**List of appendices:**

- 1 Relevant Plans and Programmes
- 2 Baseline Information
- 3 Compatibility of the SA Objectives with the West Berkshire Housing Site Allocations Objectives
- 4 Glossary
- 5 Scoping Report environmental bodies consultation responses
- 6A Site Selection Criteria – Housing Sites
- 6B Site Selection Criteria – Gypsies, Travellers and Travelling Showpeople Sites (Core Strategy policy CS7)
- 7 List of sites eliminated from consideration at sifting stage
- 8 SA/SEA tables for the Approach options tested
- 9A Housing Site Selection – Newbury and Thatcham
- 9B Housing Site Selection– Eastern Area
- 9C Housing Site Selection – East Kennet Valley
- 9D Housing Site Selection - AONB
- 10 Gypsies, Traveller and Travelling Showpeople site selection
- 11 Residential Parking Policy for new development SA/SEA assessment
- 12 SA/SEA for Sandleford Park policy options
- 13 SA/SEA for Countryside policies

## **1 Non-Technical Summary**

### **1.1 Background**

The purpose of the Sustainability Appraisal (SA) Report is to ensure that sustainability issues are considered during the preparation and adoption of the Local Development Plan Documents (DPD). The SA is an iterative process and it identifies the likely significant effects of each DPD and the extent to which implementation of the policies it contains will achieve social, environmental and economic objectives. This ensures that the SA results and consultation responses can feed into and influence the production of the DPD.

The Housing Site Allocations DPD is a daughter document to the Council's adopted Core Strategy (July 2012), and forms part of the Local Plan for the District. The Core Strategy sets out the overall planning strategy for the District, explaining the vision for the area and how it will be delivered. The Housing Site Allocations DPD identifies specific sites for housing and Gypsies, Travellers and Travelling Showpeople, as well as setting out a limited number of development management policies.

The SA Report has been produced by the Council for the Housing Site Allocations DPD. The SA Report was published at the Preferred Options consultation stage in 2014. Following the Preferred Options consultation the SA Report was updated and published for the Proposed Submission consultation.

The Proposed Submission consultation period on the Housing Site Allocations DPD and accompanying SA Report will run from 9<sup>th</sup> November to 21<sup>st</sup> December 2015.

### **1.2 Purpose of the Sustainability Appraisal**

The Housing Site Allocations DPD is subject to a Sustainability Appraisal (SA) to ensure economic, environmental and social effects of the plan are in line with sustainable development targets. The SA provides an integrated, ongoing assessment of the likely significant effects of the DPD as it is being prepared. It provides a means of translating sustainability objectives for the area into sustainable planning policies and should reflect global, national, regional and local sustainability problems and issues. The process involves a series of stages by which the content of the emerging DPD is appraised against a series of sustainability objectives. The SA should be fully integrated into the preparation of the DPD.

The SA must also incorporate the requirements of the European Directive 2001/42/EC on the 'assessment of the effects of certain plans and programmes on the environment'. This is commonly referred to as the Strategic Environmental Assessment or 'SEA' Directive.

### **1.3 Summary of the SA Process**

The first stage of the SA process is the production of the Scoping Report. This is where the scope and overall level of detail of the SA is set out. The Scoping Report sets out the sustainability objectives and these are then used to assess the options of the DPD. The sustainability objectives are derived from the review of other plans and programmes, analysis of the baseline data and of the specific environmental issues and opportunities identified in West Berkshire. Much of the background information is based on the Core Strategy SA but has been updated to take into account the most up to date information.

The next stage of the SA process is where the options are developed and refined and the effects of the options are assessed. The options are tested against the SA objectives to predict and evaluate the effects of the sites/policies set out in the DPD. Mitigation measures are identified where necessary and recommendations to changes to the options are made. Any significant changes and revised options are then reassessed, and monitoring processes are set out in the Report.

As part of the process of selecting the proposed submission sites and policies, the likely significant effects of each option are evaluated. The effects of each of the options are then tested against the SA objectives and the results are set out in the SA Report. The aim of the appraisal is to identify any significant conflicts or combined effects between the options and the SA objectives.

The SA Report contains the following:

- Outline of contents, the methodology and description of the SA/SEA process and the specific SA/SEA tasks undertaken
- A review of other plans and programmes and their relationship to the West Berkshire Core Strategy and Housing Site Allocations DPD
- A description of the environmental and sustainability context (known as the baseline information)
- A summary of the key sustainability issues)
- The SA/SEA Framework which sets out the SA/SEA objectives for assessing the Housing Site Allocations DPD
- A review of the site and policy options considered
- A review of the Preferred Options Housing Site Allocations DPD
- A review of the Proposed Submission Housing Site Allocations DPD

The SA Report has been produced in tandem with the Housing Site Allocations DPD.

#### **1.4 Statement dealing with the difference which the SA process has made**

The SA Report and the preparation of the Housing Site Allocations DPD have been carried out concurrently to ensure that the findings from the SA process have informed the emerging DPD.

In July 2014 the Council published its Preferred Options Housing Site Allocations DPD. This set out the sites the Council considered to be the best sites for allocation at that stage. In some areas options were suggested, with final decisions to be made following the consultation. The SA/SEA process was used to identify the sites and policy options to be taken forward as preferred options, and all proposed policies were also subject to SA. The Housing Site Allocations DPD and the SA Report were then updated following the Preferred Options consultation and now forms part of the Proposed Submission documents. Modifications to policies or sites since the preferred options stage have been reassessed.

The SA is an iterative process and so the comments received from the consultation on the Preferred Options DPD have fed into the development of the Proposed Submission DPD, so that the process of drafting policies, allocating sites and appraising the potential impacts could continue.

A summary of the SA and Site Assessments can be found below.

#### **1.5 Summary of likely significant effects of the Housing Site Allocations DPD**

The summary of the SA findings have been divided up into three sections, Housing Site Allocations, Sites for Gypsies, Travellers and Travelling Showpeople and, finally, Policies.

