a>		
	Will there be an impact on water quality?	0-?	Unlikely to have an impact <a href="#">The site falls within Groundwater Source Protection Zone 3.</a>	<a href="#">The Environment Agency has no principle objections to development within SPZs.</a>	
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Site is greenfield		The greenfield nature of the site means that there could be a negative impact on environmental sustainability  <a href="#">The site could have a negative impact on environmental sustainability due to the greenfield nature of the site.</a>
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on the building materials used, construction methods, transport and design	Mitigation could include Travel Plans to reduce car traffic and compliance with policies within the core strategy.	Without consideration of sustainability construction techniques <a href="#">and alternative modes of transport</a> , development could have a negative impact on environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will the site be subject to / at risk from flooding	? <u>0</u>	<p>The site does not fall within an official area of flood risk; however it does lie adjacent to an area of surface water flood risk.</p> <p>The Parish Council indicated that there was standing water on the site during Jan/Feb 2014. The impact of development on sustainability relating to flooding is uncertain.</p>	<p><u>If the site were to be allocated, then this would need to be accompanied by a Flood Risk Assessment. This is in line with Core Strategy policy CS16 (Flooding) which also requires the provision of SuDS in all new developments.</u></p> <p>SUDs would need to be provided.</p>	<p><del>Unlikely to have an impact any element of sustainability.</del></p> <p><u>Flooding can have an impact on all elements of sustainability unless appropriate mitigation measures are introduced.</u></p>
<p><u>11. To ensure a strong, diverse and sustainable economic base</u></p>	Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?	<u>0</u>	<p><u>Not considered relevant</u></p>		<p><u>The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</u></p>
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	<u>0</u>	<p><u>The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</u></p> <p><u>The development of the site for housing will have an overall neutral effect on economic sustainability.</u></p>		
	Will it promote and support the vitality and viability of the District's commercial centres?	<u>0</u>	<p><u>Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</u></p> <p><u>The development of the site for housing only will have a neutral effect on economic sustainability.</u></p>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

There are a limited number of services and facilities within walking and cycling distance of the site, although it is recognised that for higher level services and employment there could be a level of car dependency to access Newbury and other centres, particularly given that the bus service is bi-hourly, although development could provide the opportunity to enhance the bus service. The site is in close proximity of open countryside to help promote a healthy and active lifestyle.

~~There are positive impacts on the site in relation to supporting active and healthy lifestyles given its proximity to open countryside. Given the site's location sits within a BOA, means that~~ biodiversity enhancements will be sought through policy CS17 of the Core Strategy which will positively impact on the environmental sustainability of the site.

~~There are P~~potential negative impacts could occur in relation due to the access to employment, services and facilities. The sites location within the AONB which means that development has the potential to have a negative impact upon environmental sustainability impact upon the landscape; however mitigation/enhancement measures would reduce the impact. Development also has the potential to negatively impact upon environmental sustainability due to the site being greenfield. However, the adopted Core Strategy Development Plan Document is clear that for the district's housing requirement to be met, development on greenfield sites on the edge of settlements is necessary.

Whilst development has the potential to have a neutral impact upon the built environment, if the site was developed alongside site BRS003 and BRS005, the traditional linear settlement character would be lost, this resulting in a potential negative effect.

~~The site is not within an area of flood risk, however~~ There is uncertainty relating to the impact development may have on flood risk as the site lies adjacent to an area of surface water flood risk and the Parish Council reported standing water on the site during January/February 2014. Any development will therefore need to provide SuDs and any planning application would need to be accompanied by a FRA in line with Core Strategy policy. Development could impact negatively upon the landscape, however mitigation measures would ~~reduce minimise any impact.~~

Whilst there are uncertain impacts in respect of road safety and greenhouse gas emissions, there are mitigation measures that can be implemented so that the impacts on the environmental and social elements of sustainability are ameliorated against.

The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Bradfield Southend	<b>Parish:</b>	Bradfield
----------------------	------	--------------------	--------------------	----------------	-----------

<b>Site ID:</b>	BRS004	<b>Site Address:</b>	Land off Stretton Close, Bradfield Southend	<b>Development Potential:</b>	<a href="#">10-12 dwellings (0.58ha at 20dph)</a>
-----------------	--------	----------------------	---	-------------------------------	---

### Recommendation:

The site is recommended for allocation

### Justification:

The site is well related to the existing settlement and [is within close proximity to a limited number of services and facilities. The Landscape Capacity Assessment \(LCA\) has concluded that some development would be acceptable on part of the site subject to mitigation and enhancement measures.](#) ~~would be suitable for a~~ [A](#) small number of dwellings that would be in keeping with the size and function of Bradfield Southend as a service village.

### Discussion:

#### Site Description:

The site is located on the north western side of Bradfield Southend, entirely within the North Wessex Downs AONB. The site is contained on the southern and eastern edges by the settlement (and the southern edge of the site adjoins the existing settlement boundary of Bradfield Southend), and is accessed off Stretton Close and otherwise adjacent to the surrounding countryside. The western boundary is formed by a strong tree belt which continues part way along the northern boundary and widens into a small woodland group in the north west corner. There is another group of trees towards the south east corner. Most of the trees are Tree Preservation Ordered oaks. The field is currently used for horsiculture, and there are areas of scrub are emerging within the grassland. There are views north west across BRS005 to the north side of the local valley, from the open north east boundary. Otherwise the site is well contained with little intervisibility within the village, except for with houses immediately adjacent to the site.

#### Landscape:

A Landscape Capacity Assessment ([LCA](#)) has advised that development on the site is unlikely to compromise the natural beauty and special qualities of the AONB due to its visual containment subject to mitigation. [concluded that development could be accommodated on part of the site whilst maintaining the small woodland group in the eastern corner as public open space. Development would be subject to the identified mitigation and enhancement measures in the LCA. Whilst this would result in some further 'backland' development, the settlement pattern would be generally retained.](#)

~~Part of the site could be pursued as a potential housing site but at the loss of the linear settlement pattern.~~

#### Flood Risk:

The site does not fall within an area of flood risk, ~~;~~ however the site is adjacent to an area at risk of surface water flooding. Bradfield Parish Council reported that there was standing water on the site in January/February 2014. [A Flood Risk Assessment would be required alongside the submission of any planning application. Sustainable Drainage Systems would be required as part of any development on the site.](#)

#### Highways /Transport:

~~[Comments from the Council's Highways and Transport team made in respect of part of site BRS003 and site BRS004]~~

~~The site [BRS003 (part) and BRS004] can accommodate up to 34 [10](#) houses that will generate circa 204 daily vehicle movements including circa 20 during the 08.00 to 09.00 AM peak.~~

Owing to the projected size of the development and the existing use, this proposal will have a marginal impact on the highway. [Between 10-12 dwellings will generate circa 72 daily traffic movements including circa 20 during the 8:00 to 9:00 AM peak.](#)

An adoptable access would be required to serve this site. The site could be accessed via Stretton Close; however there is concern that sight lines are limited onto South End Road. [Site lines onto South End Road are acceptable.](#)

~~An alternative access is possible to the west; however the land available may be too narrow. However sight~~

## Site Selection – Site Commentary

~~lines are also limited onto South End Road.~~

Existing footways and bus stops are available nearby. Bus services are available to Newbury / Thatcham and Reading, however these services are infrequent.

### Ecology:

Given that the site sits within a Biodiversity Opportunity Area, biodiversity enhancements will be sought through policy CS17 of the Core Strategy. An Extended Phase 1 Habitat Survey would be required ~~on this site.~~ [together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected.](#)

### Archaeology:

No previous work undertaken but low archaeological potential.

### Education:

~~The primary school is likely to have some capacity due to current situation, although as the school improves this is unlikely to continue.~~ The school site can [could](#) support a one form entry primary school (capacity of 210). ~~Up to 50 additional dwellings in the village would be acceptable in terms of the capacity of the school.~~

### Environmental Health:

No comments made on this site.

### Minerals and Waste:

The site is partially underlain by gravel and policies 1 and 2 of the Replacement Minerals Local Plan for Berkshire are therefore relevant.

The extent of mineral deposit in this area unknown. The nearest former mineral working is located approximately 650 metres to the south east, which indicates that there may be potential for prior extraction, or use of the aggregates on site as part of the development should this site be progressed.

### Land use planning consultation zone:

The site is ~~not~~ within an [the outer](#) AWE consultation zone

### Environment Agency:

No specific comments made on this site. The site falls within groundwater source protection zone (SPZ) 3. [The Environment Agency has no principle objection to development within SPZs.](#)

### Thames Water:

[Thames Water do not have concerns regarding water supply or waste water infrastructure.](#)

~~Significant concern regarding water supply capability, especially water resource capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is highly likely to be required to ensure sufficient capacity is brought forward ahead of any development.~~

~~There are known issues with Harts Hill Booster Station.~~

~~A detailed water supply strategy would be required.~~

### Parish Council:

[At the SHLAA consultation event held on 10 February 2014, Bradfield Parish Council commented that they are generally happy with organic growth rather than large scale development. Size of the SHLAA sites a concern. Infrastructure of the village could not cope. There is one shop and pub. Concern expressed about light and noise pollution. Limited public transport which could be an issue if social housing provided in the village. Accessibility felt to be poor – specific issues include Union Road \(limited volume\) and South End Road \(used as a rat run as parallel the A4\). Impact on the AONB an issue.](#)

[In respect of BRS004 they commented that](#) ~~The site is well screened by trees and could be acceptable for a small amount of development. They have advised that the site regularly has standing water on it. Access to the site is considered acceptable to the Parish Council.~~

## Site Selection – Site Commentary

No further comments made at preferred options.

### Preferred options consultation key issues:

- General – impact on property prices, loss of community.
- Consultation timing inappropriate – summer holiday period.
- Ecology – impact on wildlife and TPOs.
- Harm to character of village – scale of housing out of context.
- Flood risk – standing water on the site.
- Highways and transport – reliance on car use (limited public transport), roads could not cope with increase in traffic, road safety concerns (poor sight lines at Stretton Close/South End Road junction).
- Infrastructure capacity concerns – primary school, recent closure of GP surgery, no mains gas supply, disruption to electricity supplies, poor mobile phone coverage, no high speed broadband.
- Landscape – disagreement with 2014 LSA findings, no indication of location and size of landscape buffers which referenced in SHLAA.
- Principle of development – rejecting BRS003 and BRS005 makes the case to reject BRS004.
- SA/SEA – results disputed.

### **SA/SEA:**

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

~~There are positive impacts on the site in relation to supporting active and healthy lifestyles given its proximity to open countryside.~~ The site is within walking and cycling distance of limited facilities within Bradfield Southend and well placed for access to the countryside thereby helping to promote healthy and active lifestyles. This gives the site a positive score in terms of environmental and social sustainability.

The infrequent bus service and the need to travel out of Bradfield Southend to access higher level services and employment would result in a level of car dependency. Whilst development may result in an increased bus service, it is considered that development will have a neutral impact upon safeguarding and improving accessibility to services/facilities in addition to improving and promoting opportunities for sustainable travel.

~~Given the location of the site sits within a BOA,~~ means that biodiversity enhancements will be sought through policy CS17 of the Core Strategy which will positively impact on the environmental sustainability of the site. Whilst there are trees with TPOS across the site, the majority of these fall outside of the developable area of the site.

~~Potential negative impacts could occur in relation to the access to employment, services and facilities.~~ The sites location within the AONB means that development has the potential to impact upon the landscape and this would have a negative impact upon sustainability; however mitigation/enhancement measures would reduce the impact.

Whilst development has the potential to have a neutral impact upon the built environment, if the site was developed alongside site BRS003 and BRS005, the traditional linear settlement character would be lost, this resulting in a potential negative effect.

Flooding can impact upon all elements of sustainability. Whilst the site does not fall within an official area of flood risk or adjacent to/within an area susceptible to , ~~There is uncertainty relating to the impact development may have on flood risk as the site lies adjacent to an area of surface water flood risk,~~ and the Parish Council reported standing water on the site during January/February 2014. ~~Development could impact negatively upon the landscape, however mitigation measures would reduce minimise any impact.~~ With the appropriate Flood Risk Assessment and Sustainable Drainage Methods, there should not be an impact upon sustainability.

Whilst there are uncertain impacts in respect of road safety and greenhouse gas emissions, there are mitigation measures that can be implemented so that the impacts on the environmental and social elements of sustainability are ameliorated against.

The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.

## Site Selection – Site Commentary

**Proposed development (from SHLAA submission):**

The site promoters indicate in the submission details that the site could accommodate up to 15 dwellings (including 40% allowance for affordable housing in line with policy).

## Site Selection – Site Assessment

<b>Spatial Area</b>	AONB	<b>Settlement:</b>	Bradfield Southend	<b>Parish:</b>	Bradfield
---------------------	------	--------------------	--------------------	----------------	-----------

<b>Site ID:</b>	BRS005	<b>Site Address:</b>	Land at Crackwillow, Cock Lane, Bradfield Southend, RG7 6HW
-----------------	--------	----------------------	---

<b>Development Potential:</b>	38 dwellings (1.9ha at 20dph)	<b>SHLAA Assessment:</b>	Potentially Developable
-------------------------------	-------------------------------	--------------------------	-------------------------

### Summary of Site Assessment

Key Issues:
<ul style="list-style-type: none"> <li>- Impact upon AONB <a href="#">AONB - Landscape Assessment has advised that there is potential for housing on part of the site subject to more detailed study.</a></li> <li>- Tree Preservation Orders</li> <li>- Surface water flood risk (evidence of standing water January / February 2014)</li> <li>- Thames Water have raised significant concerns regarding water supply capability</li> <li>- <a href="#">Thames Water has significant concern regarding water supply capability, in particular water resource capability. There are known issues with Harts Hill Booster Station. Any allocated site would require an integrated strategy for water and wastewater to support a planning application. This should cover flood risk, water quality and conservation.</a></li> <li>- <a href="#">Greenfield.</a></li> </ul>

### Site Assessment

<b>Parish Council consultation response:</b>	Concern that additional traffic would cause serious issues on Cock Lane.  <a href="#">No additional comments received at preferred options.</a>

Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	<p><del>The site has easy access to the countryside which would enable walking and cycling</del></p> <p>There are limited facilities within Bradfield Southend; however these can be accessed by walking or cycling. There are no cycle routes within Bradfield Southend.</p> <p>The site is well placed for access to the countryside.</p>		<p>The site's location <a href="#">to the north west of Bradfield Southend</a> gives opportunities for walking and cycling <del>and gives easy access</del> to local services / <del>and facilities</del>, <a href="#">a recreation ground and play area</a>.</p>
	Will it increase opportunities for access to sports facilities?	<b>0</b>	The site is close to the recreation ground and play area <a href="#">off South End Road</a> , but some distance from sports facilities. Sports facilities at Bradfield College are <a href="#">located</a> over 2km away		Therefore, in terms of environmental and social sustainability, development of the site would have a positive impact.
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	Unlikely to have an impact		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>- 0</b>	<p><a href="#">There is a primary school, village hall, village store, church, and pub within Bradfield Southend.</a></p> <p>There is <a href="#">are</a> limited <a href="#">employment opportunities</a> facilities within the village <del>and</del> <a href="#">therefore</a> access to employment would be mainly by car</p>		<p><a href="#">The site is located close to facilities however these are limited. There are limited employment opportunities and public transport options are limited.</a></p> <p><a href="#">The site is therefore unlikely to have any impact upon the district's economic sustainability.</a></p>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			-		The limited opportunity for local employment means that the site could have a negative impact on economic sustainability
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	0-	<p><a href="#">There is limited public transport access (there is a 2 hourly bus service between Newbury and Reading that runs between 8:00 and 18:30. Development could provide an opportunity to enable an enhanced bus service to be put in place, promoted and sustained.</a></p> <p>Within the village there are a number of <a href="#">There are</a> opportunities for walking and cycling <a href="#">to access limited local services and facilities</a>. To access a wider range of higher level services there would be reliance on the car. <del>While there are public transport opportunities within the village, the bus service is 2 hourly.</del></p>		<p>Due to the location of Bradfield Southend <a href="#">and limited range of facilities/services</a> there would be a degree of high car dependency. This could result in a negative impact on environmental sustainability.</p> <p><a href="#">Bus services are limited although it is possible that development could result in an increased bus service.</a></p>
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns but, development would also have the potential to improve road safety.	<a href="#">Road safety improvements would be considered as part of a site transport assessment or statement at the planning application stage.</a>	
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	0	The site has Tree Preservation Orders (TPO) on trees along southern boundary and sits within a Biodiversity Opportunity Area (BOA).	<p><a href="#">An Extended Phase 1 Habitat Survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected.</a></p> <p>TPOs would need protecting if</p>	<p>Policy CS17 of the Core Strategy requires <a href="#">that</a> enhancements to biodiversity are made on sites within BOAs.</p> <p><a href="#">There would be potential for a negative impact on environmental sustainability unless the site was developed in line with the Landscape Capacity</a></p>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	-	<p>A Landscape Character Capacity Assessment (LCA) (2014) concluded that development on the majority of the site would result in harm to the natural beauty and special qualities of the AONB. However there is scope for a very limited amount of development in the eastern part of the site without harm to the AONB. has advised that development may impact and harm the special qualities of the AONB and result in the loss of:</p> <ul style="list-style-type: none"> <li>• Significant tree belts</li> <li>• Matrix of woodland and pasture which has links with the wider landscape</li> <li>• Visual and aural tranquillity</li> <li>• Meadow</li> </ul> <p>There would also be an impact on the stream corridor to the northern boundary and that the topography of the site would require modification to enable housing development.</p> <p>The eastern part of the site could be pursued further as a potential housing site</p>	<p>the site is developed</p> <p>A The LCA (2014) Landscape Capacity Assessment advises of has identified the following mitigation/enhancement measures:</p> <ul style="list-style-type: none"> <li>• Retention of existing trees</li> <li>• Development should be contained within the eastern part of the site, not extending down the valley side to the north and west, and adjacent to the settlement edge.</li> <li>• Provision of a substantial tree belt and woodland group in the north west corner of site BRS004.</li> <li>• Sensitive treatment of built development in relation to the sloping site would be important.</li> <li>• Preferred access from Cock Lane.</li> </ul>	<p><a href="#">Assessment (2014)</a></p> <p>Development of the site would have a negative impact upon the character of the landscape, however mitigation measures would lessen the impact to some extent.</p>
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	0	<p>The site is located behind the existing building line but adjacent to the settlement boundary.</p> <p>Development of the site, either alone or with sites BRS003 and BRS004, would result in some erosion of the traditional linear settlement pattern.</p>	<p>The traditional linear settlement pattern of the village would be maintained by the non development of this site. Developing the site could result in a potential negative effect.</p>	Development of the site is unlikely to have an impact on any element of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	0	<p>There is low archaeological potential on the site</p>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact <a href="#">on the District's cultural assets</a>		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact <a href="#">on the historic environment</a>		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from or impact on air quality?	0	Unlikely to have an impact <a href="#">on air quality</a>		Development of the site is unlikely to have an impact on any element of sustainability.
	Will the site be at risk from or impact on noise levels?	0	Unlikely to have an impact <a href="#">on noise levels</a>		
	Will there be an impact on soil quality?	0	Unlikely to have an impact <a href="#">on soil quality</a>		
	Will there be an impact on water quality?	0?	Unlikely to have an impact <a href="#">The site falls within Groundwater Source Protection Zone 3.</a>	<a href="#">The Environment Agency has no principle objections to development within SPZs.</a>	
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Site is greenfield		<p>The greenfield nature of the site means that there could be a negative impact on environmental sustainability</p> <p><a href="#">The site could have a negative impact on environmental sustainability due to the greenfield nature of the site.</a></p>
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on the building materials used, construction methods, transport and design	Mitigation could include Travel Plans to reduce car traffic and compliance with policies within the core strategy.	Without consideration of sustainability construction techniques <a href="#">and alternative modes of transport</a> , development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	?	<p>The site does not fall within an official area of flood risk; however it does lie adjacent to an area of surface water flood risk.</p> <p>The Parish Council indicated that there was standing water on the site during Jan/Feb 2014. <del>The impact of</del></p>	<p>SUDs would need to be provided.</p> <p><a href="#">The Council's Principal Engineer has advised the implementation of SUDs would reduce the available developable area</a></p>	Unlikely to have an impact any element of sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			development on sustainability relating to flooding is uncertain.		
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

[There are a limited number of services and facilities within walking and cycling distance of the site, although it is recognised that for higher level services and employment there could be a level of car dependency to access Newbury and other centres, particularly given that the bus service is bi-hourly, although development could provide the opportunity to enhance the bus service. The site is in close proximity of open countryside to help promote a healthy and active lifestyle.](#)

~~There are positive impacts on the site in relation to supporting active and healthy lifestyles given its proximity to open countryside. Given t~~[The sites location within a BOA, means that biodiversity enhancements will be sought through policy CS17 of the Core Strategy which will positively impact on the environmental sustainability of the site.](#)

~~There are P~~[potential negative impacts could occur in relation due to the access to employment, services and facilities. The sites location within the AONB which means that development has the potential to have a negative impact upon environmental sustainability impact upon the landscape; however mitigation/enhancement measures, as outlined in](#)

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

[the Landscape Capacity Assessment](#) would reduce the impact. [Development also has the potential to negatively impact upon environmental sustainability due to the site being greenfield. However, the adopted Core Strategy Development Plan Document is clear that for the district's housing requirement to be met, development on greenfield sites on the edge of settlements is necessary.](#)

Whilst development has the potential to have a neutral impact upon the built environment, if the site was developed alongside sites BRS003 and BRS004, the linear settlement character would be lost, thus resulting in a potential negative effect.

There is uncertainty relating to the impact development may have on flood risk as the site lies adjacent to an area of surface water flood risk and the Parish Council reported standing water on the site in January/February 2014. [Any development will therefore need to provide SuDs and any planning application would need to be accompanied by a FRA in line with Core Strategy policy.](#) There is also a potential negative impact in relation to the impact of development upon the AONB.

[Whilst there are uncertain impacts in respect of road safety and greenhouse gas emissions, there are mitigation measures that can be implemented so that the impacts on the environmental and social elements of sustainability are ameliorated against.](#)

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Bradfield Southend	<b>Parish:</b>	Bradfield
<b>Site ID:</b>	BRS005	<b>Site Address:</b>	Land at Crackwillow, Cock Lane, Bradfield Southend, RG7 6HW	<b>Development Potential:</b>	38 dwellings (1.9ha at 20dph)

### Recommendation:

The site is not recommended for allocation

### Justification:

The site may be suitable for a small number of dwellings, but would be too small to allocate.

[Bradfield Southend is identified as a service village within the adopted Core Strategy. As a service village, only a small level of development is required. It is considered that there are more suitable sites in Bradfield Southend for allocation.](#)

[The site is at risk of surface water flooding and the Parish Council reported standing water on the site in early 2014.](#)

### Discussion:

#### Site Description:

The site is located on the north western side of Bradfield Southend, entirely within the North Wessex Downs AONB. The site is contained on the eastern and north eastern edges by the settlement (the eastern boundary of the site adjoins the settlement boundary of Bradfield Southend), is accessed off of Cock Lane and is otherwise adjacent to the surrounding countryside (BRS003 to the west, BRS004 to the south). The western boundary is formed by a tree belt, which continues along the northern boundary along the Pang tributary stream corridor. The south western boundary shared with site BRS004 is formed of TPO oak trees. The field is under meadow.

#### Landscape:

A Landscape Character Assessment has advised that development of the whole site may impact and harm the special qualities of the AONB and result in the loss of significant tree belts, matrix of woodland and pasture which has links with the wider landscape, visual and aural tranquillity, and meadow. There would also be an impact on the stream corridor to the northern boundary and that the topography of the site would require modification to enable housing development. [The Landscape Capacity Assessment advises that only development of the eastern part of BRS005 would be acceptable due to landscape, visual and settlement pattern constraints and is the least preferred option, of the three sites in this area, due to the potential difficulty in accessing the site and the need to cross the more sensitive part of site to reach the reduced area.](#) There would be scope for a very limited amount of development in the eastern part of the site only.

#### Flood Risk:

The site does not fall within an area of flood risk; however Bradfield Parish Council has advised that the site had standing water on it January/February 2014 and that there is surface water movement between BRS003, BRS004 and BRS005 (info from Parish Council). [Sustainable Drainage Systems would be required as part of any potential development on the site.](#)

#### Highways /Transport:

No site specific comments made.

#### Ecology:

Given that the site sits within a Biodiversity Opportunity Area, biodiversity enhancements will be sought through policy CS17 of the Core Strategy. An Extended Phase 1 Habitat Survey would be required on this site.

#### Archaeology:

No previous work undertaken but low archaeological potential.

#### Education:

The primary school is likely to have some capacity due to current situation, although as the school

## Site Selection – Site Commentary

~~improves this is unlikely to continue.~~ The school site can support a one form entry primary school (capacity of 210). ~~Up to 50 additional dwellings in the village would be acceptable in terms of the capacity of the school.~~

### Environmental Health:

No comments made on this site.

### Minerals and Waste:

~~No comments made on this site.~~ [The site is partially underlain by construction aggregates \(sand and gravel\). Policies 1 and 2 of the Replacement Minerals Local Plan are therefore relevant. Adjacent to the western boundary is a historic landfill site.](#)

### Land use planning consultation zone:

~~The site is not within an AWE consultation zone.~~ [The site is within the outer AWE consultation zone. Core Strategy policy CS8 requires that the Office for Nuclear Regulation \(ONR\) must be consulted on proposals for residential development exceeding 500 people.](#)

### Environment Agency:

No specific comments made on this site. The site falls within groundwater source protection zone (SPZ) 3. [The Environment Agency has no principle objection to development within SPZs.](#)

### Thames Water:

[Following initial consultation with Thames Water s](#)Significant concern regarding water supply capability, especially water resource capability [was raised.](#) Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is highly likely to be required to ensure sufficient capacity is brought forward ahead of any development.

There are known issues with Harts Hill Booster Station.

A detailed water supply strategy would be required.

[No additional comments were received at preferred options for this site](#)

### Parish Council:

Concern that additional traffic would cause serious issues on Cock Lane.

[No further comments were received at preferred options.](#)

### Preferred options consultation key issues:

- [Site promoted for 24 dwellings.](#)
- [Future housing requirement likely to increase and there is a shortage in the area.](#)
- [Land can be drained to accommodate buildings and foundations could be deeper to deal with flood risk issues.](#)
- [A third of the field is adjacent to existing housing, has good drainage and is dry.](#)
- [Access can be taken from Cock Lane, which is underutilised, and serve BRS004 and BRS005.](#)
- [Village envelope would not be extended.](#)

### SA/SEA:

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

~~There are positive impacts on the site in relation to supporting active and healthy lifestyles given its proximity to open countryside. Given the site sits within a BOA, biodiversity enhancements will be sought through policy CS17 of the Core Strategy which will positively impact on the environmental sustainability of the site.~~

[There are a limited number of services and facilities within walking and cycling distance of the site, although it is recognised that for higher level services and employment there could be a level of car dependency to access Newbury and other centres, particularly given that the bus service is bi-hourly, although development could provide the opportunity to enhance the bus service. The site is in close proximity of open countryside to help promote a healthy and active lifestyle.](#)

## Site Selection – Site Commentary

The sites location within a BOA-means that biodiversity enhancements will be sought through policy CS17 of the Core Strategy which will positively impact on the environmental sustainability of the site.

~~Potential negative impacts could occur in relation to the access to employment, services and facilities.~~ The sites location in the AONB means that development has the potential to impact upon the landscape; however mitigation/enhancement measures would reduce the impact. Whilst development has the potential to have a neutral impact upon the built environment, if the site was developed alongside sites BRS003 and BRS004, the linear settlement character would be lost, thus resulting in a potential negative effect.

There is uncertainty relating to the impact development may have on flood risk as the site lies adjacent to an area of surface water flood risk.

The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.

Bradfield Southend is identified as a service village within the settlement hierarchy. Service villages are identified as having a more limited range of services and some limited development potential. Therefore development of all the sites shortlisted for allocation would not be in keeping with the service village designation.

**Proposed development (from SHLAA submission):**

The site promoters have suggested that the site could accommodate 24 dwellings (with provision for 40% affordable housing in line with Core Strategy policy).

Other land uses that the site promoters feel could be appropriate include a mix of residential and education, and education/community/employment connected with the private school adjacent to this site.

			water flood risk.	Core Strategy policy CS16 (Flooding) which also requires the provision of SuDS in all new developments.	measures are introduced.
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a> <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

There are a limited number of services and facilities within walking and cycling distance of the site, although it is recognised that for higher level services and employment there could be a level of car dependency to access Newbury and other centres, particularly given that the bus service is bi-hourly, although development could provide the opportunity to enhance the bus service. The site is in close proximity of open countryside to help promote a healthy and active lifestyle.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

The site's location within a BOA means that biodiversity enhancements will be sought through policy CS17 of the Core Strategy which will positively impact on the environmental sustainability of the site.

There are potential negative impacts due to the sites location within the AONB which means that development has the potential to have a negative impact upon environmental sustainability; however mitigation/enhancement measures would reduce the impact. Development also has the potential to negatively impact upon environmental sustainability due to the site being greenfield. However, the adopted Core Strategy Development Plan Document is clear that for the district's housing requirement to be met, development on greenfield sites on the edge of settlements is necessary.

Whilst development has the potential to have a neutral impact upon the built environment, if the site was developed, the linear settlement character would be lost, thus resulting in a potential negative effect.

The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.

Whilst there are uncertain impacts in respect of road safety and greenhouse gas emissions, there are mitigation measures that can be implemented so that the impacts on the environmental and social elements of sustainability are ameliorated against.

Due to the site having limited visual and built connections with the existing built form, only part of the site would be suitable for development, with the inclusion of mitigation measures outlined in the Landscape Capacity Assessment.

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	<a href="#">AONB</a>	<b>Settlement:</b>	<a href="#">Bradfield Southend</a>	<b>Parish:</b>	<a href="#">Bradfield</a>
----------------------	----------------------	--------------------	------------------------------------	----------------	---------------------------

<b>Site ID:</b>	<a href="#">BRS006</a>	<b>Site Address:</b>	<a href="#">Land off Ash Grove</a>	<b>Development Potential:</b>	<a href="#">10 dwellings (0.48ha at 20dph)</a>
-----------------	------------------------	----------------------	------------------------------------	-------------------------------	--

### Recommendation:

The site is not recommended for allocation

### Justification:

[The Landscape Capacity Assessment \(2015\) concluded that development over the whole site would result in harm to the natural beauty and special qualities of the AONB and that only part of the site would be suitable for development.](#)

[The site has limited visual and built connections with the existing built form.](#)

[As a service village, only a small amount of development is considered appropriate, and the preferred option site \(BRS004\) is considered more suitable for development.](#)

### Discussion:

#### Site Description:

[The site is located to the north of Bradfield Southend, entirely within the North Wessex Downs AONB. The site is contained on the south eastern edge by the settlement. The south western boundary of the site adjoins the playing field of Bradfield Primary School. The site is accessed off of Ash Grove and is otherwise adjacent to the surrounding countryside. The northern, western and eastern boundaries are formed by tree belts.](#)

[The field is used as grazing land.](#)

#### Landscape:

[The Landscape Capacity Assessment indicates that the site has limited visual and built connections with the existing built form. Development of the site as a whole would result in harm to the natural beauty and special qualities of the AONB. This would result in substantial “backland” extension to the existing development north of Cock Lane and erosion of the linear pattern of much of the village. Mitigation measures that would be required are set out in the landscape assessment.](#)

#### Flood Risk:

[The site does not fall within an area of flood risk; however, site access and the eastern boundary of the site are subject to surface water flooding.](#)

#### Highways /Transport:

[No issues subject to a suitable access road being provided. The Council’s Highways and Transport team has advised that the carriageway will need to be 4.8m in width with 2m grass margins either side of the carriageway. Sight lines at the junction of Cock Lane will need to be 2.44m. Footways on the access road are not required for developments of 10 dwellings.](#)

[The site is presently accessed via a field gate to the side of 2 Ash Grove which is owned and controlled by the landowners of BRS006. It is the intention of the landowners to provide a new access road through to Cock Lane to serve the site with the existing access to the properties on Ash Grove realigned.](#)

[The Council’s Highways and Transport team do not consider that 10 dwellings would have an impact upon the highway network. 10 dwellings would generate 6 additional car movements between 8-9am.](#)

#### Ecology:

[Given that the site sits within a Biodiversity Opportunity Area, biodiversity enhancements will be sought through policy CS17 of the Core Strategy Development Plan Document \(DPD\). An Extended Phase 1 Habitat Survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected.](#)

#### Archaeology:

## Site Selection – Site Commentary

[Based on the Historic Environment Record, old edition Ordnance Survey maps and Historic Landscape Characterisation](#)), the Council's Archaeological Officer has advised that there is little archaeological potential. Whilst there are some early 17<sup>th</sup> century structures in the vicinity, it is unlikely that these represent any kind of historic settlement core, and there is no evidence of prehistoric or Roman activity in the wider area.

### **Education:**

[The primary school has some capacity the school site can support a one form entry primary school \(capacity of 210\).](#)

### **Environmental Health:**

[No comments made on this site.](#)

### **Minerals and Waste:**

[The site is partially underlain by construction aggregates \(sand and gravel\). Policies 1 and 2 of the RMLP are therefore relevant. Adjacent to the western boundary is a historic landfill site.](#)

### **Land use planning consultation zone:**

[The site is within the outer AWE consultation zone. Core Strategy policy CS8 requires that the Office for Nuclear Regulation \(ONR\) must be consulted on proposals for residential development exceeding 500 people.](#)

### **Environment Agency:**

[No specific comments made on this site.](#)

### **Thames Water:**

[No specific comments made on this site.](#)

### **Parish Council:**

Comments on the site from Bradfield Parish Council have not been made. This is due to the site being submitted during the preferred options consultation on the Housing Site Allocations DPD.

### **Preferred Options consultation key issues:**

[Comments received from the site promoter offering support for the inclusion of the site.](#)  
[For the consultation responses and Council's response, please see the Statement of Consultation.](#)

### **SA/SEA:**

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

There are positive impacts on the site in relation to supporting active and healthy lifestyles given its proximity to open countryside. Given the site sits within a Biodiversity Opportunity Area (BOA), biodiversity enhancements will be sought through policy CS17 of the Core Strategy which will positively impact on the environmental sustainability of the site.

[Bradfield Southend is identified as a service village within the settlement hierarchy. Service villages are identified as having a more limited range of services and some limited development potential. Therefore development of all the sites shortlisted for allocation would not be in keeping with the service village designation.](#)

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

Potential negative impacts could occur due to the sites location within the AONB which means that development has the potential to have a negative impact upon environmental sustainability; however mitigation/enhancement measures would reduce the impact. Development also has the potential to negatively impact upon environmental sustainability due to the site being greenfield. However, the adopted Core Strategy Development Plan Document is clear that for the district's housing requirement to be met, development on greenfield sites on the edge of settlements is necessary.

## Site Selection – Site Commentary

Whilst development has the potential to have a neutral impact upon the built environment, if the site was developed, the linear settlement character would be lost, thus resulting in a potential negative effect.

The site access and eastern boundary of the site are susceptible to surface water flooding.

[The Landscape Capacity Assessment finds the site to have limited visual and built connections with the existing built form. Therefore, only part of the site would be suitable for development, with the inclusion of mitigation measures outlined in the Landscape Assessment.](#)

Core Strategy policy CS16 requires on all development sites the provision of Sustainable Drainage Methods (SuDS) to manage surface water.

**Proposed development (from SHLAA submission):**

The site was submitted for consideration during the preferred options consultation of the Housing Site Allocations Development Plan Document (DPD).

Core Strategy requires sensitive design which respects and enhances the character of the area.	Development of the site could result in a negative impact on environmental sustainability but impacting on the character of the built environment.
	Will it conserve and enhance the significance of the District's heritage assets?	0		Heritage impact assessment would be required	
	Will it promote, conserve and enhance the District's cultural assets?	0	Development of the site would not have an impact on any of the district's cultural assets.		
	Will it provide for increased access to and enjoyment of the historic environment?	0	The site is close to the historic core of the village, but is unlikely to provide increased access to and enjoyment of the historic environment.		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk of, or impact on, air quality?	0	The size of the site is unlikely to have any impact on air quality		Unlikely to have an impact on sustainability.
	Will the site be at risk of, or impact on, noise levels?	0	The size of the site is unlikely to have any impact on noise		
	Will there be an impact on soil quality?	0	The size of the site is unlikely to have any impact on soil quality		
	Will there be an impact on water quality?	0	The size of the site is unlikely to have any impact on water quality		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	The site is Greenfield		The site could have a negative impact on environmental sustainability as it is a Greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will the site be subject to / at risk from flooding	<b>0</b>	The site is not at risk from flooding.	SUDs would need to be provided	Unlikely to have an impact on any element of sustainability.

### Summary

There are no significant sustainability effects from developing this site. The site is within easy walking distance of the village core in a residential area on the edge of the village, which gives a positive impact on sustainability. The village's location close to the A34 and M4 means that there are a number of opportunities for access to employment throughout West Berkshire and beyond, with a positive impact on economic sustainability. The site is within the AONB, and without appropriate landscape mitigation measures development would have a negative impact on environmental sustainability.

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB – Chieveley

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Chieveley	<b>Parish:</b>	Chieveley
<b>Site ID:</b>	CHI001	<b>Site Address:</b>	The Colt House, Green Lane, Chieveley	<b>Development Potential:</b>	≤5 dwellings (0.24ha at 20dph)

**Recommendation:**

The site is not recommended for allocation although will be considered as part of the settlement boundary review. Any future proposal to be considered through the planning application process.

**Justification:**

Green Lane is rural in nature with large detached housing along it. A development of 5 houses would be out of keeping with the character of the area

**Discussion:**

**Site Description:**

The site is located to the south of Chieveley. The site is not adjacent to the settlement boundary, although it is adjacent to a row of large detached houses on the edge of the village. The site is close to the centre of Chieveley and the local services and facilities available there. There is good access to the open countryside.

**Landscape:**

The site is in the AONB. The Landscape Assessment indicates that development of the site would not cause harm to the character of the AONB as long as the mitigation measures set out in the assessment are adhered to.

**Flood Risk:**

The site is in flood zone 1. SUDs would need to be provided.

**Highways /Transport:**

Traffic generation from the site is not anticipated to have a significant impact on the highway network.

Access onto Green Lane is not seen as an issue due to the small size of the site.

The site is close to the junction of the A34 and M4, meaning that there are a number of opportunities for employment outside the village. It is likely that there would be reliance on the private car within the village for commuting, although local services and facilities are within walking distance of the site.

A 2 hourly bus service passes through Chieveley.

**Ecology:**

**Archaeology:**

There is a roman farmstead adjacent to the site. The site is close to the historic core of the village. Further investigation would be required.

**Education:**

Local primary school provision is close to or at capacity. No comments have been made on secondary school provision.

**Environmental Health:**

No known air, noise or contamination issues

**Minerals and Waste:**

No known mineral or waste issues.

**Land use planning consultation zone:**

The site is not within an AWE consultation zone

**Environment Agency:**

EA not consulted on this site

## Site Selection – Site Commentary

**Thames Water:**

~~TW not consulted on this site~~

**Parish Council:**

~~This area of the village is seen as an area of special rural character and a green lane in the village. Strong views from residents and the parish council that this should remain as it is.~~

**SA/SEA:**

~~There are no significant sustainability effects from developing this site. The site is within easy walking distance of the village core in a residential area on the edge of the village, which gives a positive impact on sustainability. The village's location close to the A34 and M4 means that there are a number of opportunities for access to employment throughout West Berkshire and beyond, with a positive impact on economic sustainability. The site is within the AONB, and without appropriate landscape mitigation measures development would have a negative impact on environmental sustainability.~~

**Proposed development (from SHLAA submission):**

~~No specific proposals have been submitted for this site.~~

# Site Selection – Site Assessment

<b>Settlement:</b>	Chieveley	<b>Parish:</b>	Chieveley
--------------------	-----------	----------------	-----------

<b>Site ID:</b>	CHI009	<b>Site Address:</b>	Land south of Graces Lane, Chieveley
-----------------	--------	----------------------	--------------------------------------

<b>Development Potential:</b>	40 dwellings (2ha at 20dph)	<b>SHLAA Assessment:</b>	Not currently developable
-------------------------------	-----------------------------	--------------------------	---------------------------

**Summary of Site Assessment**

Landscape assessment indicates that this site is not suitable for development. The Assessment states “Development of the site would be out of character with the linear development of Chieveley. The northern section of the site adjacent to the road is important open countryside at the entrance to the village, and would not be suitable for development. If the north west corner of the site were developed, thus extending housing back from the roads, the straight, strongly vegetated edge of the settlement would be lost”.

**Site Assessment**

<b>Parish Council consultation response:</b>	Parish Council agreed with the SHLAA assessment of the site as not currently developable. Development here would have an impact on the visibility of the village from outside.

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	Good location in the village, close to the village hall and local shop. Close to open space and rights of way. Adjacent to a recreation ground.		The site's location gives opportunities for walking and cycling and provides easy access to local services and facilities. Therefore, in terms of environmental and social sustainability development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	+	The site is adjacent to a recreation ground		
	Will it protect and enhance green infrastructure across the district?	0	There are Public Rights of Way close to the site – there are footpaths that run from Manor Way north and westwards and south from East Lane		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	Site close to local facilities and services (village hall, shop, school), but will not provide new facilities		Chieveley's location within West Berks means that development here would have easy access to the strategic road network for a range of employment opportunities. Therefore, development of the site could have a positive impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	Site is close to local facilities and services within the village, and open countryside. There are limited opportunities for Public Transport		While car dependency is high in Chieveley due to its location and function as a service village, there are a good range of local services and facilities within the village. This should have a positive impact on sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance	Will it conserve and	0	The site is not within in any		Without mitigation

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
the natural environment	enhance the biodiversity and geodiversity assets across West Berkshire?		designated environmental / ecological designations		measures as set out in the landscape assessment development could have a negative impact on environmental sustainability.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	-	The site is in the AONB. The landscape assessment indicates development would be acceptable with appropriate mitigation.	The landscape assessment states that development would be acceptable if the existing boundary vegetation was retained.	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	+	The site is well related to the centre of Chieveley.		Careful design and development of the site would be likely to have a positive impact on sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	+	Site is close to the historic core of the village and possible medieval settlement. Core Strategy policy requires sensitive design.  There is a conservation area immediately south of the site		
	Will it promote, conserve and enhance the District's cultural assets?	0	Development of the site would not have an impact on any of the district's cultural assts.		
	Will it provide for increased access to and enjoyment of the historic environment?	0	The site is close to the historic core of the village, but is unlikely to provide increased access to and enjoyment of the historic environment.		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	The size of the site is unlikely to have any impact on air quality		Unlikely to have an impact on sustainability.
	Will the site be at risk from, or impact on, noise levels?	0	The size of the site is unlikely to have any impact on noise		
	Will there be an impact on soil quality?	0	The size of the site is unlikely to have any impact on soil quality		
	Will there be an impact on water quality?	0	The size of the site is unlikely to have any impact on water quality		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	The site is presently in use as a residential garden (greenfield)		The site could have a negative impact on environmental sustainability as it is a Greenfield site.
10. To reduce emissions	Will it reduce West	?	The level of impact depends on	Mitigation could also include	Without consideration of

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
contributing to climate change and ensure adaptation measures are in place to respond to climate change	Berkshire's contribution to greenhouse gas emissions?		location, building materials / construction, transport / design	Transport Assessment / Travel Plans.	sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	-	The site lies within a Surface Water Flood Risk area	An FRA and SUDs would be required.	Flood risk on the site means that there could be a negative impact on all elements of sustainability unless appropriate mitigation was provided.

### Summary

There are no significant sustainability effects from developing this site. The site is well related to the village core, close to local services and facilities, which will maximise the opportunities for walking within the village and give a positive impact on sustainability. The Village's location close to the A34 and M4 means that there are a number of opportunities for access to employment throughout West Berkshire and beyond, giving a positive impact on economic sustainability. Development would take place on Greenfield land and could have an impact on the local green infrastructure, with a negative impact on environmental sustainability without appropriate mitigation measures. Without appropriate landscape mitigation measures there could be a negative impact on environmental sustainability as a result of the site being in the AONB. The site is at risk from surface water flooding, which without appropriate mitigation could have a negative impact on sustainability.

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB – Chieveley

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Chieveley	<b>Parish:</b>	Chieveley
----------------------	------	--------------------	-----------	----------------	-----------

<b>Site ID:</b>	CHI010	<b>Site Address:</b>	Land adjacent to Coombe Cottage, High Street, Chieveley	<b>Development Potential:</b>	7 dwellings (0.37ha at 30sph)
-----------------	--------	----------------------	---	-------------------------------	-------------------------------

**Recommendation:**  
The site is recommended for allocation

**Justification:**  
The site is related to Chieveley, at the centre of the village with good access to local services and facilities.

**Discussion:**

**Site Description:**  
The site is well related to the centre of Chieveley Village and the local services within the village and open countryside. The site is located behind the existing building line.

**Landscape:**  
The site is in the AONB. The Landscape Assessment indicates that development would be appropriate as long as the mitigation measures set out in the assessment are adhered to.

**Flood Risk:**  
The site is in flood zone 1. As the site is within a surface water flood risk area. SUDs would need to be provided.

**Highways /Transport:**  
The traffic generated from the development is likely to travel through the centre of Chieveley, but is not expected to have a significant impact on the highway network.  
  
Access onto High Street is acceptable, appropriate sight lines can be achieved.  
  
The site is close to the junction of the A34 and M4, meaning that there are a number of opportunities for employment outside the village. It is likely that there would be reliance on the private car within the village for commuting, although local services and facilities are within walking distance of the site.  
  
A 2 hourly bus service passes through Chieveley

**Ecology:**  
An extended phase 1 habitat survey would be required.

**Archaeology:**  
The site is close to the historic core of Chieveley. Some assessment would be required.

**Education:**  
Local primary school provision is close to or at capacity. No comments have been made regarding secondary school provision.

**Environmental Health:**  
No know air, noise or contamination issues.

**Minerals and Waste:**  
No known mineral or waste issues

**Land use planning consultation zone:**  
The site is not within an AWE consultation zone

**Environment Agency:**  
No specific comments have been made on this site. The site is in SPZ3, with a high risk of contamination to groundwater.

## Site Selection – Site Commentary

**Thames Water:**

No water supply or wastewater infrastructure issues envisaged.

**Parish Council:**

Concern raised as to the access to the site and proximity to nursery school.

**SA/SEA:**

There are no significant sustainability effects from developing this site. The site is well related to the village core, close to local services and facilities, which will maximise the opportunities for walking within the village and give a positive impact on sustainability. The Village's location close to the A34 and M4 means that there are a number of opportunities for access to employment throughout West Berkshire and beyond, giving a positive impact on economic sustainability. Development would take place on Greenfield land and could have an impact on the local green infrastructure, with a negative impact on environmental sustainability without appropriate mitigation measures. Without appropriate landscape mitigation measures there could be a negative impact on environmental sustainability as a result of the site being in the AONB. The site is at risk from surface water flooding, which without appropriate mitigation could have a negative impact on sustainability.

**Proposed development (from SHLAA submission):**

The site is proposed for 4 open market residential units.

**Key: Effects of option on SA objectives**

++	+	?	0	-	--
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA-Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	Within walking distance of village hall and recreation ground. Close to open space and rights of way.		The site's location gives opportunities for walking and cycling and provides easy access to local services and facilities. Therefore, in terms of environmental and social sustainability, development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	+	Within walking distance of recreation ground and village hall		
	Will it protect and enhance green infrastructure across the district?	0			
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	Site close to local facilities and services (village hall, shop, school), but will not provide new facilities		Chieveley's location within West Berks means that development here would have easy access to the strategic road network for a range of employment opportunities. Therefore, development of the site could have a positive impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	Site is close to local facilities and services within the village, and open countryside. There are limited opportunities for Public Transport.		While car dependency is high in Chieveley due to its location and function as a service village, there are a good range of local services and facilities within the village.
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets	0	The site is not within any designated environmental / ecological designations		Unlikely to have an impact on sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	across West Berkshire?				
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	-	The site is in the AONB.	The site is well contained.	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	-	Could impact on the character of adjacent residential areas in this rural settlement edge location.	Core Strategy requires sensitive design which respects and enhances the character of the area.	Development of the site could result in a negative impact on environmental sustainability but impacting on the character of the built environment.
	Will it conserve and enhance the significance of the District's heritage assets?	0		Heritage impact assessment would be required	
	Will it promote, conserve and enhance the District's cultural assets?	0	Development of the site would not have an impact on any of the district's cultural assets.		
	Will it provide for increased access to and enjoyment of the historic environment?	0	The site is close to the historic core of the village, but is unlikely to provide increased access to and enjoyment of the historic environment.		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will there be an impact on air quality?	0	The size of the site is unlikely to have any impact on air quality		Unlikely to have an impact on sustainability.
	Will there be an impact on noise levels?	0	The size of the site is unlikely to have any impact on noise		
	Will there be an impact on soil quality?	0	The size of the site is unlikely to have any impact on soil quality		
	Will there be an impact on water quality?	0	The size of the site is unlikely to have any impact on water quality		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	The site is Greenfield		The site could have a negative impact on environmental sustainability as it is a Greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will the site be subject to / at risk from flooding	<b>0</b>	No flood risk identified	SUDs would need to be provided.	Unlikely to have an impact on all elements of sustainability.

### Summary

There are no significant sustainability effects from developing this site. The site is within easy walking distance of the village core in a residential area on the edge of the village, giving a positive impact on sustainability. The village's location close to the A34 and M4 means that there are a number of opportunities for access to employment throughout West Berkshire and beyond, with a positive impact on economic sustainability. The site is a residential garden and therefore classified as greenfield land and the location within the AONB could lead to a negative impact on environmental sustainability unless appropriate landscape mitigation measures are provided.

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB – Chieveley

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Chieveley	<b>Parish:</b>	Chieveley
----------------------	------	--------------------	-----------	----------------	-----------

<b>Site ID:</b>	CHI017	<b>Site Address:</b>	The Old Stables, Green Lane, Chieveley	<b>Development Potential:</b>	5 dwellings (0.25ha at 30sph)
-----------------	--------	----------------------	--	-------------------------------	-------------------------------

**Recommendation:**

~~The site is not recommended for allocation although will be considered as part of the settlement boundary review. Any future proposals to be considered through the planning application process.~~

**Justification:**

~~Green Lane is rural in nature with large detached housing along it. A development of 5 houses would be out of keeping with the character of the area.~~

**Discussion:**

**Site Description:**

~~The site is located to the south of Chieveley. The site is not adjacent to the settlement boundary, although it is adjacent to a row of large detached houses on the edge of the village. The site is close to the centre of Chieveley and the local services and facilities available there, there is good access to the open countryside.~~

**Landscape:**

~~The site is in the AONB.~~

**Flood Risk:**

~~The site is in flood zone 1. SUDs would need to be provided.~~

**Highways /Transport:**

~~No specific comments made on this site, although it is close to CHI001, so the highway impact would be similar.~~

~~Traffic generation from the site is not anticipated to have a significant impact on the highway network.~~

~~Access onto Green Lane is not seen as an issue due to the small size of the site.~~

~~The site is close to the junction of the A34 and M4, meaning that there are a number of opportunities for employment outside the village. It is likely that there would be reliance on the private car within the village for commuting, although local services and facilities are within walking distance of the site.~~

~~A 2 hourly bus service passes through Chieveley.~~

**Ecology:**

~~An extended phase 1 habitat survey would be required.~~

**Archaeology:**

~~Some evaluation has been done on the site, more investigation would be required.~~

**Education:**

~~Local primary school provision is close to or at capacity. No comments have been made on secondary school provision.~~

**Environmental Health:**

~~No known air, noise or contamination issues~~

**Minerals and Waste:**

~~No known mineral or waste issues~~

**Land use planning consultation zone:**

~~The site is not within an AWE consultation zone~~

**Environment Agency:**

~~No specific comments made on this site. The site is in SPZ3.~~

## Site Selection – Site Commentary

**Thames Water:**

TW not consulted on this site.

**Parish Council:**

The parish council see this area (Green Lane) as an area of special rural character and a green lane in the village. Local residents would like the lane to keep its rural feel.

**SA/SEA:**

The SA/SEA indicates a predominantly neutral sustainability effect. There are no significant sustainability effects from developing this site. The site is within easy walking distance of the village core in a residential area on the edge of the village, giving a positive impact on sustainability. The village's location close to the A34 and M4 means that there are a number of opportunities for access to employment throughout West Berkshire and beyond, with a positive impact on economic sustainability. The site is a residential garden and therefore classified as greenfield land and the location within the AONB could lead to a negative impact on environmental sustainability unless appropriate landscape mitigation measures are provided.

**Proposed development (from SHLAA submission):**

The site is proposed for a development of 3 or 4 houses following the pattern and grain of development already seen along Green Lane.

# Compton Site Assessments

# Site Selection – Site Assessment

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Compton	<b>Parish:</b>	Compton
----------------------	------	--------------------	---------	----------------	---------

<b>Site ID:</b>	COM001	<b>Site Address:</b>	Land to the east of Yew Tree Stables, Compton
-----------------	--------	----------------------	---

<b>Development Potential:</b>	27 30 dwellings (1.36ha at 20dph)	<b>SHLAA Assessment:</b>	Potentially Developable
-------------------------------	-----------------------------------	--------------------------	-------------------------

## Summary of Site Assessment

### Key Issues:

- AONB – Landscape Assessment indicates only the eastern part of the site would be suitable for development.
- [Groundwater flood risk and adjacent to Flood Zone 2 and 3 and area of Surface Water Flood Risk.](#)
- Site is adjacent to a Scheduled Monument.

## Site Assessment

<b>Parish Council consultation response:</b>	Development here would merge the village with the industrial units beyond. The Parish Council would like to see the distinction maintained. The site is considered important open space to the community. Despite the site having good access, the community would be against development on the site. Development could be visually prominent due to the topography of the site.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Compton	<b>Parish:</b>	Compton
----------------------	------	--------------------	---------	----------------	---------

<b>Site ID:</b>	COM001	<b>Site Address:</b>	Land to the east of Yew Tree Stables, Compton	<b>Development Potential:</b>	27 <del>30</del> dwellings (1.36ha at 20dph)
-----------------	--------	----------------------	---	-------------------------------	--

**Key: Effects of option on SA objectives**

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	Good access to recreation ground and countryside		The site's location to the east of Compton provides opportunities for walking and cycling, as well as easy access to local services and facilities. Therefore, in terms of environmental and social sustainability, development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	<b>+</b>	Good access to recreation ground and countryside.		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	Unlikely to have an impact		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>+</b>	Good access to secondary and primary schools, with some local job opportunities. Loss of the Pirbright Institute will reduce local employment opportunities	The Pirbright Institute site should be redeveloped in line with the adopted SPD which should result in mixed use development and therefore provide a level of local employment.	The site is located close to employment and education as well as other services and facilities within Compton. The site also has access to the strategic road network (A34), although height restrictions for heavy goods vehicles exist. The site could have a positive impact on the district's economic and social sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>0</b>	Limited public transport access ( <del>intermittent 2 hourly</del> bus service linking Compton and Newbury). Opportunities for walking and cycling to access local services and facilities.		Access to public transport is limited but the village is served by a <del>intermittent 2 hourly</del> bus service. The site's proximity to local services and facilities will encourage walking or cycling but car dependency will be high. Site is unlikely
	Will it reduce the number of road traffic accidents and improve safety?	<b>?</b>	Additional traffic could result in road safety concerns, but any development would also have the	Some of the approach roads to the village have weight or height restrictions.	

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			potential to improve road safety.		to have any impact on environmental or economic sustainability.
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	<b>0</b>	Unlikely to have an impact		The site is open and rural in nature; therefore development could have a negative impact on this element of environmental sustainability.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	<b>?</b>	Development would only be appropriate on part of the site and would be subject to the protection and enhancement of some features.	Mitigation measures set out in the Landscape Assessment – protection and enhancement of the following features would be required: <ul style="list-style-type: none"> <li>• An open area visually linking the paddocks to the north with the recreation ground to the south</li> <li>• On site trees</li> <li>• Hedgerow boundaries</li> <li>• Views from the public right of way (through careful siting and design)</li> </ul>	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	<b>0</b>	Unlikely to have an impact. Adjacent to a Conservation Area but landscape mitigation would result in a green buffer between the site and residential properties to the west.		In order to maintain the level of social and environmental sustainability of the area, any potential development should consider the impact on the SM and Conservation Area and archaeological potential in any design.
	Will it conserve and enhance the significance of the District's heritage assets?	<b>?</b>	<del>Adjacent to Scheduled Monument (SM) High potential for medieval archaeology on the site.</del> <a href="#">Further research has de-scheduled the Scheduled Monument to the west of the Church but the area is still of archaeological significance.</a>	<del>Requires further assessment</del> <a href="#">Area is of archaeological potential and an archaeological desk based assessment would be required.</a>	
	Will it promote, conserve and enhance the District's cultural assets?	<b>0</b>	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	<b>0</b>	Unlikely to have an impact		
7. To protect and improve air, water and soil quality,	Will the site be at risk from or impact on air quality?	<b>0</b>	Unlikely to have an impact on air quality		The site is unlikely to have an impact on any aspect of

and minimise noise levels throughout West Berkshire	Will the site be at risk from or impact on noise levels?	<b>0</b>	Unlikely to have an impact on noise levels		sustainability.
	Will there be an impact on soil quality?	<b>0</b>	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	<b>0</b>	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>-</b>	Greenfield site		The greenfield status <u>of</u> the site would result in a negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	<b>?</b>	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	<b>-</b>	Groundwater Emergence Zone and adjacent to Flood Zone 2 <u>and 3</u> and an area of Surface Water Flood Risk.	Sustainable urban drainage techniques (SuDS) should be used to mitigate the effect of any potential flooding.	Flood risk on <u>and near</u> the site means that there could be a negative impact on all elements of sustainability.
11. To ensure a strong, diverse and sustainable economic base	<u>Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</u>	<b>0</b>	<u>Not considered relevant</u>		<u>The development of the site for housing would have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</u>
	<u>Will it promote and support key business sectors and utilise employment land effectively and efficiently?</u>	<b>0</b>	<u>The site is Greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</u>  <u>The development of the site for housing will have an overall neutral effect on economic sustainability.</u>		
	<u>Will it promote and support the vitality and viability of the District's commercial centres?</u>	<b>0</b>	<u>Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating</u>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">uses in such commercial centres.</a> <a href="#">The development of the site will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significantly positive or negative effects. Whilst the site is well located for services, particularly education, public transport options are limited and car dependency will be high. There are, however, opportunities for walking and cycling. The site is in close proximity of open countryside and a recreation ground to help promote a healthy active lifestyle.

The landscape assessment has concluded that development could be accommodated on part of the site subject to mitigation/enhancement measures. ~~The Scheduled Monument adjacent to the site means that further archaeological investigation would be required, and the impact of the Scheduled Monument would need to be taken into account in any development proposal.~~ [The area of archaeological significance adjacent to the site means that the site has archaeological potential and a desk based assessment would be required. The impact of any archaeological potential and the Conservation Area would need to be taken in to account in any development proposal.](#)

The site is at risk from groundwater flooding and mitigation measures would be required.

[The development of the site for housing would have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

**Summary of effects:**  
**Effect:** Predominantly neutral  
**Likelihood:** High  
**Scale:** AONB spatial area  
**Duration:** Permanent  
**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Compton	<b>Parish:</b>	Compton
<b>Site ID:</b>	COM001	<b>Site Address:</b>	Land to the east of Yew Tree Stables, Compton	<b>Development Potential:</b>	27 <del>30</del> dwellings (1.36ha at 20dph)

### Recommendation:

This site will not be considered for allocation in the DPD

### Justification:

Compton is noted for its pattern of generous open spaces within the settlement and COM001 is identified in the Village Design Statement as one of the important open spaces in the village. A landscape assessment has indicated that part of the site could accommodate housing subject to mitigation and enhancement measures. The site is at risk from groundwater emergence and is adjacent to Flood Zones 2 and 3 and an area of surface water flood risk. A Flood Risk Study undertaken to inform the Pirbright Institute SPD showed groundwater flooding in Compton to be complex and closely related to groundwater levels and rainfall/river flows. Compton village experienced flooding recently in 2000, 2001, 2007 and 2014. Flood risk to the site would therefore require appropriate mitigation.

~~COM004 is the only site to be allocated in Compton.~~ It provides the opportunity to redevelop a brownfield site which relates well to the existing settlement. The re-use of a brownfield site is a priority in national and local planning policy taking precedent over Greenfield. COM004 provides an opportunity for regeneration of a large site and to reduce its impact on the landscape and AONB which in part is visually prominent and detracts from the character of the village. Further planning gains would be achieved through decontamination of the site, providing community space and green infrastructure, and a level of employment use. Site COM004 is an identified opportunity site within the Core Strategy and has an adopted SPD for the site, it is therefore a strategically preferred site for development. The site is the only site to be allocated in Compton and is significantly larger than would normally be expected for a Service Village, ~~and~~ therefore no other sites will be allocated within the village.

### Discussion:

#### Site Description:

Compton sits in a rural location within the North Wessex Downs AONB, but is located close to both the M4 and A34 corridors running east west and north south. There are also good road links into Newbury and the village is served by a regular ~~hourly~~ bus service.

The site is located adjacent to Compton giving easy access to local services, facilities and the open countryside. The site's proximity to local services will encourage walking or cycling. It is recognised that there will be a degree of car dependency given the location of the village.

#### Landscape:

The Landscape Assessment indicates that development on part of the site would be acceptable as long as mitigation measures as listed in the assessment are adhered to. These include the protection and enhancement of on-site trees and hedgerow boundaries. The impact on key landscape and visual characteristics would not be significant and would not affect views out to the Downs.

#### Flood Risk:

The site falls within a groundwater emergence zone and adjacent to Flood Zone 2 and 3 and an area of Surface Water Flood Risk. SuDS techniques would need to be deployed to mitigate against the potential impact of flooding should the site be developed.

#### Highways /Transport:

Not specifically consulted. However, the site's proximity to local services will encourage walking or cycling. The village is served by a regular ~~2-hourly~~ bus service linking the village to Newbury. There are bus stops near the site however they will need to be connected to the site with additional footways.

#### Ecology:

No ecological concerns have been raised

#### Archaeology:

There is the potential for ~~medieval~~ archaeology on the site, ~~and there is a Scheduled Monument adjacent to the site.~~ Further assessment required.

## Site Selection – Site Commentary

### Education:

Compton Primary School is close to capacity with no capacity on the site to expand further. Secondary school provision is manageable.

### Environmental Health:

No issues raised.

### Minerals and Waste:

There is a landfill site to the north of COM001.

### Land use planning consultation zone:

The site is not within an AWE consultation zone.

### Environment Agency:

Raised issue of groundwater emergence zone.

### Thames Water:

Not specifically consulted, but did not raise any infrastructure concerns in relation to water supply or waste water capability on site COM004. [Concern has been raised in relation to the wastewater network capacity on site COM004.](#)

### Parish Council:

Development here would merge the village with the industrial units beyond. The Parish Council would like to see the distinction maintained. The site is considered important open space to the community. Despite the site having good access, the community are against development on the site. Development could be visually prominent due to the topography of the site.

### [Preferred Options consultation key issues:](#)

- [Flooding not an issue](#)
- [Site prejudiced by COM004](#)

[For the consultation responses and Council's response, please see the Statement of Consultation](#)

### SA/SEA:

There are no significantly positive or negative effects.

Whilst the site is well located for services, particularly education, public transport options are limited and car dependency will be high. There are, however, opportunities for walking and cycling. The site is in close proximity of open countryside and a recreation ground to help promote a healthy active lifestyle.

The landscape assessment has concluded that development could be accommodated on part of the site subject to mitigation/enhancement measures. ~~The Scheduled Monument adjacent to the site means that further archaeological investigation would be required, and the impact of the Scheduled Monument would need to be taken into account in any development proposal.~~ [The area of archaeological significance adjacent to the site means that the site has archaeological potential and a desk based assessment would be required. The impact of any archaeological potential and the Conservation Area would need to be taken in to account in any development proposal.](#)

The site is at risk from groundwater flooding and mitigation measures would be required.

[The development of the site for housing would have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### Proposed development (from SHLAA submission):

Promoted for approximately 50 dwellings with a mix of house types and sizes, with affordable housing, open space and landscaping.

## Site Selection – Site Assessment

<b>Spatial Area</b>	AONB	<b>Settlement:</b>	Compton	<b>Parish:</b>	Compton
---------------------	------	--------------------	---------	----------------	---------

<b>Site ID:</b>	COM002	<b>Site Address:</b>	Land to the south east of Compton, RG20 6RD
-----------------	--------	----------------------	---

<b>Development Potential:</b>	23 dwellings (1.16ha at 30dph)	<b>SHLAA Assessment:</b>	Not Currently Developable
-------------------------------	--------------------------------	--------------------------	---------------------------

### Summary of Site Assessment

The site has been categorised within the SHLAA as Not Currently Developable due to the landscape impact of development on the site. Development would lead to the loss of rural character and scenic qualities of the AONB. Development would harm the Pang Valley and detract from the scenic qualities of the eastern approach into Compton.

### Site Assessment

<b>Parish Council consultation response:</b>	Parish council agreed with the SHLAA assessment of the site as not currently developable. The Parish Council would not like to see development on the other side of the disused railway line, as they do not feel that this would be well related to the village. Flood risk on the site is more significant than the EA flood zones identify. Proximity to Scheduled Monument is also a concern**.
--	---

A) Automatic exclusion			
Criteria		Yes/No*	Comments
Less than 5 dwellings		N	
Planning Permission		N	
Within flood zone 3		N	
Within significant national or international habitat / environmental / historical protection	SSSI	N

Within settlement Boundary		N	

\* Any 'yes' response will rule the site out

\*\* [Historic England de-scheduled the Scheduled Monument in 2014. The area is still of archaeological significance.](#)

# Site Selection – Site Assessment

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Compton	<b>Parish:</b>	Compton
----------------------	------	--------------------	---------	----------------	---------

<b>Site ID:</b>	COM004	<b>Site Address:</b>	Pirbright Institute, High Street, Compton, RG20 7NN
-----------------	--------	----------------------	---

<b>Development Potential:</b>	140 dwellings (7ha at 20dph)	<b>SHLAA Assessment:</b>	Potentially Developable
-------------------------------	------------------------------	--------------------------	-------------------------

## Summary of Site Assessment

### Key Issues:

- AONB – Landscape Assessment indicates only part of the site is suitable for development
- Flood risk – part of the site is in FZ3 and FZ2.
- Surface water and groundwater flood risk
- Contaminated land
- TPOs

Site has been identified as an 'opportunity area' within the adopted Core Strategy and a Supplementary Planning Document has been adopted providing a framework to guide future development on the site.

## Site Assessment

<b>Parish Council consultation response:</b>	The Parish Council would like to see COM004 developed and the green infrastructure (cricket pitch) protected. Allocation of this site would be supported by the Parish Council.
--	---

A) Automatic exclusion			
Criteria		Yes/No*	Comments
Less than 5 dwellings		N	
Planning Permission		N	
Within flood zone 3		P	Part of the site is within Flood Zone 3. This part of the site is not suitable for development.
Within significant national or international habitat / environmental / historical protection	SSSI	N

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	Good access to recreation ground and countryside		The site's location to the <a href="#">north east</a> of Compton provides opportunities for walking and cycling, as well as easy access to local services and facilities. Therefore, in terms of environmental and social sustainability, development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	+	Good access to recreation ground and countryside		
	Will it protect and enhance green infrastructure across the district?	+	If redeveloped in accordance with the adopted SPD the cricket pitch will remain as green infrastructure.	<a href="#">Retain the cricket ground as green infrastructure.</a>	
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+/-	Good access to secondary and primary schools, with some local job opportunities. The relocation of the Institute would result in the loss of local job opportunities. Whilst the SPD does seek the redevelopment of the site for mixed uses, the level of employment to be delivered is uncertain at this stage.	The adopted SPD for the site seeks mixed use development on this site. It is expected this site will therefore provide some employment which will mitigate the impact of the Institute relocating.	The site delivers positive and negative impacts in relation to economic sustainability given the loss of local employment as the Institute relocates but some of this employment could be replaced through a mixed use redevelopment scheme. The site is also close to some existing areas of employment and education as well as other services and facilities within Compton. The site also has access to the strategic road network (A34), although height restrictions for heavy goods vehicles exist.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking,	0	Limited public transport access, but the village does benefit from a bus service, and has a number of local	Some of the approach roads to the village have weight and height restrictions.	Access to public transport is limited but the village is served by a <a href="#">regular 2hourly</a>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	cycling and public transport?		services and facilities all of which can be reached by walking and cycling.		bus service. The site's proximity to local services and facilities will encourage walking or cycling, and unlikely to have an impact on environmental sustainability given the degree of car dependency in the village. It could have a positive impact on social sustainability given the ability to walk and cycle to local services/facilities
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic <a href="#">to existing levels</a> could result in road safety concerns, but any development would also have the potential to improve road safety.	<a href="#">Improvements to footways fronting the site would improve pedestrian access and connect the site to existing bus stops. Potential for pedestrian or cycle routes to Churn Road and Hockham Road would help reduce use of main access to the High Street where traffic movements would be higher.</a>	
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	+	The site benefits from mature vegetation and a number of green open spaces which provide opportunities for wildlife corridors on the site. Potential for bats on the site.	Measures to protect and enhance biodiversity and geodiversity as set out within the SPD should be adhered to.	If the site is redeveloped in accordance with the adopted SPD the site creates opportunities for positive environmental sustainability impacts.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	+	Redevelopment of the site in accordance with the SPD could make a positive contribution to the landscape character and local distinctiveness of the open downland landscape of the AONB.	Mitigation set out within the Landscape Assessment: <ul style="list-style-type: none"> <li>• The open downland character above Compton should be enhanced through the removal of buildings in the most northerly part of the site, restoration of a more natural landform and use as open space/open farmland</li> <li>• Protect views to Compton from the open downland</li> <li>• Protect views of the upper valley sides of the site from the village</li> <li>• A matrix of good sized open spaces to be provided throughout the development, linking physically and visually with the existing provision</li> <li>• Retention of the existing character facing onto High Street and in particular the area</li> </ul>	

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
				of open space.	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	+	There is potential to remove redundant non residential buildings and enhance the site's setting within the AONB. The scale of the site is not consistent with that of a service village, however it is a large brownfield site which is identified in the Core Strategy as an opportunity site.	The adopted SPD sets out key measures to be taken and principles to be followed in the redevelopment of this site.	Development on the site in accordance with the adopted SPD could result in positive impacts on social and environmental sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	+	Opportunity to enhance the site's setting within the village, whilst respecting the adjacent conservation area and nearby listed buildings. Archaeological potential on the site given its location within the heart of the historic village which has medieval origins needs consideration.	The adopted SPD sets out key measures to be taken and principles to be followed in the redevelopment of this site.	
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from or impact on air quality?	0	Unlikely to have an impact on air quality		Development of the site would have a positive impact on the environmental sustainability through decontamination of the site for mixed use development.
	Will the site be at risk from or impact on noise levels?	0	Unlikely to have an impact on noise levels		
	Will there be an impact on soil quality?	+ ?	Given the previous use of the site, there is potential for contamination. <del>Development of the site would enable the site to be decontaminated. Viability of decontamination works may need to be considered.</del>	<a href="#">Development of the site would enable the site to be decontaminated. Viability of decontamination works may need to be considered.</a>  Further assessment of contamination required and development to be in accordance with the adopted SPD.	
	Will there be an impact on	+/?	There is the potential for	<a href="#">Redevelopment of the site will</a>	

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	water quality?	/	contamination on the site which in turn through run-off, could have an impacted upon water quality. Redevelopment of the site will provide the opportunity to mitigate against any contamination and the impact that this may have on water quality.	<p><a href="#">provide the opportunity to mitigate against any contamination and the impact that this may have on water quality. Viability of decontamination works may need to be considered.</a></p> <p>Further assessment of contamination required and development to be in accordance with the adopted SPD.</p>	
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	+	Development of the site would result in the redevelopment of a large area of previously developed land in a rural location.		Development of the site could have a positive impact on environmental sustainability because it is a large previously developed site
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	-	Flood Zone 2 and 3, Groundwater Emergence Zone, <a href="#">Surface Water Flood Risk</a>	<p><a href="#">A sequential approach should be taken to development on the site in accordance with the SPD.</a> The area within the flood zone (southern part of the site) will <a href="#">be excluded from the developable area, unless detailed modelling of flood risk indicates otherwise</a> <del>not be developed</del>. Sustainable urban drainage techniques (SuDS) should be used to mitigate the effect of any potential flooding as set out within the adopted SPD.</p>	The site could have a negative impact on all aspects of sustainability due to flood risk however the impact could be minimised if development is in accordance with the adopted SPD which excludes areas of flood risk from the developable area.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<b>0/+</b>	<a href="#">The site will be for a mixed use though primarily housing. Redevelopment of the site will result in loss of employment land but some employment generating uses will be appropriate for the site as set out within the adopted SPD for the site.</a>		<a href="#">The development of the site for primarily housing with some employment generating use in accordance with the SPD will have an overall neutral/positive effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term. The provision of some employment use on the site will help to promote the economy in general in the short to long term. The scale and type of employment development will be in accordance with its rural location in the AONB.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<b>0</b>	<a href="#">The site is brownfield and the current occupier of the site will be relocating out of the District.</a>  <a href="#">The site is no longer running at its fullest capacity. Redevelopment will result in the loss of employment land as it will not be replaced in its entirety though some new employment generating use will be appropriate as set out within the adopted SPD for the site.</a>  <a href="#">The development of the site for mixed use will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres. Whilst the site will have some employment generating uses they will not be located in such a commercial centre.</a>		

### Site Summary

This site would offer the opportunity to develop an existing brownfield site outside of a settlement boundary that could positively impact on the built environment and enhance the sites setting within the village and wider AONB.

Whilst the site is well located for services, particularly education, public transport options are limited and car dependency will most likely be high given the rural location of Compton. There are, however, opportunities for walking and cycling. The site is in close proximity of open countryside and a recreation ground within the village to help promote a healthy

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

active lifestyle.

Redevelopment of the site in accordance with the adopted SPD would provide positive benefits for environmental sustainability in terms of enhancing green infrastructure and biodiversity on the site. The proximity of the site to the Conservation Area and a number of listed buildings also provides opportunities to enhance the character of the local historic environment. There would be positive benefits to environmental sustainability through the decontamination of the site.

Given the site's location within open downland the landscape impact of any redevelopment is vitally important. The SPD and Landscape Assessment for the site demonstrate that excluding certain areas from development could make a positive contribution to the landscape character.

The southern edge of the site is located within Flood Zone 2 and 3. In addition, the site is at risk from surface water flooding and groundwater flooding; however this part of the site is not included in the SPD as part of the developable area of the site and the promoters of the site have said this area will not be built on.

[The site is a brownfield employment site and is proposed to be redeveloped for primarily housing with some employment development appropriate to its rural location resulting in an overall neutral/positive impact on economic sustainability.](#)

**Summary of effects:**

**Effect:** Predominantly positive

**Likelihood:** High

**Scale:** North Wessex Downs AONB

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Compton	<b>Parish:</b>	Compton
<b>Site ID:</b>	COM004	<b>Site Address:</b>	Pirbright Institute, High Street, Compton, RG20 7NN	<b>Development Potential:</b>	140 dwellings (7ha at 20dph)

### Recommendation:

The site is considered for allocation through the DPD.

### Justification:

Development on this site would provide the opportunity to develop a brownfield site, adjacent to the settlement boundary. The site has been identified as an 'opportunity area' within the adopted Core Strategy and a Supplementary Planning Document has been adopted providing a framework to guide future development on the site. There would also be an opportunity to rectify any contaminated land issues and enhance the site's setting within the AONB and village.

### Discussion:

#### Site Description:

Compton sits in a rural location within the North Wessex Downs AONB, but is located close to both the M4 and A34 corridors running east west and north south.

The site is located adjacent to the settlement boundary of Compton giving easy access to local services, facilities and the open countryside. The site's proximity to local services will encourage walking or cycling. It is recognised that there will be a degree of car dependency given the location of the village.

Whilst the scale of the site is not consistent with that of a service village, the site has been identified through the Core Strategy as an opportunity site and has an adopted SPD. Redeveloping the site in accordance with the adopted SPD provides the opportunity to positively enhance many aspects of sustainability.

Whilst the relocation of the Institute will result in the loss of some local employment opportunities, the adopted SPD for the site does seek mixed use development which would replace a level of employment.

The site is located adjacent to the Conservation Area and within close proximity to listed buildings.

#### Landscape:

The Landscape Assessment indicates that development on parts of the site would be acceptable as long as mitigation measures as listed in the assessment and SPD are adhered to. Redevelopment of the site provides opportunities to enhance the green infrastructure and biodiversity on this site.

#### Flood Risk:

Part of the site falls within Flood Zones 2 and 3, as well as a Groundwater Emergence Zone and an area of Surface Water flood risk. [A Flood Risk Study undertaken to inform the SPD showed groundwater flooding to be complex and closely related to groundwater levels and rainfall/river flows. The study recommended that following the sequential approach to development on the site, only less vulnerable land uses in accordance with the NPPF should be located below 103m AOD within the site \(water compatible or critical infrastructure development would also be appropriate at this site level\) and more vulnerable land uses should be located above 103m AOD, unless detailed modelling indicates otherwise. This was taken forward in to the SPD and reflects the developable area in the allocated site. The area below 103m AOD includes Flood Zones 2 and 3 which are therefore excluded from the developable area Housing is therefore considered appropriate above the 103m AOD line. The SPD approach to 103m AOD for 'more vulnerable' development was supported by the Environment Agency. This part of the site will be excluded from the developable area as set out within the SPD.](#) An FRA would be required to support any development on this site.

#### Highways /Transport:

The site's proximity to local services will encourage walking or cycling. The village is served by a [regular 2 hourly bus service linking the village to Newbury. The bus service extends to Harwell Business Centre during peak journeys. WBC Passenger Transport services have indicated an aspiration to increase the frequency of the bus service. Contributions from any development could be used to help improve the service.](#) There are bus stops near the site however they will need to be connected to the site with additional

## Site Selection – Site Commentary

footways.

This site can accommodate up to 140 houses that will generate circa 840 daily vehicle movements including circa 84 during the 08.00 to 09.00 AM peak.

This was the Institute of Animal Health and therefore there would already have been a significant generator of traffic. Similar or even reduced traffic levels from the proposed use would therefore be expected.

There is an existing main access from the High Street, with further minor accesses from Churn Road. Highways therefore consider that the same arrangement could apply for any residential use subject to any access onto Churn Road being the minor access. There will need to be improvements to footways fronting the site onto the High Street.

Highways consider that only a pedestrian or cycle route should be obtained onto Hockham Road, as there is currently no existing vehicular access, and Hockham Road is narrow and winding.

A through route between Churn Road and the High Street would be encouraged to provide grids and loops in line with the UK governments Manual for Streets, and also to provide an emergency access.

~~Access can be obtained from Churn Road and Hockham; however both of these roads are narrow with limited or nonexistent footways. They are therefore not really suitable for a residential use in their current form. It is therefore likely that road widening along with footway provision will be sought. There seems to be limited opportunities for this along Hockham and Cheap Street due to limited availability of highway land. There is therefore a preference for Churn Road to access the development. A through route between Churn Road and Hockham could be encouraged in line with the UK governments Manual for Streets.~~

~~If access can be obtained through to the High Street, care would need to be taken on the type of access provided.~~

### **Ecology:**

If the site is developed in accordance with the adopted SPD, then there will be no ecological concerns.

### **Archaeology:**

There is high archaeological potential on the site given its location within the heart of the historic village which has medieval origins. Further assessment required.

### **Education:**

Compton Primary School is close to capacity with no capacity on the site to expand further. Secondary school provision is manageable.

### **Environmental Health:**

Contamination on site would need to be resolved as part of any planning application. Redevelopment of the site provides a significant opportunity to improve soil quality and potentially water quality through decontamination.

### **Minerals and Waste:**

Former landfill site is located to the west of the site. Environmental permits for waste related activities held on site for a number of years.

### **Land use planning consultation zone:**

The site is not within an AWE consultation zone.

### **Environment Agency:**

Concern that part of the site is within Flood Zones 2 and 3. However, this area will be excluded from [the developable area](#) development.

5% of the site is within SPZ1.

The site has been investigated for contamination.

### **Thames Water:**

No water supply infrastructure issues envisaged.

## Site Selection – Site Commentary

~~No wastewater infrastructure issues envisaged.~~

[Current wastewater network in this area is unlikely to be able to support the demand anticipated from this development. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development. In the first instance a drainage strategy would be required from the developer to support the development. We are also likely to request a Grampian planning condition to ensure the infrastructure is in place ahead of occupation of the development.](#)

[Infiltration from groundwater into the network has been identified as a strategic issue within Compton, therefore an integrated Water Supply and Drainage Strategy would be required for this site.](#)

### **Parish Council:**

The Parish Council would like to see COM004 developed and the green infrastructure (cricket pitch) protected. Allocation of this site would be supported by the Parish Council.

### **[Preferred Options consultation key issues:](#)**

- [Higher housing number than SPD](#)
- [Flooding and sewerage system capacity](#)
- [Access and traffic](#)

[For the consultation responses and Council's response, please see the Statement of Consultation](#)

### **SA/SEA:**

This site would offer the opportunity to develop an existing brownfield site outside of a settlement boundary that could positively impact on the built environment and enhance the sites setting within the village and wider AONB.

Whilst the site is well located for services, particularly education, public transport options are limited and car dependency will most likely be high given the rural location of Compton. There are, however, opportunities for walking and cycling. The site is in close proximity of open countryside and a recreation ground within the village to help promote a healthy active lifestyle.

Redevelopment of the site in accordance with the adopted SPD would provide positive benefits for environmental sustainability in terms of enhancing green infrastructure and biodiversity on the site. The proximity of the site to the Conservation Area and a number of listed buildings also provides opportunities to enhance the character of the local historic environment. There would be positive benefits to environmental sustainability through the decontamination of the site.

Given the site's location within open downland the landscape impact of any redevelopment is vitally important. The SPD and Landscape Assessment for the site demonstrate that excluding certain areas from development could make a positive contribution to the landscape character.

The southern edge of the site is located within Flood Zone 2 and 3. In addition, the site is at risk from surface water flooding and groundwater flooding; however this part of the site is not included in the SPD as part of the developable area of the site and the promoters of the site have said this area will not be built on.

[The site is a brownfield employment site and is proposed to be redeveloped for primarily housing with some employment development appropriate to its rural location resulting in an overall neutral/positive impact on economic sustainability.](#)

### **Proposed development (from SHLAA submission):**

The site is proposed by the agent to be developed in accordance with the adopted SPD for the site.

<b>Development Potential:</b>	56 dwellings (2.81ha at 20dph)	<b>SHLAA Assessment:</b>	Potentially Developable
-------------------------------	--------------------------------	--------------------------	-------------------------

## Summary of Site Assessment

Key Issues:

- Landscape assessment indicates development on this site would fail to conserve or enhance the special qualities or natural beauty of the AONB.
- The development of the site in conjunction with COM004, which is an identified opportunity site within the Core Strategy, would result in a scale of development which would be inappropriate in scale for the role and function of Compton.

## Site Assessment

<b>Parish Council consultation response:</b>	Access to the site off Ilsley Road would be difficult and access via Churn Road would not be desirable given its rural nature. Increased traffic on Churn Road could have a negative impact on the cricket pitch should improvements to the road be required. However, a portion of this site is seen as the most suitable option (between COM011 and COM010) assuming access issues can be overcome.

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	Good access to recreation ground and countryside		The site's location to the <u>north west east</u> of Compton provides opportunities for walking and cycling, as well as easy access to local services and facilities. Therefore, in terms of environmental and social sustainability, development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	+	Good access to recreation ground and countryside		
	Will it protect and enhance green infrastructure across the district?	0	Unlikely to have an impact		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	Good access to secondary and primary schools, with some local job opportunities. Loss of the Pirbright Institute will reduce local employment opportunities	The Pirbright Institute site should be redeveloped in line with the adopted SPD which should result in mixed use development and therefore provide a level of local employment.	The site is located close to employment and education as well as other services and facilities within Compton. The site also has access to the strategic road network (A34), although height restrictions for heavy goods vehicles exist. The site could have a positive impact on the district's economic and social sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	0	Limited public transport access ( <u>regular 2-hourly</u> bus service linking Compton and Newbury). Opportunities for walking and cycling to access local services and facilities.		Access to public transport is limited but the village is served by a <u>regular 2-hourly</u> bus service. The site's proximity to local services and facilities will encourage walking or cycling but car dependency will be high. Site is unlikely
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the	Some of the approach roads to the village have weight of height restrictions	

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

			potential to improve road safety.		to have any impact on environmental or economic sustainability.
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	?	Bird, Reptile and Bat surveys required.		Bird, Reptile and Bat surveys required.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	- / ?	Located within the AONB. <del>Further assessment required.</del> <u>Only part of the relatively enclosed small field would be suitable for development and subject to requirements to conserve and enhance the AONB as set out in the landscape assessment.</u>	<u>Mitigation measures set out in the Landscape Assessment :</u> <ul style="list-style-type: none"> <li>• <u>Development should be in the form of a continuation of the linear cottages to the south</u></li> <li>• <u>No development of the higher ground to the north and north west</u></li> <li>• <u>Plant new hedgerow of trees to the western edge, linking two areas of woodland/scrub.</u></li> </ul>	The site is located within the AONB <u>and is constrained by potential visual and landscape harm to the AONB and settlement pattern which could and has the potential to negatively impact on environmental sustainability.</u>
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	0	Unlikely to have an impact		The site is unlikely to have an impact on any aspect of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	0	Modern land use likely to have removed all archaeology		
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from or impact on air quality?	0	Unlikely to have an impact on air quality		It is unlikely that the site would have an impact on any aspect of sustainability.
	Will the site be at risk from or impact on noise levels?	0	Unlikely to have an impact on noise levels		
	Will there be an impact on soil quality?	0	Unlikely to have an impact on soil quality		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will there be an impact on water quality?	<b>0</b>	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>-</b>	Greenfield site		The site could have a negative impact on environmental sustainability as it is a greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	<b>?</b>	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	<b>-</b>	Part of the site is within a Groundwater Emergence Zone	Sustainable urban drainage techniques (SuDS) should be used to mitigate the effect of any potential flooding.	Flood risk on the site means that there could be a negative impact on all elements of sustainability.
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<b>0</b>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing would have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<b>0</b>	<a href="#">The site is Greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a> <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site will have a neutral effect on economic sustainability.</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

### Site Summary

There are no significantly positive or negative effects. Whilst the site is well located for services, particularly education, public transport options are limited and car dependency will be high. There are, however, opportunities for walking and cycling. The site is in close proximity of open countryside and a recreation ground to help promote a healthy active lifestyle.

The site's location within the AONB could have an impact on the landscape [and settlement pattern](#) and therefore a Landscape Assessment would be required. [Only part of the relatively enclosed small field would be suitable for development and subject to requirements to conserve and enhance the AONB as set out in the Landscape Assessment.](#) The site is at risk from groundwater as part of it lies within a Groundwater Emergence Zone. Both these factors combined with the greenfield nature of the site could result in negative impact on environmental sustainability.