Full details can be found in the SA Report (Section 7), with the full site assessments and SA/SEA assessment forms in the appendices, (Appendix 9 - Housing Site Assessments, Appendix 10 – Gypsies, Travellers and Travelling Showpeople Site Assessments, Appendix 11 - Countryside Policies, Appendix 12 - Parking Policy and Appendix 13 - Sandleford).

##### **1.5.1 Housing Site Allocations**

Potential housing sites have been taken to be sites promoted through the Strategic Housing Land Availability Assessment (SHLAA) process. All SHLAA sites are assessed as one of four categories,

- Deliverable (e.g. Sites with planning permission),
- Developable (e.g. Sites within the settlement boundary),

- Potentially developable (Sites adjacent to the settlement boundary with no significant issues that would be difficult to overcome), and
- Not currently developable (Sites with significant constraints that mean they are unlikely to come forward in the plan period)

All sites assessed as potentially developable were taken forward through the site selection process for the Housing Site Allocations DPD. This process was split into two sections, Part A – automatic exclusions, and Part B – considerations. Automatic exclusions identify sites where there are significant constraints to development, such as flood risk, national or international ecological/biodiversity designation or the proposed scale of development in terms of the role and function of the settlement.

Sites not ruled out through the automatic exclusions assessment (Part A) are considered to be reasonable alternatives for development, and therefore, Part B and a SA/SEA has been undertaken to inform the site selection work. This phase of the site assessment process has been used to identify the sites to be taken forward for consultation as preferred options. In some cases the SA/SEA outcomes are the same for a number of sites; where this is the case, other factors in the site assessment are taken into account to help the decision making process.

The outcomes of the Preferred Options consultation, along with any further technical work have been used to further refine the site assessments and inform the recommendation of sites for allocation within the Proposed Submission Housing Site Allocations DPD.

With regard to the SA/SEA conclusions all sites are predicted to have a number of positive sustainability effects, including social sustainability as they will deliver new good quality housing, including affordable housing.

Economic sustainability is predicted to be neutral for the majority of sites, as while development contributes towards economic development in the short term, it is not seen as promoting key business sectors/development in the longer term.

### 1.5.1.1 Newbury and Thatcham

#### ***Newbury***

A significant number of sites were promoted through the SHLAA for housing in the Newbury area. Some of these are in Protected Employment Areas (PEAs), which will be reviewed in the new Local Plan following an objective assessment of the needs for housing and employment growth, as well as a review of the District's Protected Employment Areas. These sites, including the London Road Industrial Estate, have therefore not been assessed for potential allocations as part of this Housing Site Allocations DPD. It is recognised however that they may add some flexibility to the strategy in the medium to longer term, depending on a review of employment land in the District.

21 sites were considered as options for allocation in Newbury. Of these, one site was shown to have a predominantly negative impact on sustainability through the SA/SEA (**NEW031**), with five sites showing at least one significantly negative effect against the SA/SEA objectives (**NEW001 / NEW008 / NEW010 / NEW011 / NEW054**). These sites were therefore, discounted. All the other sites showed predominantly neutral impacts on sustainability, with some positive and some negative impacts. Where there was no significant difference in the SA/SEA outcomes then other factors in the site assessment, including the responses to the Preferred Options consultation have led to the recommendation of sites for allocation.

The Council have been unable to confirm the availability of **NEW040**, and therefore, the site is not considered appropriate for allocation, as its deliverability cannot be confirmed. **NEW019** and **NEW108** are not recommended for allocation due to their distance from local service and facilities, and the potential negative impact this could have on sustainability compared to other sites. **NEW105** was considered alongside NEW045 and considered to be unsuitable for development

due to the ancient woodland buffers required, and the impact this would have on the development potential of the site promoted through the Preferred Options consultation.

The outcomes of the public consultation and further technical work have led to one of the preferred option sites (Land at Moor Lane Depot – **NEW106**) being rejected in Newbury and another site, (land south of Warren Road – **NEW104**) being included within a revised settlement boundary rather than being an allocated site. Following reassessment additional sites at south east Newbury (**NEW047B** and **NEW047C**) have also been included as allocated sites, to add some flexibility to the housing provision in the medium term.

Overall six sites in Newbury are recommended for allocation in the Proposed Submission DPD. All six sites are predicted to have a number of positive sustainability effects, including social sustainability as they will deliver new good quality housing, including affordable housing. All sites are located close to local services and facilities, and therefore, provide opportunities to promote and encourage active, healthy lifestyles and use of sustainable transport. Economic sustainability is predicted to be neutral for all sites, as while development contributes towards economic development in the short term, it is not seen as promoting key business sectors/development in the longer term.

For **NEW012** the only predicted negative sustainability effect is as a result of development on a greenfield site.

At preferred options **NEW042** predicted a potential negative impact on Green Infrastructure due to the relocation of the allotments. Following the consultation the site promoter has now committed to retaining the allotments as situ, which results in a neutral impact.

The SA/SEA predicts that without adequate mitigation there could be a potential negative impact on environmental sustainability at **NEW045**. Mitigation measures, including sensitive design and design informed by a Landscape and Visual Impact Assessment (LVIA) will mitigate this potential negative impact. Landscaping on the site would provide additional biodiversity habitat.

There is a potential negative sustainability impact predicted for **NEW047D** in terms of impact on biodiversity, however, mitigation measures are proposed that include retaining in perpetuity a large area of open space/wildlife habitat and a green corridor linking to the east. The site is a former landfill site, therefore, development of the site could result in a positive impact in terms of improving soil quality in the area, through mitigation measures to clean up the contamination on the site. The SA/SEA for **NEW047B** and **NEW047C** predicted similar outcomes to those for area **NEW047D**, which with mitigation would not result in any significant impacts on sustainability. Development of the sites together would ensure that an area of open space/wildlife corridor was retained in perpetuity, to maintain the gap between Newbury and Greenham. These sites would provide some flexibility to the housing provision in the medium term.

### ***Thatcham***

Nine sites were considered as options for development at Preferred Options stage, with an additional site submitted at preferred options and another site previously excluded being resubmitted. This resulted in the assessment of 11 sites as reasonable alternatives (**THA006; THA007; THA008; THA011; THA014; THA019; THA024; THA025; THA027; THA028 and THA037**).