[The development of the site for housing would have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Compton	<b>Parish:</b>	Compton
----------------------	------	--------------------	---------	----------------	---------

<b>Site ID:</b>	COM010	<b>Site Address:</b>	Land to the west of Churn Road, Compton	<b>Development Potential:</b>	13 dwellings (0.67ha at 20dph)
-----------------	--------	----------------------	---	-------------------------------	--------------------------------

### Recommendation:

This site will not be considered for allocation in the DPD

### Justification:

[A Flood Risk Study undertaken to inform the Pirbright Institute SPD showed groundwater flooding in Compton to be complex and closely related to groundwater levels and rainfall/river flows. Compton village experienced flooding recently in 2000, 2001, 2007 and 2014. Part of COM010 falls within a groundwater emergence zone and appropriate mitigation would be required. A landscape assessment considered COM010 in combination with COM009 and COM011 and concluded that much of the site is not suitable for development and is constrained by potential visual and landscape harm to the AONB and the settlement pattern. Only part of COM010, a relatively enclosed small field in the north east, would be suitable and subject to requirements to conserve and enhance the AONB.](#)

~~COM004 is the only site to be allocated in Compton.~~ It provides the opportunity to redevelop a brownfield site which [relates well to the existing settlement. The re-use of a brownfield site is a priority in national and local planning policy taking precedent over Greenfield. COM004 provides an opportunity for regeneration of a large site and to reduce its impact on the landscape and AONB which in part is visually prominent and detracts from the character of the village. Further planning gains would be achieved through decontamination of the site, providing community space and green infrastructure, and a level of employment use. Site COM004 is an identified opportunity site within the Core Strategy and has an adopted SPD for the site, it is therefore a strategically preferred site for development.](#) The site [is the only site to be allocated in Compton and](#) is significantly larger than would normally be expected for a Service Village, ~~and therefore no other sites will be allocated within the village.~~

### Discussion:

#### Site Description:

Compton sits in a rural location within the North Wessex Downs AONB, but is located close to both the M4 and A34 corridors running east west and north south. There are also good road links into Newbury and the village is served by a [regular 2-hourly bus service](#).

The site is located adjacent to Compton giving easy access to local services, facilities and the open countryside. The site's proximity to local services will encourage walking or cycling. It is recognised that there will be a degree of car dependency given the location of the village.

#### Landscape:

The site is located within the AONB and therefore a Landscape Assessment will be required. [Landscape work undertaken following the Preferred Options consultation considered COM010 in combination with COM009 and COM011. The assessment concluded that only part of COM010 would be suitable for development subject to the following requirements to conserve and enhance the AONB:](#)

- [Development should be in the form of a continuation of the linear cottages to the south.](#)
- [Development should keep off of higher ground to the north and north west.](#)
- [A new hedgerow with hedgerow trees should be planted to the western edge, linking two areas of woodland / scrub.](#)

#### Flood Risk:

The site partially falls within a groundwater emergence zone so SuDS techniques would need to be deployed to mitigate against the potential impact of flooding should the site be developed.

#### Highways /Transport:

Not specifically consulted. However, the site's proximity to local services will encourage walking or cycling. The village is served by a [regular 2-hourly bus service](#) linking the village to Newbury. There are bus stops near the site however they will need to be connected to the site with additional footways.

#### Ecology:

Bird, Reptile and Bat surveys would be required.

## Site Selection – Site Commentary

### Archaeology:

No impact on archaeology - modern land use likely to have removed all archaeology

### Education:

Compton Primary School is close to capacity with no capacity on the site to expand further. Secondary school provision is manageable.

### Environmental Health:

No issues raised.

### Minerals and Waste:

No issues raised.

### Land use planning consultation zone:

Site is not within an AWE consultation zone.

### Environment Agency:

Raised issues of groundwater emergence zone and historic landfill adjacent.

### Thames Water:

Not specifically consulted, but did not raise any infrastructure concerns in relation to water supply or waste water capability on site COM004. [Concern has been raised in relation to the wastewater network capacity on site COM004.](#)

### Parish Council:

The Parish Council feels that contamination issues with this site and access via Churn Road is undesirable.

### Preferred Options consultation key issues:

- [No comments received](#)

[For the consultation responses and Council's response, please see the Statement of Consultation](#)

### SA/SEA:

There are no significantly positive or negative effects.

Whilst the site is well located for services, particularly education, public transport options are limited and car dependency will be high. There are, however, opportunities for walking and cycling. The site is in close proximity of open countryside and a recreation ground to help promote a healthy active lifestyle.

The site's location within the AONB could have an impact on the landscape [and settlement pattern](#) and therefore a Landscape Assessment would be required. [Only part of the relatively enclosed small field would be suitable for development and subject to requirements to conserve and enhance the AONB as set out in the Landscape Assessment.](#) The site is at risk from groundwater as part of it lies within a Groundwater Emergence Zone. Both these factors combined with the greenfield nature of the site could result in negative impact on environmental sustainability.

[The development of the site for housing would have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### Proposed development (from SHLAA submission):

Residential of a form and scale similar to the existing properties. Agent confirmed that site is available.

# Site Selection – Site Assessment

<b>Settlement:</b>	Compton	<b>Parish:</b>	Compton
--------------------	---------	----------------	---------

<b>Site ID:</b>	COM011	<b>Site Address:</b>	Land to the north of Ilsley Road, Compton
-----------------	--------	----------------------	---

<b>Development Potential:</b>	10 dwellings (0.52 at 20dph)	<b>SHLAA Assessment:</b>	Potentially Developable
-------------------------------	------------------------------	--------------------------	-------------------------

## Summary of Site Assessment

### Key Issues:

- Site is located within the AONB and [a Landscape Assessment indicates that development would not be suitable raising potential visual and landscape harm to the AONB and settlement pattern](#), therefore a Landscape Assessment would be required
- Ground water flood risk

## Site Assessment

<b>Parish Council consultation response:</b>	Parish Council would not like to see this site developed as it would infill the area between the existing settlement and the small cluster of properties by Down House. This would extend the village too far along a busy road. Access to the site is also a concern.

			potential to improve road safety.		Site is unlikely to have any impact on environmental or economic sustainability.
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	0	Unlikely to have an impact		The site is located within the AONB, and has the potential to negatively impact on environmental sustainability.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?		Located within AONB. Landscape Assessment will be required.		
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	0	Unlikely to have an impact. Site is adjacent to Conservation Area		In order to maintain the level of social and environmental sustainability of the area, any potential development should consider the impact on the Conservation Area in any design.
	Will it conserve and enhance the significance of the District's heritage assets?	0	Possible archaeology though no previous work	Requires further investigation	
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from or impact on air quality?	0	Unlikely to have an impact on air quality		It is unlikely that the site would have an impact on any aspect of sustainability.
	Will the site be at risk from or impact on noise levels?	0	Unlikely to have an impact on noise levels		
	Will there be an impact on soil quality?	0	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?		Greenfield Site		The site could have a negative impact on environmental sustainability as it is a Greenfield site.
10. To reduce emissions contributing to climate change and ensure	Will it reduce West Berkshire's contribution to greenhouse gas emissions?		The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
adaptation measures are in place to respond to climate change	Will the site be subject to/ at risk from flooding	-	Groundwater Emergence Zone.	Sustainable urban drainage techniques (SuDS) should be used to mitigate the effect of any potential flooding.	could have a negative impact on environmental sustainability.  Flood risk on the site means that there could be a negative impact on all elements of sustainability.

### Summary

There are no significantly positive or negative effects.  
Whilst the site is well located for services, particularly education, public transport options are limited and car dependency will be high. There are, however, opportunities for walking and cycling. The site is in close proximity of open countryside and a recreation ground to help promote a healthy active lifestyle.

The greenfield status of the site as well as the site's location within the AONB could have a negative effect on environmental sustainability.

The site is at risk from groundwater flooding and mitigation measures would be required.

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Compton	<b>Parish:</b>	Compton
<b>Site ID:</b>	COM012	<b>Site Address:</b>	The Paddocks east of Roden House, Wallingford Road, Compton	<b>Development Potential:</b>	23 <del>25</del> dwellings (1.18ha at 20dph)

**Recommendation:**

This site will not be considered for allocation in the DPD

**Justification:**

COM004 is the only site to be allocated in Compton. It provides the opportunity to redevelop a brownfield site which is an identified opportunity site within the Core Strategy and has an adopted SPD for the site. The site is significantly larger than would normally be expected for a Service Village, and therefore no other sites will be allocated within the village.

**Discussion:**

**Site Description:**

Compton sits in a rural location within the North Wessex Downs AONB, but is located close to both the M4 and A34 corridors running east west and north south. There are also good road links into Newbury and the village is served by a 2 hourly bus service.

The site is located adjacent to Compton giving easy access to local services, facilities and the open countryside. The site's proximity to local services may encourage walking or cycling. It is recognised that there will be a degree of car dependency given the location of the village.

**Landscape:**

The site is located within the AONB and therefore a landscape assessment will be required.

**Flood Risk:**

The site falls within a groundwater emergence zone so SuDS techniques would need to be deployed to mitigate against the potential impact of flooding should the site be developed.

**Highways /Transport:**

Not specifically consulted. However, the site's proximity to local services will encourage walking or cycling. The village is served by a 2 hourly bus service linking the village to Newbury. There are bus stops near the site however they will need to be connected to the site with additional footways.

**Ecology:**

No issues raised.

**Archaeology:**

Desk based assessment required due to possible archaeology on site.

**Education:**

Compton Primary School is close to capacity with no capacity on the site to expand further. Secondary school provision is manageable.

**Environmental Health:**

No issues raised.

**Minerals and Waste:**

Site partially underlain by gravel and therefore Policies 1 and 2 of Replacement Minerals Local Plan for Berkshire are relevant.

**Land use planning consultation zone:**

The site is not within an AWE consultation zone.

**Environment Agency:**

## Site Selection – Site Commentary

~~The site lies within a SPZ3 and is partially within a groundwater emergence zone.~~

**~~Thames Water:~~**

~~Not specifically consulted, but did not raise any infrastructure concerns in relation to water supply or waste water capability on site COM004.~~

**~~Parish Council:~~**

~~The Parish Council feel that development here would merge the village with the industrial units beyond and distinction should be maintained.~~

**~~SA/SEA:~~**

~~There are no significantly positive or negative effects.~~

~~Whilst the site is well located for services, particularly education, public transport options are limited and car dependency will be high. There are, however, opportunities for walking and cycling. The site is in close proximity of open countryside and a recreation ground to help promote a healthy active lifestyle.~~

~~The greenfield status of the site as well as the site's location within the AONB could have a negative effect on environmental sustainability.~~

~~The site is at risk from groundwater flooding and mitigation measures would be required.~~

**~~Proposed development (from SHLAA submission):~~**

~~No details given.~~

----------------------	------	--------------------	----------------	----------------	----------------

<b>Site ID:</b>	GSH001	<b>Site Address:</b>	Land west of Spring Meadows, Great Shefford
-----------------	--------	----------------------	---

<b>Development Potential:</b>	16 dwellings (0.81ha at 20dph)	<b>SHLAA Assessment:</b>	Potentially Developable
-------------------------------	--------------------------------	--------------------------	-------------------------

## Summary of Site Assessment

Key Issue:

- Flooding. While not officially in an EA flood risk area the site flooded in Jan/Feb 2014

## Site Assessment

<b>Parish Council consultation response:</b>	The Parish Council has previously objected to this site. There is concern that development here would impact on residents in Spring Meadows. Flooding is seen as the main issue, with access, highways and a lack of public transport services also of concern.

**Key: Effects of option on SA objectives**

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	The site is within walking distance of local facilities.		The site has good access to the open countryside which could encourage walking and cycling. However there are limited sports facilities within the village itself. Development of the site could have a positive impact on social sustainability.
	Will it increase opportunities for access to sports facilities?	<b>0</b>	There are no formal sports facilities within the village.		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	Unlikely to have an impact on GI		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>0</b>	Site is unlikely to improve access to services and facilities as there are only a limited number of facilities within the village		The limited number of services and facilities within the village means that there could be a negative impact on economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>0</b>	There are a limited number of facilities within the village, which means that walking and cycling are the only options for local amenities.		Likely that there will be a degree of car dependency within the village due to the location and limited range of services and facilities on offer within the site. This could have a negative impact on all elements of sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	<b>?</b>	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	<b>0</b>	Unlikely to have an impact on biodiversity or geodiversity.		It is unlikely that there would be an impact on any element of sustainability.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	<b>0</b>	Unlikely to have an impact as long as recommendations in the Landscape Assessment are met.	Development would need to protect and enhance the following: - retain existing boundary vegetation	

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
				<ul style="list-style-type: none"> <li>- buildings kept off northern most corner of the site</li> <li>- new planting to integrate buildings into the landscape and soften settlement edge.</li> </ul>	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	<b>0</b>	Unlikely to have an impact		It is unlikely that there would be an impact on any element of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	<b>0</b>	Unlikely to have an impact		
	Will it promote, conserve and enhance the District's cultural assets?	<b>0</b>	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	<b>0</b>	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	<b>0</b>	Unlikely to have an impact		It is unlikely that there would be an impact on any element of sustainability.
	Will the site be at risk from, or impact on noise levels?	<b>0</b>	Unlikely to have an impact		
	Will there be an impact on soil quality?	<b>0</b>	Unlikely to have an impact		
	Will there be an impact on water quality?	<b>0</b>	Unlikely to have an impact		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>-</b>	Site is greenfield		The Greenfield nature of the site means that there could be a negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	<b>?</b>	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will the site be subject to / at risk from flooding	-	The site is adjacent to an area of surface water flood risk. However, significant flooding of Great Shefford occurred during Jan/Feb 2014 blocking the majority of access routes into the village.		Flood risk within the village means that there could be a negative impact on all aspects of sustainability.
<a href="#">11. To ensure a strong, diverse and sustainable economic base</a>	Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a> <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	Will it promote and support the vitality and viability of the District's commercial centres?	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significant sustainability effects [on site](#). The site is close to local facilities and services within the village and to the countryside which would encourage walking and cycling, with a positive impact on sustainability. The site is in a surface water flood risk area. Flooding has a negative impact on all elements of sustainability, some mitigation measures may be able to improve the situation. Great Shefford itself has a history of flooding, which many mean that mitigation measures do not remove the risk, and subsequent impact on sustainability.

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

[At preferred options stage it was assessed that, due to the severe flooding in the village which resulted in the village being largely cut off during the floods of early 2014, no additional](#)

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

[development is proposed for Great Shefford.](#)

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB – Great Shefford

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Great Shefford	<b>Parish:</b>	Great Shefford
----------------------	------	--------------------	----------------	----------------	----------------

<b>Site ID:</b>	GSH001	<b>Site Address:</b>	Land west of Spring Meadows, Great Shefford	<b>Development Potential:</b>	16 dwellings (0.81ha at 20dph)
-----------------	--------	----------------------	---	-------------------------------	--------------------------------

### Recommendation:

The site is not recommended for allocation

### Justification:

Due to the flood risk within the village, and history of flooding resulting in all roads in and out of the village being closed (Jan/Feb 2014).

### Discussion:

#### Site Description:

The site is located to the north east of Great Shefford, close to local services and facilities within the village, including the primary school.

#### Landscape:

The site is in the AONB. The Landscape Assessment indicates that development on the site would not cause significant harm to the landscape character, and subject to a number of mitigation measures development would be acceptable.

#### Flood Risk:

The site is in flood zone 1. It is adjacent to an area of surface water flood risk. Great Shefford suffered from flooding, and during Jan/Feb 2014 the village was largely cut off with the majority of roads into and out of the village closed. [Groundwater modelling carried out in 2014/15 indicates that part of the site is within a groundwater flood risk area.](#) An FRA would be required and SUDs provided.

#### Highways /Transport:

Traffic impact from development here is not expected to have a significant impact on the highway and travel network.

Access to the site would be from the end of Spring Meadows. The verge leading up to the site would need to be turned into a footway.

There is a two hourly bus service to Lambourn and Newbury.

#### Ecology:

No comments made on this site

#### Archaeology:

No known archaeological issues.

#### Education:

No comments made on this site

#### Environmental Health:

No known air, noise or contamination issues.

#### Minerals and Waste:

No comments made on this site

#### Land use planning consultation zone:

The site is not within an AWE consultation zone

#### Environment Agency:

[Environment Agency](#) not consulted on this site. The site is in an area at high risk of groundwater contamination.

#### Thames Water:

[Thames Water](#) not consulted on this site.

## Site Selection – Site Commentary

### **Parish Council:**

The Parish Council have discussed this site in the past, objecting to any development on the site due to the impact on residents on Spring Meadows, the potential for increased flood risk, access and highway issues being the main concerns. The lack of public transport services in the village is also seen as an issue.

### **Preferred Options consultation key issue:**

- Flooding
- Ecology/Biodiversity
- Highways and Transport
- Settlement Boundary

Comments received from the site promoter objecting to the 'unreasonable and unsound' reason for ruling out this deliverable site due to flooding. The site promoter also states that housing development would help maintain the viability of local services and be in keeping with the West Berkshire spatial strategy.

For the consultation responses and Council's response, please see the Statement of Consultation.

### **SA/SEA:**

The SA/SEA indicates a predominantly neutral sustainability impact. There are no significant sustainability effects. The site is close to local facilities and services within the village and to the countryside which would encourage walking and cycling, with a positive impact on sustainability. The site is in a surface water flood risk area. Flooding has a negative impact on all elements of sustainability; some mitigation measures may be able to improve the situation. Great Shefford itself has a history of flooding, which may mean that mitigation measures do not remove the risk, and subsequent impact on sustainability.

The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.

### **Proposed development (from SHLAA submission):**

The site is being promoted for approximately 25 dwellings including affordable housing. At preferred options stage the site was ruled out due to the severe flooding in the village in 2014.

# Hermitage Site Assessments

## Site Selection – Site Assessment

			-		<del>should only be considered if there are no suitable alternatives.</del>
11. To ensure a strong, diverse and sustainable economic base	Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?	0	Not considered relevant		The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	0	The site is greenfield and there will be no loss of employment land through the development of the site for housing, No employment use development is proposed for the site.  The development of the site for housing will have an overall neutral effect on economic sustainability.		
	Will it promote and support the vitality and viability of the District's commercial centres?	0	Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.		

### Site Summary

Overall the site is likely to have a [predominantly](#) neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

There are a number of local services and facilities within walking or cycling distance of the site, although it is recognised that for higher end services and employment there could be a level of car dependency to access Newbury [and other centres](#). The site is in close proximity of open countryside to help promote a healthy active lifestyle. [Development on this site has the potential to improve the built environment through a well designed scheme.](#)

There are potential negatives due to [a small part of](#) the site being at risk from surface water flooding and [a small](#) part of the site being located within a critical drainage area. [There is also the potential for a negative impact on environmental sustainability and due to](#) the sites location within the AONB. [However, a Landscape Sensitivity Assessment \(LSA\) has been carried out which concludes that the site has the potential to deliver housing without creating an adverse impact on the landscape, subject to a series of mitigation measures set out within the LSA and outlined above.](#)

~~Whilst the risk is considered to be small, flooding has the potential to impact on all elements of sustainability, and the location within the AONB means that development has the potential to impact upon environmental sustainability.~~ Mitigation measures would need to be considered to reduce the impact.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Hermitage	<b>Parish:</b>	Hermitage
<b>Site ID:</b>	HER001	<b>Site Address:</b>	Land off Charlotte Close, Hermitage	<b>Development Potential:</b>	<a href="#">Approximately 15 dwellings</a> 46 dwellings (0.8ha at 20 dph)

### Recommendation:

The site is recommended for allocation

### Justification:

The site is well related to the existing settlement.

[Whilst the site is within the AONB a Landscape Sensitivity Assessment has been carried out and indicates that development on the site would be acceptable in landscape terms, subject to mitigation measures to ensuring the protection of existing landscape features.](#)

[A small part of the site is within an area of The site is at risk from surface water flood risk and a small part of the site is within a Critical Drainage Area. As a result a Flood Risk Assessment \(FRA\) would be required to support a planning application, along with the implementation of appropriate flood risk mitigation measures. ; nonetheless, the Core Strategy requires the use of SuDS techniques in new developments. In addition, an Extended Phase 1 Habitat Survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected.](#)

### Discussion:

#### Site Description:

Hermitage sits in a rural location within the North Wessex Downs AONB, but is located [in close proximity](#) to both the M4 and A34 corridors running east west and north south. The site is located [adjacent to the southern edge of Hermitage, adjoining the settlement boundary](#) to the south of Hermitage and adjoins the settlement boundary on the northern boundary. The site is contained by trees and [comprises](#) scrubland.

#### Landscape:

The Landscape [Sensitivity Assessment \(LSA\)](#) indicates that development on the site would be acceptable as long as enhancement and mitigation measures as listed in the assessment are adhered to.

#### Flood Risk:

[A small part of](#) the site is at risk from surface water flooding and part of the site sits within a critical drainage area. A FRA and appropriate mitigation, including SUDs, would be required [as part of any planning application](#).

#### Highways /Transport:

The Council's Highways and Transport team have advised in respect of this site [and concluded that and part of HER004 that the impact of additional traffic may be limited due to the size of development. Concern had previously been expressed although they have concerns regarding the B4009 Newbury Road / Priors Court Road / Station Road mini roundabout however it has been confirmed that having reviewed the Road Traffic Accident data from the previous five years, there is no safety issue at this roundabout. Work may need to be undertaken to ensure no detrimental impact](#) It would seem that access with appropriate sight lines of 2.4 x 43.0 metre can be obtained onto Station Road.

[An access onto Station Road would remain appropriate if part of HER004 is developed in conjunction with HER001.](#)

#### Ecology:

[An Extended Phase 1 Habitat Survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected.](#) An extended Phase 1 Habitat Survey will be required.

#### Archaeology:

No impact.

#### Education:

## Site Selection – Site Commentary

Hermitage / Chieveley / Curridge are seen as one area in terms of education. The ~~site~~ [existing primary school](#) could have 1.5 forms of entry. Current capacity is 190, but could go up to 210. The school is likely to be full in September 2014.

There is some potential to expand. With 20-40 dwellings in the village there is unlikely to be an issue. ~~Would be nice~~ [Education see advantages](#) to ~~expanding~~ the school to 2 forms of entry in the future, but this would require additional land.

Potential need for secondary provision.

The school is very popular, many people move into the village to get into the school.

### **Environmental Health:**

No [known issues](#). ~~comments made in respect of this site.~~

### **Minerals and Waste:**

Site partially underlain by gravel. Policies 1 and 2 of the Replacement Minerals Local Plan for Berkshire are therefore relevant. Relatively large scale mineral extraction in the area historically suggests that the deposits in this area might be extensive. Considered realistic possibility for the option to use minerals on site as part of construction or partial prior extraction (depending on depth and quality of deposit).

No known waste issues.

### **Land use planning consultation zone:**

The site is not within an AWE consultation zone

### **Environment Agency:**

No specific comments made on this site. The site falls within groundwater source protection zone (SPZ) 3.

### **Thames Water:**

No water supply or wastewater infrastructure issues envisaged.

### **Parish Council:**

The site is important to prevent flooding on Lipscomb Close and the surrounding area. A drain runs through the site. Access to the site could be an issue, especially if access is required from Charlotte Close.

### **Preferred Options Consultation Key Issues:**

- [Housing distribution](#)
- [Environment](#)
- [Highways and Transport](#)
- [Infrastructure](#)
- [Flooding](#)
- [General comments](#)

[For the consultation responses and Council's response, please see the Statement of Consultation.](#)

### **SA/SEA:**

[Overall the site is likely to have a predominantly neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.](#)

[There are a number of local services and facilities within walking or cycling distance of the site, although it is recognised that for higher end services and employment there could be a level of car dependency to access Newbury and other centres. The site is in close proximity of open countryside to help promote a healthy active lifestyle.](#)

[There are potential negatives due to a small part of the site being at risk from surface water flooding and a small part of the site being located within a critical drainage area. There is also a potentially negative impact on environmental sustainability due to the sites location within the AONB. However, a Landscape Sensitivity Assessment \(LSA\) has been carried out which concludes that the site has the potential to deliver housing without creating an adverse impact on the landscape, subject to a series of mitigation measures set out within the LSA and outlined above.](#)

## Site Selection – Site Commentary

Whilst the risk is considered to be small, flooding has the potential to impact on all elements of sustainability. Mitigation measures would need to be considered to reduce the impact.

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

There are a number of local services and facilities within walking or cycling distance of the site, although it is recognised that for higher end services and employment there could be a level of car dependency to access Newbury. The site is in close proximity of open countryside to help promote a healthy active lifestyle.

There are potential negatives due to the site being at risk from surface water flooding and part of the site being located within a critical drainage area and the sites location within the AONB. Flooding has the potential to impact on all elements of sustainability, and the location within the AONB means that development has the potential to impact upon environmental sustainability. Mitigation measures would need to be considered to reduce the impact.

### **Proposed development (from SHLAA submission):**

The site promoter has advised that the site has capacity for up to 30 residential dwellings, possibly comprising a mix of detached, semi-detached and terraced housing.

[The site promoter's consultation response at the Preferred Options stage outlines support for the allocation of the site.](#)

## Site Selection – Site Assessment

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	There are limited facilities in Hermitage however these can be accessed through walking and cycling. <a href="#">The site has good access to the countryside.</a>		The site's location to the south of Hermitage gives opportunities for walking and cycling and gives easy access to local services and facilities. Therefore, in terms of environmental and social sustainability, development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	<b>0</b>	There are outdoor sports facilities at Hermitage Primary School, but these facilities are not available publically.		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	Unlikely to have an impact		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>0</b>	There is a primary school, church hall, pub, shop and play facilities in Hermitage. There are <a href="#">limited</a> employment opportunities within the settlement boundary		The site is located close to facilities however these are limited. There are <a href="#">limited</a> employment opportunities within the settlement boundary.  Bus services are intermittent.  The site is therefore unlikely to have any impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>0</b>	<a href="#">Limited public transport access (there is an intermittent service between Harwell and Newbury during weekdays) although there are opportunities for walking and cycling to access limited local services and facilities.</a>		There will be a degree of car dependency within the village due to the limited public transport services. However, local services and facilities are within walking or cycling distance.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns but, development would also have the potential to improve road safety.		Overall it is unlikely that development of this site would have an impact on any element of sustainability.
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	?	There are Great Crested Newts nearby	<a href="#">An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. A Great Crested Newt Survey will also be required to cover all ponds within the vicinity of the site. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected</a> <del>An Extended Phase 1 Habitat Survey is required</del>	Development of the site could impact on environmental sustainability if mitigation measures are not adhered to
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	-	The site is within the AONB.  A Landscape <a href="#">Sensitivity</a> Assessment (LSA) has concluded that the site as a whole should not be pursued, <a href="#">but part of the site may be acceptable if developed in conjunction with HER001</a>	The <del>Landscape Assessment</del> LSA identifies that only a small area <del>of in</del> the north east western part of the site (the area of land between the public house and the access off Lipscomb Close) may be suitable for development together with site HER001	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	+	Well related to settlement	<a href="#">Development should be sensitively designed</a>	<a href="#">Development of the site is likely to have a positive impact on the built environment and therefore positively impacting on environmental sustainability. The impact on archaeological features is unknown and further work will be required, the in the form of a Heritage Impact Assessment, to</a>
	Will it conserve and enhance the significance of the District's heritage assets?	?	Record of a surviving ridge and furrow which is a rare feature in West Berkshire. Historic farmstead and railway features.	Further <a href="#">exploratory</a> work will be required – <a href="#">Heritage Impact Assessment</a>	
	Will it promote, conserve and enhance the District's cultural assets?	0	The site is unlikely to have an impact on <del>access to the historic environment</del> <a href="#">the District's cultural assets.</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact <a href="#">on access to the historic environment</a>		<a href="#">support a planning application should development come forward</a>
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from or impact on air quality?	0	The site is unlikely to have an impact on air quality		Development of this site is unlikely to have an impact upon any element of sustainability
	Will the site be at risk from or impact on noise levels?	0	The site is unlikely to have an impact on noise levels		
	Will there be an impact on soil quality?	0	The site is unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	The site is unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	The site is greenfield		The site could have a negative impact on environmental sustainability as it is a <a href="#">greenfield</a> site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on the building materials used, construction methods, transport and design	Mitigation could include Travel Plans to reduce car traffic and <a href="#">ensure</a> compliance with policies within the <a href="#">Core Strategy</a> .	Without consideration of sustainability construction techniques <a href="#">and the promotion of alternative modes of transport</a> development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	-	<del>The site is at risk from surface water and also lies</del> <a href="#">A large part of the site lies</a> within a critical drainage area <a href="#">and a small part is within an area of surface water flood risk</a>	A FRA and appropriate <a href="#">flood</a> mitigation <a href="#">measures</a> , including SUDs, would be required.	Flooding can have an impact on all elements of sustainability. 	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a [predominantly](#) neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

[There are a number of local services and facilities within walking or cycling distance of the site, although it is recognised that for higher end services and employment there could be a level of car dependency to access Newbury and other centres. The site is in close proximity of open countryside to help promote a healthy active lifestyle. Development on this site has the potential to improve the built environment through a well designed scheme.](#)

~~There are a number of local services and facilities within walking or cycling distance of the site, although it is recognised that for higher end services and employment there could be a level of car dependency to access Newbury. The site is in close proximity of open countryside to help promote a healthy active lifestyle.~~

[There are potential negatives due to a small part of the site being at risk from surface water flooding and a large part of the site being located within a critical drainage area. Flooding has the potential to impact on all elements of sustainability. Mitigation measures would need to be considered to reduce the impact.](#)

[There is also the potential for a negative impact on environmental sustainability due to the sites location within the AONB. A Landscape Sensitivity Assessment \(LSA\) has been carried out which concludes that development on the whole site would result in harm to the natural beauty of the AONB, but it may be that a small area in the north west of the site \(between the public house and the access off Lipscomb Close\) could be developed together with HER001.](#)

~~There are potential negatives due to the site being at risk from surface water flooding and being located within a critical drainage area and the sites location within the AONB. Flooding has the potential to impact on all elements of sustainability, and the location within the AONB means that development has the potential to impact upon environmental sustainability. Mitigation measures would need to be considered to reduce the impact.~~

### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Scale:** AONB spatial area  
**Duration:** Permanent  
**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Hermitage	<b>Parish:</b>	Hermitage
<b>Site ID:</b>	HER004	<b>Site Address:</b>	Land to the south east of Old Farm House, Hermitage	<b>Development Potential:</b>	10-4 dwellings (0.572ha at 20 dph)

### Recommendation:

~~The site is not recommended for allocation~~ [A small area in the north west of the site \(between the public house and the access off Lipscomb Close\) is recommended for allocation](#)

### Justification:

[The site is well related to the existing settlement, however the Landscape Sensitivity Assessment \(LSA\) concludes that development on the whole of the site would result in harm to the AONB. The Landscape assessment LSA indicates that the site is part of the open gateway to Hermitage from the south. Development on the whole site would be unacceptable, but The LSA goes on to state that a small area to the north east west of the site would be acceptable if developed together with HER001 \(the area of land between the public house and the access off Lipscomb Close Road\).](#)

[A large part of the site lies within a Critical Drainage Area and a small part is within an area of surface water flood risk, so a Flood Risk Assessment \(FRA\) would be required to support a planning application. This would ensure the implementation of appropriate flood risk mitigations measures.](#)

[In addition, a desk-based archaeological assessment would be required, along with an Extended Phase 1 Habitat Survey together with any further detailed surveys arising from that as necessary. A Great Crested Newt Survey will also be required to cover all ponds within the vicinity of the site. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected.](#)

### Discussion:

#### Site Description:

~~Hermitage sits in a rural location within the North Wessex Downs AONB, but is located in close proximity to both the M4 and A34 corridors running east west and north south. The site is located adjacent to the southern edge of Hermitage, adjoining the settlement boundary.~~ [Hermitage sits in a rural location within the North Wessex Downs AONB, but is located close to both the M4 and A34 corridors running east west and north south. The site is located to the south of Hermitage and adjoins the settlement boundary on the north east boundary.](#)

#### Landscape:

The Landscape [Sensitivity Assessment \(LSA\)](#) indicates that development on the [whole](#) site would be unacceptable, [but with the exception of a small area to the north east west of the site \(the area of land between the public house and the access off Lipscomb Road\) could be developed in conjunction with HER001.](#)

#### Flood Risk:

~~The site is at risk from surface water and also lies within a critical drainage area.~~ [A small part of the site lies within an area of surface water flood risk and a large part of the site is within a Critical Drainage Area. A FRA and appropriate mitigation measures would be required as part of any planning application.](#)

#### Highways /Transport:

The Council's Highways and Transport team have advised [that part of this site, if developed together with HER001, could be accessed off Station Road. Access via Lipscomb Close is also a possibility.](#) ~~in respect of this site and part of HER001 that~~ [The impact of additional traffic generation may be limited due to the size of development. Although concern had previously been expressed regarding the B4009 Newbury Road / Priors Court Road / Station Road mini-roundabout, a review of the Road Traffic Accident data from the previous five years indicate there are no safety issues with the roundabout.](#) ~~although they have concerns regarding the B4009 Newbury Road / Priors Court Road / Station Road mini roundabout. Work may need to be undertaken to ensure no detrimental impact~~  
Access with appropriate sight lines of 2.4 x 43.0 metre could be obtained onto Station Road.

#### Ecology:

Great Crest Newts known to be nearby. [An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. A Great Crested Newt Survey will also be](#)

## Site Selection – Site Commentary

required to cover all sites within the vicinity of the site. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected  
~~An extended Phase 1 Habitat Survey would be required.~~

### Archaeology:

The site has record of a surviving ridge and furrow, a rare feature in West Berkshire. Historic farmstead and railway features. A desk based assessment will be required – [Heritage Impact Assessment](#).

### Education:

Hermitage / Chieveley / Curridge are seen as one area in terms of education. The existing primary school could have 1.5 forms of entry. Current capacity is 190, but could go up to 210. The school is likely to be full in September 2014.

There is some potential to expand. With 20-40 dwellings in the village there is unlikely to be an issue. Education see advantages to expanding the school to 2 forms of entry in the future, but this would require additional land.

~~Hermitage / Chieveley / Curridge are seen as one area in terms of education. The site could have 1.5 forms of entry. Current capacity is 190, but could go up to 210. The school is likely to be full in September 2014.~~

~~There is some potential to expand. With 20-40 dwellings in the village there is unlikely to be an issue. Would be nice to expand the school to 2 forms of entry in the future, but this would require additional land.~~

Potential need for secondary provision.

The school is very popular, many people move into the village to get into the school.

### Environmental Health:

~~No comments made in respect of this site.~~ [No known issues.](#)

### Minerals and Waste:

Site partially underlain by gravel. Policies 1 and 2 of the Replacement Minerals Local Plan for Berkshire are therefore relevant. Relatively large scale mineral extraction in the area historically suggests that the deposits in this area might be extensive. Considered realistic possibility for the option to use minerals on site as part of construction or partial prior extraction (depending on depth and quality of deposit).

No known waste issues.

### Land use planning consultation zone:

The site is not within an AWE consultation zone

### Environment Agency:

No specific comments made on this site. The site falls within groundwater source protection zone (SPZ) 3.

### Thames Water:

No water supply or wastewater infrastructure issues envisaged.

### Parish Council:

The site is important to prevent flooding on Lipscomb Road and the surrounding area. A drain runs through the site. Access to the site could be an issue, especially if access is required from Charlotte Close. The Parish Council have approached the land owners to see if the land not suitable for development could be used for allotments.

### Preferred Options Consultation Key Issues:

- [Sustainability](#)
- [Availability and Suitability](#)
- [Landscape](#)
- [Highways and Transport](#)

[For the consultation responses and Council's response, please see the Statement of Consultation.](#)

### SA/SEA:

[Overall the site is likely to have a predominantly neutral effect on sustainability, and the SA/SEA does not](#)

## Site Selection – Site Commentary

highlight any significant sustainability effects.

There are a number of local services and facilities within walking or cycling distance of the site, although it is recognised that for higher end services and employment there could be a level of car dependency to access Newbury and other centres. The site is in close proximity of open countryside to help promote a healthy active lifestyle. Development on this site has the potential to improve the built environment through a well designed scheme.

There are potential negatives due to a small part of the site being at risk from surface water flooding and a large part of the site being located within a critical drainage area. Flooding has the potential to impact on all elements of sustainability. Mitigation measures would need to be considered to reduce the impact.

There is also the potential for a negative impact on environmental sustainability due to the sites location within the AONB. A Landscape Sensitivity Assessment (LSA) has been carried out which concludes that development on the whole site would result in harm to the natural beauty of the AONB, but it may be that a small area in the north west of the site (between the public house and the access off Lipscomb Close) could be developed together with HER001.

~~Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.~~

~~There are a number of local services and facilities within walking or cycling distance of the site, although it is recognised that for higher end services and employment there could be a level of car dependency to access Newbury. The site is in close proximity of open countryside to help promote a healthy active lifestyle.~~

~~There are potential negatives due to the site being at risk from surface water flooding and being located within a critical drainage area and the sites location within the AONB. Flooding has the potential to impact on all elements of sustainability, and the location within the AONB means that development has the potential to impact upon environmental sustainability. Mitigation measures would need to be considered to reduce the impact.~~

### **Proposed development (from SHLAA submission):**

The site promoter has advised that the site could provide approximately 200 dwellings together with amenity space and additional landscaping.

Consultation response at the Preferred Options stage identifies support from the site promoters for including a small part of the site within the settlement boundary review as recommended within the LSA for HER004 and as set out within the HSA DPD at paragraph 5.34. The consultation response outlines that the site would have capacity for 14 dwellings to be developed in conjunction with HER001.

## Site Selection – Site Assessment

<b>Spatial Area</b>	AONB	<b>Settlement:</b>	Hermitage	<b>Parish:</b>	Chieveley
---------------------	------	--------------------	-----------	----------------	-----------

<b>Site ID:</b>	HER007	<b>Site Address:</b>	Land at Doctor's Row, Doctor's Lane, Hermitage
-----------------	--------	----------------------	--

<b>Development Potential:</b>	4 dwellings (0.22ha at 20ph)	<b>SHLAA Assessment:</b>	Not currently developable
-------------------------------	------------------------------	--------------------------	---------------------------

### Summary of Site Assessment

Key Issues:

- [Recommended within the SHLAA as Not Currently Developable](#)
- Automatic exclusion: site is for less than 5 dwellings, which is too small to be allocated as a site. [The site is poorly related to the existing settlement and not adjacent to the existing settlement boundary.](#)

### Site Assessment

<b>Parish Council consultation response:</b>	Parish Council did not comment on this site.

## Site Selection – Site Assessment

<b>Spatial Area</b>	AONB	<b>Settlement:</b>	Hermitage	<b>Parish:</b>	Chieveley & Hermitage
---------------------	------	--------------------	-----------	----------------	-----------------------

<b>Site ID:</b>	HER009	<b>Site Address:</b>	North of Primary School, Hampstead Norreys Road, Hermitage
-----------------	--------	----------------------	--

<b>Development Potential:</b>	28 dwellings (1.4ha at 20dph)	<b>SHLAA Assessment:</b>	Potentially Developable
-------------------------------	-------------------------------	--------------------------	-------------------------

### Summary of Site Assessment

Key Issues:
- AONB – <a href="#">Landscape Sensitivity Assessment (LSA) concludes development of the whole site would widen the otherwise narrow settlement on the west side of Hampstead Norris Road. Some development on part of the site could be accommodated, subject to the mitigation measures set out within the LSA (2014).</a>
- Flood risk (surface water) <a href="#">Small parts of the site are within an area of surface water flood risk</a>
- Right of way crosses site
- Distance from local play facilities <a href="#">A desk-based archaeological assessment is required</a>

### Site Assessment

<b>Parish Council consultation response:</b>	Development in this area would ruin the rural aspect of the school. The site and surrounding woodland is a wildlife corridor. Traffic issues associated with the school would likely to worsen with development here. There are potential issues with flooding around Orchard Close, and sewer flooding has been an issue in the past. There are no health services in the village (residents have to travel to Chieveley or Chapel Row). This site is seen as the most acceptable, but the road network would need to be improved and any development should be low density.

			- <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a [predominantly](#) neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

~~There are a number of local services and facilities within walking or cycling distance of the site, although it is recognised that for higher end services and employment there could be a level of car dependency to access Newbury and other centres. The site is in close proximity of open countryside to help promote a healthy active lifestyle. There are a number of local services and facilities within walking or cycling distance of the site, although it is recognised that for higher end services and employment there could be a level of car dependency to access Newbury. The site is in close proximity of open countryside to help promote a healthy active lifestyle.~~

There are potential negatives due to the site being at risk from surface water flooding and the sites location within the AONB. [Whilst the risk is considered small](#), flooding has the potential to impact on all elements of sustainability. ~~and~~ The location [of the site](#) within the AONB means that development has the potential to impact upon environmental sustainability. [A Landscape Sensitivity Assessment \(LSA\) has been carried out which concludes that development of the whole site would widen the otherwise narrow settlement on the west side of Hampstead Norreys Road. Only part of the site could be considered as a potential housing site subject to the implementation of mitigation measures outlined within the LSA. Mitigation measures would need to be considered to reduce the impact.](#)

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Hermitage	<b>Parish:</b>	<a href="#">Chieveley</a> / Hermitage
----------------------	------	--------------------	-----------	----------------	---------------------------------------

<b>Site ID:</b>	HER009	<b>Site Address:</b>	Land to the north of Hermitage Primary School, Hampstead Norreys Road, Hermitage	<b>Development Potential:</b>	28 dwellings (1.4ha at 20dph)
-----------------	--------	----------------------	--	-------------------------------	-------------------------------

### Recommendation:

The site is not recommended for allocation

### Justification:

[The Landscape Sensitivity Assessment \(LSA, 2014\)](#) indicates that the site is locally prominent [but largely well screened from the AONB. It goes on to state that development would impact on the rural character of Manor Lane, impact on the footpath crossing the site and development of the whole site would widen the otherwise narrow settlement on the west side of Hampstead Norreys Road. However, it concludes that](#) ~~but~~ there is development potential [on only part of the site subject to mitigation measures to conserve and enhance the natural beauty and special qualities of the AONB.](#) ~~(subject to further detailed outcomes)~~ Adjacent to settlement boundary with dispersed development to the north, south and west.

[Small areas of the site are within an area of surface water flood risk, and a Flood Risk Assessment \(FRA\) would be required to ensure appropriate flood mitigation measures are implemented.](#)

[It is considered that, given the outcomes of the LSA, development on this site would not be as well related to the settlement pattern as HER001. There are other sites within Hermitage which are considered more appropriate for allocation. Other sites in Hermitage are considered to be more appropriate for development. Not as well related to the settlement pattern as HER001.](#)

### Discussion:

#### Site Description:

Hermitage sits in a rural location within the North Wessex Downs AONB, but is located [in](#) close [proximity](#) to both the M4 and A34 corridors running east west and north south.

The site is located adjacent to Hermitage and there is loose development to the north, south and west.

#### Landscape:

A Landscape Character [Sensitivity Assessment \(LSA, 2014\)](#) has advised that the site is locally prominent but largely well screened from the wider AONB.

Part of the site could be considered further as a potential housing site subject to mitigation / enhancement measures. The Landscape [Sensitivity Assessment](#) notes that development would result in the loss of the landscape setting of Hermitage which has strong links with the wider landscape. Development would also impact upon the rural character of Manor Lane, the footpath crossing the site, and the tree belt and hedges to the site boundaries.

#### Flood Risk:

~~The~~ [Small areas of the site](#) ~~is~~ [are](#) at risk from surface water flooding. A FRA and appropriate [flood mitigation measures](#), including SUDs, would be required.