One site was recommended for allocation through the Preferred Options DPD and remains the only site recommended for allocation in Thatcham. The Core Strategy is clear that Thatcham is to receive a lower allocation than other urban areas given the rapid expansion of the town in recent years, to allow for a period of consolidation for infrastructure and town centre facilities to be upgraded to meet the demands of the existing population.

A major consideration in Thatcham is the potential for development to lead to the coalescence of individual settlements. This is particularly the case with development to the north of Thatcham that

could result in the coalescence of Cold Ash and Thatcham. Therefore, a number of sites were ruled out.

**THA025** is recommended for allocation, as it is seen as the most appropriate site for allocation in the Town. The site is close to local services and facilities, with a number of public transport options, all meaning that there are opportunities for walking and cycling and promoting active, healthy lifestyles. There is a predicted negative impact from the in relation to the proximity of the site to the SAC and SSSI, however, adequate mitigation measures would ensure these sites are protected and enhanced.

#### ***Cold Ash***

Four sites were considered as reasonable alternatives for allocation, with one site being ruled out due to its relationship to the existing settlement pattern (**COL004**). The remaining three sites were consulted on as preferred options. **COL011** has been subsequently rejected on landscape grounds, leaving two sites recommended for allocation in Cold Ash.

**COL002** is recommended for allocation. The site is close to local services and facilities, and therefore will have a positive sustainability impact through the promotion of sustainable modes of travel, and the promotion of active, healthy lifestyles. It is noted that due to the rural location of the site, there will be some reliance on the car for access to employment and higher level services and facilities. There is potential for a negative sustainability impact due to surface water flood risk on the site, however, with appropriate mitigation this negative impact will be reduced.

A small amount of linear development, in keeping the surrounding character is proposed for **COL006**. Many of the sustainability impacts are similar to COL002, although there is not the same level of flood risk predicted. There is a potential negative impact on road safety, as the site is in a rural location, although it is expected that mitigation measures would lead to a reduction in this impact.

### **1.5.1.2 Eastern Area**

#### ***Eastern Urban Area***

Nine sites were considered as options for development in the Eastern Urban Area. There are a number of technical issues in the Eastern Spatial area that were highlighted by the site selection process, therefore, a wider range of options were consulted on as preferred options, with further technical work and the outcomes of consultation to inform the sites to be recommended for allocation. Eight sites were consulted on as preferred options, with two being discounted following public consultation and further technical work (EUA007 and EUA033).

**EUA032** was not considered as a preferred option. While the SA/SEA did not highlight any significant sustainability issues, the Landscape Assessment work states that access to the site should not come from Sulham Hill due to the negative impact this would have on the character of the AONB. As an alternative access cannot be found the site is not considered to be deliverable without a negative impact on environmental sustainability and the AONB that could not be mitigated.

While the SA/SEA did not rule out **EUA007** from being considered for allocation, the site is accessed from Pincents Lane, which is also used to access a retail park and a proposed new IKEA store. Transport Assessment work indicates there is much sensitivity in the area, and there are serious concerns regarding the traffic impact of additional development. It is considered prudent to monitor the impact of IKEA on the junctions in the area once the scheme has been implemented and then reconsider the site for allocation at a later date.

**EUA033** was included as a preferred option, but is no longer recommended for allocation. The SA/SEA does not highlight any significant sustainability issues on the site; however, the Landscape Assessment states that only one of the sites on Long Lane should be developed due to the potential negative impact on environmental sustainability and the AONB. The Landscape Assessment states a preference for EUA003/008 to be developed over EUA033. There are also concerns over the traffic impact of several developments in this area, along with a risk of surface

water flooding at the proposed access point to the site. While technical solutions are available they could impact on viability and deliverability of the site in the short term, and therefore, the site is not recommended for allocation.

Overall six sites are recommended for allocation. The SA/SEA shows that **EUA003 and EUA008** could have a negative impact on environmental sustainability due to the sites being located within the AONB. Landscape Assessment work has been carried out by the Council, and shows that development of the sites is acceptable subject to certain mitigation measures. These measures are set out in the site policies within the DPD to ensure the potential negative impact is mitigated. The sites are well related to existing development, and therefore, are predicted to have positive sustainability impacts in terms of access to services and facilities which will enable the promotion of healthy, active lifestyles.

**EUA025 and EUA026** are located adjacent to the A4 and M4, at M4 junction 12. This results in predicted negative impacts in terms of air quality and noise. Mitigation, including the recommendation for only a small part of EUA025 to be allocated for development will reduce this impact. The remaining area of EUA025 will be retained as a landscape buffer, and open space, increasing the availability of public open space in the area. This reduced developable area on EUA025 also ensures that no development will take place within the flood zones. The only predicted negative sustainability impact for **EUA031** is as a result of the site being greenfield land.

**EUA035** has a number of predicted positive sustainability impacts. While the site is close to the railway line, only part of the site has been proposed for development, which will provide a landscape buffer to the railway, reducing the air quality and noise impacts the railway could have. The site is adjacent to the AONB, therefore, there is a potential negative impact on environmental sustainability. Mitigation as set out in the Landscape Assessment would minimise this impact.

### ***Theale***

Five sites were considered as options of development in Theale. Of these five, one site was rejected at preferred options due to flood risk and concerns over proximity to the M4 (**THE002**). The SA/SEA indicates a potentially significant impact in terms of flood risk, and following advice from the Environment Agency it was not considered appropriate to consider the site for allocation. The remaining four sites were consulted on as preferred options.

The outcomes of the public consultation and further technical work, plus the requirement for Theale to have a period of consolidation led to two of these being discounted (THE001 and THE005).

**THE005** is located in flood zone 2, and therefore, there is a potential negative sustainability impact as a result of flood risk. The site is no longer recommended for allocation as the Environment Agency requested that any sites in flood zones are subject to a sequential test. As other sites are available, both in Theale and across the District, the test cannot be carried out.

**THE001** did not show any significant sustainability impacts, however, through the preferred options significant concern was raised regarding access to the site, with limited scope for improvements to be made without acquiring third party land. Landscape Assessment work carried out following the preferred options indicated that the site would be suitable for development subject to various mitigation measures, including a buffer to separate the site from the existing village. As a result the site is not considered to be well related to the existing settlement, and could result in a negative impact in terms of impact on the character of the built environment.

As a result two sites are recommended for allocation. The developable area of both sites (**THE003 and THE009**) has been reduced as a result of further landscape work carried out following the preferred options, to ensure no negative impacts on the AONB or environmental sustainability.

### **1.5.1.3 East Kennet Valley** ***Burghfield Common***

Nine sites were considered as options for development. Several of the sites were rejected due to their development potential in respect of Burghfield Common as a rural service centre.

**BUR005** and **BUR008** were considered to be less well related to the existing settlement pattern, and this could have a potentially negative impact on the character of the built environment. Locally there is strong opposition to development to the west of the village (**BUR006**, **BUR007**, **BUR011**), as development would impact on the character of built environment. Both **BUR007** and **BUR008** submitted smaller site proposals through the preferred options, but the reasons for rejection are considered to be the same whether the whole or part of the site is considered for development.

Two sites were included as preferred options, with both sites being recommended for allocation, one as at preferred options (**BUR015**), and one with a reduced developable area following the Preferred Options consultation and further technical work (**BUR002/002A/004**) to ensure that the existing woodland is retained as a wildlife habitat.

### ***Mortimer***

Mortimer Parish Council is in the process of developing a Neighbourhood Development Plan (NDP). Representations through the public consultation as well as discussion with the neighbourhood planning group has led to an agreement that the site allocations for Mortimer will be made through the NDP, which will also review the settlement boundary in accordance with the criteria. The NDP for Stratfield Mortimer is therefore, required to provide 110 dwellings. The NDP is well progressed, and when adopted, will form part of the Development Plan for West Berkshire.

### ***Aldermaston***

No sites were considered options for development due to Aldermaston being within the inner AWE consultation zone.

### ***Woolhampton***

Five sites were considered as options for development. Two of the sites were ruled out due to flood risk (**WOOL002** and **WOOL003**), with a third ruled out due to its poor relationship with the existing settlement and potential flood risk (**WOOL005**).

Two alternative sites were recommended as preferred options, and a choice between these has been made following the consultation and further technical assessment. This has resulted in **WOOL006** being recommended for allocation rather than **WOOL001**.

The sites have very similar outcomes in the SA/SEA, however there is a local preference for **WOOL006**, and for development along the A4 between the existing edge of the village and the petrol station. This has resulted in a change in the orientation of the developable area to that proposed at preferred options.

## **1.5.1.4 North Wessex Downs Area of Outstanding Natural Beauty**

### ***Hungerford***

Nine sites were considered as options for development, none of which were predicted to have any significant negative environmental effects. Six sites were recommended as preferred options, with five of the sites being considered as a single site.

**HUN001** is not recommended for allocation. There are no significant sustainability effects picked up by the SA/SEA. There are concerns over access to the site, which is via a narrow road, where as both of the preferred options sites are accessed via main roads. The site is located to the west of Hungerford adjacent to a protected employment area, and consideration could be given in the future to the redevelopment of the area as a single site.

**HUN022** and **HUN028** are also not recommended for allocation. While the SA/SEA does not pick up any significant sustainability issues the sites are considered to be less well related to the existing settlement than either of the two preferred options, and there are concerns over access without the sites to the west of Hungerford being developed. The proposed access points to the

sites are located outside the area considered suitable for development; therefore, access to the sites could only be delivered in conjunction with other sites.

Two options were included as preferred options, and as the SA/SEA did not indicate a more suitable site in terms of sustainability the consultation was used to get an indication of which would be preferable in terms of local impacts. A reassessment of the site following the consultation has resulted in **HUN007** being recommended for allocation rather than the Eddington group of sites (**HUN003, HUN005, HUN006, HUN015, HUN020**).

The main concern raised regarding development in Hungerford is in relation to traffic generation through the High Street. Transport Assessment (TA) work carried out indicates that HUN007 will have less of an impact as it is close to local education facilities. The Eddington sites are close to a SSSI and SAC, and therefore, the SA/SEA does indicate that there will be potential negative impacts on these protected areas without adequate mitigation. This is not an issue faced by HUN007. Additional landscape work has also suggested that the Eddington sites should not be delivered as a whole, which has resulted in uncertainty as to whether the site can or should be delivered holistically, which could result in piecemeal development in the area. Therefore, HUN007 is recommended for allocation.

### ***Lambourn***

Five sites were considered as options for development, with one new site submitted as part of the Preferred Options consultation. This new site was also considered to be an option for development.

Two sites were considered as preferred options, **LAM005** and **LAM007**. Following the Preferred Options consultation it became clear that LAM007 was currently in use associated with the racehorse industry, and that its allocation would therefore be contrary to policy CS12 of the Core Strategy. This is not a factor picked up by the SA/SEA process, but the site assessments as a whole.

**LAM002A** is also potentially currently in use as part of the racehorse industry, and therefore, this along with a concern regarding the relationship of the proposals with the existing settlement pattern the site was not recommended for allocation.

The topography of **LAM009** raises concerns over the ability to achieve suitable access, and the site is considered to be poorly related to the existing settlement, therefore it was not recommended for allocation.

**LAM013** is located within a groundwater emergence zone, surface water flood risk area and critical drainage area, with a history of flooding in both the 2007 and 2014 floods. Due to the concern over the flood risk on the site it was considered that there are more appropriate sites within the village and therefore the site is not recommended for allocation.

Two sites in Lambourn are recommended for allocation. **LAM005** is well related to the existing settlement and close to the centre of the village. Development will not take place within the flood zones and a significant buffer will be provided to the SSSI/SAC to ensure no negative sustainability impacts.

Development on the south western part of **LAM015** (new site submission) could be developed without resulting in harm to the AONB. The site can deliver a low density linear development, reflecting the existing settlement pattern.