#### Highways /Transport:

This site can accommodate up to 28 houses that will generate circa 168 daily vehicle movements including circa 17 during the 08.00 to 09.00 AM peak.

The impact of additional traffic generation may be limited due to the size of the development, although I have some concern regarding the proximity to the school. Work may need to be undertaken to ensure no detrimental impact.

It would seem that access with appropriate sight lines of 2.4 x 43.0 metre can be obtained onto the B4009, although any access should not be too close to the nearby mini roundabouts.

Footways and bus stops are near the site. The village is served by an intermittent bus service during the week that connects Newbury with Harwell.

## Site Selection – Site Commentary

### **Ecology:**

No issues.

### **Archaeology:**

Possible archaeology but no previous work on site. Desk based assessment required.

### **Education:**

Hermitage / Chieveley / Curridge are seen as one area in terms of education. [The existing primary school](#) ~~The site~~ could have 1.5 forms of entry. Current capacity is 190, but could go up to 210. The school is likely to be full in September 2014.

There is some potential to expand. With 20-40 dwellings in the village there is unlikely to be an issue. [Education see advantages to expanding](#) ~~Would be nice to expand~~ the school to 2 forms of entry in the future, but this would require additional land.

Potential need for secondary provision.

The school is very popular, many people move into the village to get into the school.

### **Environmental Health:**

No comments made in respect of this site.

### **Minerals and Waste:**

No comments made in respect of this site.

### **Land use planning consultation zone:**

The site is not within an AWE consultation zone

### **Environment Agency:**

No specific comments made on this site. The site falls within groundwater source protection zone (SPZ) 3.

### **Thames Water:**

No water supply or wastewater infrastructure issues envisaged.

### **Parish Council:**

Development in this area would ruin the rural aspect of the school. The site and surrounding woodland is a wildlife corridor. Traffic issues associated with the school would likely to worsen with development here. There are potential issues with flooding around Orchard Close, and sewer flooding has been an issue in the past. There are no health services in the village (residents have to travel to Chieveley or Chapel Row). This site is seen as the most acceptable, but the road network would need to be improved and any development should be low density.

### **Preferred Options Consultation Key Issues:**

[No consultation responses received in relation to this site.](#)

[For the consultation responses and Council's response, please see the Statement of Consultation.](#)

### **SA/SEA:**

[Overall the site is likely to have a predominantly neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.](#)

[There are a number of local services and facilities within walking or cycling distance of the site, although it is recognised that for higher end services and employment there could be a level of car dependency to access Newbury and other centres. The site is in close proximity of open countryside to help promote a healthy active lifestyle.](#)

[There are potential negatives due to the site being at risk from surface water flooding and the sites location within the AONB. Whilst the risk is considered small, flooding has the potential to impact on all elements of sustainability,. The location of the site within the AONB means that development has the potential to impact upon environmental sustainability. A Landscape Sensitivity Assessment \(LSA\) has been carried out which concludes that development of the whole site would widen the otherwise narrow settlement on the west side of Hampstead Norreys Road. Only part of the site could be considered as a potential housing site](#)

## Site Selection – Site Commentary

~~subject to the implementation of mitigation measures outlined within the LSA. Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects. There are a number of local services and facilities within walking or cycling distance of the site, although it is recognised that for higher end services and employment there could be a level of car dependency to access Newbury. The site is in close proximity of open countryside to help promote a healthy active lifestyle.~~

~~There are potential negatives due to the site being at risk from surface water flooding and the sites location within the AONB. Flooding has the potential to impact on all elements of sustainability, and the location within the AONB means that development has the potential to impact upon environmental sustainability. Mitigation measures would need to be considered to reduce the impact.~~

**Proposed development (from SHLAA submission):**

The site promoter has suggested in the site submission form that the site would be suitable for 2-storey semi detached / detached residential dwellings in keeping with the site surroundings. The site promoter also acknowledges that the site could be considered for the provision of a community facility or leisure/recreation facility as part of a mixed use scheme given the location of a primary school adjacent to the site.

## Site Selection – Site Assessment

<b>Spatial Area</b>	AONB	<b>Settlement:</b>	Hermitage	<b>Parish:</b>	Chieveley
---------------------	------	--------------------	-----------	----------------	-----------

<b>Site ID:</b>	HER010	<b>Site Address:</b>	South of Manor Lane, Hermitage
-----------------	--------	----------------------	--------------------------------

<b>Development Potential:</b>	116 dwellings (5.91ha at 20dph)	<b>SHLAA Assessment:</b>	Not currently developable
-------------------------------	---------------------------------	--------------------------	---------------------------

### Summary of Site Assessment

Key Issues:

- [Recommended within the SHLAA as Not Currently Developable](#)
- Automatic exclusion
- Relationship to Hermitage – [the site is detached from the existing settlement boundary](#)
- Impact on settlement character of Oare
- Surface water flood risk
- Distance from amenity space and play facilities for children

### Site Assessment

<b>Parish Council consultation response:</b>	Access to this site is poor, Manor Lane is very narrow. Oare is not seen as part of Hermitage. The Motorway should not be seen as a barrier for infill development. The impact on the landscape is key.
--	---

A) Automatic exclusion			
Criteria		Yes/No*	Comments
<b>Less than 5 dwellings</b>		N	
<b>Planning Permission</b>		N	
<b>Within flood zone 3</b>		N	
<b>Within significant national or international habitat / environmental / historical protection</b>	SSSI	N

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	There are limited facilities in Hermitage however these can be accessed through walking and cycling. <a href="#">The site has good access to the countryside.</a>		The site's location to the north of Hermitage gives opportunities for walking and cycling and gives easy access to local services and facilities. Therefore, in terms of environmental and social sustainability, development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	<b>0</b>	There are outdoor sports facilities at Hermitage Primary School, but these facilities are not available to the public. <a href="#">The site is also close to the new village hall which has amenity green space and a play area</a>		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	The site is <del>adjacent</del> <a href="#">close</a> to school playing fields, <a href="#">and amenity green space</a>		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>0</b>	There is a primary school, church hall, pub, shop and play facilities in Hermitage. There are <a href="#">limited</a> <del>no</del> employment opportunities within the settlement boundary		The site is located close to facilities however these are limited. There are <del>no</del> <a href="#">limited</a> employment opportunities within the settlement boundary.  Bus services are intermittent.  The site is therefore unlikely to have any impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>0</b>	Limited public transport access (there is an intermittent service between Harwell and Newbury during weekdays) although there are opportunities for walking and cycling		There will be a degree of car dependency within the village due to the limited public transport services. However, local services

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			-		
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns but, development would also have the potential to improve road safety.		and facilities are within walking or cycling distance. Overall it is unlikely that development of this site would have an impact on any element of sustainability.
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	0	Unlikely to have an impact		Development of the site could impact on environmental sustainability due to the location of the site within the AONB
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	-	The site is located within the AONB		
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	-	Development of the site would lead to significant changes to the character of Oare as the village is not seen as part of Hermitage. <a href="#">extend the village of Hermitage to the north along the Hampstead Norreys Road. It is considered that such expansion would not be appropriate and would relate poorly to the existing settlement pattern</a>		The significant changes to the character of Oare as a result of any development <a href="#">development of the site would expand Hermitage to the north which</a> would negatively impact upon the environmental sustainability of the site
	Will it conserve and enhance the significance of the District's heritage assets?	?0	Western area within historic core of village	Desk based assessment required	
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact <a href="#">on the District's cultural assets</a>		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact <a href="#">on access to the historic environment</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from or impact on air quality?	-	The site is close to the M4, <a href="#">so could be impacted by air pollution</a>		The proximity of the site to the M4 could <a href="#">negatively</a> impact upon environmental sustainability
	Will the site be at risk from or impact on noise levels?	-	The site is close to the M4, <a href="#">so could be impacted by noise levels</a>	Noise survey required	
	Will there be an impact on soil quality?	0	Unlikely to have an impact <a href="#">on soil quality</a>		
	Will there be an impact on water quality?	0	Unlikely to have an impact <a href="#">on water quality</a>		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	0 -	The site is greenfield		The site could have a negative impact on environmental sustainability as it is a greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on the building materials used, construction methods, transport and design	Mitigation could include Travel Plans to reduce car traffic and <a href="#">ensure</a> compliance with policies within the <a href="#">Core Strategy</a> .	Without consideration of sustainability construction techniques <a href="#">and the promotion of alternative modes of transport</a> , development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	0	The site does not fall within an area of flood risk; however it does lie adjacent to an area of surface water flood risk.	Sustainable drainage (SUDs) techniques would be required	Development of this site is unlikely to impact upon the environmental sustainability of the site provided SuDS techniques are used to mitigate against the risk of any potential flooding

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a [predominantly](#) neutral effect on sustainability [and the SA/SEA does not highlight any significant sustainability effects.](#) ~~however the SA/SEA highlights a significant sustainability effect as a result of the impact that development would have upon the character of Oare.~~

[There are a number of local services and facilities within walking or cycling distance of the site, although it is recognised that for higher end services and employment there could be a level of car dependency to access Newbury and other centres. The site is in close proximity of open countryside to help promote a healthy active lifestyle.](#)

There are potential negatives due to the sites location within the AONB, [its relationship with the existing settlement pattern](#) and the proximity to the M4 motorway. Development [therefore](#) has the potential to impact upon environmental sustainability. ~~Flooding has the potential to impact on all elements of sustainability, and the location within the AONB means that development has the potential to impact upon environmental sustainability. Mitigation measures would need to be considered to reduce the impact.~~

~~There are a number of local services and facilities within walking or cycling distance of the site, although it is recognised that for higher end services and employment there could be a level of car dependency to access Newbury. The site is in close proximity of open countryside to help promote a healthy active lifestyle.~~

### Summary of effects:

**Effect:** ~~Predominantly neutral with one significantly negative effect~~

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Likelihood:** High  
**Scale:** AONB spatial area  
**Duration:** Permanent  
**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Hermitage	<b>Parish:</b>	Hermitage
<b>Site ID:</b>	HER011	<b>Site Address:</b>	Land north of Manor Lane	<b>Development Potential:</b>	12 dwellings (0.58ha at 20dph)

### Recommendation:

The site is not recommended for allocation ([only part of the site that extends along Hampstead Norreys Road has been considered for allocation](#)).

### Justification:

Development of the site would [extend the village of Hermitage to the north of Manor Lane, along Hampstead Norreys Road. It is considered that such expansion would not be appropriate and would be poorly related to the existing settlement pattern.](#) ~~lead to significant changes to the character of Oare as the village is not seen as part of Hermitage~~  
[Although a Landscape Sensitivity Assessment \(LSA\) was not carried out for this site specifically, the work on HER009 concludes that development would not extend further northwards than the existing northern edge of Hermitage.](#)

The proximity of the site to the M4 is likely to [impact result in-on noise and air quality.](#) ~~impacts.~~

### Discussion:

#### Site Description:

Hermitage sits in a rural location within the North Wessex Downs AONB, but is located [in close proximity](#) to both the M4 and A34 corridors running east west and north south. Only part of the site that extends along ~~Hermitage~~ [Hampstead Norreys Road](#) has been considered for allocation – two smaller parts of the site along Manor Lane have been excluded because they fall within [the settlement of](#) Oare ~~and~~ not Hermitage.

The site is detached from the settlement boundary and ~~is not seen as part of~~ [relates poorly to the village of](#) Hermitage.

#### Landscape:

The site falls within the AONB. [A Landscape Sensitivity Assessment \(LSA\) was not carried out for this site.](#)

#### Flood Risk:

The site does not fall within an area of flood risk however there is an area of surface water flooding adjacent to the site.

#### Highways /Transport:

Site specific comments from the Council's Highways and Transport team not made in respect of this site. The village is served by an intermittent bus service during the week that connects Newbury with Harwell.

#### Ecology:

No known impact.

#### Archaeology:

Western area within historic core of village. Desk based assessment required.

#### Education:

Hermitage / Chieveley / Curridge are seen as one area in terms of education. [The existing primary school](#) ~~The site~~ could have 1.5 forms of entry. Current capacity is 190, but could go up to 210. The school is likely to be full in September 2014.

There is some potential to expand. With 20-40 dwellings in the village there is unlikely to be an issue. [Education see advantages to expanding](#) ~~Would be nice to expand~~ the school to two forms of entry in the future, but this would require additional land.

Potential need for secondary provision.

The school is very popular, many people move into the village to get into the school.

#### Environmental Health:

## Site Selection – Site Commentary

No comments made in respect of this site.

### **Minerals and Waste:**

No comments made in respect of this site.

### **Land use planning consultation zone:**

The site is not within an AWE consultation zone

### **Environment Agency:**

No comments made in respect of this site.

### **Thames Water:**

No comments made in respect of this site.

### **Parish Council:**

Parish council do not consider this site to be potentially developable, especially as the other sites in Oare are considered to be not currently developable. Concerns regarding the proximity of the site to the motorway.

### **Preferred Options Consultation Key Issues:**

No consultation responses received in relation to this site.

For the consultation responses and Council's response, please see the Statement of Consultation.

### **SA/SEA:**

Overall the site is likely to have a predominantly neutral effect on sustainability and the SA/SEA does not highlight any significant sustainability effects.

There are a number of local services and facilities within walking or cycling distance of the site, although it is recognised that for higher end services and employment there could be a level of car dependency to access Newbury and other centres. The site is in close proximity of open countryside to help promote a healthy active lifestyle.

There are potential negatives due to the sites location within the AONB, its relationship with the existing settlement pattern and the proximity to the M4 motorway. Development therefore has the potential to impact upon environmental sustainability.

~~Overall the site is likely to have a neutral effect on sustainability, however the SA/SEA highlights a significant sustainability effect as a result of the impact that development would have upon the character of Oare.~~

~~There are potential negatives due to the sites location within the AONB and the proximity to the M4 motorway. Development has the potential to impact upon environmental sustainability. Flooding has the potential to impact on all elements of sustainability, and the location within the AONB means that development has the potential to impact upon environmental sustainability. Mitigation measures would need to be considered to reduce the impact.~~

~~There are a number of local services and facilities within walking or cycling distance of the site, although it is recognised that for higher end services and employment there could be a level of car dependency to access Newbury. The site is in close proximity of open countryside to help promote a healthy active lifestyle.~~

### **Proposed development (from SHLAA submission):**

The site promoter has commented that the site is suitable for residential development (2-storey semi-detached / detached development).

## Site Selection – Site Assessment

<b>Spatial Area</b>	AONB	<b>Settlement:</b>	Hermitage	<b>Parish:</b>	Chieveley
---------------------	------	--------------------	-----------	----------------	-----------

<b>Site ID:</b>	HER012	<b>Site Address:</b>	Land opposite St Bartholomew's Church, Manor Lane, Oare
-----------------	--------	----------------------	---

<b>Development Potential:</b>	28 dwellings (1.4ha at 20dph)	<b>SHLAA Assessment:</b>	Not Currently Developable
-------------------------------	-------------------------------	--------------------------	---------------------------

### Summary of Site Assessment

Key Issues:

- [Recommended within the SHLAA as Not Currently Developable.](#)
- Automatic exclusion: development of this site would lead to significant changes to the settlement of Oare. Oare is not seen as, or physically part of Hermitage and therefore, development of this site would not be appropriate.

### Site Assessment

<b>Parish Council consultation response:</b>	Access to the site is poor. Manor Lane is very narrow. Oare is not seen as part of Hermitage. The Motorway should not be seen as a barrier for infill development.

			-		
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns but, development would also have the potential to improve road safety.		and facilities are within walking or cycling distance. Overall it is unlikely that development of this site would have an impact on any element of sustainability.
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	0	Unlikely to have an impact	<a href="#">An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected</a> Extended Phase 1 Habitats Survey required	Development of the site could impact on environmental sustainability due to the location of the site within the AONB
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	-	The site is located within the AONB		
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	-	<del>Site is poorly related to the existing settlement and beyond the building line of the village</del> <a href="#">Development of the site would extend the village of Hermitage to the north (beyond Manor Lane), along Hampstead Norreys Road. It is considered that such expansion would not be appropriate and would relate poorly to the existing settlement pattern</a>		<a href="#">The development of the site would expand Hermitage to the north which would negatively impact upon the environmental sustainability</a>
	Will it conserve and enhance the significance of the District's heritage assets?	? 0	Unknown <a href="#">impact</a>	Further assessment required	
	Will it promote, conserve and enhance the District's cultural assets?	0	The site is unlikely to have an impact on <del>access to the historic environment</del> <a href="#">the District's cultural assets</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will it provide for increased access to and enjoyment of the historic environment?	<b>0</b>	Unlikely to have an impact <a href="#">on access to the historic environment</a>		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from or impact on air quality?	<b>-</b>	The site is close to the M4 <a href="#">so could be impacted by air pollution</a>		The proximity of the site to the M4 could <a href="#">negatively</a> impact upon environmental sustainability
	Will the site be at risk from or impact on noise levels?	<b>-</b>	The site is close to the M4 <a href="#">so could be impacted by noise levels</a>	Noise survey required	
	Will there be an impact on soil quality?	<b>0</b>	Unlikely to have an impact <a href="#">on soil quality</a>		
	Will there be an impact on water quality?	<b>0</b>	Unlikely to have an impact <a href="#">on water quality</a>		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>-</b>	The site is greenfield		The site could have a negative impact on environmental sustainability as it is a greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	<b>?</b>	The level of impact depends on the building materials used, construction methods, transport and design	Mitigation could include Travel Plans to reduce car traffic and <a href="#">ensure</a> compliance with policies within the <a href="#">Core Strategy</a> .	Without consideration of sustainability construction techniques <a href="#">and the promotion of alternative modes of transport</a> , development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	<b>0</b>	The site does not fall within an area of flood risk; however it does lie adjacent to an area of surface water flood risk.	Sustainable drainage (SUDs) techniques would be required	Development of this site is unlikely to impact upon the environmental sustainability of the site provided SuDS techniques are used to mitigate against the risk of any potential flooding

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a predominantly neutral effect on sustainability [and the SA/SEA does not highlight any significant sustainability effects.](#)

[There are a number of local services and facilities within walking or cycling distance of the site, although it is recognised that for higher end services and employment there could be a level of car dependency to access Newbury and other centres. The site is in close proximity of open countryside to help promote a healthy active lifestyle.](#)

There are potential negatives due to the sites location within the AONB, the relationship of the site to the existing settlement ~~boundary~~ [pattern](#) and the proximity to the M4 motorway. Development [therefore](#) has the potential to impact upon environmental sustainability. ~~Development therefore has the potential to impact upon environmental sustainability. Mitigation measures would need to be considered to reduce the impact.~~

~~There are a number of local services and facilities within walking or cycling distance of the site, although it is recognised that for higher end services and employment there could be a level of car dependency to access Newbury. The site is in close proximity of open countryside to help promote a healthy active lifestyle.~~

#### Summary of effects:

**Effect:** Predominantly negative [neutral](#)

**Likelihood:** High

**Scale:** AONB spatial area

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Hermitage	<b>Parish:</b>	Hermitage
<b>Site ID:</b>	HER016	<b>Site Address:</b>	Land to the east of Hampstead Norreys Road, Hermitage	<b>Development Potential:</b>	8 dwellings (0.4ha at 20 dph)

### Recommendation:

The site is not recommended for allocation

### Justification:

[Development of the site would extend the village of Hermitage to the north of Manor Lane, along Hampstead Norreys Road. It is considered that such expansion would not be appropriate and would be poorly related to the existing settlement pattern.](#)

[Although a Landscape Sensitivity Assessment \(LSA\) was not carried out for this site specifically, the work on HER009 concludes that development would not extend further northwards than the existing northern edge of Hermitage.](#)

[The proximity of the site to the M4 is likely to impact on noise and air quality.](#)

~~The site is poorly related to Hermitage and the proximity of the site to the M4 is likely to result in noise impacts.~~

### Discussion:

#### Site Description:

Hermitage sits in a rural location within the North Wessex Downs AONB, but is located [in](#) close [proximity](#) to both the M4 and A34 corridors running east west and north south.

The site is poorly related to the settlement boundary of Hermitage – the site is physically detached from the settlement boundary of Hermitage.

#### Landscape:

The site falls within the AONB. [A Landscape Sensitivity Assessment \(LSA\) was not carried out for this site.](#)

#### Flood Risk:

The site does not fall within an area of flood risk however there is an area of surface water flooding adjacent to the site.

#### Highways /Transport:

Site specific comments from the Council's Highways and Transport team not made in respect of this site. The village is served by an intermittent bus service during the week that connects Newbury with Harwell.

#### Ecology:

Unlikely to have an impact, however [an extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected](#)  
~~an Extended Phase 1 Habitats Survey required.~~

#### Archaeology:

The site is unlikely to have an impact.

#### Education:

Hermitage / Chieveley / Curridge are seen as one area in terms of education. [The existing primary school](#)  
~~The site~~ could have 1.5 forms of entry. Current capacity is 190, but could go up to 210. The school is likely to be full in September 2014.

There is some potential to expand. With 20-40 dwellings in the village there is unlikely to be an issue. [Education see advantages to expanding](#) ~~Would be nice to expand~~ the school to two forms of entry in the future, but this would require additional land.

Potential need for secondary provision.

The school is very popular, many people move into the village to get into the school.

## Site Selection – Site Commentary

**Environmental Health:**

No comments made in respect of this site.

**Minerals and Waste:**

No comments made in respect of this site.

**Land use planning consultation zone:**

The site is not within an AWE consultation zone

**Environment Agency:**

No specific comments made on this site. The site falls within groundwater source protection zone (SPZ) 3.

**Thames Water:**

No comments made in respect of this site.

**Parish Council:**

Site is seen as very close to the motorway, which could cause noise and health issues for residents.

**Preferred Options Consultation Key Issues:**

No consultation responses received in relation to this site.

For the consultation responses and Council's response, please see the Statement of Consultation.

**SA/SEA:**

Overall the site is likely to have a predominantly neutral effect on sustainability and the SA/SEA does not highlight any significant sustainability effects.

There are a number of local services and facilities within walking or cycling distance of the site, although it is recognised that for higher end services and employment there could be a level of car dependency to access Newbury and other centres. The site is in close proximity of open countryside to help promote a healthy active lifestyle.

There are potential negatives due to the sites location within the AONB, the relationship of the site to the existing settlement pattern and the proximity to the M4 motorway. Development therefore has the potential to impact upon environmental sustainability.

~~Overall the site is likely to have a predominantly neutral effect on sustainability.~~

~~There are potential negatives due to the sites location within the AONB, the relationship of the site with the existing settlement boundary and the proximity to the M4 motorway. Development has the potential to impact upon environmental sustainability. Development therefore has the potential to impact upon environmental sustainability. Mitigation measures would need to be considered to reduce the impact.~~

~~There are a number of local services and facilities within walking or cycling distance of the site, although it is recognised that for higher end services and employment there could be a level of car dependency to access Newbury. The site is in close proximity of open countryside to help promote a healthy active lifestyle.~~

**Proposed development (from SHLAA submission):**

The site promoter has suggested that the site is suitable for residential development.

## Summary of Site Assessment

### Key Issues:

- AONB – only a limited part of the site is considered suitable for development
- [Development of the whole site as a large single estate would be out of scale with housing on the north side of Kintbury and could constitute an unacceptable expansion of the settlement.](#)
- [A limited linear development could be accommodated along Irish Hill Road to match the settlement pattern in the Conservation Area.](#)
- [Potential impact on the setting of the Conservation Area - the undeveloped, rural character of the site provides an attractive natural edge to the east of the conservation area.](#)
- Flood risk (groundwater)
- [The site lies within a groundwater emergence zone and an EA groundwater vulnerability zone. A FRA required.](#)
- [Potential access issues if adequate sight lines cannot be achieved](#)

## Site Assessment

<b>Parish Council consultation response:</b>	This site has a long history of proposals for development. Concern from the Parish Council that the road would need to be widened and potential issues with Burtons Hill. The pavement through the village is intermittent. The Parish Council felt that development of this site would change the character of the village and would just be creating development. This site (along with KIN001) is the first part of the countryside as you leave the village.

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	The site has easy access to the countryside, and is close to local services and facilities which would enable walking and cycling		The site is close to local services and facilities including a local leisure centre and playing field meaning that development of the site is likely to have a positive impact on social and environmental sustainability
	Will it increase opportunities for access to sports facilities?	<b>+</b>	The site is close to the leisure centre (Jubilee Leisure Centre and playing fields)		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	Site is close to the canal. Unlikely to have an impact		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>+</b>	The site is close to local services and facilities within the village. The village is served by a railway station and a 2 hourly bus service between Newbury and Hungerford		The proximity to local services and facilities means that the site should have a positive economic sustainability. In addition employment opportunities can be accessed via rail
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>+</b>	Within the village there are a number of opportunities for walking and cycling. There are public transport opportunities within the village – a 2 hourly bus service and railway. However, the degree of car dependency is still likely to be high.		Kintbury does offer travel choices given the proximity of the railway station. There are opportunities for walking and cycling and a bus service to and from the village
	Will it reduce the number of road traffic accidents and improve safety?	<b>?</b>	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	<b>0</b>	Unlikely to have an impact		Without mitigation measures as set out in the Landscape Assessment there would be potential for a negative impact on
	Will it conserve and	<b>-</b>	The site is located within the AONB.	Landscape Assessment	

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	enhance the local distinctiveness of the character of the landscape?		<p>The Landscape Assessment indicates that development of this site would only be acceptable in a limited area – as linear development along Irish Hill Road to match the settlement pattern in the conservation area.</p> <p>The site is prominent in views to the east and across the valley to the north. The Landscape <a href="#">Sensitivity Assessment (LSA) (2011)</a> indicates that only a <a href="#">very small</a> part of the site is suitable for development. <a href="#">A limited linear development could be accommodated along Irish Hill Road to match the settlement pattern in the Conservation Area.</a></p>	<p>indicates the following protection / enhancement would be required:</p> <ul style="list-style-type: none"> <li>- retention of existing trees and hedgerows and replacement of the conifer hedges</li> <li>- consideration of views from the surrounding countryside and new planting to integrate the buildings into the landscape</li> <li>- consideration of the scale of any new development against the overall size of the settlement and aspirations to limit expansion</li> </ul>	environmental sustainability.
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	0	<p>The site is adjacent to the existing settlement, so provided only a small area of the site is developed, unlikely to have an impact on the character of the built environment. <a href="#">The site is fairly well connected to the settlement edge, though extends further north than the adjacent linear development to the west.</a> <a href="#">Development of the whole site as a large single estate would be out of scale with housing on the north side of Kintbury and could constitute an unacceptable expansion of the settlement.</a></p>	<p><a href="#">Development should be sensitively designed</a></p>	<p><a href="#">There would be potential for a negative impact on environmental sustainability unless the site was developed in line with the Landscape Assessment</a> <a href="#">Development of the site is unlikely to have a significant impact on any element of sustainability, and</a> subject to further assessment of the impact of development on <a href="#">the Conservation Area and</a> archaeological material.</p>
	Will it conserve and enhance the significance of the District's heritage assets?	?	<p><a href="#">The undeveloped, rural character of the site provides an attractive natural edge to the east of the Conservation Area and makes an important contribution to its setting.</a></p> <p>There is a British Romano villa and a Mesolithic site to the south east of the site</p>	<p>Further assessment is required as to the impact development could have on the <a href="#">Conservation Area and</a> archaeological material.</p>	

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact		Development of the site is unlikely to have an impact on any element of sustainability.
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact		
	Will there be an impact on soil quality?	0	Unlikely to have an impact		
	Will there be an impact on water quality?	0?	<a href="#">It is within a Source Protection Zone (SPZ2) with a high risk of contamination to groundwater</a> Unlikely to have an impact	<a href="#">The EA has no in principle objections to development in SPZs.</a>	
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Site is greenfield		The greenfield nature of the site means that there could be a negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques <a href="#">and the promotion of alternative modes of transport</a> , development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	-	The site is within groundwater emergence zone but there is no evidence of the site ever having flooded. <a href="#">The site lies within the EA's groundwater vulnerability zone.</a>	A FRA and appropriate mitigation <a href="#">measures</a> , including SuDS would need to be provided	<a href="#">A FRA will highlight the mitigation measures required to minimise the risk of flooding.</a> Flooding can have a negative impact on all elements of sustainability unless appropriate mitigation measures can be put in place.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

The site is well related to existing services and facilities within Kintbury with opportunities for walking and cycling and healthy active lifestyles, giving a positive impact on sustainability.

~~The impact on the landscape could have a negative impact on environmental sustainability. Significant landscape mitigation measure would be required which significantly reduce the area suitable for development. The site is within a groundwater emergence zone, with potential for groundwater flooding which could lead to a negative impact on all elements of sustainability. Mitigation measures should reduce this impact.~~

[There is the potential for a negative impact on environmental sustainability due to the site's location both within the AONB and its location in Kintbury, adjacent to the Conservation Area. A LSA has been carried out which concludes that only a limited part of the site has potential to deliver housing without causing harm to the natural beauty and special qualities of the AONB subject to a number of mitigation measures.](#)

[The site lies within a groundwater emergence zone. Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.](#)

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB - Kintbury

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Kintbury	<b>Parish:</b>	Kintbury
<b>Site ID:</b>	KIN004	<b>Site Address:</b>	Kintbury Park Farm, Irish Hill Road, Kintbury	<b>Development Potential:</b>	18 dwellings (0.89ha at 20dph)

### Recommendation:

The site is not recommended for allocation

### Justification:

Development of the site would have an impact on the rural character of this area. [Development of the site as a whole would constitute an unacceptable expansion of the settlement.](#)

Only a very small area of the site is acceptable for development in landscape terms – a limited linear development [along Irish Hill Road to match the settlement pattern in the Conservation Area](#)

[Potential impact on the setting of the Conservation Area - the undeveloped, rural character of the site provides an attractive natural edge to the east of the Conservation Area.](#)

Other sites in Kintbury are considered to be more appropriate for development.

[The site lies within a groundwater emergence zone and an EA groundwater vulnerability zone. A FRA required.](#)

[Potential access issues if adequate sight lines cannot be achieved](#)

### Discussion:

#### Site Description:

The site is located to the north east of Kintbury, close to local services and facilities within the village and close to open countryside. [It lies adjacent and to the east of the Conservation Area and the undeveloped, rural character of the site provides an attractive natural edge and makes an important contribution to its setting.](#)

#### Landscape:

The site is within the AONB, and the Landscape Assessment indicates that the site would be prominent in views to the east and across the valley to the north. Development of the site as a whole would constitute an unacceptable expansion of the settlement. Linear development could be accommodated along Irish Hill Road to match settlement pattern in the Conservation Area, along with the protection of boundary hedgerows and trees. Mitigation measures that would be required are set out in the landscape assessment.

#### Flood Risk:

The site is in flood zone 1, although it is within a groundwater emergence zone. A FRA would be required and SUDs would need to be provided.

#### Highways /Transport:

~~No specific comments have been made on this site.~~

~~The site is close to Kintbury railway station which provides links to London and the west country. There is an infrequent bus service (2 hourly) linking Kintbury with Newbury and Hungerford. There are local opportunities for walking and cycling within the village.~~

[This site can accommodate up to 15 dwellings that will generate circa 90 daily vehicle movements including 9 during the 08.00 to 09.00 AM peak.](#)

[There is concern that required sight lines of 2.4 x 43 metres cannot be achieved at the proposed access point. However it should be possible to achieve these sight lines if the proposed access was moved a few metres eastwards. A pedestrian route is also needed from the site.](#)

[Most of the traffic to and from the site will travel west via Newbury Street. The sight lines are however restricted to the right at the Newbury Street / Station Road junction.](#)

[Footways exist along most, but not all of Newbury Street that would link into Kintbury centre. This includes the site opposite on Newbury Street that has consent for residential that does include a footway fronting the site.](#)

## Site Selection – Site Commentary

[Bus service number 3 passes nearby along Holt Road and Newbury Street providing up to five services each way between Newbury and Hungerford with bus stops existing nearby along Newbury Street and Holt Road. Kintbury train station is 830 metres walking distance from the site.](#)

### **Ecology:**

No known ecological issues

### **Archaeology:**

There is a Romano-British Village and Mesolithic site to the south east of the site. Further assessment and evaluation would be required.

### **Education:**

Local primary school provision is close to or at capacity. No comments have been made about secondary school provision.

### **Environmental Health:**

No known air, noise or contamination issues

### **Minerals and Waste:**

No known mineral or waste issues

### **Land use planning consultation zone:**

The site is not within an AWE consultation zone

### **Environment Agency:**

~~No specific comments have been made on this site.~~ The site is within SPZ2 with a high risk of contamination to groundwater. [The EA has no in principle objections to development in SPZs](#)

### **Thames Water:**

TW not consulted on this site

### **Parish Council:**

This site has a long history of proposals for development. Concern from the Parish Council that the road would need to be widened and potential issues with Burtons Hill. The pavement through the village is intermittent. The Parish Council felt that development of this site would change the character of the village and would just be creating development. This site (along with KIN001) is the first part of the countryside as you leave the village.

### **[Preferred options Consultation – key issues](#)**

[No responses were received for this site.](#)

[For all the consultation responses and the Council's response, please see the Statement of Consultation](#)

### **SA/SEA:**

~~Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects. There are no significant sustainability issues with this site. The site is well related to existing services and facilities within Kintbury with opportunities for walking and cycling and healthy active lifestyles, giving a positive impact on sustainability. The impact on the landscape could have a negative impact on environmental sustainability. Significant landscape mitigation measure would be required which significantly reduce the area suitable for development. The site is within a groundwater emergence zone, with potential for groundwater flooding which could lead to a negative impact on all elements of sustainability. Mitigation measures should reduce this impact.~~

[Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects. The site lies within a groundwater emergence zone. Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.](#)

## Site Selection – Site Commentary

**Proposed development (from SHLAA submission):**

The site is proposed for approximately 60 dwellings (over 3.1ha) as a mix of open market and affordable housing (in line with the Core Strategy).

## Summary of Site Assessment

### Key Issues:

- AONB
- The site would normally be considered as part of settlement boundary review but is being treated as part of the wider allocation with KIN007. [Vehicular access from Layland's Green would need to be obtained through KIN006.](#)
- [The site lies within the EA's groundwater vulnerability zone. The site has underlying clay. A FRA required.](#)
- [The site is close to a Great Crested Newt breeding site. An extended Phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. A Great Crested Newt survey will also be required to cover all ponds within 250m south and east of the site. Appropriate avoidance and mitigation measures would need to be implemented to ensure any protected species were not adversely affected.](#)
- [A TPO was placed on the woodland in the northern part of KIN007 in November 2014](#)
- [There is suspected contamination at Kiln Farm due to brick and tile works. A contamination assessment required.](#)
- [As the site is underlain with clay a methodology for foundation design would be required](#)

## Site Assessment

<b>Parish Council consultation response:</b>	The Parish Council noted that this site is situated on old clay workings and many of the houses in the neighbouring residential area have had to be underpinned due to subsidence. Drainage is seen as an issue as there are springs at the top of the hill and the area is very boggy. The Parish Council considers that some infill development in this area would not be completely inappropriate, although they would not like to see a large development. <a href="#">At the preferred options consultation the Parish Council added that the site provides a habitat for Great Crested Newts, expressed concerns over viability and provision of affordable housing and also the impact on the village of additional traffic.</a>

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site has easy access to the countryside, and is close to local services and facilities which would enable walking and cycling		The site is close to local services and facilities including a local leisure centre and playing field meaning that development of the site is likely to have a positive impact on social and environmental sustainability
	Will it increase opportunities for access to sports facilities?	+	The site is <del>relatively</del> close to the leisure centre (Jubilee Leisure Centre and playing fields)		
	Will it protect and enhance green infrastructure across the district?	0	Unlikely to have an impact		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The site is close to local services and facilities within the village. The village is served by a railway station and a 2 hourly bus service between Newbury and Hungerford		The proximity to local services and facilities means that the site should have a positive economic sustainability. In addition employment opportunities can be accessed via rail
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	Within the village there are a number of opportunities for walking and cycling. There are public transport opportunities within the village – there is a 2 hourly bus service and railway station. However, the degree of car dependency is still likely to be high.		Kintbury does offer travel choices given the proximity of the railway station. There are opportunities for walking and cycling and a bus service to and from the village, all of which have a positive impact on sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity	?	<a href="#">The site lies very close to a Local Wildlife Site which is also a BBOWT</a>	<del>Great crested newt survey</del> <a href="#">An extended Phase 1 habitat</a>	While the site is very small, there would be potential for

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	and geodiversity assets across West Berkshire?	-	<a href="#">nature reserve (Kintbury Newt Ponds) which hosts a large breeding population of Great Crested Newts.</a> The site is within a Biodiversity Opportunity Area and within 250m of a great crested newt site and Local Wildlife Site	<a href="#">survey</a> required. <a href="#">In addition, all ponds within 250m of the site to the south and east would need to be surveyed for Great Crested Newts</a>	a negative impact on environmental sustainability unless the site was developed in line with the <a href="#">Landscape Assessment</a> and <a href="#">appropriate avoidance and mitigation measure</a> were implemented so that <a href="#">any protected species were not adversely affected.</a> <a href="#">Mitigation measures would also need to be put into place to protect the woodland TPO on KIN007.</a>
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	-	The site is located within the AONB. The Landscape <a href="#">Sensitivity Assessment (LSA) (2011)</a> indicates that development of this site would be acceptable subject to protection and enhancement measures <a href="#">Although not on KIN006, a TPO (201/21/0849) was placed on the woodland in the northern part of KIN007 on 11<sup>th</sup> November 2014</a>	Landscape assessment <a href="#">LSA</a> indicates the following protection <a href="#">and</a> enhancement would be required: <ul style="list-style-type: none"> <li>- protection and enhancement of boundary hedgerows and trees</li> <li>- protection of the ditch</li> </ul>	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	0	The site is <a href="#">in keeping with the existing settlement pattern in Kintbury</a> although would <a href="#">discontinue the linear nature of development along Layland's Green</a> <small>small in scale and development is unlikely to have an impact upon the character of the built environment</small>	<a href="#">Development should be sensitively designed. There is an opportunity to integrate the development with the existing street scene along Layland's Green</a>	Development of the site is unlikely to have an impact on any element of sustainability <a href="#">although has the potential to improve the built environment through a well designed scheme.</a>
	Will it conserve and enhance the significance of the District's heritage assets?	0	Unlikely to have an impact		
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact		<a href="#">There would be potential for a negative impact on environmental sustainability unless the site was developed in accordance with the contamination</a>
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact		
	Will there be an impact on soil quality?	0-2	<del>Unlikely to have an impact</del> <a href="#">Suspected contamination at Kiln</a>	<a href="#">A contamination assessment required.</a>	

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will there be an impact on water quality?	0-?	<u>Farm due to brick and tile works. It is within a Source Protection Zone (SPZ2) with a high risk of contamination to groundwater. Unlikely to have an impact</u>	<u>The EA has no in principle objections to development in SPZs.</u>	<u>assessment Development of the site is unlikely to have an impact on any element of sustainability.</u>
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Site is greenfield		The greenfield nature of the site means that there could be a negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques <u>and the promotion of alternative modes of transport.</u> development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	0-?	<u>The site lies within the EA's groundwater vulnerability zone although there is no record of groundwater flooding on the site itself. The underlying clay is likely to mean an engineered drainage solution will be required to manage surface water drainage. is not at risk from flooding</u>	<u>A FRA and appropriate flood mitigation measures including SuDS would need to be provided. A methodology for foundation design would need to be provided.</u>	<u>A FRA will highlight the mitigation measures required to minimise the risk of flooding. Flooding can have a negative impact on all elements of sustainability unless appropriate mitigation measures can be put in place. Unlikely to have an impact on any element of sustainability.</u>
11. <u>To ensure a strong, diverse and sustainable economic base</u>	<u>Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</u>	0	<u>Not considered relevant</u>		<u>The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key</u>
	<u>Will it promote and support key business sectors and utilise employment land effectively and efficiently?</u>	0	<u>The site is greenfield and there will be no loss of employment land through the development of the site for housing, No employment use</u>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		<a href="#">business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

The site is well related to the existing settlement close to local services and facilities with good opportunities for walking and cycling, giving a positive impact on sustainability.  
[Development on this site has the potential to improve the built environment through a well designed scheme.](#)

[There is also the potential for a negative impact on environmental sustainability due to the site's location is within the AONB. However, a LSA has been carried out which concludes that the site has potential to deliver housing without causing harm to the natural beauty and special qualities of the AONB subject to a number of mitigation measures. As the site is close to a site with Great Crested Newts, there is therefore also potential for a negative impact on environmental sustainability, unless appropriate avoidance and mitigation measures are implemented as set out in the assessments. Mitigation measures would also need to be put into place to remove any potential negative impacts on environmental sustainability for the woodland TPO on KIN007.](#)

[There is the potential for a negative impact on environmental sustainability unless the site is developed in line with the outcome of the contamination assessment.](#)

[Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.](#)

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB - Kintbury

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Kintbury	<b>Parish:</b>	Kintbury
<b>Site ID:</b>	KIN006	<b>Site Address:</b>	Land to the east of Layland's Green, Kintbury	<b>Development Potential:</b>	<a href="#">Approx 10 dwellings when considered as a combined site with KIN007 (0.2ha at 20dph)</a>

### Recommendation:

The site is recommended for allocation as part of a wider allocation with KIN007

### Justification:

The site is well related to the existing settlement and local services and facilities. [The site is not large enough to be allocated on its own but it has a very close relationship with KIN007 and together the sites have the potential for approximately 10 dwellings. Vehicular access from Layland's Green would need to be obtained through KIN006. Both sites are within the same land ownership which would assist with deliverability.](#)

[Whilst the site is within the AONB, a Landscape Sensitivity Assessment has been carried out that indicates that development on the site would be acceptable in landscape terms, subject to mitigation measures to ensure the protection and enhancement of existing landscape features.](#)

[The site has been identified by the Environment Agency as lying within a groundwater vulnerability zone. The site is also underlain by clay. As a result a Flood Risk Assessment \(FRA\) would be required to support a planning application, along with the implementation of appropriate flood risk mitigation measures.](#)

[The site is close to Kintbury Newt Ponds which hosts a large population of Great Crested Newts. An extended Phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. A Great Crested Newt survey will also be required to cover all ponds within 250m south and east of the site. Appropriate avoidance and mitigation measures would need to be implemented to ensure any protected species were not adversely affected.](#)

[There is suspected contamination at Kiln Farm due to the old brick and tile works and so a contamination assessment would be required.](#)

[The site is underlain with clay and so a methodology for foundation design would be required](#)

### Discussion:

#### Site Description:

The site is located to the south of Kintbury, [is well related to the existing settlement and is](#) located close to local services and facilities and open countryside.

#### Landscape:

The site is within the AONB. The Landscape [Sensitivity](#) Assessment (2011) indicates that development would be acceptable as long as the [boundary hedgerows and trees and the ditch which runs along the northern boundary were protected and enhanced.](#) ~~protection and enhancement measures as listed in the assessment are adhered to.~~

[Although not on KIN006, a TPO \(201/21/0849\) was placed on the woodland in the northern part of KIN007 on 11<sup>th</sup> November 2014](#)

#### Flood Risk:

The site is within Flood Zone 1. [A FRA and SuDS](#) would need to be provided.

[The site is shown on the Environment Agency's groundwater vulnerability map although we have no records of groundwater flooding at this location. The properties adjacent to the site are shown to be at risk of surface water flooding on the EA surface water flood map but it does not show any surface water run-off from the site. However, the surface water flood map is based on local topography and would not take account of potential flows from the accumulation of surface water due to underlying clay. Clay soil would mean foundations would need to be much deeper and include protection against clay](#)

## Site Selection – Site Commentary

heave and maybe suspended ground floors. Clay soil would also restrict the scope for sustainable drainage systems which would mean that surface water from the site would have to be piped directly into existing surface water drains. A methodology for foundation design should be submitted.