### ***Pangbourne***

Two sites were considered as options for development, with both being included as preferred options (PAN001 and PAN002). Much of Pangbourne is at risk from flooding which significantly limits where development could reasonably take place. Neither of the preferred options sites is at risk from flooding.

Neither preferred options sites were shown to have any significant sustainability impacts. There are potential access concerns relating to both sites, however, significant concerns were raised through the preferred options consultation in relation to **PAN001**, in terms of the suitability of the local roads for additional traffic. No options are available to improve access arrangements to the site, and therefore, the site is no longer recommended for allocation.

Highways concerns relating to **PAN002** have been tested through a planning application. While the planning application has been refused, the highway impact is not a reason for refusal. Therefore, PAN002 is recommended for allocation.

### ***Bradfield Southend***

Three sites were considered as options for development, with an additional site that was submitted as part of the Preferred Options consultation being considered as an option for development.

One site (**BRS004**) was included as a preferred option and is now recommended for allocation. The site is well related to the existing settlement, and is only suitable for a small number of dwellings, that would be in keeping with the size and function of the village. The SA/SEA did not highlight any significant negative impacts.

Of the rejected sites the Landscape Assessment indicated that development of both **BRS003** and BRS004 would impact negatively on environmental sustainability and the character of the AONB, and stated that development of BRS003 without BRS004 would result in a poorly related development, therefore BRS003 is not recommended for development. BRS003 is also at risk from surface water flooding, with some evidence of flooding in 2014.

The Landscape Assessment indicated that development of **BRS005** would result in harm to the AONB, and therefore, the site is not recommended for development.

While some development on **BRS006** (new site submission) is considered acceptable in landscape terms, a limited amount of development is considered appropriate for the village, and BRS004 is considered to be a more suitable site as it is better related to the existing residential development in the village. Therefore BRS006 is not recommended for allocation.

### ***Chieveley***

Three sites were considered as options for development. Of these three sites (**CHI010**), one was consulted on as a Preferred Option.

Following the consultation the development potential on the three sites was reassessed, and on all occasions reduced to less than 5 dwellings, meaning that the sites were automatically excluded from the site selection process, but also removing one of the negative SA/SEA impacts (impact on the character of the area). As a result, the sites have been considered as part of the settlement boundary review process. The sites meet the review criteria and therefore, have been included within the revised settlement boundary.

No sites will be allocated for development in Chieveley.

### ***Compton***

Five sites were originally considered as options for development, with two sites subsequently being ruled out following additional landscape work indicating development would cause harm to the AONB (**COM011/COM012**).

**COM004** was included as the preferred option and is recommended for allocation. The SA/SEA predicts that development of the site will have a predominantly positive effect on sustainability, whereas the other sites will have a predominantly neutral effect.

Development of COM004 would result in the redevelopment of a large brownfield site, which is well related to the existing settlement. There are a number of benefits of redevelopment of the site, including providing areas of green infrastructure, improvements to the character of the AONB, and cleaning up of contamination on the site as a result of the previous land use. The site is identified as an opportunity site within the Core Strategy, and has an adopted SPD.

While neither of the other sites (**COM001 and COM010**) have any significant negative impacts highlighted in the SA/SEA, the overall positive sustainability impact and positive benefits of redevelopment COM004 has resulted in it being recommended over the other sites in Compton

### ***Great Shefford***

Great Shefford is subject to a significant level of flood risk, with ground, surface and fluvial flood risk areas. As a result of significant flooding in 2014 (and previously) no development is proposed for the village.

**GSH001** was considered as an option for development, and while the SA/SEA does not highlight any significant sustainability issues on the site itself, it is not recommended for allocation due to the significant flood risk in the village, which can result in the village being cut off from the surrounding area during times of flooding.

### ***Hermitage***

Five sites were considered as options for development. One site was included as a preferred option, and is now recommended for allocation (HER001). Part of a second site (HER004) was proposed to be included within the settlement boundary, but has been reassessed as being more suitable as an allocation due to the development potential on the site.

**HER011 and HER016** are not recommended for allocation. Development of these sites would extend the village to the north of Manor Lane. It is considered that such expansion would not be appropriate and would be poorly related to the existing settlement pattern.

**HER009** is not recommended for allocation. The site is prominent in location, but largely screened from the AONB. The landscape assessment indicates that part of the site would be suitable for development subject to certain mitigation measures. However, it is considered that other sites in Hermitage are more appropriate for development.

**HER001** and part of **HER004** are recommended for development. The sites are well related to the existing settlement and development would result in little harm to the AONB, subject to mitigation measures. Parts of the sites are at risk from flooding, but Flood Risk Assessments would set out appropriate mitigation to minimise this impact.

### ***Kintbury***

Eight sites were considered as options for development. Two adjacent sites were included as a preferred option, and are now recommended for allocation (KIN006/007).

**KIN004** is not recommended for allocation. Development of the site is likely to have a negative impact on the impact of the character of the area, and impact on the conservation area.

**KIN008, KIN009, KIN015 and KIN016** are not recommended for allocation. They are poorly related to the existing residential development, additional sites would need to be developed to improve this relationship and provide access to the sites. Development would result in a negative impact on the character of the area, with a possible negative impact on environmental sustainability. Development of additional sites to link the sites to the existing settlement would not be in keeping with the role and function of Kintbury as a service village.

**KIN006/007** are recommended for allocation as a single combined site. The sites are well related to the existing settlement and close to local services and facilities, and can deliver housing without causing harm to the AONB.

**KIN011** was not included as a preferred option primarily because of highways concerns. Sight lines are poor at the Inkpen Road/The Haven junction and the Inkpen Road/High Street junction. However, further technical work has been undertaken since the preferred options, which show that acceptable visibility splays at the Inkpen Road/The Haven junction can be achieved, therefore, resolving the issue. Although the main technical reasons for not proposing the site at the preferred options stage have been overcome, Council Members have responded to the concerns expressed locally over the cumulative impacts of additional development in Kintbury and the surrounding area. As KIN006/007 was previously consulted upon as a preferred option, they consider that the public have been given more opportunity to comment on this as an option for future development, and therefore, have requested that KIN011 is deferred until an informed assessment can be made of the cumulative impact of traffic generated from additional development in the area. It is proposed that the site should be considered further through the preparation of the new Local Plan.