### Highways /Transport:

~~No specific comments have been made for this site. Comments made regarding to KIN007 are considered to be similar to this site. Traffic is not expected to have a significant impact on the wider highway network.~~

~~The site is close to Kintbury railway station which provides links to London and the west country. There is an infrequent bus service (2 hourly) linking Kintbury with Newbury and Hungerford. There are local opportunities for walking and cycling within the village.~~

~~Bus stops exist nearby that can be reached by pedestrians.~~

It is considered that an access with the appropriate 2.4 x 43 metre sight lines can be achieved from Layland's Green. A footway can also be continued southwards on the eastern side of Layland's Green. The traffic generated is not expected to have a significant impact on the wider highway network. Most of the traffic to and from the site will travel north to and from Burtons Hill and Newbury Street. The Burtons Hill / Newbury Street junction would seem acceptable with regards to sight lines. Sight lines are however restricted to the right at the Newbury Street / Station Road junction. The site is close to Kintbury railway station which provides links to London and the west country. There is an infrequent bus service (2 hourly) linking Kintbury with Newbury and Hungerford. Bus service number 3 passes nearby along Holt Road and Newbury Street providing up to five services each way between Newbury and Hungerford with bus stops existing along Newbury Street and Holt Road. Kintbury train station is 1,240 metres walking distance from the site.

There are narrow intermittent pavements through the village. Footways exist along Burtons Hill up to Newbury Street. A footway exists along most, but not all of Newbury Street that would link into Kintbury village centre. Although footways do not exist along all of Newbury Street, in rural areas footways are often not provided. Also along Newbury Street, the road width and parked cars do ensure that vehicle speeds are kept lower that reduces concerns on safety for pedestrians. There is an alternative pedestrian route through Gainsborough Avenue and Hop Gardens onto Newbury Street. However the route is not a right of way through the GP surgery car park, but it should always be available.

### Ecology:

The site lies very close to a Local Wildlife Site which is also a BBOWT nature reserve (Kintbury Newt Ponds) and which hosts a large breeding population of Great Crested Newts. The Council's Ecologist does not consider that the fields are BAP habitat, but, being grass, could be a good Barn Owl feeding area. Local environmental records indicate that Great Crested Newts are using the area around the site so it may be possible that they are also be using the site in their terrestrial phase. An extended Phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. A Great Crested Newt survey will also be required to cover all ponds within 250m south and east of the site. Appropriate avoidance and mitigation measures would need to be implemented to ensure any protected species were not adversely affected.

The pit in the north of KIN007 should be developed into a permanent pond as part of a SUDs scheme and a corridor left for newts along the northern boundary.

The site is within a Biodiversity Opportunity Area and so the Council will pursue net gains for biodiversity in accordance with Core Strategy Policy CS17. The site is within 250m of a great crested newt site and a Local Wildlife Site. A great crested newt survey would be required.

### Archaeology:

No known archaeological issues.

### Education:

Local primary school provision is close to or at capacity. No comments made regarding secondary school provision.

### Environmental Health:

No known air, noise or contamination issues. There is suspected contamination at Kiln Farm due to the old brick and tile works and so a contamination assessment would be required.

## Site Selection – Site Commentary

### Minerals and Waste:

No known mineral or waste issues. [There is an area of former clay workings to the south and south east of the site](#)

### Land use planning consultation zone:

The site is not within an AWE consultation zone

### Environment Agency:

~~EA not consulted on this site. Comments made on KIN007 are considered to be similar.~~ The site is in SPZ2, with a high risk of contamination to groundwater. [The EA has no in principle objections to development in SPZs.](#)

### Thames Water:

~~TW not consulted on this site~~ [Thames Water has not raised any concerns regarding water supply/waste water services for this site.](#)

### Parish Council:

The Parish Council noted that this site is situated on old clay workings and many of the houses in the neighbouring residential area have had to be underpinned due to subsidence. Drainage is seen as an issue as there are springs at the top of the hill and the area is very boggy. The Parish Council considers that some infill development in this area would not be completely inappropriate, although they would not like to see a large development. [At the preferred options consultation the Parish Council added that the site provides a habitat for Great Crested Newts, expressed concerns over viability and provision of affordable housing and also the impact on the village of additional traffic.](#)

### Preferred options Consultation – key issues

17 responses were received for the site. The main issues raised were regarding:

- [Principle of development](#)
- [Flooding](#)
- [Biodiversity](#)
- [Highways and road safety](#)
- [Infrastructure](#)

[For the consultation responses and the Council's response, please see the Statement of Consultation](#)

### SA/SEA:

The SA/SEA indicates a predominantly neutral sustainability effect. There are no significant sustainability issues with this site. The site is well related to the existing settlement close to local services and facilities with good opportunities for walking and cycling, giving a positive impact on sustainability. [Development on this site also has the potential to improve the built environment through a well designed scheme.](#)

~~The site is within the AONB close to a site with great crested newts, there is potential for a negative impact on environmental sustainability, unless appropriate mitigation measures are implemented as set out in the assessments.~~

[There is the potential for a negative impact on environmental sustainability due to the site's location within the AONB. However, a LSA has been carried out which concludes that the site has potential to deliver housing without causing harm to the natural beauty and special qualities of the AONB subject to a number of mitigation measures. As the site is close to a site with Great Crested Newts, there is also potential for a negative impact on environmental sustainability, unless appropriate avoidance and mitigation measures are implemented. Mitigation measures would also need to be put into place to remove any potential negative impacts on environmental sustainability for the woodland TPO on KIN007.](#)

[There is the potential for a negative impact on environmental sustainability unless the site is developed in line with the outcome of the contamination assessment.](#)

[Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.](#)

[The development of the site for housing would have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

## Site Selection – Site Commentary

**Proposed development (from SHLAA submission):**

The site was promoted as one of a number of sites in this area of Kintbury, promoted as a whole and individually. Development would be in a range of dwellings and include affordable housing.

# Site Selection – Site Assessment

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Kintbury	<b>Parish:</b>	Kintbury

## Summary of Site Assessment

### Key Issues:

- AONB
- [The site is being treated as part of the wider allocation with KIN006](#)
- [The site lies within the EA's groundwater vulnerability zone. The site has underlying clay. A FRA required.](#)
- [The site is close to a Great Crested Newt breeding site. An extended Phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. A Great Crested Newt survey will also be required to cover all ponds within 250m south and east of the site. Appropriate avoidance and mitigation measures would need to be implemented to ensure any protected species were not adversely affected.](#)
- [A TPO was placed on the woodland in the northern part of the site in November 2014](#)
- [Overhead power lines](#)
- [There is suspected contamination at Kiln Farm due to brick and tile works. A contamination assessment required.](#)
- [As the site is underlain with clay a methodology for foundation design would be required](#)

## Site Assessment

<b>Parish Council consultation response:</b>	The Parish Council noted that this site is situated on old clay workings and many of the houses in the neighbouring residential area have had to be underpinned due to subsidence. Drainage is seen as an issue as there are springs at the top of the hill and the area is very boggy. The Parish Council considers that some infill development in this area would not be completely inappropriate, although they would not like to see a large development. Access could be taken from Craven Close; although on street parking is common on this road, which could be an issue. <a href="#">At the preferred options consultation the Parish Council added that the site provides a habitat for Great Crested Newts, expressed concerns over viability and provision of affordable housing and also the impact on the village of additional traffic.</a>

	Critical Drainage Area	N	
Contamination / pollution	Air Quality	N	
	Contaminated Land	N <u>U</u>	<a href="#">Suspected contamination at Kiln Farm due to brick and tile works. A contamination assessment required.</a>
	Other	N	
Highways / Transport	Access issues	N	Access could be achieved from Craven Close. Consideration of exiting on street parking may be required. <a href="#">It is considered that an access with the appropriate 2.4 x 43 metre sight lines can be achieved from Layland's Green. A footway can also be continued southwards on the eastern side of Layland's Green.</a>
	Highway network suitability	Y <u>N</u>	<a href="#">Development is not anticipated to have</a> There would not be a significant wider traffic impact on the wider highway network. <a href="#">Most of the traffic to and from the site will travel north to and from Burtons Hill and Newbury Street. The Burtons Hill / Newbury Street junction would seem acceptable with regards to sight lines. Sight lines are however restricted to the right at the Newbury Street / Station Road junction.</a>
	Public Transport network	Y	Kintbury is serviced by a railway line, and infrequent bus services (2 hourly) between Newbury and Hungerford. <a href="#">Bus service number 3 passes nearby along Holt Road and Newbury Street providing up to five services each way between Newbury and Hungerford with bus stops existing along Newbury Street and Holt Road. Kintbury train station is 1,240 metres walking distance from the site.</a>
	Footways/Pavements	U	There are narrow intermittent pavements through the village. <a href="#">Footways exist along Burtons Hill up to Newbury Street. A footway exists along most, but not all of Newbury Street that would link into Kintbury village centre. Although footways do not exist along all of Newbury Street, in rural areas footways are often not provided. Also along Newbury Street, the road width and parked cars do ensure that vehicle speeds are kept lower that reduces concerns on safety for pedestrians. There is an alternative pedestrian route through Gainsborough Avenue and Hop Gardens onto Newbury Street. However the route is not a right of way through the GP surgery car park, but it should always be available.</a>

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site has easy access to the countryside, and is close to local services and facilities which would enable walking and cycling		The site is close to local services and facilities including a local leisure centre and playing field meaning that development of the site is likely to have a positive impact on social and environmental sustainability
	Will it increase opportunities for access to sports facilities?	+	The site is <del>relatively</del> close to the leisure centre (Jubilee Leisure Centre and playing fields)		
	Will it protect and enhance green infrastructure across the district?	0	Unlikely to have an impact		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The site is close to local services and facilities within the village. The village is served by a railway station and a 2 hourly bus service between Newbury and Hungerford		The proximity to local services and facilities means that the site should have a positive economic sustainability. In addition employment opportunities can be accessed via rail
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	Within the village there are a number of opportunities for walking and cycling. There are public transport opportunities within the village – there is a 2 hourly bus service and railway station. However, the degree of car dependency is still likely to be high.		Kintbury does offer travel choices given the proximity of the railway station. There are opportunities for walking and cycling and a bus service to and from the village, all of which have a positive impact on sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity	?	<a href="#">The site lies very close to a Local Wildlife Site which is also a BBOWT</a>	<a href="#">An extended Phase 1 habitat survey required. In addition, all</a>	While the site is very small, there would be potential for

	water quality?		<a href="#">(SPZ2) with a high risk of contamination to groundwater</a> <del>Unlikely to have an impact</del>	<a href="#">objections to development in SPZs.</a>	<del>have an impact on any element of sustainability.</del>
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Site is greenfield		The greenfield nature of the site means that there could be a negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques <a href="#">and the promotion of alternative modes of transport</a> , development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	0-?	<a href="#">The site lies within the EA's groundwater vulnerability zone although there is no record of groundwater flooding on the site itself. The underlying clay is likely to mean an engineered drainage solution will be required to manage surface water drainage.</a> is not at risk from flooding	<a href="#">A FRA and appropriate flood mitigation measures including SuDS would need to be provided. A methodology for foundation design would need to be provided.</a>	<a href="#">A FRA will highlight the mitigation measures required to minimise the risk of flooding. Flooding can have a negative impact on all elements of sustainability unless appropriate mitigation measures can be put in place.</a> Unlikely to have an impact on any element of sustainability.
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		<a href="#">the longer term.</a>
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

The site is well related to the exiting settlement close to local services and facilities with good opportunities for walking and cycling, giving a positive impact on sustainability. [Development on this site has the potential to improve the built environment through a well designed scheme.](#)

[There is also the potential for a negative impact on environmental sustainability due to the site's location is within the AONB. However, a LSA has been carried out which concludes that the site has potential to deliver housing without causing harm to the natural beauty and special qualities of the AONB subject to a number of mitigation measures. As the site is close to a site with Great Crested Newts, there is therefore also potential for a negative impact on environmental sustainability, unless appropriate avoidance and mitigation measures are implemented as set out in the assessments. Mitigation measures would also need to be put into place to remove any potential negative impacts on environmental sustainability for the woodland TPO on KIN007.](#)

[There is the potential for a negative impact on environmental sustainability unless the site is developed in line with the outcome of the contamination assessment.](#)

[Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.](#)

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB - Kintbury

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Kintbury	<b>Parish:</b>	Kintbury
----------------------	------	--------------------	----------	----------------	----------

<b>Site ID:</b>	KIN007	<b>Site Address:</b>	Land to the east of Layland's Green, Kintbury	<b>Development Potential:</b>	9 dwellings (0.44ha at 20dph) <a href="#">Approx 10 dwellings when considered as a combined site with KIN006</a>
-----------------	--------	----------------------	---	-------------------------------	---

**Recommendation:**

The site is recommended for allocation as part of a wider allocation with KIN006

**Justification:**

The site is well related to the existing settlement and local services and facilities. [The site has a very close relationship with KIN006 and together the sites have the potential for approximately 10 dwellings. Vehicular access from Layland's Green would need to be obtained through KIN006. Both sites are within the same land ownership which would assist with deliverability.](#)

[Whilst the site is within the AONB, a Landscape Sensitivity Assessment has been carried out that indicates that development on the site would be acceptable in landscape terms, subject to mitigation measures to ensure the protection and enhancement of existing landscape features.](#)

[The site has been identified by the Environment Agency as lying within a groundwater vulnerability zone. The site is also underlain by clay. As a result a Flood Risk Assessment \(FRA\) would be required to support a planning application, along with the implementation of appropriate flood risk mitigation measures.](#)

[The site is close to Kintbury Newt Ponds which hosts a large population of Great Crested Newts. An extended Phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. A Great Crested Newt survey will also be required to cover all ponds within 250m south and east of the site. Appropriate avoidance and mitigation measures would need to be implemented to ensure any protected species were not adversely affected.](#)

[TPO \(201/21/0849\) was placed on the woodland in the northern part of the site on 11<sup>th</sup> November 2014. This would need to be protected as part of any development and would mean that access to the site would be through KIN006 from Layland's Green.](#)

[There is suspected contamination at Kiln Farm due to the old brick and tile works and so a contamination assessment would be required.](#)

[The site is underlain with clay and so a methodology for foundation design would be required](#)

**Discussion:**

**Site Description:**

The site is located to the south of Kintbury, close to local services and facilities including open countryside. [Overhead cables cross the site.](#)

**Landscape:**

The site is within the AONB. The Landscape [Sensitivity](#) Assessment (2011) indicates that development would be acceptable as long as the [boundary hedgerows and trees and the ditch which runs along the northern boundary were protected and enhanced.](#) ~~protection and enhancement measures as listed in the assessment are adhered to.~~

[A TPO \(201/21/0849\) was placed on the woodland in the northern part of the site on 11<sup>th</sup> November 2014 which means that access to the site would need to be through KIN006 from Layland's Green.](#)

**Flood Risk:**

The site is within Flood Zone 1. [The site is shown on the Environment Agency's groundwater vulnerability map. A FRA and SuDS](#) would need to be provided.

[The site is shown on the Environment Agency's groundwater vulnerability map although we have no records of groundwater flooding at this location. The properties adjacent to the site are shown to be at risk](#)

## Site Selection – Site Commentary

of surface water flooding on the EA surface water flood map but it does not show any surface water run-off from the site. However, the surface water flood map is based on local topography and would not take account of potential flows from the accumulation of surface water due to underlying clay. Clay soil would mean foundations would need to be much deeper and include protection against clay heave and maybe suspended ground floors. Clay soil would also restrict the scope for sustainable drainage systems which would mean that surface water from the site would have to be piped directly into existing surface water drains. A methodology for foundation design should be submitted.

### Highways /Transport:

It is considered that an access with the appropriate 2.4 x 43 metre sight lines can be achieved from Layland's Green. A footway can also be continued southwards on the eastern side of Layland's Green. The traffic generated is not expected to have a significant impact on the wider highway network. Most of the traffic to and from the site will travel north to and from Burtons Hill and Newbury Street. The Burtons Hill / Newbury Street junction would seem acceptable with regards to sight lines. Sight lines are however restricted to the right at the Newbury Street / Station Road junction. The site is close to Kintbury railway station which provides links to London and the west country. There is an infrequent bus service (2 hourly) linking Kintbury with Newbury and Hungerford. Bus service number 3 passes nearby along Holt Road and Newbury Street providing up to five services each way between Newbury and Hungerford with bus stops existing along Newbury Street and Holt Road. Kintbury train station is 1,240 metres walking distance from the site.

~~There are local opportunities for walking and cycling within the village.~~ There are narrow intermittent pavements through the village. Footways exist along Burtons Hill up to Newbury Street. A footway exists along most, but not all of Newbury Street that would link into Kintbury village centre. Although footways do not exist along all of Newbury Street, in rural areas footways are often not provided. Also along Newbury Street, the road width and parked cars do ensure that vehicle speeds are kept lower that reduces concerns on safety for pedestrians. There is an alternative pedestrian route through Gainsborough Avenue and Hop Gardens onto Newbury Street. However the route is not a right of way through the GP surgery car park, but it should always be available.

~~Bus stops exist nearby that can be reached by pedestrians.~~

### Ecology:

The site lies very close to a Local Wildlife Site which is also a BBOWT nature reserve (Kintbury Newt Ponds) and which hosts a large breeding population of Great Crested Newts. The Council's Ecologist does not consider that the fields are BAP habitat, but, being grass, could be a good Barn Owl feeding area. Local environmental records indicate that Great Crested Newts are using the area around the site so it may be possible that they are also be using the site in their terrestrial phase. An extended Phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. A Great Crested Newt survey will also be required to cover all ponds within 250m south and east of the site. Appropriate avoidance and mitigation measures would need to be implemented to ensure any protected species were not adversely affected.

The pit in the north of the site (in KIN007) should be developed into a permanent pond as part of a SuDS scheme and a corridor left for newts along the northern boundary.

The site is within a Biodiversity Opportunity Area and so the Council will pursue net gains for biodiversity in accordance with Core Strategy Policy CS17. The site is within 250m of a great crested newt site and a Local Wildlife Site. A great crested newt survey would be required.

### Archaeology:

No known archaeological issues.

### Education:

Local primary school provision is close to or at capacity. No comments made regarding secondary school provision.

### Environmental Health:

~~No known air or noise or contamination issues.~~ There is suspected contamination at Kiln Farm due to the old brick and tile works and so a contamination assessment would be required.

### Minerals and Waste:

No known mineral or waste issues. There is an area of former clay workings to the south and south east of the site

## Site Selection – Site Commentary

### Land use planning consultation zone:

The site is not within an AWE consultation zone

### Environment Agency:

~~No comments made on this site. Comments made on KIN007 are considered to be similar.~~ The site is in SPZ2, with a high risk of contamination to groundwater. [The EA has no in principle objections to development in SPZs.](#)

### Thames Water:

~~No comments made on this site.~~ [Thames Water has not raised any concerns regarding water supply/waste water services for this site.](#)

### Parish Council:

The Parish Council noted that this site is situated on old clay workings and many of the houses in the neighbouring residential area have had to be underpinned due to subsidence. Drainage is seen as an issue as there are springs at the top of the hill and the area is very boggy. The Parish Council considers that some infill development in this area would not be completely inappropriate, although they would not like to see a large development. Access could be taken from Craven Close; although on street parking is common on this road, which could be an issue. [At the preferred options consultation the Parish Council added that the site provides a habitat for Great Crested Newts, expressed concerns over viability and provision of affordable housing and also the impact on the village of additional traffic.](#)

### Preferred options Consultation – key issues

[17 responses were received for the site. The main issues raised were regarding:](#)

- [Principle of development](#)
- [Flooding](#)
- [Biodiversity](#)
- [Highways and road safety](#)
- [Infrastructure](#)

[For the consultation responses and the Council's response, please see the Statement of Consultation](#)

### SA/SEA:

The SA/SEA indicates a predominantly neutral sustainability effect. There are no significant sustainability issues with this site. The site is well related to the existing settlement close to local services and facilities with good opportunities for walking and cycling, giving a positive impact on sustainability. [Development on this site also has the potential to improve the built environment through a well designed scheme.](#)

~~The site is within the AONB close to a site with great crested newts, there is potential for a negative impact on environmental sustainability, unless appropriate mitigation measures are implemented as set out in the assessments.~~

[There is the potential for a negative impact on environmental sustainability due to the site's location within the AONB. However, a LSA has been carried out which concludes that the site has potential to deliver housing without causing harm to the natural beauty and special qualities of the AONB subject to a number of mitigation measures. As the site is close to a site with Great Crested Newts, there is also potential for a negative impact on environmental sustainability, unless appropriate avoidance and mitigation measures are implemented. Mitigation measures would also need to be put into place to remove any potential negative impacts on environmental sustainability for the woodland TPO on KIN007.](#)

[There is the potential for a negative impact on environmental sustainability unless the site is developed in line with the outcome of the contamination assessment.](#)

[Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.](#)

[The development of the site for housing would have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### Proposed development (from SHLAA submission):

The site was promoted as one of a number of sites in this area of Kintbury, promoted as a whole and individually. Development would be in a range of dwellings and include affordable housing.

# Site Selection – Site Assessment

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Kintbury	<b>Parish:</b>	Kintbury
----------------------	------	--------------------	----------	----------------	----------

<b>Site ID:</b>	KIN008	<b>Site Address:</b>	Land to the east of Layland Green and south of Holt Road, Kintbury
-----------------	--------	----------------------	--

<b>Development Potential:</b>	13 dwellings (0.64ha at 20dph)	<b>SHLAA Assessment:</b>	Potentially Developable
-------------------------------	--------------------------------	--------------------------	-------------------------

## Summary of Site Assessment

### Key Issues:

- AONB – only a small part of the site is considered suitable for development
- [Only a narrow wedge at the western end of the site from the eastern corner of KIN009 to the edge of the settlement on Holt Road should be considered in conjunction with KIN006, KIN007 and KIN009](#)
- Flood risk (ground and surface water)
- [The site lies within a groundwater emergence zone and an EA groundwater vulnerability zone. A FRA required.](#)
- [The site is close to a Great Crested Newt breeding site. An extended Phase 1 habitat survey required with an additional Great Crested Newt survey](#)

## Site Assessment

<b>Parish Council consultation response:</b>	Parish Council <a href="#">does</a> not wish to see the village extended to the east / south east.

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will it conserve and enhance the significance of the District's heritage assets?	0	There are no heritage assets on or near to the site		
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact		Development of the site is unlikely to have an impact on any element of sustainability.
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact		
	Will there be an impact on soil quality?	0	Unlikely to have an impact		
	Will there be an impact on water quality?	0?	<a href="#">It is within a Source Protection Zone (SPZ2) with a high risk of contamination to groundwater</a> <del>Unlikely to have an impact</del>	<a href="#">The EA has no in principle objections to development in SPZs.</a>	
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Site is greenfield		The greenfield nature of the site means that there could be a negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques <a href="#">and the promotion of alternative modes of transport</a> , development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	-	<a href="#">The site lies within a groundwater emergence zone. The site lies within the EA's groundwater vulnerability zone. The site is at risk from surface water and groundwater flooding</a>	A FRA and <a href="#">appropriate flood mitigation measures including SuDS</a> would need to be provided.	<a href="#">A FRA will highlight the mitigation measures required to minimise the risk of flooding.</a> Flooding can have a negative impact on all elements of sustainability <a href="#">unless</a>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
					<a href="#">appropriate mitigation measures can be put in place.</a>
<a href="#">11. To ensure a strong, diverse and sustainable economic base</a>	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<a href="#">0</a>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<a href="#">0</a>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<a href="#">0</a>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

The site is close to local services and facilities with opportunities for walking and cycling, which give a positive impact on sustainability.

The site is within the AONB, the landscape assessment indicates that only a small part of the site would be suitable for development without a significant impact on the character of the landscape and therefore, have a negative impact on environment sustainability. Mitigation measures would be required on the small area of the site to ensure there wasn't a negative impact on sustainability. The site is at risk from ground and surface water flooding, without appropriate mitigation, this would have a negative impact on all elements of sustainability.

[There is also the potential for a negative impact on environmental sustainability due to the site's location within the AONB. A LSA has been carried out which concludes that although the western part of the site is well connected to the settlement edge, development of the whole site would be out of scale with most of Kintbury and would constitute an unacceptable expansion of the settlement.](#)

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

As the site is close to a site with Great Crested Newts, there is also potential for a negative impact on environmental sustainability, unless appropriate avoidance and mitigation measures are implemented.

The site lies within a groundwater emergence zone. Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.

The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB - Kintbury

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Kintbury	<b>Parish:</b>	Kintbury
<b>Site ID:</b>	KIN008	<b>Site Address:</b>	Land to the east of Laylands Green and south of Holt Road, Kintbury	<b>Development Potential:</b>	13 dwellings (0.64ha at 20dph)

### Recommendation:

The site is not recommended for allocation

### Justification:

[The western part of the site is well connected to the settlement edge but development of the whole site would be out of scale with most of Kintbury.](#) Only a very small area of the site is suitable for development in landscape terms. The site would need to be developed alongside other sites to improve its relationship to the existing settlement and gain access.

Other sites in Kintbury are considered more appropriate for development.

[The site has been identified by the Environment Agency as lying within a groundwater emergence zone. As a result a Flood Risk Assessment \(FRA\) would be required to support a planning application, along with the implementation of appropriate flood risk mitigation measures.](#)

[The site is close to Kintbury Newt Ponds which hosts a large population of Great Crested Newts. An extended Phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. A Great Crested Newt survey will also be required. Appropriate avoidance and mitigation measures would need to be implemented to ensure any protected species were not adversely affected.](#)

### Discussion:

#### Site Description:

The site is located to the south east of Kintbury, close to local services and facilities including open countryside.

#### Landscape:

The site is located in the AONB. The Landscape Assessment indicates that [the western part of the site is well connected to the settlement edge but development of the whole site would be out of scale with most of Kintbury. Only a narrow wedge at the western end of the site from the eastern corner of KIN009 to the edge of the settlement on Holt Road should be considered in conjunction with KIN006, KIN007 and KIN009.](#) The Landscape Assessment also sets out the mitigation measures that would be required should development take place.

#### Flood Risk:

The site is in flood zone 1, but at risk from ground and surface water flooding. [The site lies within a groundwater emergence zone.](#) A FRA would be required and SuDS would need to be provided.

#### Highways /Transport:

Access to the site would require adjacent sites to be developed.

Considering the expected size of the development, no significant impact on the wider highway network is anticipated.

The site is close to Kintbury railway station which provides links to London and the west country. Bus service number 3 (2 hourly) passes nearby along Holt Road and Newbury Street providing up to five services each way between Newbury and Hungerford. Bus stops exist nearby that can be reached by pedestrians.

There are local opportunities for walking and cycling within the village. Existing footways are available nearby that the site can connect onto.

#### Ecology:

~~Potential for reptiles on the site. A reptile survey would be required.~~

## Site Selection – Site Commentary

~~The site is within a Biodiversity Opportunity Area.~~

[The site lies close to a Local Wildlife Site which is also a BBOWT nature reserve \(Kintbury Newt Ponds\) and which hosts a large breeding population of Great Crested Newts. An extended Phase 1 habitat survey would be required and an additional survey for Great Crested Newts.](#)

[A very small part of the site is within a Biodiversity Opportunity Area and so the Council will pursue net gains for biodiversity in accordance with Core Strategy Policy CS17.](#)

### **Archaeology:**

No known archaeology issues

### **Education:**

Local primary provision is close to or at capacity. No comments made about secondary school provision.

### **Environmental Health:**

No known air, noise or contamination issues.

### **Minerals and Waste:**

No known mineral or waste issues

### **Land use planning consultation zone:**

The site is not within an AWE consultation zone

### **Environment Agency:**

~~No specific comments have been made on this site.~~ [The site is in SPZ2, with a high risk of contamination to groundwater. The EA has no in principle objections to development in SPZs](#)

### **Thames Water:**

No comments have been made on this site

### **Parish Council:**

Parish Council do not wish to see the village extended to the east / south east.

### **[Preferred options Consultation – key issues](#)**

[1 response was received for the site. The main issue raised was regarding:](#)

- [Principle of development](#)

[For the consultation responses and the Council's response, please see the Statement of Consultation](#)

### **SA/SEA:**

There are no significant sustainability issues with this site. The site is close to local services and facilities with opportunities for walking and cycling, which give a positive impact on sustainability. ~~The site is within the AONB, the Landscape Assessment indicates that only a small part of the site would be suitable for development without a significant impact on the character of the landscape and therefore, have a negative impact on environment sustainability. Mitigation measures would be required on the small area of the site to ensure there wasn't a negative impact on sustainability. The site is at risk from ground and surface water flooding, without appropriate mitigation this would have a negative impact on all elements of sustainability.~~

[There is also the potential for a negative impact on environmental sustainability due to the site's location within the AONB. A LSA has been carried out which concludes that although the western part of the site is well connected to the settlement edge, development of the whole site would be out of scale with most of Kintbury and would constitute an unacceptable expansion of the settlement.](#)

[As the site is close to a site with Great Crested Newts, there is also potential for a negative impact on environmental sustainability, unless appropriate avoidance and mitigation measures are implemented. The site lies within a groundwater emergence zone. Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.](#)

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

## Site Selection – Site Commentary

**Proposed development (from SHLAA submission):**

The site was promoted as one of a number of sites in this area of Kintbury, promoted as a whole and individually. Development would be in a range of dwellings and include affordable housing.

# Site Selection – Site Assessment

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Kintbury	<b>Parish:</b>	Kintbury
----------------------	------	--------------------	----------	----------------	----------

<b>Site ID:</b>	KIN009	<b>Site Address:</b>	Land to the east of Layland Green, Kintbury
-----------------	--------	----------------------	---

<b>Development Potential:</b>	16 dwellings (0.8ha at 20dph)	<b>SHLAA Assessment:</b>	Potentially Developable
-------------------------------	-------------------------------	--------------------------	-------------------------

## Summary of Site Assessment

- Key Issues:
- AONB
  - Flood risk (ground water)
  - [Site is not that well related to the existing settlement without development taking place on adjacent sites](#)
  - [Access would need to be achieved through KIN006 and 007 from Layland's Green](#)
  - [There is suspected contamination at Kiln Farm due to brick and tile works. A contamination assessment required.](#)
  - [Part of the site lies within a groundwater emergence zone and an EA groundwater vulnerability zone. A FRA required.](#)
  - [As the site is underlain with clay a methodology for foundation design would be required](#)

## Site Assessment

<b>Parish Council consultation response:</b>	The Parish Council noted that this site is situated on old clay workings and many of the houses in the neighbouring residential area have had to be underpinned due to subsidence. Drainage is seen as an issue as there are springs at the top of the hill and the area is very boggy. The Parish Council considers that some infill development in this area would not be completely inappropriate, although they would not like to see a large development.

	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	0	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		<a href="#">business development in the longer term.</a>
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects. The site is close to local services and facilities with opportunities for walking and cycling, giving a positive impact on sustainability. [Development on this site has the potential to improve the built environment through a well designed scheme.](#)

~~The site is located in the AONB close to a site with great crested newts, without appropriate mitigation measures development could have a negative impact on environmental sustainability. The site is at risk from groundwater flooding. Flood risk can have a negative impact on all elements of sustainability unless appropriate mitigation measures are provided.~~

[There is also the potential for a negative impact on environmental sustainability due to the site's location](#) is within the AONB. [However, a LSA has been carried out which concludes that the site has potential to deliver housing without causing harm to the natural beauty and special qualities of the AONB subject to a number of mitigation measures.](#) As the site is close to a site with Great Crested Newts, there is therefore [also](#) potential for a negative impact on environmental sustainability, unless appropriate [avoidance and](#) mitigation measures are implemented ~~as set out in the assessments.~~

[Part of the site is within a groundwater emergence zone. Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.](#)

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB - Kintbury

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Kintbury	<b>Parish:</b>	Kintbury
<b>Site ID:</b>	KIN009	<b>Site Address:</b>	Land to the east of Layland Green, Kintbury	<b>Development Potential:</b>	16 dwellings (0.8ha at 20dph)

### Recommendation:

The site is not recommended for allocation

### Justification:

The site would need to be allocated and developed as part of a wider allocation to improve the site's relationship to the existing settlement [and gain access](#). Development of a larger group of sites would be out of keeping with the role and function of Kintbury as a service village. [Other sites in Kintbury are considered more appropriate for development](#).

[Whilst the site is within the AONB, a Landscape Sensitivity Assessment has been carried out that indicates that development on the site would be acceptable in landscape terms, subject to mitigation measures to ensure the protection and enhancement of existing landscape features.](#)

[A small part of the north eastern area of the site lies within a groundwater emergence zone. The site has been identified by the Environment Agency as lying within a groundwater vulnerability zone. As a result a Flood Risk Assessment \(FRA\) would be required to support a planning application, along with the implementation of appropriate flood risk mitigation measures.](#)

[The site is close to Kintbury Newt Ponds which hosts a large population of Great Created Newts. An Extended Phase 1 Habitat Survey would therefore be required together with a survey of all ponds within 250m to the south and east of the site for Great Created Newts.](#)

[There is suspected contamination at Kiln Farm due to the old brick and tile works and so a contamination assessment would be required.](#)

[The site is underlain with clay and so a methodology for foundation design would be required](#)

### Discussion:

#### Site Description:

The site is located to the south of Kintbury, close to local services and facilities, including open countryside.

#### Landscape:

The site is located in the AONB. The Landscape [Sensitivity](#) Assessment (2011) indicates that development on the site would be appropriate as long as the mitigation measures set out in the assessment are adhered to.

#### Flood Risk:

The site is in flood zone [1](#), but [a small part of the north eastern area of the site lies within the in a groundwater emergence zone](#). A FRA would be required and SuDS would need to be provided. [Clay soil would mean foundations would need to be much deeper and include protection against clay heave and maybe suspended ground floors. Clay soil would also restrict the scope for sustainable drainage systems which would mean that surface water from the site would have to be piped directly into existing surface water drains. A methodology for foundation design should be submitted.](#)

#### Highways /Transport:

Access to the site would require adjacent sites to be developed.

Considering the expected size of the development, no significant impact on the wider highway network is anticipated.

The site is close to Kintbury railway station which provides links to London and the west country. Bus service number 3 (2 hourly) passes nearby along Holt Road and Newbury Street providing up to five services each way between Newbury and Hungerford. Bus stops exist nearby that can be reached by pedestrians.

## Site Selection – Site Commentary

There are local opportunities for walking and cycling within the village. Existing footways are available nearby that the site can connect onto.

### Ecology:

~~Within 250m of a great crested newt site BAP habitat. A great crested newt survey would be required.~~  
The site lies close to a Local Wildlife Site which is also a BBOWT nature reserve (Kintbury Newt Ponds) and which hosts a large breeding population of Great Crested Newts. An extended Phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. A Great Crested Newt survey will also be required. Appropriate avoidance and mitigation measures would need to be implemented to ensure any protected species were not adversely affected.

The site is within a Biodiversity Opportunity Area and so the Council will pursue net gains for biodiversity in accordance with Core Strategy Policy CS17.

### Archaeology:

No known archaeological issues

### Education:

Local primary school provision is close to or at capacity. No comments made on secondary school provision.

### Environmental Health:

~~No known air or noise or contamination issues.~~ There is suspected contamination at Kiln Farm due to the old brick and tile works and so a contamination assessment would be required.

### Minerals and Waste:

No known mineral or waste issues

### Land use planning consultation zone:

The site is not within an AWE consultation zone

### Environment Agency:

No specific comments made on this site. The site is in SPZ2. The EA has no in principle objections to development in SPZs.

### Thames Water:

No comments made on this site

### Parish Council:

The Parish Council noted that this site is situated on old clay workings and many of the houses in the neighbouring residential area have had to be underpinned due to subsidence. Drainage is seen as an issue as there are springs at the top of the hill and the area is very boggy. The Parish Council considers that some infill development in this area would not be completely inappropriate, although they would not like to see a large development.

### Preferred options Consultation – key issues

1 response was received for the site. The main issue raised was regarding:

- Principle of development

For the consultation responses and the Council's response, please see the Statement of Consultation

### SA/SEA:

~~The site is located in the AONB close to a site with great created newts, without appropriate mitigation measures development could have a negative impact on environmental sustainability. The site is at risk from groundwater flooding. Flood risk can have a negative impact on all elements of sustainability unless appropriate mitigation measures are provided.~~

The SA/SEA indicates a predominantly neutral impact. There are no significant sustainability issues with this site. The site is close to local services and facilities with opportunities for walking and cycling, giving a positive impact on sustainability. Development on the site has the potential to improve the built environment through a well designed scheme. There is also the potential for a negative impact on environmental sustainability due to the site's location within the AONB. However, a LSA has been carried out which concludes that the site has potential to deliver housing without causing harm to the natural beauty and special qualities of the AONB subject to a number of mitigation measures. As the site is close to a site with

## Site Selection – Site Commentary

Great Crested Newts, there is also potential for a negative impact on environmental sustainability, unless appropriate avoidance and mitigation measures are implemented. Part of the site is within a groundwater emergence zone. Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.

**Proposed development (from SHLAA submission):**

The site was promoted as one of a number of sites in this area of Kintbury, promoted as a whole and individually. Development would be in a range of dwellings and include affordable housing.

## Site Selection – Site Assessment

<b>Spatial Area</b>	AONB	<b>Settlement:</b>	Kintbury	<b>Parish:</b>	Kintbury
---------------------	------	--------------------	----------	----------------	----------

<b>Site ID:</b>	KIN010	<b>Site Address:</b>	Land to the east of Layland Green, Kintbury
-----------------	--------	----------------------	---

<b>Development Potential:</b>	49 dwellings (2.45ha at 20dph)	<b>SHLAA Assessment:</b>	Not currently developable
-------------------------------	--------------------------------	--------------------------	---------------------------

### Summary of Site Assessment

Key Issues:

- [Poor](#) relationship to [existing](#) settlement – site is not adjacent to the settlement without other sites being developed
- [Potential impact on the natural beauty and special qualities of the AONB](#)

### Site Assessment

<b>Parish Council consultation response:</b>	Parish Council noted that this site is situated on old clay workings and many of the houses in the neighbouring residential area have had to be underpinned due to subsidence. Drainage is seen as an issue as there are springs at the top of the hill and the area is very boggy. The Parish Council do not want to see the village extended to the east / south east.

## Summary of Site Assessment

Key Issues:	<ul style="list-style-type: none"> <li>- AONB</li> <li>- Significant Highway concerns</li> <li>- Flood risk (groundwater)</li> <li>- <a href="#">Only part of the site (the northern part - as submitted) would be considered suitable for potential development</a></li> <li>- <a href="#">The site lies within a groundwater emergence zone and an EA groundwater vulnerability zone. A FRA required.</a></li> <li>- <a href="#">Sight lines are poor at the Inkpen Road/The Haven junction. If the required visibility splays can be achieved from land within Sovereign's control then this issue can be resolved.</a></li> <li>- <a href="#">Access to the site from The Haven is proposed through an area which currently provides access to a set of garages. If any of these garages are to be removed then this provision will need to be replaced. This may reduce the potential capacity of the site.</a></li> <li>- Although the Inkpen Road / High Street junction is restricted regarding width and sight lines and extensive on street car parking within the High Street also limits potential for additional traffic flow, <a href="#">it is not considered that the increase in traffic at this junction (in relation to all the existing traffic using this junction) is of significant concern.</a></li> <li>- <a href="#">The site is close to a Great Crested Newt breeding site. An extended Phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. A Great Crested Newt survey would also be required. Appropriate avoidance and mitigation measures would need to be implemented to ensure any protected species were not adversely affected.</a></li> <li>- <a href="#">Thames Water has concern regarding water supply infrastructure. A water supply strategy would be required.</a></li> </ul>
-------------	--

## Site Assessment

<b>Parish Council consultation response:</b>	<p>Access to the site has been left at the end of The Haven, although the road is narrow. Access along the track between KIN011 and KIN016 would not be acceptable. Parish Council thought that Sovereign Housing may have some involvement in the site. The site is well screened and cannot really be seen from the wider countryside. There could be some potential for wider development of The Haven, which was originally an area of affordable housing (much of which is now in private ownership). Development of the south of the site would leave a gap (gardens) between the existing building line and the new development. Felt that generally residents of Kintbury could see this as an easy option, although the residents of The Haven may not agree. There would not be additional need for open space as the site is adjacent to the recreation ground.</p> <p><a href="#">No additional comments were made about this site at the preferred options consultation.</a></p>

	Racehorse Industry	N	
Flood risk	Flood Zone 2	N	
	Groundwater flood risk	Y	<a href="#">Part of the site lies within a groundwater emergence zone</a> <a href="#">Site lies with the EA's groundwater vulnerability zone although there is no record of groundwater flooding at this location</a>
	Surface water flood risk	N	
	Critical Drainage Area	N	
	Contamination / pollution	Air Quality	N
	Contaminated Land	N	

## Site Selection – Site Assessment

B) Considerations			
Criteria		Yes / No / Unknown	Comments
	Other	N	
Highways / Transport	Access issues	N-U	Access to the site could be taken from The Haven <a href="#">Access is proposed onto The Haven through a set of garages. If they are to be removed, then any parking will need to be replaced.</a> <a href="#">Sight lines are poor at the Inkpen Road / The Haven junction. With Inkpen Road being of good width and alignment in this location, it is likely that vehicles will travel up to 30 mph, which would require sight lines of 2.4 x 43 metres. The sight lines are much below this. If the required visibility splays can be achieved from land within Sovereign's control then this issue can be resolved.</a>
	Highway network suitability	N	<a href="#">This site can accommodate 20 to 25 dwellings that will generate circa 13 to 15 daily vehicle movements during the 08.00 to 09.00 AM peak. Development is not anticipated to have a significant traffic impact on the wider highway network for this level of development.</a> <a href="#">There are significant concerns about the traffic impacts of development as Most traffic to and from the site will pass through the centre of Kintbury. The Inkpen Road / High Street junction is restricted regarding width and sight lines and extensive on street car parking within the High Street also limits potential for additional traffic flow. However, it is not considered that the increase in traffic at this junction (in relation to all the existing traffic using this junction) is of sufficient concern to prevent allocation of this site for housing up to 25 dwellings. There is an awareness of there being much concern locally regarding the combined traffic impact of the site allocations in Kintbury and the potential impact of additional apartments being constructed at Inglewood. It is understood that a further 33 apartments are to be completed, which are likely to generate 13 vehicle movements between 08.00 and 09.00. It is expected that most, but not all of these to travel to and from Kintbury. This will not result in a significant traffic impact.</a>
	Public Transport network	Y	<a href="#">Kintbury is serviced by a railway line, and infrequent bus services (2 hourly) between Newbury and Hungerford. Bus service number 3 passes along Inkpen Road providing up to five services each way between Newbury and Hungerford. Bus stops exist nearby that can be reached by pedestrians. Kintbury train station is 1,120 metres walking distance from the site.</a>
	Footways/Pavements	U	<a href="#">There are narrow intermittent pavements through the village. Existing footways are available nearby that the site can connect onto into the centre of Kintbury</a>
Landscape	Located in AONB	Y	
	Located within an area of High Landscape Sensitivity ( <i>from Core Strategy LSS</i> )	N/A	
	Other		
Green Infrastructure	Open Space / Playing field / Amenity Space nearby	Y	<a href="#">Site is very close to local amenity facilities</a>

**Key: Effects of option on SA objectives**

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site has easy access to the countryside, and is close to local services and facilities which would enable walking and cycling		The site is close to local services and facilities including a local leisure centre and playing field meaning that development of the site is likely to have a positive impact on social and environmental sustainability
	Will it increase opportunities for access to sports facilities?	+	The site is next to a recreation ground and is also close to a leisure centre (Jubilee Leisure Centre and playing fields)		
	Will it protect and enhance green infrastructure across the district?	0	Unlikely to have an impact		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The site is close to local services and facilities within the village. The village is served by a railway station and a 2 hourly bus service between Newbury and Hungerford		The proximity to local services and facilities means that the site should have a positive economic sustainability. In addition employment opportunities can be accessed via rail
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	Within the village there are a number of opportunities for walking and cycling. There are public transport opportunities within the village – there is a 2 hourly bus service and railway. However, the degree of car dependency is still likely to be high.		Kintbury does offer travel choices given the proximity of the railway station. There are opportunities for walking and cycling and a bus service to and from the village which would have a positive impact on sustainability. <del>Road safety can have a negative impact on sustainability unless mitigation measures are introduced.</del> <u>There could be potential for a negative</u>
	Will it reduce the number of road traffic accidents and improve safety?	-?	Additional traffic could result in road safety concerns, as most traffic to and from the site will pass through the centre of Kintbury. The Inkpen Road / High Street junction is restricted regarding width and sight lines and extensive on street car	<del>Significant highway improvements would be required.</del> <u>It is not considered that the increase in traffic at the Inkpen Road/High Street junction (in relation to the existing traffic</u>	

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			parking within the High Street also limits potential for additional traffic flow. <a href="#">Particular concern has been expressed locally regarding the combined potential traffic impact with the additional apartments currently being constructed at Inglewood.</a>	<a href="#">using the junction) is of significant concern.</a>	<a href="#">impact on sustainability if the road safety concerns expressed locally could not be overcome.</a>
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	?	<a href="#">The site lies close to a Local Wildlife Site which is also a BBOWT nature reserve (Kintbury Newt Ponds) which hosts a large breeding population of Great Crested Newts. and within 250m of a great crested newt site and Local Wildlife Site</a>	<a href="#">An extended Phase 1 habitat survey with an additional Great Crested Newt survey required</a>	Without mitigation measures as set out in the Landscape Assessment there would be potential for a negative impact on environmental sustainability. <a href="#">There would be potential for a negative impact on environmental sustainability unless the site was developed in line with the Landscape Assessment and appropriate avoidance and mitigation measure were implemented so that any protected species were not adversely affected.</a>
	Will it conserve and enhance the local distinctiveness of the character of the landscape?		The site is located within the AONB. The Landscape <a href="#">Sensitivity Assessment (LSA) (2011)</a> indicates that development of this site would be acceptable subject to protection and enhancement measures	<a href="#">Landscape assessment LSA</a> indicates the following protection and enhancement would be required: <ul style="list-style-type: none"> <li>- Boundary hedgerows and trees and scattered trees within the southern section of the site</li> <li>- Replacement of the conifer hedgerow with more appropriate planting.</li> <li>- Views from the surrounding countryside, PROW and the neighbouring recreation field would need to be carefully considered and</li> <li>- New planting would be important in integrating the buildings into the landscape</li> </ul>	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	0	<a href="#">Development of this site would discontinue the linear nature of adjacent development, but a deeper pattern of development is common elsewhere in Kintbury. Unlikely to have an impact</a>	<a href="#">Development should be sensitively designed</a>	Development of the site is unlikely to have an impact on any element of sustainability <a href="#">although has the potential to improve the built environment through a</a>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will it conserve and enhance the significance of the District's heritage assets?	0	There are no heritage assets on or near to the site		<a href="#">well designed scheme.</a>
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact		Development of the site is unlikely to have an impact on any element of sustainability.
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact		
	Will there be an impact on soil quality?	0	Unlikely to have an impact		
	Will there be an impact on water quality?	0?	<a href="#">It is within a Source Protection Zone (SPZ2) with a high risk of contamination to groundwater</a> <del>Unlikely to have an impact</del>	<a href="#">The EA has no in principle objections to development in SPZs.</a>	
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	The site is greenfield		The greenfield nature of the site means that there could be a negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques <a href="#">and the promotion of alternative modes of transport</a> , development could have a negative impact on environmental sustainability.

					<a href="#">appropriate mitigation measures can be put in place.</a> Flood risk can have a negative impact on all elements of sustainability. Mitigation measures should reduce this impact.
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing, No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects. The site [has a strong relationship with the existing settlement and](#) is close to local services and facilities with good opportunities for walking and cycling, giving a positive impact on sustainability. [Development on this site has the potential to improve the built environment through a well designed scheme.](#)

[The site is not anticipated to have a significant traffic impact on the wider highway network at this level of development, however particular concern has been expressed locally regarding the combined potential traffic impact with the additional apartments currently being constructed at Inglewood. There could be potential for a negative impact on sustainability if these road safety concerns could not be overcome. There is also the potential for a negative impact on environmental sustainability due to the site's location within the AONB. However, a LSA has been carried out which concludes that the site has potential to deliver housing without causing harm to the natural beauty and special qualities of the](#)

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

AONB subject to a number of mitigation measures. As the site is close to a great crested newt site with Great Crested Newts, there is also potential for Without mitigation measures development would lead to a negative impact on environmental sustainability unless appropriate avoidance and mitigation measures are implemented. The site is in a groundwater emergence zone, therefore there is potential for groundwater flooding. Flooding can have a negative impact on all elements of sustainability unless mitigation measures are provided.

Part of the site lies within a groundwater emergence zone. Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.

The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB - Kintbury

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Kintbury	<b>Parish:</b>	Kintbury
<b>Site ID:</b>	KIN011	<b>Site Address:</b>	Land adjoining The Haven, Kintbury	<b>Development Potential:</b>	<a href="#">Approx 20-2 dwellings (1.08ha at 20dph)</a>

### Recommendation:

The site is not recommended for allocation [at this time](#). It should be considered as part of the new [Local Plan](#)

### Justification:

~~Significant concerns about the traffic impact of development on the highway network~~

[As a Service Village Kintbury has a limited range of services and some limited development potential and as such, is expected to accommodate some additional housing growth to 2026. However, the number of sites promoted in Kintbury has meant that choices have needed to be made through the site selection process. The northern part of the site which was originally submitted has the potential to accommodate up to 20 dwellings and it is this part of the site only which could be considered suitable for allocation.](#)

[At the preferred options stage the site was not recommended for allocation primarily because of highway concerns. Sight lines are poor at the Inkpen Road/The Haven junction and the Inkpen Road / High Street junction is also restricted regarding width and sight lines. Extensive on street car parking within the High Street also limits potential for additional traffic flow. However, since the preferred options consultation further technical work has been undertaken on the site. This has shown that the required visibility splays can be achieved from land within Sovereign's control at the Inkpen Road/The Haven junction and therefore this issue can be resolved. In addition, the Highways team does not consider that the increase in traffic at the Inkpen Road / High Street junction \(in relation to all the existing traffic using this junction\) would be of sufficient concern to prevent allocation of this site for housing for 20 dwellings. Further development at this location would however be of concern.](#)

[Although the main technical reasons for not proposing the site for allocation at the preferred options stage have been overcome, Council Members have responded to the concerns expressed locally over the cumulative impacts of additional development in Kintbury together with the previously approved development at Inglewood, phase 3 of which is still currently under construction. As KIN006 /007 was previously identified as a preferred site and was consulted upon at the preferred options stage, they consider that the public have been given more opportunity to comment on this as an option for future development. They have therefore requested that consideration of KIN011 is deferred until an informed assessment can be made of the cumulative impact of traffic generated from the additional dwellings at Inglewood with that generated from KIN006/007. It is therefore proposed that the site should be considered further through the preparation of the new Local Plan.](#)

[Whilst the site is within the AONB, a Landscape Sensitivity Assessment has been carried out that indicates that development on the site would be acceptable in landscape terms, subject to mitigation measures to ensure the protection and enhancement of existing landscape features.](#)

[Part of the site lies within a groundwater emergence zone. The site has also been identified by the Environment Agency as lying within a groundwater vulnerability zone. As a result a Flood Risk Assessment \(FRA\) would be required to support a planning application, along with the implementation of appropriate flood risk mitigation measures.](#)

[The site is close to Kintbury Newt Ponds which hosts a large population of Great Crested Newts. An Extended Phase 1 Habitat Survey with an additional Great Crested Newt survey would therefore be required.](#)

[Thames Water has concern regarding water supply infrastructure. A water supply strategy would be required.](#)

[Access to the site from The Haven is proposed through an area which currently provides access to a set of garages. If any of these garages are to be removed then this parking provision will need to be replaced. This may reduce the potential capacity of the site.](#)

## Site Selection – Site Commentary

### Discussion:

#### Site Description:

The site is located to the west of Kintbury, [with a strong relationship to the existing settlement and](#) close to local services and facilities and open countryside.

#### Landscape:

The site is in the AONB. The Landscape [Sensitivity Assessment \(2011\)](#) indicates that development on the site would be acceptable [as long as mitigation measures as listed in the assessment are adhered to, subject to the protection and enhancement of the boundary hedgerows and trees and scattered trees within the southern section of the site and the replacement of the conifer hedgerow with more appropriate planting. Views from the surrounding countryside, PROW and the neighbouring recreation field would need to be carefully considered and new planting would be important in integrating the buildings into the landscape.](#)

#### Flood Risk:

The site is in Flood Zone 1, but within a groundwater emergence zone. A FRA would be required and SuDS provided.

[The site is also shown on the Environment Agency's groundwater vulnerability map although we have no records of groundwater flooding at this location.](#)

#### Highways /Transport:

~~There is significant concern regarding the traffic impact of development on the highway network. Traffic to and from the site will pass through the centre of Kintbury, there is concern over the impact on Inkpen Road / High Street junction as it is restricted regarding width and sight lines. On street parking along the High Street also limited potential additional traffic flow.~~

[Access is proposed onto The Haven through a set of garages. If they are to be removed, then any parking will need to be replaced.](#)

[Sight lines are poor at the Inkpen Road / The Haven junction. With Inkpen Road being of good width and alignment in this location, it is likely that vehicles will travel up to 30 mph, which would require sight lines of 2.4 x 43 metres. The sight lines are much below this. If the required visibility splays can be achieved from land within Sovereign's control then this issue can be resolved.](#)

[This site can accommodate 20 to 25 dwellings that will generate circa 13 to 15 vehicle movements during the 08.00 to 09.00 AM peak.](#)

[Development is not anticipated to have a significant traffic impact on the wider highway network. Most traffic to and from the site will pass through the centre of Kintbury. The Inkpen Road / High Street junction is restricted regarding width and sight lines and extensive on street car parking within the High Street also limits potential for additional traffic flow. However, it is not considered that the increase in traffic at this junction \(in relation to all the existing traffic using this junction\) is of sufficient concern to prevent allocation of this site for this level of housing. Further development at this location would however be of concern in transport terms.](#)

[There is an awareness of there being much concern locally regarding the combined traffic impact of the site allocations in Kintbury and the potential impact of additional apartments being constructed at Inglewood. It is understood that a further 33 apartments are to be completed which are likely to generate 13 vehicle movements between 08.00 and 09.00. It is expected most, but not all of these to travel to and from Kintbury. This will not result in a significant traffic impact.](#)

~~The site is close to Kintbury railway station~~ [Kintbury train station is 1,120 metres walking distance from the site](#) which provides links to London and the west country. There is an infrequent bus service (2 hourly) linking Kintbury with Newbury and Hungerford. [Bus service number 3 passes along Inkpen Road providing up to five services each way between Newbury and Hungerford. Bus stops exist nearby that can be reached by pedestrians.](#) There are local opportunities for walking and cycling within the village. [Existing footways are available nearby that the site can connect onto into the centre of Kintbury](#)

#### Ecology:

~~The site is within 250m of a great crested newt site, so a survey would be required. The site is within a BAP habitat.~~ [The site lies close to a Local Wildlife Site \(LWS\) which is also a BBOWT owned nature reserve \(Kintbury Newt Ponds\) and which hosts a large breeding population of Great Crested Newts \(GCN\). An extended Phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. A Great Crested Newt survey would also be required. Appropriate avoidance and mitigation](#)

## Site Selection – Site Commentary

[measures would need to be implemented to ensure any protected species were not adversely affected.](#)

### Archaeology:

No known archaeological issues.

### Education:

Local primary school provision is close to or at capacity. No comments made regarding secondary school provision.

### Environmental Health:

No known air, noise or contamination issues.

### Minerals and Waste:

No known mineral or waste issues

### Land use planning consultation zone:

The site is not within an AWE consultation zone.

### Environment Agency:

~~No specific comments made on this site.~~ The site is in SPZ2, with a high risk of contamination to groundwater. [The EA has no in principle objections to development in SPZs.](#)

### Thames Water:

~~Concern regarding water supply infrastructure. Significant concern regarding water supply capability, especially water resource capability.~~ [The](#) current water supply network in this area is unlikely to be able to support the demand [anticipated](#) from this [site development](#). Water supply infrastructure is highly likely to be required to ensure sufficient capacity is brought forward ahead of any development.

~~A detailed~~ water supply strategy would be required

[Thames Water has](#) no concerns [regarding](#) wastewater [services](#) ~~infrastructure issues envisaged.~~

### Parish Council:

Access to the site has been left at the end of The Haven, although the road is narrow. Access along the track between KIN011 and KIN016 would not be acceptable. Parish Council thought that Sovereign Housing may have some involvement in the site. The site is well screened and cannot really be seen from the wider countryside. There could be some potential for wider development of The Haven, which was originally an area of affordable housing (much of which is now in private ownership). Development of the south of the site would leave a gap (gardens) between the existing building line and the new development. Felt that generally residents of Kintbury could see this as an easy option, although the residents of The Haven may not agree. There would not be additional need for open space as the site is adjacent to the recreation ground

### Preferred Options Consultation key issues

[No responses were received for this site.](#)

[For all the consultation responses and the Council's response, please see the Statement of Consultation](#)

### SA/SEA:

~~The SA/SEA indicates a predominantly neutral sustainability impact. There are no significant sustainability issues with this site. The site is close to local services and facilities with good opportunities for walking and cycling, giving a positive impact on sustainability. The site is in the AONB and close to a great crested newt site. Without mitigation measures development would lead to a negative impact on environmental sustainability. The site is in a groundwater emergence zone, therefore there is potential for groundwater flooding. Flooding can have a negative impact on all elements of sustainability unless mitigation measures are provided.~~

[Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects. The site has a strong relationship with the existing settlement and is close to local services and facilities with good opportunities for walking and cycling, giving a positive impact on sustainability. The site is not anticipated to have a significant traffic impact on the wider highway network. Development on this site has the potential to improve the built environment through a well designed scheme.](#)

[There is also the potential for a negative impact on environmental sustainability due to the sites location](#)

## Site Selection – Site Commentary

within the AONB. However, a LSA has been carried out which concludes that the site has potential to deliver housing without causing harm to the natural beauty and special qualities of the AONB subject to a number of mitigation measures. As the site is close to a site with Great Crested Newts, there is also potential for a negative impact on environmental sustainability unless appropriate avoidance and mitigation measures are implemented.

Part of the site lies within a groundwater emergence zone. Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.

The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.

### **Proposed development (from SHLAA submission):**

~~No specific proposals have been submitted for this site.~~

Since the preferred options consultation the site promoter has advised that it has an option on the northern part of the site and that it considers the site has capacity for 25 dwellings. It has stated that it would also be happy to agree a smaller developable area or less dense development, given that the preferred option site the Council put forward had scope for only 13 dwellings.

The site promoter has confirmed that the required visibility splays can be achieved from land within its control at the Inkpen Road / The Haven junction.

## Site Selection – Site Assessment

-------------------------------	--------------------------------	--------------------------	-------------------------

## Summary of Site Assessment

### Key Issues:

- AONB – only part of the site is considered suitable for development. [The development of the site as a whole would be out of character and would result in the loss of woodland as well as housing at a high elevation.](#)
- Flood risk (surface water)
- Relationship to settlement – [the site is separated from the main settlement by a narrow gap of open land in KIN 006, 007 and 009 site is not adjacent to existing settlement without development of other sites](#)
- [The site lies within the EA's groundwater vulnerability zone. The site has underlying clay. A FRA required.](#)
- [The site is close to a Great Crested Newt breeding site. An extended Phase 1 habitat survey required with an additional Great Crested Newt survey](#)
- Overhead power lines
- [There is suspected contamination at Kiln Farm due to brick and tile works. A contamination assessment required.](#)
- [As the site is underlain with clay a methodology for foundation design would be required](#)

## Site Assessment

<b>Parish Council consultation response:</b>	The Parish Council noted that this site is situated on old clay workings and many of the houses in the neighbouring residential area have had to be underpinned due to subsidence. Drainage is seen as an issue as there are springs at the top of the hill and the area is very boggy. Part of the site is steeply sloping. The Parish Council considers that some infill development in this area would not be completely inappropriate, although they would not like to see a large development.

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site has easy access to the countryside, and is close to local services and facilities which would enable walking and cycling		The site is close to local services and facilities including a local leisure centre and playing field meaning that development of the site is likely to have a positive impact on social and environmental sustainability
	Will it increase opportunities for access to sports facilities?	+	The site is close to the leisure centre (Jubilee Leisure Centre and playing fields)		
	Will it protect and enhance green infrastructure across the district?	0	Unlikely to have an impact		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The site is close to local services and facilities within the village. The village is served by a railway station and a 2 hourly bus service between Newbury and Hungerford		The proximity to local services and facilities means that the site should have a positive economic sustainability. In addition employment opportunities can be accessed via rail
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	Within the village there are a number of opportunities for walking and cycling. There are public transport opportunities within the village – there is a 2 hourly bus service and railway. However, the degree of car dependency is still likely to be high.		Kintbury does offer travel choices given the proximity of the railway station. There are opportunities for walking and cycling and a bus service to and from the village
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	?	<del>The site is within 250m of a great crested newt site.</del> <u>The site lies very close to a Local Wildlife Site which is also a BBOWT nature reserve (Kintbury Newt</u>	<u>An extended Phase 1 habitat survey required. In addition a Great Crested Newt survey is required</u> <del>Great crested newt survey required</del>	<del>Without mitigation measures as set out in the Landscape Assessment there would be potential for a negative impact on</del>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<b>0</b>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>		<a href="#">economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant effects. The site is close to local services and facilities, with opportunities for walking and cycling which give a positive impact on sustainability.

~~The site is located within the AONB, the landscape assessment indicates that part of the site would be suitable for development as long as the mitigation measures set out are adhered to, without these mitigation measures there could be a negative impact on environmental sustainability. The site is poorly related to the existing settlement pattern unless other sites were developed, giving a negative impact on environmental sustainability. The site is also in a surface water flood risk area. With appropriate mitigation measures the potential negative impact on all elements of sustainability should be reduced.~~

[There is also the potential for a negative impact on environmental sustainability due to the site's location within the AONB and its location relative to the main settlement of Kintbury. However, a LSA has been carried out which concludes that some of the site has the potential to deliver a very limited number of dwellings without causing harm to the natural beauty and special qualities of the AONB subject to a number of mitigation measures.](#)

[As the site is close to a site with Great Crested Newts, there is also potential for a negative impact on environmental sustainability, unless appropriate avoidance and mitigation measures are implemented.](#)

[Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.](#)

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

**Summary of effects:**  
**Effect:** Predominantly neutral  
**Likelihood:** High

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Scale:** AONB - Kintbury  
**Duration:** Permanent  
**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Kintbury	<b>Parish:</b>	Kintbury
<b>Site ID:</b>	KIN015	<b>Site Address:</b>	Land to the east of Layland Green, Kintbury	<b>Development Potential:</b>	29 dwellings (1.44ha at 20dph)

### Recommendation:

The site is not recommended for allocation

### Justification:

The site is not that well related to the existing settlement without development taking place on some adjacent sites. ~~poorly related to the existing settlement without other sites being developed.~~ Development of KIN015, with other sites, would be out of keeping with the role and function of Kintbury as a service village.

The development of the site as a whole would be out of character and would result in the loss of woodland as well as housing at a high elevation. The site would only be suitable for a very limited development of very low density to match that existing on the site and located to ensure the retention and protection of the existing woodland and other valuable trees and hedges.

Other sites in Kintbury are considered more appropriate for development.

The site has been identified by the Environment Agency as lying within a groundwater vulnerability zone. The site is also likely to be underlain by clay. As a result a Flood Risk Assessment (FRA) would be required to support a planning application, along with the implementation of appropriate flood risk mitigation measures.

The site is close to Kintbury Newt Ponds which hosts a large population of Great Crested Newts. An extended Phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. A Great Crested Newt survey would also be required. Appropriate avoidance and mitigation measures would need to be implemented to ensure any protected species were not adversely affected.

There is suspected contamination at Kiln Farm due to the old brick and tile works and so a contamination assessment would be required.

The site is underlain with clay and so a methodology for foundation design would be required

Further archaeological assessment would be required

### Discussion:

#### Site Description:

The site is located to the south of Kintbury and is separated from the main settlement by a narrow gap of open land in KIN 006, 007 and 009. Overhead power lines cross the site.

~~The site is poorly related to existing development in Kintbury. boundary~~

#### Landscape:

The site is located within the AONB. The Landscape Assessment indicates ~~that only part of the site would be suitable for development, subject to the mitigation measures set out in the assessment~~ the site would be suitable for a very limited development of very low density to match that existing on the site and located to ensure the retention and protection of the existing woodland and other valuable trees and hedges.

#### Flood Risk:

The site is in Flood Zone 1, but at risk from ground and surface water flooding ~~but within a surface water flood risk area. There is anecdotal evidence that there are drainage issues on the site.~~ A FRA would be required and SuDS provided.

Clay soil would mean foundations would need to be much deeper and include protection against clay heave and maybe suspended ground floors. Clay soil would also restrict the scope for sustainable drainage systems which would mean that surface water from the site would have to be piped directly into existing surface water drains. A methodology for foundation design should be submitted.

#### Highways /Transport:

## Site Selection – Site Commentary

It would seem possible to get access [with adequate sight lines](#) from the southern part of the site from Layland Green. Extensive new footways would be required along Layland Green to connect the site to existing footways.

The site is close to Kintbury railway station which provides links to London and the west country. There is an infrequent bus service (2 hourly) linking Kintbury with Newbury and Hungerford. There are local opportunities for walking and cycling within the village.

### Ecology:

[The site lies very close to a Local Wildlife Site which is also a BBOWT nature reserve \(Kintbury Newt Ponds\) and which hosts a large breeding population of Great Crested Newts. Local environmental records indicate that Great Crested Newts are using the ponds within the site. An extended Phase 1 habitat survey would be required and an additional survey for Great Crested Newts.](#)

[The site is within a Biodiversity Opportunity Area and so the Council will pursue net gains for biodiversity in accordance with Core Strategy Policy CS17. The site is within 250m of a great crested newt site, so a survey would be required. The site is within a Biodiversity Action Plan and in a BAP habitat.](#)

### Archaeology:

Post medieval brickworks on the site. An assessment and evaluation to explore the nature of the remains and the extent of their survival would be required.

### Education:

Local primary school provision is close to or at capacity. No comments made about secondary school provision.

### Environmental Health:

No known air or noise or ~~contamination~~ issues. [There is suspected contamination at Kiln Farm due to the old brick and tile works and so a contamination assessment would be required.](#)

### Minerals and Waste:

No known mineral or waste issues. [There is an area of former clay workings in the site](#)

### Land use planning consultation zone:

The site is not within an AWE consultation zone

### Environment Agency:

~~No specific comments made on this site.~~ [The site is in SPZ2 with a high risk of contamination to groundwater. The EA has no in principle objections to development within SPZs.](#)

### Thames Water:

TW not consulted on this site

### Parish Council:

The Parish Council noted that this site is situated on old clay workings and many of the houses in the neighbouring residential area have had to be underpinned due to subsidence. Drainage is seen as an issue as there are springs at the top of the hill and the area is very boggy. Part of the site is steeply sloping. The Parish Council considers that some infill development in this area would not be completely inappropriate, although they would not like to see a large development.

### [Preferred options Consultation key issues](#)

[No responses were received for this site.](#)

[For all the consultation responses and the Council's response, please see the Statement of Consultation](#)

### SA/SEA:

The SA/SEA indicates a predominantly neutral sustainability impact. There are no significant sustainability issues with this site. The site is close to local services and facilities, with opportunities for walking and cycling which give a positive impact on sustainability. [There is also the potential for a negative impact on environmental sustainability due to the site's location within the AONB and its location relative to the main settlement of Kintbury. However, a LSA has been carried out which concludes that some of the site has the potential to deliver a very limited number of dwellings without causing harm to the natural beauty and special qualities of the AONB subject to a number of mitigation measures. As the site is close to a site with Great Crested Newts, there is also potential for a negative impact on environmental sustainability, unless appropriate avoidance and mitigation measures are](#)

## Site Selection – Site Commentary

implemented. Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.

~~The site is located within the AONB, the landscape assessment indicates that part of the site would be suitable for development as long as the mitigation measures set out are adhered to, without these mitigation measures there could be a negative impact on environmental sustainability. The site is poorly related to the existing settlement pattern unless other sites were developed, giving a negative impact on environmental sustainability. The site is also in a surface water flood risk area. With appropriate mitigation measures the potential negative impact on all elements of sustainability should be reduced.~~

**Proposed development (from SHLAA submission):**

The site was promoted as one of a number of sites in this area of Kintbury, promoted as a whole and individually. Development would be in a range of dwellings and include affordable housing.

Appropriate avoidance and mitigation measures would need to be implemented to ensure any protected species were not adversely affected.</a></li> </ul>
---

## Site Assessment

<b>Parish Council consultation response:</b>	<p>Access to the site could be an issue as there are lots of junctions onto Inkpen Road near to the site. There are no pavements along the road at this point. Traffic generated from the site would travel through the village to get to the A4. The site has a rural, remote feel and is the start of the countryside as you leave the village. There is the feeling that the village stops before the site. General feeling from the parish council is that development of this site would urbanise the rural area and would create visual harm to the surrounding character of the area.</p>

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site has easy access to the countryside, and is close to local services and facilities which would enable walking and cycling		The site is close to local services and facilities including a local leisure centre and playing field meaning that development of the site is likely to have a positive impact on social and environmental sustainability
	Will it increase opportunities for access to sports facilities?	+	The site is close to the leisure centre (Jubilee leisure centre and playing fields)		
	Will it protect and enhance green infrastructure across the district?	0	Unlikely to have an impact		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The site is close to local services and facilities within the village. The village is served by a railway station and a 2 hourly bus service between Newbury and Hungerford		The proximity to local services and facilities means that the site should have a positive economic sustainability. In addition employment opportunities can be accessed via rail
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	Within the village there are a number of opportunities for walking and cycling. There are public transport opportunities within the village – there is a 2 hourly bus service and railway. However, the degree of car dependency is still likely to be high.		Kintbury does offer travel choices given the proximity of the railway station. There are opportunities for walking and cycling and a bus service to and from the village. This impacts positively on sustainability. However, additional traffic introduces a negative effect.
	Will it reduce the number of road traffic accidents and improve safety?	-?	Additional traffic could result in road safety concerns, as most traffic to and from the site will pass through the centre of Kintbury. The Inkpen Road / High Street junction is restricted regarding width and sight lines and extensive on street car parking within the High Street also limits potential for additional traffic	Mitigation measures will be required. <a href="#">It is not considered that the increase in traffic at the Inkpen Road / High Street junction (in relation to all the existing traffic using this junction) is of sufficient concern to prevent allocation of this site for</a>

historic and cultural environment is conserved and enhanced	enhance the local distinctiveness of the character of the built environment?		<del>related to the settlement</del> <a href="#">Development of the whole site would extend the settlement south beyond the current development along Inkpen Road and west which would erode the linear nature of the settlement along the west side of Inkpen Road</a>	<del>come forward for the site to be acceptable in respect of impact on the built environment</del>  <a href="#">Development should be sensitively designed</a>	<a href="#">for a negative impact on environmental sustainability unless the site was developed in line with the Landscape Assessment</a> Development of the site is unlikely to have an impact on any element of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	?	More work required. There is an unlisted house on the site which has been marked on Ordnance Survey maps since the first edition	Further assessment required	
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact		Development of the site is unlikely to have an impact on any element of sustainability.
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact		
	Will there be an impact on soil quality?	0	Unlikely to have an impact		
	Will there be an impact on water quality?	0?	<a href="#">It is within a Source Protection Zone (SPZ2)</a> Unlikely to have an impact	<a href="#">The EA has no in principle objections to development in SPZs.</a>	
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Site is greenfield		The Greenfield nature of the site means that there could be a negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques <del>techniques</del> <a href="#">and the promotion of alternative modes of transport.</a> development could have a negative impact on environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will the site be subject to / at risk from flooding	0	The site is not at risk from flooding A very small area in the northern part of the site lies within a groundwater emergence zone. The site lies within the EA's groundwater vulnerability zone.	A FRA and appropriate flood mitigation measures including SuDS would need to be provided.	Development of the site is unlikely to have an impact on any element of sustainability. A FRA will highlight the mitigation measures required to minimise the risk of flooding. Flooding can have a negative impact on all elements of sustainability unless appropriate mitigation measures can be put in place.
11. To ensure a strong, diverse and sustainable economic base	Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?	0	Not considered relevant		The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	0	The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.  The development of the site for housing will have an overall neutral effect on economic sustainability.		
	Will it promote and support the vitality and viability of the District's commercial centres?	0	Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

### Summary

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects. The site is close to local services and facilities, with opportunities for walking and cycling, giving a positive impact on sustainability. There is concern over traffic impact on road safety, which without mitigation measures could have a negative impact on all element of sustainability. The site is located in the AONB and close to a great crested newt site, without appropriate mitigation measures development could lead to a negative impact on environmental sustainability.

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects. The site is close to local services and facilities with good opportunities for walking and cycling, giving a positive impact on sustainability. The site is not anticipated to have a significant traffic impact on the wider highway network at this level of development.

There is also the potential for a negative impact on environmental sustainability due to the site's location within the AONB. However, a LSA has been carried out which concludes that part of the site has potential to deliver housing without causing harm to the natural beauty and special qualities of the AONB subject to a number of mitigation measures. As the site is close to a site with Great Crested Newts, there is also potential for a negative impact on environmental sustainability unless appropriate avoidance and mitigation measures are implemented.

A very small part of the site lies within a groundwater emergence zone. Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.

The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** AONB - Kintbury

**Duration:** Permanent

**Timing:** Short to Long term

The site is not recommended for allocation

### Justification:

Significant concerns about the traffic impact of development on the highway network

[Other sites in Kintbury are considered more appropriate for development.](#)

[Whilst the site is within the AONB, a Landscape Capacity Assessment has been carried out that indicates that development on the northern part of the site would be acceptable in landscape terms, subject to mitigation measures to ensure the protection and enhancement of existing landscape features. Development of the whole site would extend the settlement south beyond the current development along Inkpen Road and west which would erode the linear nature of the settlement along the west side of Inkpen Road](#)

[A very small part of the site lies within a groundwater emergence zone and an EA's groundwater vulnerability zone. A FRA required.](#)

[The site is close to a Great Crested Newt breeding site. An extended Phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. A Great Crested Newt survey would also be required. Appropriate avoidance and mitigation measures would need to be implemented to ensure any protected species were not adversely affected.](#)

### Discussion:

#### Site Description:

The site is located to the south west of Kintbury, close to local services and facilities and the open countryside.

#### Landscape:

The site is in the AONB. The Landscape Assessment indicates that the northern part of the site would be suitable for development as long as the mitigation measures set out in the landscape assessment are adhered to. [Development of the whole site would extend the settlement south beyond the current development along Inkpen Road and west which would erode the linear nature of the settlement along the west side of Inkpen Road](#)

#### Flood Risk:

The site is in Flood Zone 1. [A very small area in the northern part of the site lies within a groundwater emergence zone. The site lies within the EA's groundwater vulnerability zone. A FRA would be required and SuDS would need to be provided.](#)

#### Highways /Transport:

[With the available land it is anticipated that an access with adequate sight lines onto Inkpen Road can be achieved.](#)

~~There is significant concern regarding the traffic impact of development on the highway network. Most~~ traffic to and from the site will pass through the centre of Kintbury. ~~there is concern over the impact on~~ The Inkpen Road / High Street junction is restricted regarding width and sight lines and extensive on street car parking within the High Street also limits potential for additional traffic flow. [However, it is not considered that the increase in traffic at this junction \(in relation to all the existing traffic using this junction\) is of sufficient concern to prevent allocation of this site.](#)

The site is close to Kintbury railway station which provides links to London and the west country. There is an infrequent bus service (2 hourly) linking Kintbury with Newbury and Hungerford. [Bus service number 3 passes along Inkpen Road providing up to five services each way between Newbury and Hungerford. Bus stops exist nearby that can be reached by pedestrians. Existing footways are available nearby that the site can connect into.](#) There are local opportunities for walking and cycling within the village.

## Site Selection – Site Commentary

### **Ecology:**

~~The site is within 250m of a great crested newt site, so a survey would be required. The site is within a BAP habitat.~~

[The site lies very close to a Local Wildlife Site which is also a BBOWT nature reserve \(Kintbury Newt Ponds\) and which hosts a large breeding population of Great Crested Newts. An extended Phase 1 habitat survey would be required and an additional survey for Great Crested Newts.](#)

### **Archaeology:**

There is an unlisted house on the site which is included on the first edition OS maps. Further investigation is required.

### **Education:**

Local primary school provision is close to or at capacity. No comments made regarding secondary school provision.

### **Environmental Health:**

No known air, noise or contamination issues.

### **Minerals and Waste:**

No known mineral or waste issues

### **Land use planning consultation zone:**

The site is not within an AWE consultation zone.

### **Environment Agency:**

~~No specific comments made on this site.~~ The site is in SPZ2. [The EA has no in principle objections to development in SPZs](#)

### **Thames Water:**

~~No water supply or wastewater infrastructure issues envisaged.~~

[Thames Water has not raised any concerns regarding water supply/waste water services for this site](#)

### **Parish Council:**

Access to the site could be an issue as there are lots of junctions onto Inkpen Road near to the site. There are no pavements along the road at this point. Traffic generated from the site would travel through the village to get to the A4. The site has a rural, remote feel and is the start of the countryside as you leave the village. There is the feeling that the village stops before the site.

General feeling from the Parish Council is that development of this site would urbanise the rural area and would create visual harm to the surrounding character of the area.

### **Preferred options Consultation key issues**

[No responses were received for this site.](#)

[For all the consultation responses and the Council's response, please see the Statement of Consultation](#)

### **SA/SEA:**

~~The SA/SEA indicates a predominantly neutral sustainability impact. There are no significant sustainability issues with this site. The site is close to local services and facilities, with opportunities for walking and cycling, giving a positive impact on sustainability. There is concern over traffic impact on road safety, which without mitigation measures could have a negative impact on all element of sustainability. The site is located in the AONB and close to a great crested newt site, without appropriate mitigation measures development could lead to a negative impact on environmental sustainability.~~

[Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects. The site is close to local services and facilities with good opportunities for walking and cycling, giving a positive impact on sustainability. The site is not anticipated to have a significant traffic impact on the wider highway network at this level of development. There is also the potential for a negative impact on environmental sustainability due to the site's location within the AONB. However, a LSA has been carried out which concludes that part of the site has potential to deliver housing without causing harm to the natural beauty and special qualities of the AONB subject to a number of mitigation measures. As the site is close to a site with Great Crested Newts, there is also potential for a negative impact on environmental sustainability unless appropriate avoidance and mitigation measures are implemented. A very small part of the site lies within a groundwater emergence zone. Flooding has the](#)

## Site Selection – Site Commentary

[potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

**Proposed development (from SHLAA submission):**

The site is proposed for between 30 and 41 dwellings, in keeping with the local vicinity of predominantly family housing. It is proposed that a pavement could be constructed within the curtilage of the land along Inkpen Road.

## Appendix 10

### Gypsy and Traveller and Travelling Showpeople Site Assessments

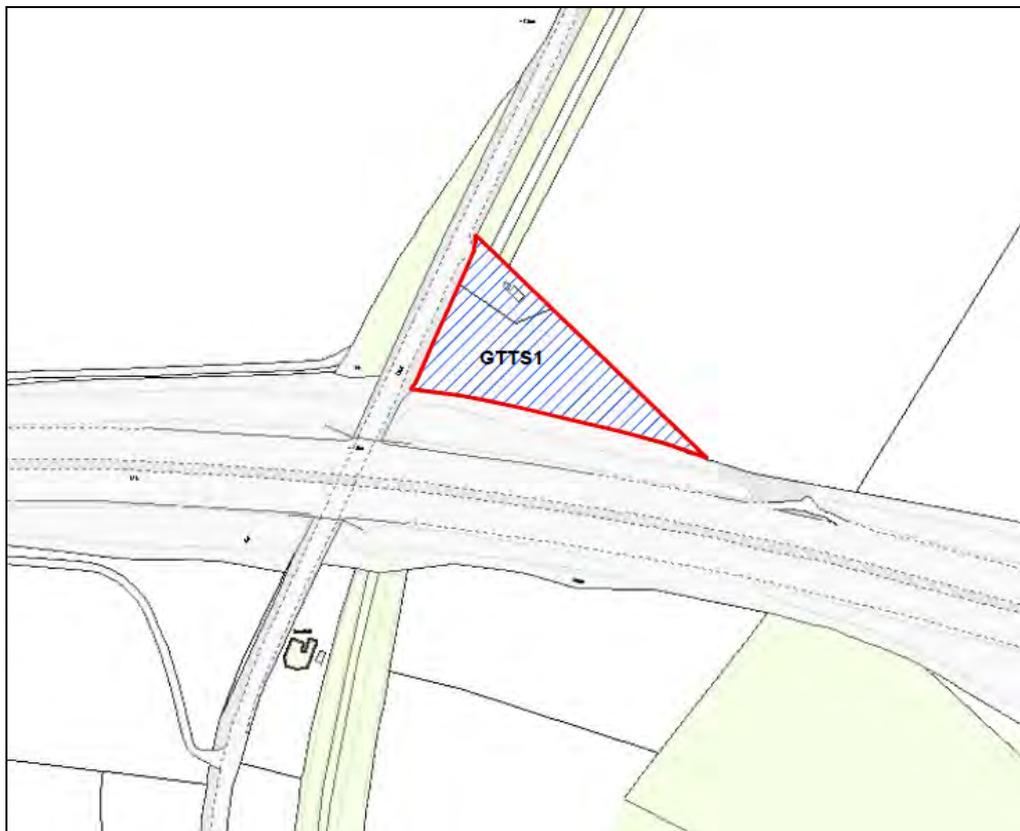

## Site Assessment for Gypsy and Traveller Sites

<b>Site ID:</b>	GTTS1	<b>Site Address:</b>	Land to the north west of Furze Hill, Hermitage		
<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	North of Hermitage	<b>Parish:</b>	Hampstead Norreys
<b>Development Potential:</b>	3 - 5 pitches		<b>Site Size:</b>	0.44 ha	

### Site Description:

The site is located within the North Wessex Downs Area of Outstanding Natural Beauty (NWD AONB) along the B4009 to the north of Hermitage. When travelling north from Hermitage the site is situated to the east of B4009 and adjacent to M4. Mature trees help contain the site within the wider landscape along its north eastern boundary and to the south the site is contained by boundary planting along the M4 corridor. However the site is visually exposed from views to the west and along the B4009.

### Site Location:

**Site Assessment:**

Policy CS7 Criteria	Assessment of suitability
Safe and easy access to major roads and public transport services	<ul style="list-style-type: none"> <li>• Located on the B4009, a main local route between Newbury and the north east of the District.</li> <li>• Speed limit directly outside site is 60mph.</li> <li>• Hermitage is served by a 2 hourly bus service, linking with Newbury.</li> <li>• The nearest bus stop is located within Hermitage – approximately 530m from the site.</li> <li>• The road between the site and the start of the village has no formal footpath provision (for a stretch of road approximately 400m in length) and therefore not conducive to pedestrians for this part.</li> </ul>
Easy access to local services including a bus route, shops, schools and health services	<ul style="list-style-type: none"> <li>• Located approximately 1300m from village shop, public house and village hall.</li> <li>• Primary school is located approximately 650m away from the site.</li> <li>• No GP surgery within village, nearest surgery is within Compton or Chieveley.</li> </ul>
Located outside areas of high flooding risk	<ul style="list-style-type: none"> <li>• Site is not at risk of flooding and there is no evidence of flood risk issues on the site.</li> </ul>
Provision for adequate on site facilities for parking, storage, play and residential amenity	<ul style="list-style-type: none"> <li>• Site is of a sufficient size to allow for the provision of adequate on site facilities. This will require appropriate design.</li> <li>• A shed is currently present in the northern part of the site.</li> </ul>
The possibility of the integrated co-existence between the site and the settled community, including adequate levels of privacy and residential amenity both within the site and with neighbouring occupiers	<ul style="list-style-type: none"> <li>• The site is outside of, but close to, the existing settlement of Hermitage. The village has a number of services and facilities which are less than 1.5km away from the site.</li> <li>• The site's location close to the village provides the opportunity for integration with the settled community however the site is in a rural location.</li> <li>• No residential properties are immediately adjacent.</li> <li>• Impact on the privacy and residential amenity of both site occupants and/or neighbouring uses will be limited.</li> </ul>
Opportunities for an element of authorised mixed uses	<ul style="list-style-type: none"> <li>• Any proposed mixed use development in the NWDAONB would need to be assessed in accordance with the relevant Local Plan policies. This would need to reflect the site's location within a nationally designated landscape.</li> </ul>
The compatibility of the use with the surrounding land use, including potential disturbance from vehicular movements, and on site business activities	<ul style="list-style-type: none"> <li>• Surrounding land use is largely agricultural with the village nearby.</li> <li>• Given the existing use of the site is a field previously used for grazing, there would be an increase in vehicle movements to and from the site.</li> </ul>

Will not materially harm the physical and visual character of the area	<ul style="list-style-type: none"> <li>• The site is rural in character despite being close to the existing settlement of Hermitage.</li> <li>• Mature trees help contain the site within the wider landscape along its north eastern boundary and to the south the site is contained by boundary planting along the M4 corridor. However the site is visually exposed from views to the west and along the B4009.</li> <li>• Located adjacent to the M4 motorway – noise impact from the motorway needs to be considered.</li> </ul>
Where applicable have regard for the character and policies affecting the North Wessex Downs AONB	<ul style="list-style-type: none"> <li>• Site is located within the NWDAONB.</li> <li>• Landscape assessment concludes that development of this site would have an impact on the landscape of the NWDAONB. See landscape assessment for details.</li> </ul>
Other issues to consider	<ul style="list-style-type: none"> <li>• Rights of Way Improvement Plan runs along southern boundary of the site.</li> <li>• Site lies on route of the old railway line which is currently being investigated for a long distance cycle path.</li> <li>• <del>Submission from agent indicates the site is available immediately and with no known constraints to delivery.</del></li> <li>• <del>Awaiting comments from internal consultees ( Education, Environmental Health, Highways).</del></li> <li>• <del>Site is still subject to key stakeholder consultation including Parish Council, Environment Agency, Thames Water, Police and NWDAONB Council of Partners.</del></li> </ul>

### Summary of assessment:

The site is close to existing services and facilities, with good access to a bus service. Mature trees help contain the site within the wider landscape along its north eastern boundary and to the south the site is contained by boundary planting along the M4 corridor. However the site is visually exposed from views to the west and along the B4009. The size of the site would not dominate the landscape or the nearest settled community and the impact on the privacy and residential amenity of both site occupants and/or neighbouring uses will be limited. The site is not at risk of flooding.

The site is within the AONB and therefore consideration of the landscape is paramount in assessing the suitability of sites within this nationally designated landscape. The [Landscape Capacity Assessment \(LSA, 2014\)](#) concludes that this site would have an adverse landscape and visual impact on the open undeveloped wider landscape north of the M4. National policy (Planning Policy for Traveller Sites (PPTS)) seeks to restrict Gypsy and Traveller sites within open countryside that is away from existing settlements or outside areas allocated in the development plan. The site's location adjacent to the M4 would result in noise impact for future residents.