### **1.5.2 Sites for Gypsies, Travellers and Travelling Showpeople**

Six sites were considered as options for development. Two sites are recommended for allocation, one for Gypsies and Travellers (GTTS5) and one for Travelling Showpeople (GTTS2). A further site (GTTS6) is recommended as an area of search.

**GTTS3** and **GTTS7** are not recommended for allocation. Both sites are adjacent to existing settlements, and the SA/SEA highlights a potential negative impact on the character of the built environment, although mitigation measures could be put in place to minimise the impact. Due to concerns regarding the impact on the existing settled community these sites are not recommended for allocation. GTTS7 has subsequently been taken forward as a housing site allocation.

**GTTS9** is not recommended for allocation. It was consulted upon as preferred option site, however, following the Preferred Options consultation certainty of site delivery could not be ascertained.

**GTTS5** is recommended for allocation for Gypsies and Travellers. The site is an existing Gypsy and Traveller site and while allocation of the site would result in changing existing transit pitches to permanent pitches, the principle of Gypsies and Travellers on the site is established. The Gypsy and Traveller Accommodation Assessment (GTAA) concluded that there is no demand for additional transit pitches.

**GTTS6** is recommended for allocation as an area of search. GTTS6B, identified as a preferred option, forms part of wider Council landholding. Comments and concerns raised through the preferred options has resulted in the wider Clappers Farm landholding being considered as an area of search from within which a site for up to 9 pitches to accommodate Gypsies and Travellers will be delivered. While the site is rural in location, it is close to some local services and facilities.

**GTTS2** is recommended for allocation for Travelling Showpeople. This is an established existing yard, with good access to services and facilities. Effective landscaping will be required to ensure the impact of any development on the wider landscape is minimised. There is also a risk of flooding on the site, but the developable area is outside this zone, therefore, the impact is minimised.

### **1.5.3 Policies**

#### ***Countryside Policies***

The majority of effects resulting from the policies are very positive, positive or neutral. Both **policy 1** (Location of New Housing in the Countryside) and **policy 2** (Rural Housing Exceptions) are predicted to have a positive impact on the opportunity to provide sustainable housing to meet local needs. Both policies may have a negative environmental impact as a result of higher greenhouse gases and air pollution which stem from the need for greater car use in rural areas.

**Policy 2** is showing to have a significantly positive impact on maximising the provision of affordable housing. Policy 2 could result in some negative impacts in terms of sustainable transport options as rural exceptions sites can be located in areas where there are few facilities and poor transport facilities. There is a risk with policy 2 that environmental sustainability could be overridden by greater benefits to social or economic sustainability, although the policy does require that sites under consideration by the policy would need to review whether there are any more suitable alternatives available locally.

**Policy 3** is predicted to have positive impacts in relation to the protection and enhancement of the built and natural environment. All other impacts are likely to be neutral.

**Policy 4** is likely to have a significantly positive impact on maximising the use of previously developed land and buildings, along with positive impacts in relation to waste disposal and the reuse of mineral and materials, which will all in turn help to reduce greenhouse gas emissions through the promotion of reuse of existing resources.

At preferred options four policies were consulted upon dealing with different elements of housing for the rural economy. As a result of the consultation, and to bring the policy more in line with the NPPF, the individual policies have been replaced by a single policy for housing relating to rural workers (**Policy 5**). The policy will have a positive impact on economic and social sustainability, although there is potential for a negative environmental sustainability due to the loss of a green field site.

**Policies 6, 7 and 8** are likely to have a number of positive impacts, especially in relation to the improvements to the quality of housing and the reuse of previously developed land. There is a potential negative impact in relation to the impact on the character of the countryside and potential impacts on biodiversity, where existing habitat is to be lost through the replacement of a dwelling. The potential negative impacts can be mitigated through policy CS17 of the Core Strategy.

Changes have been made to the wording of most of the policies since the Preferred Options consultation, but this has not changed to SA/SEA outcome, as the principle of the policy has remained the same.

### ***Residential Parking Policy***

A new residential parking policy is proposed through the Housing Site Allocation DPD. The new policy takes into account the parking guidance set in the NPPF (paragraph 39). Two policy options were assessed, with the option to use a location/dwellings size policy being favoured. The actual parking policy has not been subject to a separate SA/SEA as the level of detail provided in the policy is far greater than would be picked up in the SA tables.

The policy will have a predominantly neutral effect on sustainability, however, there are positive impacts in relation to supporting and encouraging healthy, active lifestyles and improving and promoting opportunities for sustainable travel and reducing green house gas emissions. There are no negative impacts from the proposed policy.

No changes have been made to the principle of the policy since the Preferred Options consultation, although changes have been made to the parking zones and levels of parking expected.

### ***Sandleford Park***

New evidence has come forward regarding infrastructure at Sandleford Park, and as a result the Supplementary Planning Document supporting the Core Strategy policy has been updated. At the Preferred Options stage it was anticipated that the existing Core Strategy policy would be updated to take into account this new evidence and to require a single Masterplan to ensure that the site came forward in a comprehensive manner. However, in light of the expected timing of the planning application for the site, there was a necessity to provide this guidance more speedily.

Following legal advice, it was decided to update the Supplementary Planning Document (SPD) for the site, rather than amend the policy through the DPD process. Consultation on the updated SPD took place from 12<sup>th</sup> December 2014 to 30<sup>th</sup> January 2015. The updated SPD was adopted by the Council on 3<sup>rd</sup> March 2015. The original SPD was subject to screening to determine whether an SA was required. This was revised in light of the amendments to the SPD and the amendments were not considered to change the outcome of the screening opinion. The SPD to guide development of the site was adopted on 3<sup>rd</sup> March 2015 and has weight as a material consideration in the planning process.

The Housing Site Allocations DPD will not contain a specific policy on Sandleford Park.

## **1.6 Conclusion**

As a result of the SA work undertaken during the development of the Housing Site Allocations DPD and following the Preferred Options consultation, the most sustainable options were taken forward into the Proposed Submission version of the DPD.

The Preferred Options DPD represented the best available options at that stage and were considered to achieve the sustainability objectives of the Housing Site Allocations DPD. The approach taken in the Proposed Submission Housing Site Allocations DPD is considered to represent the most suitable site from the options assessed in order to achieve the sustainability objectives of the DPD. If the DPD is successfully implemented and the negative effects identified are successfully mitigated where appropriate, then future development in West Berkshire will result in positive sustainability impacts and sustainable development. This SA Report recommends that the sites and policies are accepted as the Proposed Submission document.

The Housing Site Allocations DPD sits under the Core Strategy, to deliver the housing requirement, with additional flexibility, as required by the Core Strategy. The Core Strategy and Housing Site Allocations DPD achieve a balance between making provision for development to meet local needs, taking into account infrastructure requirements and the extensive environmental constraints of the area, and displaying flexibility to respond to changing circumstances across the time frame of the Core Strategy and Housing Site Allocations DPD.

## **2 Introduction**

West Berkshire Council is in the process of preparing a Housing Site Allocations Development Plan Document (DPD).

This report constitutes the Strategic Environmental Assessment (SEA) and Sustainability Appraisal (SA) for the Proposed Submission version of the Housing Site Allocations DPD.

The main aim of the Sustainability Appraisal / Strategic Environmental Assessment (SA/SEA) is to promote sustainable development through the integration of social, environmental and economic considerations into the preparation of new or revised Development Plan Documents (DPD). This document incorporates the requirements of a SEA for the Housing Site Allocations Development Plan Document (DPD) as required by the Planning and Compulsory Purchase Act 2004 and the European Directive on SEA (2001).

This report should be read in conjunction with the full SA / SEA Environmental Report for the Adopted Core Strategy.

### **2.1 The Development Plan for West Berkshire**

The Council's adopted Core Strategy (July 2012) forms part of the Local Plan for the District. The Core Strategy sets out the overall planning strategy for the District, explaining the vision for the area and how it will be delivered.

The Housing Site Allocations DPD will identify specific sites for housing and Gypsies, Traveller and Travelling Showpeople sites, as well as set out a limited number of development management policies to enable development to be managed within the context of the spatial strategy set out in the Core Strategy DPD.

It was originally intended that a Site Allocations and Delivery DPD would be produced; however the change in approach from a Site Allocations and Delivery DPD to a Housing Site Allocations DPD was taken in order to prioritise and encourage housing delivery in the District in accordance with Government policy. There is also a pressing requirement to address through the plan led system the need for Traveller sites, and the need for a priority review of several housing development management policies.

The West Berkshire District Local Plan 1991 – 2006 was adopted in June 2002, and in 2007 a number of the policies were extended, producing a Saved Policies version of the Local Plan. Any policies not saved are either no longer required or are covered by national or local policies. The adopted Core Strategy replaced a number of policies within the West Berkshire District Local Plan, and the Housing Site Allocations DPD will replace other policies, once adopted.

After 2016, another Local Plan will be prepared which is intended to replace the current folder of documents (the Core Strategy DPD, Housing Site Allocations DPD, and the saved policies of the West Berkshire District Local Plan) with a comprehensive Local Plan which is anticipated for adoption in September 2019.

In July 2014 the Council published its preferred options Housing Site Allocations DPD. The main aim of the Preferred Options Stage was for the Council to explain to the community and partner organisations what the Council's preferred approach was and to enable comments to be made so that these could inform the Proposed Submission Housing Site Allocations DPD. While the preferred options was a voluntary stage, it was seen as being important to give people early input into the plan making process, and concurred with the principles of the planning system which are based around the front-loading of evidence and continuous public participation in order to achieve a sound plan.

Following the preferred options consultation the Council has prepared the Proposed Submission Housing Site Allocations DPD taking into account the feedback from the community and the evidence base. The Proposed Submission DPD is being published for consultation on 9<sup>th</sup> November to 21<sup>st</sup> December 2015 before being submitted to the Secretary of State.

### **3 The Appraisal Methodology**

#### **3.1 What is the SA/SEA? Why does it need to be done?**

The purpose of Sustainability Appraisal (SA) is to ensure that sustainability issues are considered during the preparation of plans. The SA is an iterative process which identifies the likely effects of options and subsequently the effect of the Housing Site Allocations DPD, and the extent to which these options and the DPD help to achieve economic, environmental, and social objectives.

The SA must also incorporate the requirements of the European Directive 2001/42/EC on the 'assessment of the effects of certain plans and programmes on the environment'<sup>1</sup>. This is commonly referred to as the Strategic Environmental Assessment or 'SEA' Directive. This was transposed into UK law by the Environmental Assessment of Plans and Programmes Regulations 2004, (the SEA Regulations). Under these requirements, plans that set out the framework for future development consent of projects must be subject to an environmental assessment to determine if the plan, the DPD, will have any significant effects on the environment. This context is reiterated in paragraph 165 of the National Planning Policy Framework (NPPF)<sup>2</sup>

"A sustainability appraisal which meets the requirements of the European Directive on strategic environmental assessment should be an integral part of the plan preparation process, and should consider all the likely significant effects on the environment, economic and social factors".

Further to the NPPF, the Planning and Compulsory Purchase Act 2004<sup>3</sup> requires an SA and SEA to be carried out for DPDs. Both of these requirements can be carried out in one appraisal process. In order to avoid any confusion, the reference to SA throughout this document will refer to both the SA and the SEA.

### 3.2 Stages to the SA / SEA

The SA is made up of a series of stages (A to E) which are detailed in the Table below.