The site is [automatically excluded and not recommended for allocation](#) due to the potential landscape impact on the AONB.

## Site Assessment for Gypsy and Traveller Sites

<b>Site ID:</b>	GTTS2	<b>Site Address:</b>	<del>Circus Headquarters</del> , Long Copse Farm, Enborne, Newbury, RG20 0LD
-----------------	-------	----------------------	--

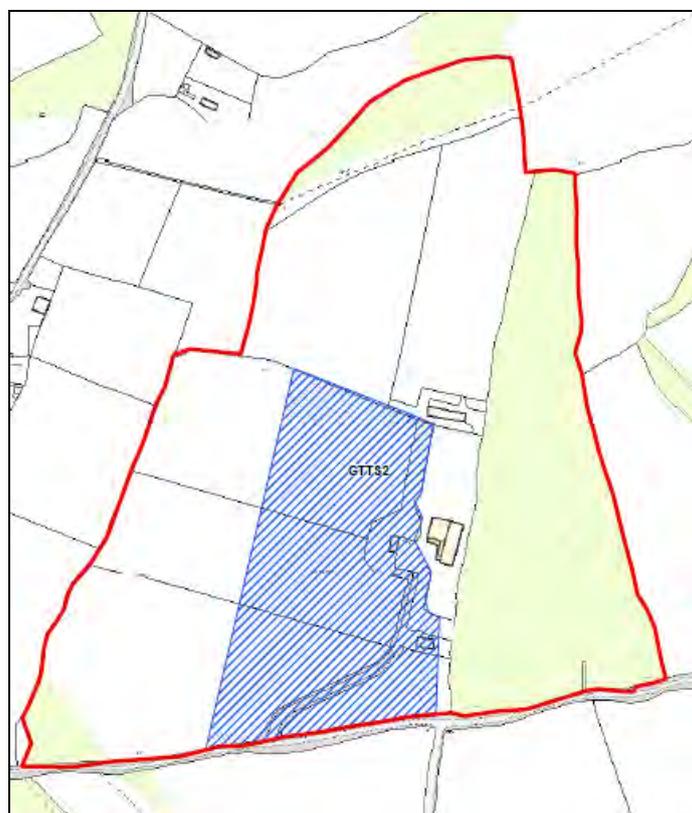

<b>Spatial Area:</b>	Newbury and Thatcham	<b>Settlement:</b>	Enborne	<b>Parish:</b>	Enborne
----------------------	----------------------	--------------------	---------	----------------	---------

<b>Development Potential:</b>	<del>204</del> plots for Travelling Showpeople of Zippos Circus	<b>Site Size:</b>	19.8 ha (4.4ha proposed for development)
-------------------------------	---	-------------------	--

### Site Description:

The site is located in Enborne to the west of Wash Common. This is a ~~very~~ large site accommodating ~~an~~ existing four caravans for Travelling Showpeople and the storage of equipment associated with Zippos Circus. It is proposed by the landowner that 20 additional plots are required for use by the circus which would equate up to approximately 4.4 ha. [The Gypsy and Traveller Assessment identifies the need for a further 4 plots to accommodate household growth over the period of the Plan.](#) The site contains areas of woodland which are designated Local Wildlife Sites, but the site is largely in agricultural use with the exception of the area accommodating Travelling Showpeople and associated storage.

### Site Location:

## Site Assessment:

Policy CS7 Criteria	Assessment of suitability
Safe and easy access to major roads and public transport services	<ul style="list-style-type: none"> <li>The site is located to the south west of Newbury in the Parish of Enborne and approximately 1km from the settlement boundary.</li> <li><a href="#">Vanners-Wheatlands</a> Lane is a relatively quiet rural road. Speed limit is 60 mph. This reduces to 30mph on the approach to Crockham Heath approximately 100m from the site access.</li> <li>The site has good access to the A34.</li> <li>The nearest bus <del>stop is located just outside the site along Vanners Lane – approximately 130m from the site, however, the nearest bus stop</del> with an active bus service is just over 1km away.</li> <li>There is a 2 hourly bus service from Crockham Heath to Newbury and Hungerford (Connect Service no.3).</li> </ul>
Easy access to local services including a bus route, shops, schools and health services	<ul style="list-style-type: none"> <li>Located approximately 350m from the nearest primary school – Enborne C of E Primary School.</li> <li>The site is approximately 2km from Wash Common where a number of services and facilities do exist, including schools, shops, recreation ground, public house and library.</li> <li>GP Surgery is available within Wash Common.</li> <li><a href="#">Vanners-Wheatlands</a> Lane is rural in character with no formal footway provision.</li> </ul>
Located outside areas of high flooding risk	<ul style="list-style-type: none"> <li>The northern most part of the site is within flood Zones 2 and 3. Development <a href="#">will not take place on land within the Flood Zones 2 and 3. would need to be avoided on this area.</a></li> <li>Stream runs along the western and northern boundaries of the site.</li> </ul>
Provision for adequate on site facilities for parking, storage, play and residential amenity	<ul style="list-style-type: none"> <li>Site is of a sufficient size to allow for the provision of adequate on site facilities. This will require appropriate design.</li> <li>The site is currently used as a Travelling Showperson's site so a number of on-site facilities already exist.</li> </ul>
The possibility of the integrated co-existence between the site and the settled community, including adequate levels of privacy and residential amenity both within the site and with neighbouring occupiers	<ul style="list-style-type: none"> <li>The site is outside of any existing settlement and rural in character.</li> <li>No residential properties are immediately adjacent – residential dwellings are dispersed throughout the area, with some in close proximity (approximately 400m away)</li> <li>Impact on the privacy and residential amenity of both site occupants and/or neighbouring uses will be limited.</li> </ul>
Opportunities for an element of authorised mixed uses	<ul style="list-style-type: none"> <li>As Circus Headquarters the site has a number of storage buildings/areas for circus equipment.</li> <li>Potential for an element of agricultural use to remain on part of the site.</li> </ul>
The compatibility of the use with	<ul style="list-style-type: none"> <li>Surrounding land use is largely agricultural, with</li> </ul>

the surrounding land use, including potential disturbance from vehicular movements, and on site business activities	<p>residential properties dispersed.</p> <ul style="list-style-type: none"> <li>• Whilst the site is an existing site for Travelling Showpeople the existing use of the proposed area is largely agricultural.</li> <li>• There would be an increase in vehicle movements to and from the site if an additional <a href="#">204</a> plots were to be provided.</li> </ul>
Will not materially harm the physical and visual character of the area	<ul style="list-style-type: none"> <li>• The site is rural in character with views to the west, however the site is contained to the east and north by areas of woodland.</li> <li>• The position of any further accommodation for Travelling Showpeople would require careful consideration given the size and character of the site.</li> <li>• Local Wildlife Sites present on site along with Tree Preservation Orders.</li> </ul>
Where applicable have regard for the character and policies affecting the North Wessex Downs AONB	<ul style="list-style-type: none"> <li>• Site is not within the NWDAONB.</li> <li>• No impact on the character and policies affecting the NWDAONB.</li> </ul>
Other issues to consider	<ul style="list-style-type: none"> <li>• Public Right of Way runs along the northern boundary (ENBO/19/1).</li> <li>• Site is in close proximity to Nature Reserve – Avery’s Pightle (approximately 400m away).</li> <li>• The agent promoting the site has indicated that the site is available immediately, with no known constraints to delivery.</li> <li>• Concern that additional development at the site could be inappropriate in scale within this rural location and possibly dominate the dispersed nature of surrounding development.</li> <li>• <del>Awaiting comments from internal consultees (Education, Environmental Health, Highways, Community Safety).</del></li> <li>• <del>Site is still subject to key stakeholder consultation including Parish Council, Environment Agency, Thames Water and Police.</del></li> </ul>

### Summary of assessment:

The site is within 2km of Wash Common which has a number of services and facilities. The nearest primary school is 350m from the site. The site contains two Local Wildlife Sites in the eastern and northern parts of the site along with Tree Preservation Orders, but the remainder is largely agricultural land with the exception of that used to accommodate the [existing](#) Travelling Showpeople. The site is outside of any existing settlement and rural in character and as such there are no residential properties immediately adjacent to the site. Impact on the privacy and residential amenity of both site occupants and/or neighbouring uses will therefore be limited.

The northern most part of the site is within flood Zones 2 and 3. Development ~~would need to be avoided on~~ [will not take place on](#) this area and a stream runs along the western and northern

boundaries of the site. The site is contained to the east by Long Copse and to the north by an area of woodland, with views to neighbouring properties to the west.

National policy (Planning Policy for Traveller Sites (PPTS)) seeks to restrict Gypsy and Traveller sites within open countryside that is away from existing settlements or outside areas allocated in the development plan. However, this is an existing site for Travelling Showpeople, with good access to a range of services and facilities on an established site within the area. ~~There is concern however that additional development at the site could be inappropriate in scale within this rural location and possibly dominate the dispersed nature of surrounding development. Effective landscaping will be required to ensure the impact of any development on the wider landscape is minimised.~~

The GTAA highlights a need for Travelling Showpeople in relation to Zippo's Circus of 24 plots of the next 15 years.

The site is **recommended for allocation.**

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

<b>Spatial Area:</b>	Newbury Thatcham	<b>Settlement:</b>	Enborne	<b>Parish:</b>	Enborne
----------------------	------------------	--------------------	---------	----------------	---------

<b>Site ID:</b>	GTTS2	<b>Site Address:</b>	Long Copse Farm, Enborne	<b>Development Potential:</b>	294 plots (for Travelling Showpeople)
-----------------	-------	----------------------	--------------------------	-------------------------------	---------------------------------------

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site has easy access to the countryside and is close to local services and facilities and opportunities for walking and cycling do exist. Providing a site for permanent accommodation creates an opportunity to deliver a better living environment.		The site is close to local services and facilities in Wash Common. The site is likely to have a positive impact on social and environmental sustainability.
	Will it increase opportunities for access to sports facilities?	0	Sport facilities are not available within Enborne. Nearest sports facilities are within Wash Common, 2km from the site. Access would most likely be reliant upon the private car.		
	Will it protect and enhance green infrastructure across the district?	0	Development will be directed away from Local Wildlife Sites on the site. Public Right of Way present on the site.	Create buffers between development and Local Wildlife Sites. Protect and maintain the Public Right of Way on the northern part of the site.	
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	Primary school is within walking distance. Local employment opportunities would be available within Newbury however residents would be employed by the circus located on site. Services and facilities are available in Wash Common which is approximately 2km from the site.		The proximity to local facilities means that the site should have a positive impact on social and economic sustainability
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public	0-	Bus stop is located approximately 1km from the site and is served by a 2hourly bus service to Newbury. Opportunities for walking and cycling	<a href="#">Mitigation could be provided through creation of passing places to enhance opportunities for walking and</a>	Access to local services and facilities however there would be a <a href="#">high</a> degree of car dependency for higher

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	transport?		do exist however there would be a high level of car dependency.	<a href="#">cycling.</a>	order services and facilities. Development on this site would have a <del>negative</del> <sup>neutral</sup> effect on <a href="#">environmental sustainability</a> .
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.	<a href="#">Mitigation could be provided through creation of passing places to enhance safety of road users and pedestrians.</a>	
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	0	Local Wildlife Sites are present on the site which would need to be protected. A line of individual trees are located towards the western edge of the site and these would also need to be protected.	<a href="#">Sensitive design ,layout and siting of the development on the site as well as landscaping could assist in minimising the impact on local wildlife sites.</a>	Development could have a negative impact on environmental sustainability unless appropriate mitigation measures are introduced.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	0	The site is well screened to the east by Long Copse, and hedges, trees and copses provide screening from other directions. Although there are breaks in the vegetation in some places there are few views into the site.	Sensitive design, layout and siting of the development on the site, as well as <a href="#">additional</a> landscaping could assist in minimising any visual impact arising from the site.	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	0	Unlikely to have an impact	Sensitive design, layout and siting of the development on the site, as well as landscaping could assist in minimising any visual impact arising from the site.	Overall neutral effect on sustainability, however development could have a negative impact on environmental sustainability unless appropriate mitigation measures are introduced.
	Will it conserve and enhance the significance of the District's heritage assets?	0	Unlikely to have an impact		
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact. A34 is in close proximity to the site and therefore there is the potential for air quality impact however this is not expected to be significant..		Unlikely to have an impact on any element of sustainability.
	Will the site be at risk from,	0	Unlikely to have an impact.		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	or impact on, noise levels?		A34 is in close proximity to the site and therefore there is the potential for noise impact however this is not expected to be significant.		
	Will there be an impact on soil quality?	<b>0</b>	Unlikely to have an impact		
	Will there be an impact on water quality?	<b>0</b>	Unlikely to have an impact		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Site is <u>largely</u> greenfield, however part of the site is an existing site for Travelling Showpeople.	<a href="#">The development could help to mitigate the impact by maximising use of the previously developed land to accommodate the development</a>	Development on greenfield land has a negative impact on environmental sustainability <u>though mitigation will reduce the impact.</u>
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions? Unlikely to be any significant sustainability issues	?	The level of impact depends on the building materials used, construction methods, transport and design		Without consideration given to sustainable construction techniques development could negatively impact on sustainability.
	Will the site be subject to / at risk from flooding	-	The site is partly within Flood Zones 2 and 3 which are located on the northern part of the site.	SUDs and a Flood Risk Assessment would be required. Development would be directed away from the flood Zones and mitigation measures could result in a positive effect.	Development could have a negative impact on all elements of sustainability however with the implementation of appropriate mitigation this could result in a positive effect.
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<b>0</b>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<b>0</b>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		<a href="#">the longer term.</a>
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significantly positive or negative effects in relation to this site.

The site is close to local services and facilities, [though some of these will inevitably be accessed by car, overall -and](#) this could have a positive impact on sustainability.

Development of the site could however lead to a negative impact on environmental sustainability unless suitable mitigation measures are introduced with regard to flood risk and the greenfield nature of the site. Mitigation measures such as good design techniques, SUDS and layout would help to mitigate this impact.

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury Thatcham

**Duration:** Permanent

**Timing:** Short to Long term

## Site Assessment for Gypsy and Traveller Sites

<b>Site ID:</b>	GTTS3	<b>Site Address:</b>	Benhams Farm, Hollybush Lane, Burghfield Common, RG7 3JS		
-----------------	-------	----------------------	--	--	--

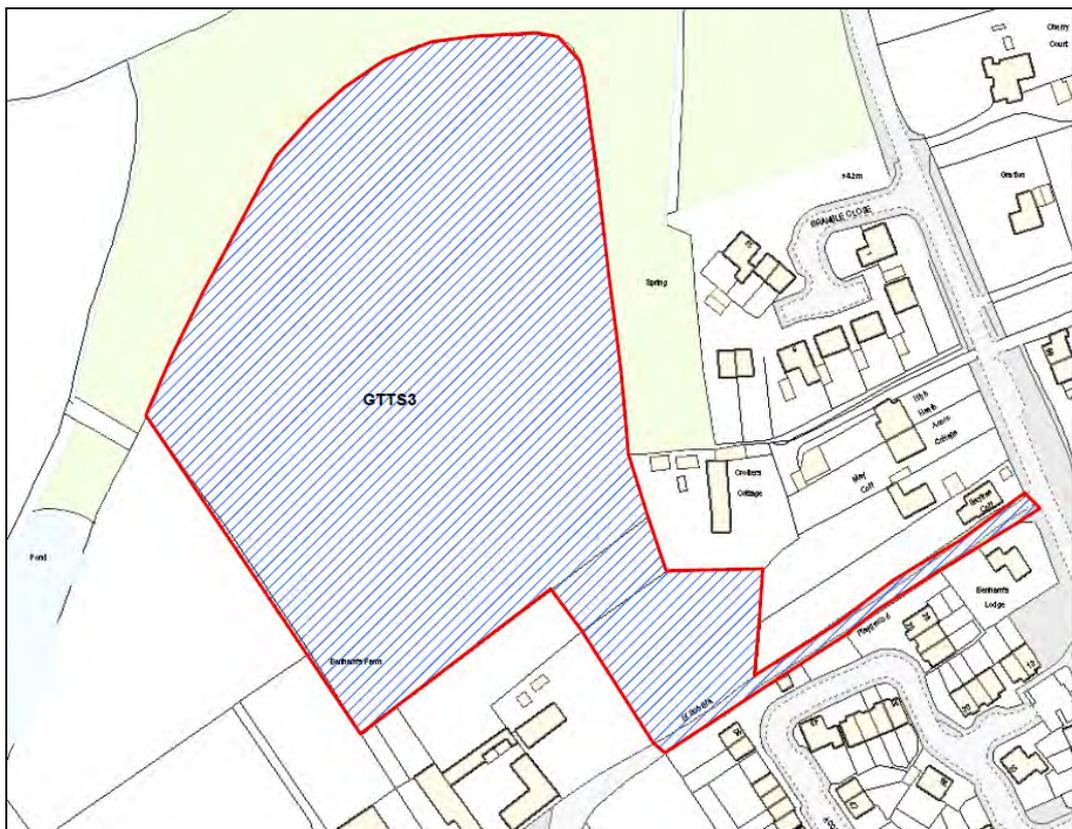

<b>Spatial Area:</b>	East Kennet Valley	<b>Settlement:</b>	Burghfield	<b>Parish:</b>	Sulhamstead
----------------------	--------------------	--------------------	------------	----------------	-------------

<b>Development Potential:</b>	Up to 15 pitches	<b>Site Size:</b>	2.85 ha		
-------------------------------	------------------	-------------------	---------	--	--

### Site Description:

The site is located to the west of Burghfield with part of the site lying adjacent to the settlement boundary. The site is accessed via a narrow track off Hollybush Lane and is set behind existing farmhouse and farm buildings. The site is contained to the north and east by woodland and existing vegetation, with farm buildings to the south and open farmland to the west. This is a large site currently used for agricultural purposes.

### Site Location:

**Site Assessment:**

Policy CS7 Criteria	Assessment of suitability
Safe and easy access to major roads and public transport services	<ul style="list-style-type: none"> <li>• Access to the site is via a narrow track off Hollybush Lane.</li> <li>• Speed limit on Hollybush Lane is 30mph and there is formal footway provision along this road.</li> <li>• The site is in close proximity to the main Reading Road.</li> <li>• Burghfield Common has a regular bus service linking the village to Mortimer railway station and Reading town centre. The nearest bus stop to the site is approximately 700m away.</li> </ul>
Easy access to local services including a bus route, shops, schools and health services	<ul style="list-style-type: none"> <li>• The site has good access to schools - located approximately 350m from Mrs Blands Infant School, less than 1km to Garland Junior School and approximately 300m from The Willink School which is located along Hollybush lane.</li> <li>• The site is adjacent to the settlement boundary of Burghfield Common where a number of services and facilities do exist, including schools, shops, recreation facilities and a library.</li> <li>• Health services are available within Burghfield Common.</li> <li>• The site has good access to public transport as set out above.</li> </ul>
Located outside areas of high flooding risk	<ul style="list-style-type: none"> <li>• The site is not located within a flood zone.</li> <li>• There is evidence that the adjacent farm has flooded in the past and therefore a Flood Risk Assessment would be required.</li> </ul>
Provision for adequate on site facilities for parking, storage, play and residential amenity	<ul style="list-style-type: none"> <li>• Site is of a sufficient size to allow for the provision of adequate on site facilities. This will require appropriate design.</li> </ul>
The possibility of the integrated co-existence between the site and the settled community, including adequate levels of privacy and residential amenity both within the site and with neighbouring occupiers	<ul style="list-style-type: none"> <li>• The site forms part of Benhams Farm and is located behind the existing farmhouse and associated barns.</li> <li>• Conversion of some outbuildings to residential has taken place and therefore residential properties are immediately adjacent to the site.</li> <li>• Proximity of the site to the existing settlement provides the opportunity for integration with the settled community.</li> <li>• Potential impact on the privacy and residential amenity of neighbouring residents.</li> </ul>
Opportunities for an element of authorised mixed uses	<ul style="list-style-type: none"> <li>• Any proposed mixed use development would need to be assessed in accordance with the relevant Local Plan policies.</li> </ul>
The compatibility of the use with the surrounding land use, including potential disturbance from vehicular movements, and on site business activities	<ul style="list-style-type: none"> <li>• Although very close to the settlement the site does have a rural character.</li> <li>• Located down a single track lane the surrounding land uses are predominantly agricultural.</li> <li>• Residential properties are adjacent to the site, within the</li> </ul>

	<p>wider farm landholdings, which could impact on the residential amenity of these properties in terms of general disturbance.</p> <ul style="list-style-type: none"> <li>• There would be an increase in vehicle movements to and from the site compared to the current use (agriculture/grazing).</li> </ul>
Will not materially harm the physical and visual character of the area	<ul style="list-style-type: none"> <li>• The site is rural in character.</li> <li>• The site is contained to the north and east by woodland and existing vegetation, with farm buildings to the south but open farmland to the west providing views to the wider landscape.</li> </ul>
Where applicable have regard for the character and policies affecting the North Wessex Downs AONB	<ul style="list-style-type: none"> <li>• Site is not within the NWDAONB.</li> <li>• No impact on the character and policies affecting the NWDAONB.</li> </ul>
Other issues to consider	<ul style="list-style-type: none"> <li>• Site is located within the outer consultation zone for both AWE Aldermaston and AWE Burghfield.</li> <li>• Public Right of Way runs along the access to the site (SULH/41).</li> <li>• Listed building (Crofters Cottage) adjacent to the site.</li> <li>• The landowner indicates the site is available immediately, with no known constraints to delivery.</li> <li>• <del>Awaiting comments from internal consultees (Education, Environmental Health, Highways, Community Safety).</del></li> <li>• <del>Site is still subject to key stakeholder consultation including Parish Council, Environment Agency, Thames Water and Police.</del></li> </ul>

### Summary of Assessment:

The site is close to existing services and facilities, with good access to a bus service. The large site is set behind the existing settlement but is contained to the north and east by woodland and to the south by existing farm buildings. The site abuts the settlement boundary, with residential properties located immediately adjacent to the site itself. Open farmland to the west of the site affords views to the wider landscape which could result in some visual impact. Additional landscaping and sensitive design would be required.

Whilst the site is not located within a Flood Zone there is record of flooding at Benhams Farm and therefore a Flood Risk Assessment would be required.

The site is located within the outer consultation zone for both AWE Aldermaston and AWE Burghfield.

The site is **not recommended for allocation** due to concern over the impact on the existing settled community.

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	The site has easy access to the countryside, and is close to local services and facilities which would enable walking and cycling. Providing a site for permanent accommodation creates an opportunity to deliver a better living environment. The sites proximity to the settled community provides the opportunity for integrated co-existence.		The site is close to local services and facilities including a local leisure centre and playing field. The site also provides the opportunity for integrated co-existence and as such the site is likely to have a positive impact on social and environmental sustainability.
	Will it increase opportunities for access to sports facilities?	<b>+</b>	Very accessible to leisure centre and recreation ground.		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	Site is close to local amenity spaces and Public Right of Way runs along the access track to the site and through the farm beyond.	Public Right of Way would need to be protected.	
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>+</b>	Accessible to local facilities and very close to schools. Limited local employment opportunities in terms of B class uses but other types of employment are available within the village.		The proximity to local facilities means that the site should have a positive impact on social and economic sustainability
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>0</b>	There is a regular bus service in Burghfield Common but no railway station. There are a number of opportunities for walking and cycling. There is no pavement on the west side of Hollybush Lane.	Potential to provide footpath along Hollybush Lane	There are opportunities for sustainable travel with regular bus services to Reading. This should have a generally positive impact on environmental sustainability.
	Will it reduce the number of road traffic accidents and	<b>?</b>	Additional traffic could result in road safety concerns, but any	Potential to include a safe crossing of Hollybush Lane.	

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	improve safety?		development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	-	There are wetlands to the north of the site that would need to be protected. The site is within a BOA. There is potential for bats and badgers on the site.	Extended Phase 1 Habitat Survey required. There would be an opportunity to extend the Public Open Space (POS) to the north west in an easterly direction.	Development could have a negative impact on environmental sustainability unless appropriate mitigation measures are introduced.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	0 / -	The site is contained to the north and west by woodland and existing vegetation and farm buildings to the south. Open farmland to the west provides views to the wider landscape.	Sensitive design and layout of the site as well as landscaping could assist in minimising any visual impact arising from the site.	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	-	The site abuts the settlement boundary, with residential properties located immediately adjacent to the site itself. The close proximity of the site could have an impact.	Sensitive design and layout of the site as well as landscaping could assist in minimising any impact arising from the site.	Development could have a negative impact on environmental sustainability however appropriate mitigation measures could reduce this impact.
	Will it conserve and enhance the significance of the District's heritage assets?	0	Historic farmstead in south west corner of the site.	Further assessment required.	
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact		Unlikely to be any significant sustainability issues
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact		
	Will there be an impact on soil quality?	0	Unlikely to have an impact		
	Will there be an impact on water quality?	0	Unlikely to have an impact		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Site is greenfield		Development on greenfield land has negative impact on environmental

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
		?			sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions? Unlikely to be any significant sustainability issues	?	The level of impact depends on the building materials used, construction methods, transport and design		Without consideration given to sustainable construction techniques development could negatively impact on sustainability.
	Will the site be subject to / at risk from flooding	<b>0</b>	The site is adjacent to an area of surface water flood risk, but is not at risk itself	SUDs and a Flood Risk Assessment would be required.	Unlikely to have an impact on any element of sustainability.
11. <a href="#">To ensure a strong, diverse and sustainable economic base</a>	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<b>0</b>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<b>0</b>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

[Overall the site is likely to have a predominantly neutral effect on sustainability and T](#)there are no significantly positive or negative effects in relation to this site. The site is close to local services and facilities, with opportunities for walking, cycling and public transport, this has a positive impact on sustainability. Development of the site could lead to a negative impact on environmental sustainability unless suitable mitigation measures are introduced with regard to landscape impact and the built environment [as the site abuts the existing settlement boundary](#). The site is greenfield and therefore likely to have a negative impact on sustainability. Mitigation measures such as good design techniques and layout would help to mitigate this impact.

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** East Kennet Valley

**Duration:** Permanent

**Timing:** Short to Long term

## Site Assessment for Gypsy and Traveller Sites

<b>Site ID:</b>	GTT54	<b>Site Address:</b>	Land to the rear of Paices Hill, Aldermaston
-----------------	-------	----------------------	--

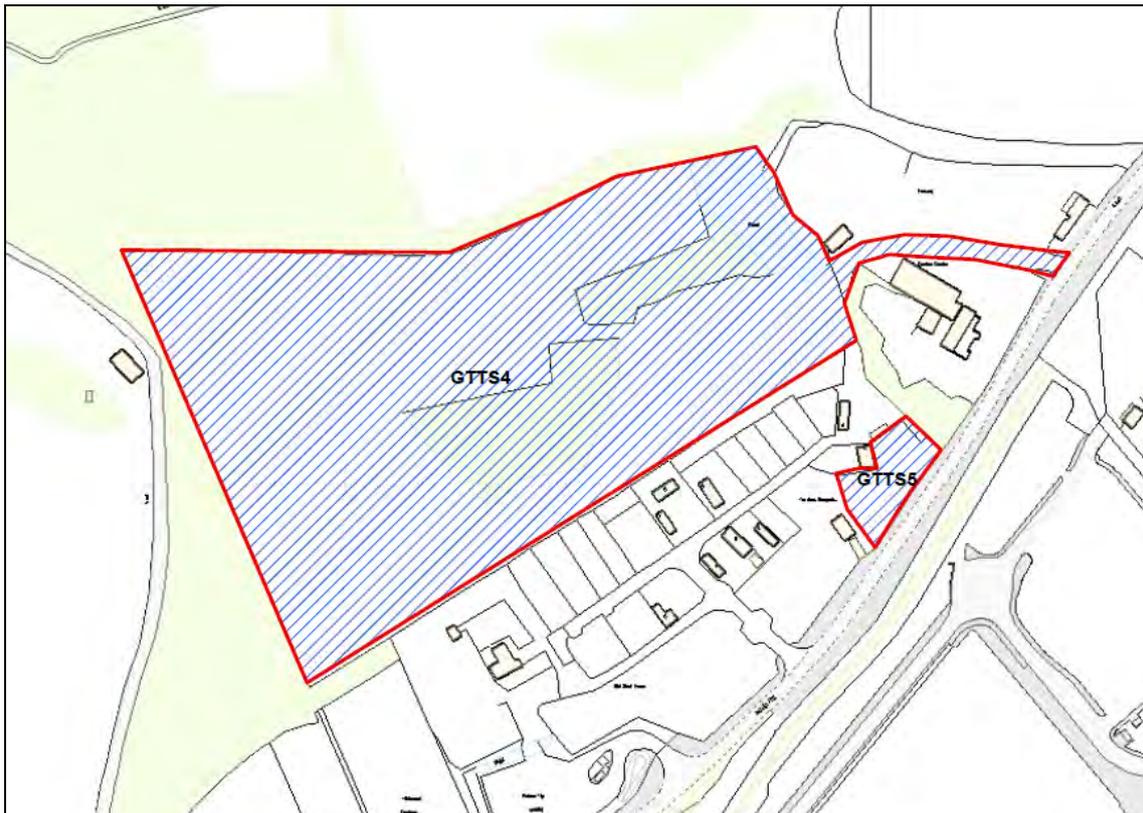

<b>Spatial Area:</b>	East Kennet Valley	<b>Settlement:</b>	Rural	<b>Parish:</b>	Aldermaston
----------------------	--------------------	--------------------	-------	----------------	-------------

<b>Development Potential:</b>	Up to 15 pitches	<b>Site Size:</b>	5.67 ha
-------------------------------	------------------	-------------------	---------

### Site Description:

The site located behind the existing privately run Gypsy and Traveller site, Paices Hill, which has a total of 39 pitches (24 permanent and 15 transit pitches). The site would be accessed off Paices Hill using a separate entrance to the existing site. The site is currently bounded by a corrugated iron fence making views into the site difficult.

### Site Location:

**Site Assessment:**

	including Parish Council, Environment Agency, Thames Water and Police.
--	--

### Summary of Assessment:

The site located behind the existing privately run Gypsy and Traveller site, Paices Hill, which has a total of 39 pitches (24 permanent and 15 transit pitches).

The site would be accessed off Paices Hill using a separate entrance to the existing site. It is currently bounded by a corrugated iron fence making views into the site difficult.

The site is less than 1km to Tadley which hosts a variety of services and facilities including schools and shops, and employment areas (Calleva Park and Youngs Industrial Estate) are also in close proximity. Most of the surrounding uses are commercial. The site is not located within a flood zone and there is no evidence of flood risk issues on the site.

Extension of the Paices Hill site to include this site would result in a very large site which is inappropriate in size and scale.

Site is located within the inner consultation zone for AWE Aldermaston.

The site is automatically excluded and not recommended for allocation as it is considered that the site would be inappropriate in size and scale.

**Key: Effects of option on SA objectives**

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site has easy access to the countryside, and is close to local services and facilities in Tadley which would enable walking and cycling. Providing a site for permanent accommodation creates an opportunity to deliver a better living environment.		The site is close to local services and facilities including a local leisure centre. The site is likely to have a positive impact on social and environmental sustainability.
	Will it increase opportunities for access to sports facilities?	+	Leisure facilities are available in Tadley.		
	Will it protect and enhance green infrastructure across the district?	0	Unlikely to have an impact.		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	Accessible to local services and facilities, including schools. A number of commercial uses surround the site.		The proximity to local facilities means that the site should have a positive impact on social and economic sustainability
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	0	There are a number of opportunities for walking and cycling in the area. Public transport is limited. There is no pavement along Paices Hill. Potential for high car dependence.	Potential to provide footpath along Paices Hill.	There are opportunities for walking and cycling however public transport is limited and it is likely car dependence will be high. Overall, development is unlikely to impact on sustainability <a href="#">as the pitches proposed replace existing transit pitches with permanent pitches.</a>
	Will it reduce the number of road traffic accidents and improve safety?	?	The site already has consent for transit pitches however the change to permanent could result in additional traffic which in turn could result in road safety concerns. Any development would also have the potential to improve road safety.	Potential to provide Highway improvements along Paices Hill.

### Summary

There are no significantly positive or negative effects in relation to this site.  
 The site is close to local services and facilities, with opportunities for walking, cycling and public transport in particular, this has a positive impact on sustainability.  
 The site is also previously developed land which would positively impact on environmental sustainability.  
 Overall the site has a predominantly neutral effect on the sustainability.

Within the area there are some</del></li> </ul>

<p>from vehicular movements, and on site business activities</p>	<p><a href="#">redundant farm buildings as well as a working farm.</a></p> <ul style="list-style-type: none"> <li>• The surrounding uses are predominantly agriculture, with dispersed residential properties, however some of these properties are <a href="#">directly opposite this site adjacent to the area boundary.</a></li> <li>• There would be an increase in vehicular movements to and from the site which could have an impact on the highway.</li> </ul>
<p>Will not materially harm the physical and visual character of the area</p>	<ul style="list-style-type: none"> <li>• The <a href="#">site area of search</a> is bounded by hedgerows and <del>a few</del> mature trees along the road edge.</li> <li>• Potential for views <a href="#">from the east across agricultural land into and out of the area of search at certain locations. Effective landscaping would be required.</a></li> <li>• Vacant agricultural buildings/<a href="#">farm buildings</a> present on the site.</li> </ul>
<p>Where applicable have regard for the character and policies affecting the North Wessex Downs AONB</p>	<ul style="list-style-type: none"> <li>• <a href="#">Site Clappers Farm area of search</a> is not within the NWDAONB.</li> <li>• No impact on the character and policies affecting the NWDAONB.</li> </ul>
<p>Other issues to consider</p>	<ul style="list-style-type: none"> <li>• <a href="#">Site Area</a> is located within the Thames Basin Heath SPA 5-7km zone.</li> <li>• The <a href="#">site area of search</a> is within the middle consultation zone for AWE Burghfield.</li> <li>• <a href="#">The south western boundary of the area of search lies adjacent to ancient woodland.</a></li> <li>• <a href="#">Public Right of Way runs adjacent to the northern boundary of the area of search.</a></li> <li>• <a href="#">Site Area</a> is located close to railway line – potential noise impact.</li> <li>• The <a href="#">site Clappers Farm area of search</a> is Council owned land.</li> <li>• <del>Awaiting comments from internal consultees (Archaeology, Education, Environmental Health, Ecology, Highways, Community Safety, G&amp;T Liaison Officer, Housing and Emergency Planning).</del></li> <li>• <del>Site is still subject to key stakeholder consultation including Parish Council, Environment Agency, Thames Water and Police.</del></li> </ul>

**Summary of Assessment:**

[The identified preferred options site \(GTTS6B\) forms part of wider Council landholdings, Clappers Farm, and the whole of the site is now being considered as an area of search \(GTTS6\). Comments and concerns raised through the preferred options consultation has resulted in the wider Clappers Farm landholding \(GTTS6\) being considered as an area of search from within which a site for up to 9 pitches will be delivered through the Local Plan.](#)

The ~~site~~ Clappers Farm area of search is approximately 2.54km from Spencers Wood, 4km from Burghfield Common and 4km from Mortimer, ~~both~~ of which have a range of services and facilities including shops and schools. The nearest primary school is approximately less than 1.5km from the ~~site area~~ (although this is within Wokingham Borough). ~~The site~~ Clappers Farm is outside of any existing settlement and is rural in character, although there are some dispersed residential properties ~~directly opposite the site~~ adjacent to the area of search boundary, ~~both~~ on Cross Lane and Bloomfield Hatch Lane. The area of search also has good access to the A33 and M4.

National policy (Planning Policy for Traveller Sites (PPTS)) seeks to restrict Gypsy and Traveller sites within open countryside that is away from existing settlements or outside areas allocated in the development plan. ~~h~~ However, it does go on to say that in assessing the suitability of sites in rural settings the scale of such sites should not dominate the nearest settled community. The area of search there are is close to some local services and facilities nearby, and has good access to both A33 and the M4.

This site is Council owned land and capable of being delivered later in the plan period.

The site GTTS6 is recommended for allocation as an area of search from within which a site for up to 9 pitches will be delivered through the Local Plan.

	the historic environment?				
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	<b>0</b>	Unlikely to have an impact		Development could be impacted from noise as a result of the close proximity of the railway line. This could have a negative impact on social sustainability.
	Will the site be at risk from, or impact on, noise levels?	<b>0 / -</b>	<del>Site is in close proximity to</del> The railway line <u>adjoins the northern boundary of the site</u> and therefore could be impacted by noise.	Site layout and design - buffers potentially required <u>depending on specific site selected.</u>	
	Will there be an impact on soil quality?	<b>0</b>	Unlikely to have an impact		
	Will there be an impact on water quality?	<b>0</b>	Unlikely to have an impact		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>-</b>	Site is greenfield. Agricultural buildings <del>in</del> the <u>area of search site.</u>		Development on greenfield land has negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions? Unlikely to be any significant sustainability issues	<b>?</b>	The level of impact depends on the building materials used, construction methods, transport and design.		Without consideration given to sustainable construction techniques development could negatively impact on sustainability.
	Will the site be subject to / at risk from flooding	<b>0</b>	The <del>site not at risk of</del> <u>area of search contains areas at risk from</u> flooding. <u>The selection of a site within the area of search will take this into account and avoid the area affected.</u>	<u>A Flood Risk Assessment would be required, along with the implementation of SUDs and/or appropriate mitigation measures. -would be required</u>  <u>Development will not take place within flood zones 2 and 3.</u>	<u>Unlikely to have an impact on any element of sustainability. -Flooding has the potential to impact on all aspects of sustainability if appropriate mitigation measures are not put in place.</u>
11. <u>To ensure a strong, diverse and sustainable economic base</u>	<u>Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</u>	<b>0</b>	<u>Not considered relevant</u>		<u>The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key</u>
	<u>Will it promote and support key business sectors and utilise employment land effectively and efficiently?</u>	<b>0</b>	<u>The site is greenfield and there will be no loss of employment land through the development of the site for housing, No employment use</u>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		<a href="#">business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	0	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

[Overall development on part of the area of search is likely to have a predominantly neutral effect on sustainability and there are no significantly positive or negative effects in relation to the area of search is site.](#)  
[The Allocating a site within the area of search could impact positively on the lifestyle of the travelling community through the provision of permanent accommodation.](#)  
[The site area of search has poor access to public transport and services and facilities are approximately 2.5 - 4km from the site, with the exception of a primary school although this is within the neighbouring authority.](#)  
[This would lead to a high car dependency and have a negative effect on social and environmental sustainability.](#)  
[The greenfield nature of the site area of search and the potential for noise impact from the railway line could also have a negative impact on sustainability. Mitigation measures such as good design techniques and additional landscaping would help to mitigate against negative impact.](#)  
[Flooding has the potential to impact on all aspects of sustainability if appropriate mitigation measures are not put in place.](#)

**Summary of effects:**  
**Effect:** Predominantly neutral  
**Likelihood:** High  
**Scale:** East Kennet Valley  
**Duration:** Permanent  
**Timing:** Short to Long term

## Site Assessment for Gypsy and Traveller Sites

<b>Site ID:</b>	GTTS7	<b>Site Address:</b>	72 Purley Rise, Purley on Thames
-----------------	-------	----------------------	----------------------------------

<b>Spatial Area:</b>	Eastern Area	<b>Settlement:</b>	Eastern Urban Area	<b>Parish:</b>	Purley on Thames
----------------------	--------------	--------------------	--------------------	----------------	------------------

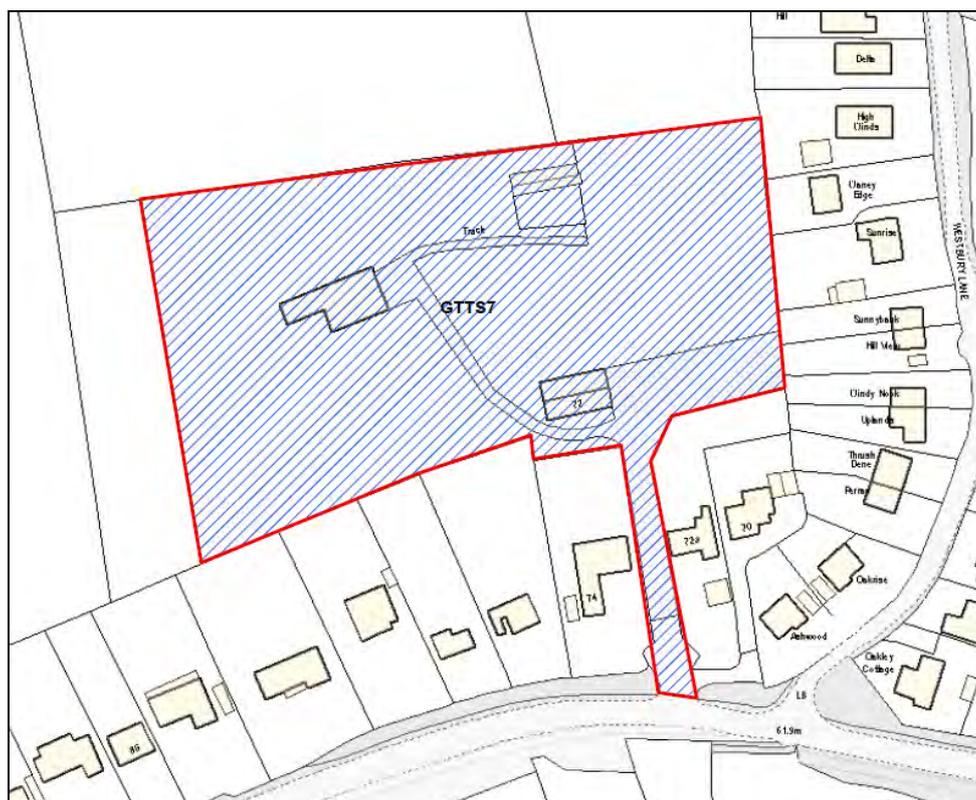

<b>Development Potential:</b>	Up to 10 pitches for Gypsies and Travellers
-------------------------------	---

### Site Description:

The site is located in the Eastern Urban Area, with residential dwellings on two sides of the site. The site is currently used for storing touring caravans and was promoted through the Strategic Housing Land Availability Assessment (SHLAA) for either housing or a Gypsy and Traveller site. The site is therefore also being considered for housing.

The site is accessed via a narrow track from Purley Rise and passes between dwellings. The site is well screened from the road and existing properties.

### Site Location:

**Site Assessment:**

Policy CS7 Criteria	Assessment of suitability
Safe and easy access to major roads and public transport services	<ul style="list-style-type: none"> <li>• Access to the site is obtained off Purley Rise which has a speed limit of 30 mph.</li> <li>• Access to the site is via a narrow track between residential properties</li> <li>• There is formal footway provision on one side along this road and throughout the urban area.</li> <li>• The site is served by regular bus services throughout Tilehurst to Reading and Pangbourne. The nearest bus stop to the site is approximately 150m away.</li> <li>• The site is 2.6km from Tilehurst railway station.</li> </ul>
Easy access to local services including a bus route, shops, schools and health services	<ul style="list-style-type: none"> <li>• The site has good access to services and facilities in the Eastern Urban Area.</li> <li>• Infant school and primary school are within 1km of the site. Nearest secondary school is 1.7km from the site.</li> <li>• There are a number of opportunities for walking and cycling, including access to the Thames Path.</li> </ul>
Located outside areas of high flooding risk	<ul style="list-style-type: none"> <li>• The site is not located within a flood zone, but does sit within a groundwater emergence zone. However there is no evidence of flooding on the site.</li> </ul>
Provision for adequate on site facilities for parking, storage, play and residential amenity	<ul style="list-style-type: none"> <li>• Site is of a sufficient size to allow for the provision of adequate on site facilities. This will require appropriate design.</li> </ul>
The possibility of the integrated co-existence between the site and the settled community, including adequate levels of privacy and residential amenity both within the site and with neighbouring occupiers	<ul style="list-style-type: none"> <li>• The site is adjacent to the existing settlement boundary and sits behind the current building line. It is surrounded by residential properties on two sides.</li> <li>• The sites location provides the opportunity for integration with the settled community.</li> <li>• Potential impact on the privacy and residential amenity of neighbouring residents.</li> </ul>
Opportunities for an element of authorised mixed uses	<ul style="list-style-type: none"> <li>• Any proposed mixed use development on the site would need to be assessed in accordance with the policies set out within the Local Plan.</li> </ul>
The compatibility of the use with the surrounding land use, including potential disturbance from vehicular movements, and on site business activities	<ul style="list-style-type: none"> <li>• The site currently used for storing touring caravans and so the area will be familiar with a degree of traffic movements relating to the current use.</li> <li>• Potential impact on the privacy and residential amenity of residential properties immediately adjacent to the site in terms of noise, additional vehicle movements and general disturbance.</li> </ul>
Will not materially harm the physical and visual character of the area	<ul style="list-style-type: none"> <li>• The site is well screened by mature vegetation therefore visual impact will be minimal.</li> <li>• Surrounding landscape sensitivity is low/medium based on the Landscape Sensitivity Study.</li> </ul>

Where applicable have regard for the character and policies affecting the North Wessex Downs AONB	<ul style="list-style-type: none"> <li>• Site is not within the North Wessex Downs AONB. However, land surrounding the site is within the AONB and therefore impact on the wider landscape would need to be considered.</li> </ul>
Other issues to consider	<ul style="list-style-type: none"> <li>• The site is part of a BAP Habitat and therefore an extended Phase 1 Habitat Survey would be required.</li> <li>• Archaeological potential on the site. Desk-based assessment would be required.</li> <li>• Site is located close to railway line – potential noise impact.</li> <li>• <del>Awaiting comments from internal consultees (Education, Environmental Health, Highways, Community Safety).</del></li> <li>• <del>Site is still subject to key stakeholder consultation including Parish Council, Environment Agency, Thames Water and Police.</del></li> </ul>

### Summary of Assessment:

The site is located within an urban area and has good access to services and facilities as well as public transport. A regular bus service passes the site and Tilehurst train station is just over 2 km away. The site's close proximity to the existing settlement provides opportunities for integration with the settled community however it could also result in potential impact on the privacy and residential amenity of neighbouring residents.

The site is currently used for storing touring caravans and is well screened from the highway and adjacent properties.

The site is not within a flood zone but is within a ground water emergence zone, although there is no evidence of previous flooding on the site.

The site was also submitted as a SHLAA site and has been recommended as a ~~preferred~~ housing site allocation. [It is considered that the site is appropriate for housing development.](#)

The site is [therefore not recommended for allocation as a Gypsy and Traveller site.](#)

Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		facilities, meaning that there would be a positive impact on all elements of sustainability.
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	0	Development of the site would be unlikely to have an impact on biodiversity or geodiversity		Unlikely to have an impact on any element of sustainability.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	0	The site is adjacent to the AONB however the northern part of the site (proposed) is well screened and is currently used for storing touring caravans.	Sensitive design, layout and siting of development on the site as well as landscaping could assist with minimising any visual impact arising from the development.	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	-	The site abuts the settlement boundary, with residential properties located immediately adjacent to the site itself. The close proximity of the site could have an impact.	Sensitive design, layout and siting of development on the site as well as landscaping could assist with minimising any visual impact arising from the development.	Development could have a negative impact on environmental sustainability, however appropriate mitigation measures could reduce this impact.
	Will it conserve and enhance the significance of the District's heritage assets?	?	There are known Saxon graves near to the site.	Further work is required to determine whether there is anything of archaeological significance on the site.	
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	?	The south of the site is located adjacent to the railway line and could be impacted by poor air quality.	Development is only proposed for the northern part of the site.	Unlikely to have an impact on any element of sustainability.
	Will the site be at risk from, or impact on, noise levels?	?	The south of the site is located adjacent to the railway line and could be impacted by noise.	Development is only proposed for the northern part of the site.	

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment: - Nature of effect (scale, likelihood of occurrence) - Duration (temporary, permanent, short/med/long term) - Cumulative - Synergistic - assumptions	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will there be an impact on soil quality?	<b>0</b>	The site is unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	<b>0</b>	The site is unlikely to have an impact on water quality		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>-</b>	The site is greenfield		The site could have a negative impact on environmental sustainability as it is a greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	<b>?</b>	The level of impact depends on location, building materials / construction, transport / design		Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	<b>-</b>	The site is at risk from surface and ground water flooding but does not sit within a flood zone.	There has been no evidence of flooding on the site. An FRA and appropriate mitigation including SUDs would be required.	Flooding can have a negative impact on all elements of sustainability, Mitigation measures should reduce this impact.
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<b>0</b>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<b>0</b>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<ul style="list-style-type: none"> <li>- Nature of effect (scale, likelihood of occurrence)</li> <li>- Duration (temporary, permanent, short/med/long term)</li> <li>- Cumulative</li> <li>- Synergistic</li> <li>- assumptions</li> </ul>		
			<p><a href="#">is not for employment generating uses in such commercial centres.</a>  <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a></p>		

### Summary

[Overall the site is likely to have a predominantly neutral effect of sustainability, and T](#) there are no significant positive or negative impacts on sustainability from this site. The ~~site scores positively~~ [site is likely to have a positive impact on sustainability](#) in terms of opportunities for sustainable travel and health, active lifestyles as it is close to local services and facilities. There are no biodiversity or environmental designations on the site. Development could [negatively](#) impact upon the character of the built environment given residential properties are located immediately adjacent to the site. The site is well screened and is currently used for storing touring caravans. The proximity to the railway line could cause noise and air pollution, but careful design and use of only part of the site could mitigate this impact. The site is at risk from surface and groundwater flooding, although with appropriate mitigation the negative impact should be reduced.

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Eastern Area

**Duration:** Permanent

**Timing:** Short to Long term.

## Site Assessment for Gypsy and Traveller Sites

<b>Site ID:</b>	GTTS8	<b>Site Address:</b>	Stable View, Oare
-----------------	-------	----------------------	-------------------

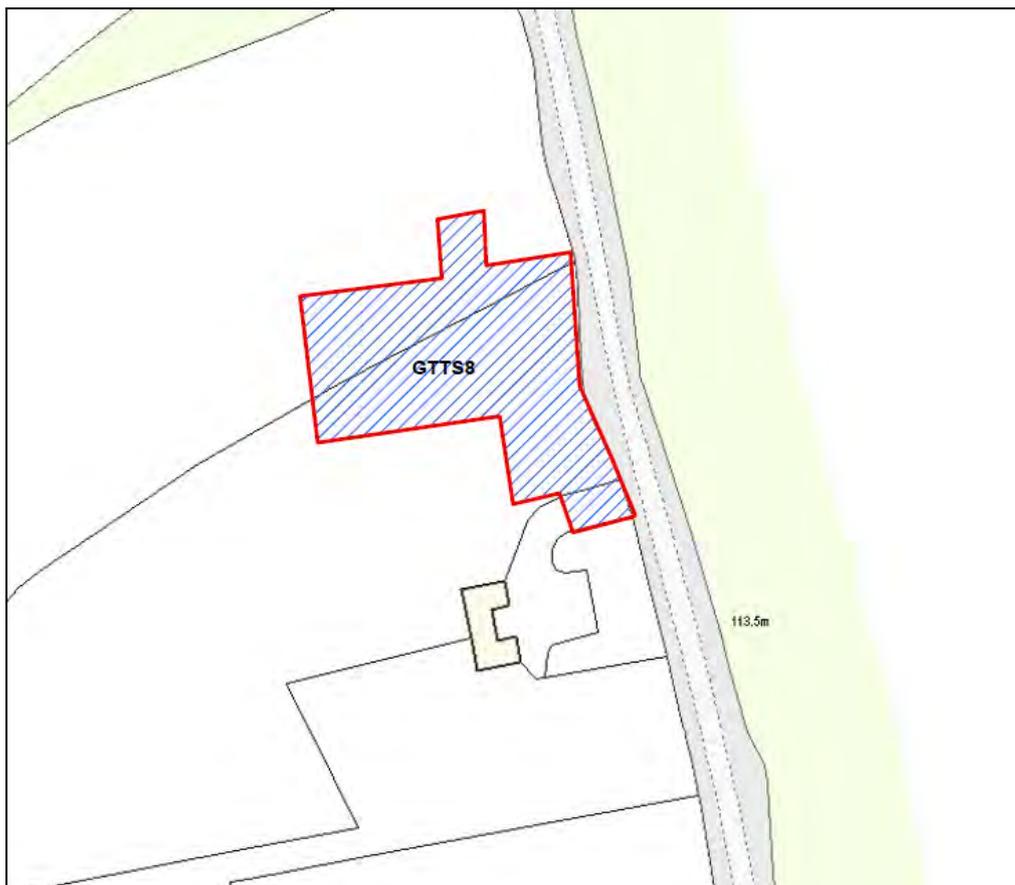

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Oare	<b>Parish:</b>	Chieveley
----------------------	------	--------------------	------	----------------	-----------

<b>Development Potential:</b>	1 pitch	<b>Site Size:</b>	0.18 ha
-------------------------------	---------	-------------------	---------

### Site Description:

The site is located within the North Wessex Downs AONB between the settlements of Hermitage and Oare. The site is situated along a rural road, which has dispersed residential properties. It is currently an unauthorised Gypsy and Traveller development accommodating one family. The site is contained by fencing and some vegetation.

### Site Location:

**Site Assessment:**

Policy CS7 Criteria	Assessment of suitability
Safe and easy access to major roads and public transport services	<ul style="list-style-type: none"> <li>• Access to the site is obtained off Old Street which has a speed limit of 60 mph.</li> <li>• There is no formal footway provision along this road and it is rural in character.</li> <li>• Hermitage is served by the 6a bus service, linking with Newbury and Harwell Business Centre via several small villages.</li> <li>• The nearest bus stop to the site is approximately 800m away on the edge of Hermitage village.</li> </ul>
Easy access to local services including a bus route, shops, schools and health services	<ul style="list-style-type: none"> <li>• The site is located approximately 1200m from the village shop, public house and village hall.</li> <li>• Primary school is located just over 2km from the site.</li> <li>• No GP surgery within Hermitage, nearest surgery is within Compton or Chieveley.</li> </ul>
Located outside areas of high flooding risk	<ul style="list-style-type: none"> <li>• Site is not at risk of flooding and there is no evidence of flood risk issues on the site.</li> </ul>
Provision for adequate on site facilities for parking, storage, play and residential amenity	<ul style="list-style-type: none"> <li>• Existing facilities on site including parking, play area and static caravan.</li> </ul>
The possibility of the integrated co-existence between the site and the settled community, including adequate levels of privacy and residential amenity both within the site and with neighbouring occupiers	<ul style="list-style-type: none"> <li>• The site is outside of, but close to, the existing settlement of Hermitage. The village has a number of services and facilities which are less than 1.5km away from the site.</li> <li>• The site's location close to the village provides the opportunity for some integration with the settled community however the site is in a rural location.</li> <li>• Whilst there are no residential properties immediately adjacent to the site, there are some dwellings dispersed along the road.</li> <li>• Impact on the privacy and residential amenity of both site occupants and/or neighbouring uses would be limited.</li> </ul>
Opportunities for an element of authorised mixed uses	<ul style="list-style-type: none"> <li>• Any proposed mixed use development in the AONB would need to be assessed in accordance with the relevant Local Plan policies. This would need to reflect the site's location within a nationally designated landscape.</li> </ul>
The compatibility of the use with the surrounding land use, including potential disturbance from vehicular movements, and on site business activities	<ul style="list-style-type: none"> <li>• Surrounding land use is largely agricultural, with some residential properties nearby.</li> <li>• Given the existing use of the site as an unauthorised Gypsy and Traveller site there would not be an increase in vehicle movements to and from the site or general disturbance.</li> </ul>

Will not materially harm the physical and visual character of the area	<ul style="list-style-type: none"> <li>• The site is rural in character despite being close to the existing settlement of Hermitage.</li> <li>• Fencing and some vegetation help contain the site within the wider landscape, with limited views from the road (Old Street).</li> </ul>
Where applicable have regard for the character and policies affecting the North Wessex Downs AONB	<ul style="list-style-type: none"> <li>• Site is located within the North Wessex Downs AONB.</li> <li>• Previous planning appeals for the site were dismissed due to unacceptable harm to the AONB landscape.</li> </ul>
Other issues to consider	<ul style="list-style-type: none"> <li>• The site is an existing unauthorised site which has been subject to a number of planning appeals in recent years. The appeals have been dismissed due to landscape impact.</li> <li>• <del>Awaiting comments from internal consultees (Ecology, Education, Environmental Health, Highways, Community Safety).</del></li> <li>• <del>Site is still subject to key stakeholder consultation including Parish Council, Environment Agency, Thames Water, Police and the AONB Council of Partners.</del></li> </ul>

#### Summary of Assessment:

The site is close to existing [local](#) services and facilities, with good access to a bus service. Existing fencing and vegetation help contain the site within the wider landscape with limited views from the road. The size of the site would not dominate the landscape or the nearest settled community and the impact on the privacy and residential amenity of both site occupants and/or neighbouring uses will be limited. The site is not at risk of flooding.

The site is within the NWDAONB and therefore consideration of the landscape is paramount in assessing the suitability of sites within this nationally designated landscape. National policy (Planning Policy for Traveller Sites (PPTS)) seeks to restrict Gypsy and Traveller sites within open countryside that is away from existing settlements or outside areas allocated in the development plan.

Previous planning appeals for the site have been dismissed due to the unacceptable harm to the landscape within the AONB.

The site is [automatically excluded and -not recommended for allocation, the site has previously been dismissed at appeal due to unacceptable harm to the landscape of the AONB.](#)

### Site Assessment for Gypsy and Traveller Sites

<b>Site ID:</b>	GTTS9	<b>Site Address:</b>	Padworth Farm, Rag Hill, Aldermaston		
-----------------	-------	----------------------	--------------------------------------	--	--

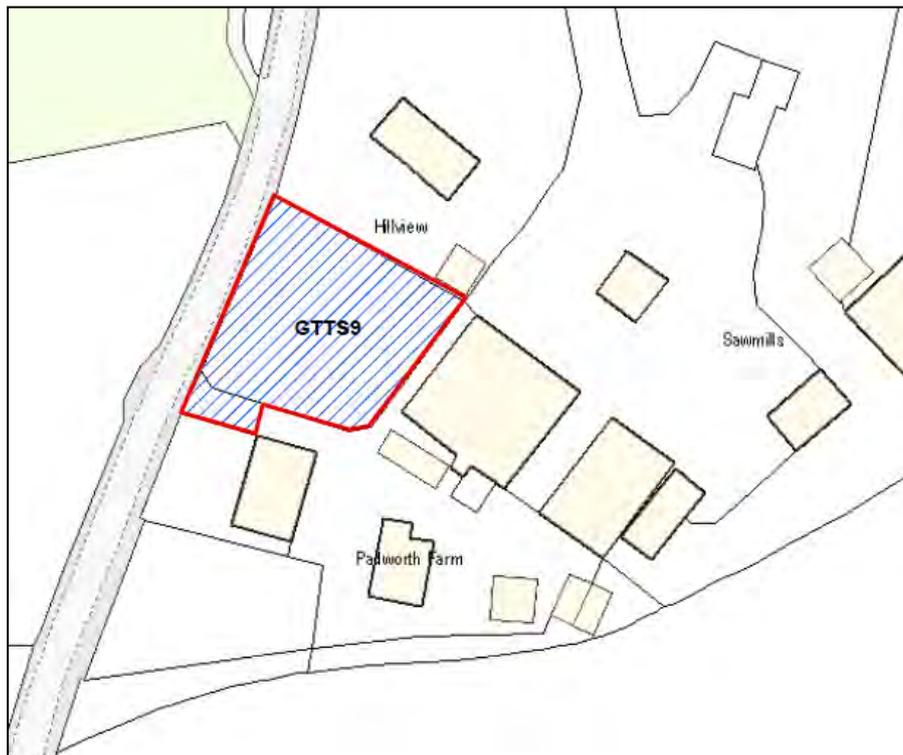

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	Padworth	<b>Parish:</b>	Padworth
----------------------	------	--------------------	----------	----------------	----------

<b>Development Potential:</b>	1 pitch	<b>Site Size:</b>	0.08ha
-------------------------------	---------	-------------------	--------

#### Site Description:

The site is located at Padworth Sawmills, to the west of Padworth. The site is situated along a rural road. The site has previously had planning permission, but this has subsequently expired.

#### Site Location:

**Site Assessment:**

Policy CS7 Criteria	Assessment of suitability
Safe and easy access to major roads and public transport services	<ul style="list-style-type: none"> <li>• Access to the site is from Rag Hill which has a speed limit of 60mph</li> <li>• There is no formal footway provision along this road and it is rural in character.</li> <li>• No bus service passes the site.</li> </ul>
Easy access to local services including a bus route, shops, schools and health services	<ul style="list-style-type: none"> <li>• The site is 2.5km from Aldermaston Village, where there is a local shop, pub and primary school.</li> <li>• There is no GP surgery within Aldermaston, the nearest surgeries are located in Tadley, or Mortimer.</li> </ul>
Located outside areas of high flooding risk	<ul style="list-style-type: none"> <li>• The site is not located within a flood zone and there is no evidence of flood risk issues on the site.</li> </ul>
Provision for adequate on site facilities for parking, storage, play and residential amenity	<ul style="list-style-type: none"> <li>• Site previously had planning permission for onsite facilities.</li> </ul>
The possibility of the integrated co-existence between the site and the settled community, including adequate levels of privacy and residential amenity both within the site and with neighbouring occupiers	<ul style="list-style-type: none"> <li>• The site is some distance from a settled community.</li> <li>• There are a number of farms along Rag Hill</li> <li>• The site is situated adjacent to Padworth Farm.</li> </ul>
Opportunities for an element of authorised mixed uses	<ul style="list-style-type: none"> <li>• There is no indication that the site is to be used for alternative uses.</li> </ul>
The compatibility of the use with the surrounding land use, including potential disturbance from vehicular movements, and on site business activities	<ul style="list-style-type: none"> <li>• The site is currently used as paddock/garden.</li> <li>• The surrounding land uses are predominantly agricultural</li> <li>• The impact on the highway network was considered as part of the lapsed planning application.</li> </ul>
Will not materially harm the physical and visual character of the area	<ul style="list-style-type: none"> <li>• This was considered as part of the lapsed planning application.</li> </ul>
Where applicable have regard for the character and policies affecting the North Wessex Downs AONB	<ul style="list-style-type: none"> <li>• Site is not within the NWDAONB.</li> <li>• No impact on the character and policies affecting the NWDAONB.</li> </ul>
Other issues to consider	<ul style="list-style-type: none"> <li>• The site is in the inner consultation zone for AWE Aldermaston</li> <li>• <del>Awaiting comments from internal consultees (Archaeology, Education, Environmental Health, Ecology, Highways, Community Safety, G&amp;T Liaison Officer, Housing and Emergency Planning).</del></li> <li>• <del>Site is still subject to key stakeholder consultation including Parish Council, Environment Agency, Thames Water and Police.</del></li> </ul>

### **Summary of Assessment:**

The site is 2.5km from Aldermaston Village, where there is a local shop, pub and primary school. The site is a grassy paddock with residential properties to the west.

National policy (Planning Policy for Traveller Sites (PPTS)) seeks to restrict Gypsy and Traveller sites within open countryside that is away from existing settlements or outside areas allocated in the development plan. However, the principal of this site being suitable for single Gypsy and Traveller pitch provision was established through the previous planning application (10/02684/FULD)

[Following the preferred options consultation it became clear that certainty of delivery could not be ascertained.](#)

The site is **not** recommended for allocation.

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	The site has easy access to the countryside, and is close to local services and facilities in Aldermaston, which would enable walking and cycling. Providing a site for permanent accommodation creates an opportunity to deliver a better living environment.		The site is close to local services and facilities. The site is likely to have a positive impact on social and environmental sustainability.
	Will it increase opportunities for access to sports facilities?	<b>0</b>	Unlikely to have an impact.		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	Unlikely to have an impact.		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>+</b>	Accessible to local services and facilities, including schools. A number of commercial uses surround the site.		The proximity to local facilities means that the site should have a positive impact on social and economic sustainability
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>0</b>	There are a number of opportunities for walking and cycling in the area. Public transport is limited. Potential for high car dependence.	Improvements could be made to pedestrian and cycling facilities in the area.	There are opportunities for walking and cycling however public transport is limited and it is likely car dependence will be high. Overall, development is unlikely to impact on sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	<b>0</b>	The site already has benefited from a consent for a single pitch.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	<b>0</b>	No known habitats on the site		Development is unlikely to have an impact on any element of sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	<b>0</b>	Unlikely to have an impact		
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	<b>0</b>	Unlikely to have an impact		Development is unlikely to have an impact on any element of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	<b>0</b>	Unlikely to have an impact		
	Will it promote, conserve and enhance the District's cultural assets?	<b>0</b>	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	<b>0</b>	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	<b>0</b>	Unlikely to have an impact		Development is unlikely to have an impact on any element of sustainability.
	Will the site be at risk from, or impact on, noise levels?	<b>0</b>	Unlikely to have an impact		
	Will there be an impact on soil quality?	<b>0</b>	Unlikely to have an impact		
	Will there be an impact on water quality?	<b>0</b>	Unlikely to have an impact		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>-</b>	Site is greenfield		Development on greenfield land has negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions? Unlikely to be any significant sustainability issues	<b>?</b>	The level of impact depends on location, building materials / construction, transport / design		Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	<b>0</b>	The site is not at risk of flooding	SUDs would be required	Unlikely to have an impact on any element of sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. ## Policy Development - Sustainability Appraisal / Strategic Environmental Assessment

### Summary

~~This policy is unlikely to have impact on sustainability. The policy could be removed.~~

This policy is likely to have a positive impact on maximising the opportunity to provide sustainable housing to meet local needs. Housing outside settlement boundaries is required by the policy to take account of the scale and character of the surrounding dwellings. The potential negative impacts of the policy result from the higher greenhouse gases and consequent air pollution stemming from the need for greater car use in a rural area. Also, development in the countryside has the potential to impact on green infrastructure and biodiversity. The mitigation measures relate to specific sites that would be considered under this policy, the comparison with other potential sites within an area and options for travel choice. The settlements in the policy are at the bottom of the settlement hierarchy which promotes the most sustainable settlements for development. Therefore, the quantity of development arising from these sources is limited.

#### Summary of effects:

**Effect:** neutral

**Likelihood:** High

**Scale:** District Wide

**Duration:** Permanent

**Timing:** Short to Long term

## Policy Development - Sustainability Appraisal / Strategic Environmental Assessment

<b>Policy 2</b>	<p><b>Countryside 2 – Rural <u>Housing</u> Exceptions Policy</b></p> <p>There is a presumption in favour of small scale affordable rural ‘exception’ housing outside settlement boundaries to meet identified local housing need in rural areas. Such schemes will be subject to a detailed assessment of the need for affordable housing in the local area through a Local Housing Needs Survey, the impact of the scheme on the local character of the area, its relationship with the existing settlement and whether more sustainable alternatives are available locally.</p> <p>Within the AONB the overriding consideration is the impact of all the effects arising from the new development on its special qualities and natural beauty of the AONB landscape.</p> <p>It is expected that rural exception sites will deliver 100% affordable housing however it is recognised that in some cases a small proportion of market housing may be appropriate only where it can be demonstrated that the market housing is necessary to cross-subsidise the delivery of the affordable housing within the scheme. The affordable housing within the scheme must remain affordable in perpetuity.</p>

## Policy Development - Sustainability Appraisal / Strategic Environmental Assessment

	to sports facilities?		may not be in a location where they are there is access to sports facilities. <a href="#">Unlikely to have an impact</a>	exception sites should be in locations where there are opportunities for access to sports facilities.	elements of sustainability as the specific location of a proposed development would have a different impact depending on the opportunities arising close to the site. <a href="#">Unlikely to have an impact on any element of sustainability.</a>
	Will it reduce levels and fear of crime and anti-social behaviour?	<b>0</b>	<a href="#">Unlikely to have an impact</a>		<a href="#">Unlikely to have an impact on any element of sustainability.</a>
	Will it protect and enhance green infrastructure across the district?	<b>-</b>	Where there is an identified affordable housing need, development of a <a href="#">A rural exception</a> site could result in the loss of green infrastructure.	Mitigation by <a href="#">improving existing green infrastructure</a> or by providing alternative green infrastructure would be required.	There could be a negative impact on social and environmental sustainability through the loss of green infrastructure as a result of this policy. Mitigation measures would help to reduce this impact.
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>0</b>	This policy is focused on providing affordable housing to meet a local identified need, therefore, it is unlikely to have an impact on access to services and facilities.		Unlikely to have an impact on any element of sustainability.
	Will it support development of access to IT facilities including Broadband particularly in rural areas?	<b>0</b>	Unlikely to have an impact on access to IT facilities.		Unlikely to have an impact on any element of sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>-</b>	This policy focuses on the provision of affordable housing in rural areas to meet an identified need. Opportunities for travel choice in rural areas can be limited, therefore, the policy could have a negative impact on this objective.	The opportunities for sustainable travel opportunities need to be considered as part of the assessment of sites being considered under this policy.	This policy could have a negative impact on all elements of suitability if sites considered under this policy do not have access to travel choices. Mitigation measures, including the consideration of travel options available in an area, should help to

## Policy Development - Sustainability Appraisal / Strategic Environmental Assessment

					reduce this impact.
	Will it reduce the number of road traffic accidents and improve safety?	<b>0</b>	Unlikely to have an impact		Unlikely to have an impact on any element of sustainability.
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	<b>0-</b>	Unlikely to have an impact <a href="#">A rural exception site could result in the loss of green infrastructure and this may have an impact on biodiversity assets.</a>	<a href="#">Mitigation by improving biodiversity assets in existing green infrastructure or by providing alternative green infrastructure would offset this potential impact.</a>	<del>Unlikely to have an impact on any element of sustainability.</del> <a href="#">There could be a negative impact on social and environmental sustainability through the loss of biodiversity assets as a result of this policy. Mitigation measures would help to reduce this impact.</a>
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	<b>?</b>	Where there is an overriding need for affordable housing, this could override considerations of the landscape. Sites in the AONB, the landscape is the overriding consideration.	In the AONB the impact on the landscape should be the overriding consideration.	There is an unknown impact on all elements of sustainability. The impact on environmental sustainability is a key factor that could be affected by this policy.
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	<b>+?</b>	The policy <a href="#">requires consideration of the impact on the character of the area and Policy</a> refers to CS14 for design considerations, therefore, the policy should have a positive impact on the character of the built environment. <a href="#">will also apply</a>	<a href="#">Careful siting and design of development would be needed to ensure a positive contribution to the existing built environment</a>	<del>The policy is likely to have a positive impact on environmental sustainability.</del> <a href="#">The impact on environmental sustainability is a key factor that could be affected by this policy. This could be mitigated by careful siting and design of new buildings.</a>
	Will it conserve and enhance the significance of the District's heritage assets?	<b>0</b>			<a href="#">Unlikely to have an impact on any element of sustainability</a>
	Will it promote, conserve and enhance the	<b>0</b>			

## Policy Development - Sustainability Appraisal / Strategic Environmental Assessment

	District's cultural assets? Will it provide for increased access to and enjoyment of the historic environment?	<b>0</b>			
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will it reduce air pollution?	<b>? -</b>	Development of sites under this policy could result in additional traffic movements, which would have an impact on air pollution.	Mitigation measures, including consideration of alternative transport modes would need to be considered to ensure a minimal impact on air pollution from this site.	There is potential for a negative impact on environmental sustainability as a result of this policy, but this largely depends on the sites considered under this policy. Mitigation measures would help to reduce the impact.
	Will it reduce noise levels?	<b>0</b>	Unlikely to have an impact		Unlikely to have an impact on any element of sustainability.
	Will it maintain and improve soil quality?	<b>0</b>	Unlikely to have an impact		
	Will it maintain and improve water quality?	<b>0</b>	Unlikely to have an impact		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>0 -</b>	<del>Unlikely to have an impact</del> <u>Exception housing sites are likely to be greenfield.</u>	<u>Possible mitigation would be to consider any previously developed land for development for exception housing sites.</u>	<del>Unlikely to have an impact on any element of sustainability.</del> <u>There is a potential impact on environmental sustainability. Mitigation measures could be sought.</u>
9. To reduce consumption of natural resources and manage their use efficiently	Will it reduce energy use and promote the use of sustainable / renewable energy technologies?	<b>0</b>	Unlikely to have an impact		Unlikely to have an impact on any element of sustainability.
	Will it promote the adoption of sustainable design and construction practices?	<b>0</b>	Unlikely to have an impact		
	Will it reduce waste generation and disposal in line with the waste	<b>0</b>	Unlikely to have an impact		

## Policy Development - Sustainability Appraisal / Strategic Environmental Assessment

	hierarchy and reuse of materials?				
	Will it reduce water consumption and promote reuse?	<b>0</b>	Unlikely to have an impact		
	Will it reduce the consumption of minerals and promote reuse of secondary materials?	<b>0</b>	Unlikely to have an impact		
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	-	<del>The policy is focused on providing affordable housing in rural areas where there is an identified need. Therefore, there is potential for these sites to contribute more to greenhouse gases than other sites, as they are likely to be located area where there are fewer alternative options for low carbon/greenhouse gas emission eg. car travel. The policy seeks to provide affordable housing to meet local needs in rural areas. There is potential for these sites to contribute more to greenhouse gases than other sites, as they are likely to be located where car travel will be higher as there are fewer alternative options for travel.</del>	The policy does requires that the most sustainable locations within the rural area are chosen, which would help to reduce the impact on greenhouse gas emissions.	There could be a negative impact on environmental sustainability, unless mitigation measures are considered and implemented where possible.
	Will the policy minimise flood risk to people, property and the environment?	<b>? 0</b>	The policy does not refer to flood risk, but <u>is one of the consideration covered by CS16 for any site.</u> <del>this would need to be considered for any sites coming forward under the policy.</del>	Appropriate FRAs would need to be provided for sites considered under the policy.	The policy itself is unlikely to have an impact on any element of sustainability. <u>Where any sites considered through the policy are affected by flooding, without appropriate mitigation measures, there could be an impact on individual sites.</u> Although sites considered through the

## Policy Development - Sustainability Appraisal / Strategic Environmental Assessment

					policy could be impacted by flooding, and therefore, without appropriate mitigation measures there could be an impact on individual sites as a result of this policy.
11. To ensure a strong, diverse and sustainable economic base which meets objectively assessed economic needs	Will it enable the provision of high quality economic development which response to business needs and delivers a range of employment opportunities?	<b>0</b>	Unlikely to have an impact		Unlikely to have an impact on any element of sustainability.
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	<b>0+</b>	Unlikely to have an impact <u>The provision of affordable housing in rural areas will support businesses through providing a local workforce.</u>		Unlikely to have an impact on any element of sustainability. <u>This will have a positive impact on economic sustainability.</u>
	Will it promote and support the vitality and viability of the District's commercial centres?	<b>0</b>	Unlikely to have an impact		Unlikely to have an impact on any element of sustainability.

### Summary

This policy is likely to have a significantly positive impact on maximising the provision of affordable housing to meet identified local needs, as this is the primary aim of the policy. The potential negative impacts of the policy result from the main aim of the policy to be to provide affordable housing in areas where there are few facilities and poor transport facilities, to meet identified needs in rural areas. The mitigation measures relate to specific sites that would be considered under this policy, and the comparison with other potential sites within an area, and options for travel choice ~~amongst other things~~. There is a risk that environmental sustainability could be overridden by greater benefit to social or economic sustainability. The policy states that any site being considered under the policy needs to review whether any more suitable alternatives are available locally, this will help to ensure completely unsuitable sites come forward. Providing this accommodation in the rural area will provide a local workforce for rural businesses so is a positive impact.

9. To reduce consumption of natural resources and manage their use efficiently	Will it reduce energy use and promote the use of sustainable / renewable energy technologies?	<b>0</b>	Unlikely to have an impact		Unlikely to have an impact on any element of sustainability.
	Will it promote the adoption of sustainable design and construction practices?	<b>0</b>	Unlikely to have an impact		
	Will it reduce waste generation and disposal in line with the waste hierarchy and reuse of materials?	<b>+</b>	Redevelopment of an existing building will make best use of existing resources on any sites considered under this policy.		This will have a positive impact on economic and environmental sustainability.
	Will it reduce water consumption and promote reuse?	<b>0</b>	Unlikely to have an impact		Unlikely to have an impact on any element of sustainability.
	Will it reduce the consumption of minerals and promote reuse of secondary materials?	<b>+</b>	Redevelopment of an existing building will make the best use of existing materials and reuse materials already on a site being considered under the policy.		This will have a positive impact on economic and environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	<b>+</b>	Reuse of existing buildings should help to reduce West Berkshire's greenhouse gas emissions, <a href="#">though there is likely to be increased car use giving greater emissions.</a>		This will have a positive impact on economic and environmental sustainability.
	Will the policy minimise flood risk to people, property and the environment?	<b>0</b>	Unlikely to have an impact		Unlikely to have an impact on any element of sustainability.
11. To ensure a strong, diverse and sustainable economic base which meets objectively assessed economic needs	Will it enable the provision of high quality economic development which response to business needs and delivers a range of employment opportunities?	<b>0</b>	Unlikely to have an impact		Unlikely to have an impact on any element of sustainability.

## Policy Development - Sustainability Appraisal / Strategic Environmental Assessment

	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	<b>0</b>	Unlikely to have an impact		
	Will it promote and support the vitality and viability of the District's commercial centres?	<b>0</b>	Unlikely to have an impact		

### Summary

The policy will have a significantly positive impact on maximising the use of previously developed land and buildings, there will also be positive impacts in relation to waste disposal, reducing the consumption of minerals and reuse of secondary materials and reducing West Berkshire's greenhouse gas emissions, as the policy is promoting the use of existing resources that are no longer required for their original use.

11. To ensure a strong, diverse and sustainable economic base which meets objectively assessed economic needs	Will it enable the provision of high quality economic development which response to business needs and delivers a range of employment opportunities?	<b>+</b>	The policy relates specifically to accommodation <u>largely</u> related to agricultural, and forestry and <u>equestrian</u> development, both of which are important in the rural economy.		The policy is likely to have a positive impact on economic sustainability.
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	<b>+</b>	The policy relates specifically to accommodation <u>largely</u> related to agricultural, and forestry and <u>equestrian</u> development, both of which are important in the rural economy.		The policy is likely to have a positive impact on economic sustainability.
	Will it promote and support the vitality and viability of the District's commercial centres?	<b>0</b>	Unlikely to have an impact		Unlikely to have an impact on any element of sustainability.

### Summary

The policy is likely to have a positive impact on economic and social sustainability as it is related to the provision of housing related to agriculture, and forestry and equestrian businesses within the countryside. There is potential for a negative impact on environmental sustainability in relation to green infrastructure, as the provision of accommodation could result in a loss of green infrastructure on a site being considered under the policy.

	Will it increase opportunities for access to sports facilities?	<b>0</b>	Unlikely to have an impact.		
	Will it reduce levels and fear of crime and anti-social behaviour?	<b>0</b>	Unlikely to have an impact.		
	Will it protect and enhance green infrastructure across the district?	<b>+</b>	The policy aims to protect the loss of land used for agriculture, woodland or other rural uses.	Supporting evidence will be required to show it is appropriate for the site and surroundings. Where a loss is permitted in exceptional circumstances, the Core Strategy requires new provision of GI.	There may be some impact on environmental sustainability, although any negative impact should be reduced through mitigation measures. Protecting GI would have a positive social impact. There would be no impact on economic sustainability.
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>0</b>	Unlikely to have an impact		Unlikely to have an impact on any element of sustainability.
	Will it support development of access to IT facilities including Broadband particularly in rural areas?	<b>0</b>	Unlikely to have an impact		
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public	<b>0</b>	Unlikely to have an impact		Unlikely to have an impact on any element of sustainability.

## Policy Development - Sustainability Appraisal / Strategic Environmental Assessment

	transport? Will it reduce the number of road traffic accidents and improve safety?	<b>0</b>	Unlikely to have an impact		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	<b>-</b>	Potential loss to biodiversity where land is taken in as residential garden or garage space.	Core Strategy policy CS17 aims to conserve and enhance biodiversity and geodiversity.	<del>The supporting evidence could be amended to require an assessment of the potential impact on biodiversity. This policy could have a negative impact on environmental sustainability. There would be no impact on economic or social sustainability.</del>
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	<b>+</b>	Policy protects against adverse impacts on the setting within the wider landscape, and on local character. Within the AONB, conserving/enhancing the landscape is an overriding importance.	Protection provided through the planning application process and inclusion of relevant conditions.	The policy is likely to have a positive impact on environmental sustainability.
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	<b>+</b>	Policy protects against adverse impacts on the local character and requires the proposed boundary treatment to be appropriate to the location. Supporting evidence is required to show that new hard surfacing, ground moulding or landscaping to be in character with the surrounding area.	Protection provided through the submission of supporting evidence, the planning application process and inclusion of relevant conditions.	The policy is likely to have a positive impact on environmental sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	<b>+</b>	Policy requires the consideration of the local character.	Protection through the planning application process.	The policy is likely to have a positive impact on environmental sustainability.
	Will it promote, conserve and enhance the District's cultural assets?	<b>0</b>	Unlikely to have an impact.		Unlikely to have an impact on any element of sustainability.
	Will it provide for increased access to and	<b>0</b>	Unlikely to have an impact.

	environment?		surface or be held on site for release later.		sustainability where hard surfaces are proposed. Any risk from flooding should not be made worse and preferably improve the situation.
11. To ensure a strong, diverse and sustainable economic base which meets objectively assessed economic needs	Will it enable the provision of high quality economic development which response to business needs and delivers a range of employment opportunities?	<b>0</b>	Unlikely to have an impact.		Unlikely to have an impact on any element of sustainability.
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	<b>0</b>	Unlikely to have an impact.		
	Will it promote and support the vitality and viability of the District's commercial centres?	<b>0</b>	Unlikely to have an impact.		

### Summary

This policy is likely to have a positive impact on the retention and improvement of existing housing, the protection of green infrastructure, the character of the landscape and built environment and to minimise the risk of flooding. The potential negative impact results from the potential loss of biodiversity where land of biodiversity value is used as residential garden or parking space. This can be mitigated through Core Strategy policy CS17. ~~and the supporting evidence for policy 11 could be amended to require an assessment of the potential impact on biodiversity.~~

### Summary

This option would see benefits from incorporating design, travel planning, electric charging points and cycle parking but would apply a single approach to the level of car parking required. This approach would take no account of how accessible a location was or what type or size the dwelling was. This is likely to be less effective and could result in unsuitable levels of parking which may increase the level of unsafe on street parking or have a negative impact in terms of the amount of hard standing / parking areas in a development. [Good design of parking areas can also help to reduce actual and perceived crime.](#)

### Summary

This option aims to provide adequate parking through well designed parking solutions which will help to reduce the level of unsafe on street parking that occurs. It also includes the requirement for travel plans and travel information packs for residential development and the need to provide electric charging points and cycle parking. [Good design of parking areas can also help to reduce actual and perceived crime](#). This all seeks to increase the number of journeys made by sustainable modes that have less of an impact on the environment and help to improve health and wellbeing. The approach to car parking levels that seeks to take account of accessibility of location and the type and size of dwelling also seeks to reflect the differing need for parking according to these factors.

### Sandleford Park SA/SEA

## Appendix 13 - SA/SEA for Sandford Park Policy Options

### Option 1: Maintain existing Core Strategy policy

#### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site referred to in the policy is well located for access to the countryside, and development will provide a country parkland, which will support and encourage active, healthy lifestyles.		There will be a positive impact on sustainability, with a significantly positive impact on GI through the provision and protection a Country Parkland.
	Will it increase opportunities for access to sports facilities?	+	The site referred to in the policy is adjacent to Newbury Rugby Club.		
	Will it protect and enhance green infrastructure across the district?	++	The policy requires the provision of and protection of part of the site a Country Parkland.		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The policy requires some onsite provision of local services and facilities including a primary school.		There will be a positive impact on sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	The site referred to in the policy is close to local services and facilities for walking and cycling opportunities and public transport services will be improved to serve the site.	Public transport services will be improved to serve the site as set out in the SPD.	There are already opportunities for walking and cycling on the site, measures introduced to improve public transport services will all ensure that the site has a positive impact on sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	+	The policy requires certain buffers and biodiversity enhancements to be provided on the site		Mitigation measures as required through the policy and SPD will ensure that there is a positive impact environmental sustainability.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	0	Unlikely to have an impact		
6. To ensure that the built,	Will it conserve and	0	Unlikely to have an impact		Unlikely to have an impact

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
historic and cultural environment is conserved and enhanced	enhance the local distinctiveness of the character of the built environment?				on sustainability
	Will it conserve and enhance the significance of the District's heritage assets?	<b>0</b>	Unlikely to have an impact		
	Will it promote, conserve and enhance the District's cultural assets?	<b>0</b>	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	<b>0</b>	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will there be an impact on air quality?	<b>0</b>	Unlikely to have an impact		Unlikely to have an impact on sustainability
	Will there be an impact noise levels?	<b>0</b>	Unlikely to have an impact		
	Will there be an impact on soil quality?	<b>0</b>	Unlikely to have an impact		
	Will there be an impact on water quality?	<b>0</b>	Unlikely to have an impact		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>-</b>	Greenfield		The site could have a negative impact on environmental sustainability as it is a Greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	<b>?</b>	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	<b>?</b>	The developable area of the site is not within a flood zone. There are small areas of the site within surface water flood risk areas.	An FRA and SUDs would need to be provided	Flooding can have a negative impact on all elements of sustainability. Mitigation measures would be required to reduce this impact.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

### Summary

There is a significant positive impact from this policy in terms of the creation of a Country Parkland on the southern part of the site. The policy aims to make sure that there are no significant negative impact which could not be mitigated against.

#### **Summary of Effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

	Will it conserve and enhance the local distinctiveness of the character of the landscape?	0	Unlikely to have an impact		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	<b>0</b>	Unlikely to have an impact		Unlikely to have an impact on sustainability
	Will it conserve and enhance the significance of the District's heritage assets?	<b>0</b>	Unlikely to have an impact		
	Will it promote, conserve and enhance the District's cultural assets?	<b>0</b>	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	<b>0</b>	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will there be an impact on air quality?	<b>0</b>	Unlikely to have an impact		Unlikely to have an impact on sustainability
	Will there be an impact noise levels?	<b>0</b>	Unlikely to have an impact		
	Will there be an impact on soil quality?	<b>0</b>	Unlikely to have an impact		
	Will there be an impact on water quality?	<b>0</b>	Unlikely to have an impact		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>-</b>	Greenfield		The site could have a negative impact on environmental sustainability as it is a Greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	<b>?</b>	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	<b>?</b>	The developable area of the site is not within a flood zone. There are small areas of the site within surface water flood risk areas.	An FRA and SUDs would need to be provided	Flooding can have a negative impact on all elements of sustainability. Mitigation measures would be required to reduce this impact.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

### Summary

There is a significant positive impact from this policy in terms of the creation of a Country Parkland on the southern part of the site and in terms of accessibility to services and facilities, as the policy would require additional all vehicle accesses to the site and additional education provision. The policy aims to make sure that there are no significant negative impact which could not be mitigated against.

#### **Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Medium term