<b>Table 1 SA/SEA Stages</b>	
<b>Stage A</b>	Setting the context and objectives, establishing the baseline and deciding the scope
<b>Stage B</b>	Developing and refining the options
<b>Stage C</b>	Appraising the effects of the plan
<b>Stage D</b>	Consultation
<b>Stage E</b>	Monitoring the significant effects of implementing the plan

This report accompanies the Proposed Submission version of the Housing Site Allocations DPD. This SA report builds on the Scoping Report and the Core Strategy SA/SEA Environmental Report. The SA Report contains the following:

- An outline of the contents, the methodology and description of the SA/SEA process and the specific SA/SEA tasks undertaken
- A review of other plans and programmes and their relationship to the West Berkshire Core Strategy and Housing Site Allocations DPD (Appendix 1)
- A description of the environmental and sustainability context (known as the baseline information) (Appendix 2)
- A summary of key sustainability issues
- The SA/SEA Framework which sets out the SA/SEA objectives for Assessing the Housing Site Allocations DPD
- A review of the options considered and the preferred options selected
- A review of the Preferred Options consultation and the proposed allocations and policies

This SA report has been produced alongside the Proposed Submission Housing Site Allocations DPD for public consultation. At this stage, consultees are invited to consider the Proposed Submission document in light of the SA report.

### 3.3 Consultation

Public involvement through consultation is a key element of the sustainability appraisal. During the development of the SA there are several formal stages of consultation. Informal comments received can also be taken into consideration.

Consultation on the SA Scoping report took place in September 2013 and July 2014 for five weeks. A summary of the comments made during the consultation are set out in appendix 5.

Following the Regulation 18 consultation on the change to approach to produce a Housing Site Allocations DPD, rather than a Site Allocation and Delivery DPD, the Scoping Report was updated and the three statutory consultees given a further opportunity to comment. This consultation took place in July 2014.

A Preferred Options version of the Housing Site Allocations DPD was subject to a seven week consultation between 25 July and the 12 September 2014. A version of the SA/SEA was published alongside the Preferred Options DPD. Results from the consultation are published in the Statement of Consultation, and a summary of the key issues raised and how these have been taken into account in the production of the final SA/SEA are set out in section 6 – Appraisal

The SA/SEA is now subject to further consultation alongside the Proposed Submission version of the DPD. The consultation will run from 9<sup>th</sup> November until 21<sup>st</sup> December 2015.

### **3.4 Difficulties encountered in compiling information or carrying out the assessment**

The collection of the baseline information identified issues relating to accuracy of data, format of data and whether the research was up to date. This can cause limitations with the identification of issues (in the scoping stage) and the monitoring of SA objectives. Where there are gaps in the baseline data this has been identified and therefore poses a degree of difficulty in forecasting effects.

The appraisal of policies is not always a straightforward process, particularly with it being an iterative process, and therefore there will be some degree of uncertainty in the predicted outcomes. Uncertainties can arise from scientific uncertainties, natural variability and lack of precision. A number of policy options were difficult to assess against the SA objectives and sub-objectives. This is particularly the case with topic specific policy options which may only have a significant impact on a small number of SA sub-objectives.

Where there is uncertainty this can be reduced through research and professional judgement, although there will still remain an element of uncertainty. Where necessary a precautionary approach has been taken in the SA. This is to make sure that where there are threats to the environment and a lack of scientific knowledge, action is taken.

## **4 Background to the SA Report**

### **4.1 Requirement for the Sustainability Appraisal (SA)**

The Planning and Compulsory Purchase Act 2004 requires a Sustainability Appraisal (SA) and a Strategic Environmental Assessment (SEA) to be carried out for Development Plan Documents (DPDs). The SA and the SEA requirements can be carried out in one appraisal process. Throughout this document, reference to the SA refers to both the SA and the SEA process<sup>4</sup>.

Under the Town and Country Planning (Local Development) England (Amendment) Regulations 2012 there is no formal requirement for a Preferred Options stage and the SA is now only required under Section 20 to be published for consultation when the proposed submission document is published for consultation (current consultation stage). There is therefore no formal requirement for an SA report to be published with a preferred options style consultation document. The Council however, saw a preferred options style consultation as allowing members of the public early

---

<sup>4</sup> European Parliament. (2001) "The Assessment of the Effects of Certain Plans and Programmes on the Environment", Directive 2001/42/EC of the European Parliament, Luxembourg, 2001  
[http://europa.eu/legislation\\_summaries/environment/general\\_provisions/l28036\\_en.htm](http://europa.eu/legislation_summaries/environment/general_provisions/l28036_en.htm)

involvement in the development of the options for development. As the SA/SEA had formed an important part of the site selection process, an SA/SEA report was published alongside the preferred options consultation.

#### 4.2 Stages of the SA

The sustainability appraisal is made up of a series of stages (stages A to E) see table 1 below.

<b>Table 2 – Summary of the SA/SEA Stages</b>	
<b>Stage A</b>	Setting the context and objectives, establishing the baseline and deciding the scope
<b>Stage B</b>	Developing and refining the options
<b>Stage C</b>	Appraising the effects of the plan
<b>Stage D</b>	Consultation
<b>Stage E</b>	Monitoring the significant effects of implementing the plan

The first stage (**Stage A**) is the production of the Scoping Report. This is where the scope and overall level of detail of the SA is set out. The Scoping Report was published in September 2013 and revised in July 2014, and went out to consultation to the statutory environmental bodies for 5 weeks. Consultation responses received as part of the Scoping Report consultation have been taken into account in the production of a revised Scoping Report.

The scoping report sets out the sustainability objectives and Core Strategy objectives (which are also being used for the Housing Site Allocations DPD) and these are then used to assess the preferred options of the Housing Site Allocations DPD. The SA objectives have been carried forward from the Core Strategy SA Environmental report as the DPD will sit under the Core Strategy. Some tweaks have been made to ensure that the objectives are in line with the updated background information and with the aims of the Housing Site Allocations DPD. Stage A has been completed.

The next stage is **Stage B**. This is the stage where options are developed and refined and the effects of the options are assessed. This stage is an iterative process where the options are tested against the SA objectives to predict and evaluate the effects of options in the DPD. Mitigation measures are identified where necessary and recommendations to changes of the options are made and the revised options reassessed where necessary. Stage B has been completed for the Preferred Options and Proposed Submission version of the DPD.

The findings of Stage B have been pulled together to produce this SA report, which is known as **Stage C**.

Following the preferred options consultation, changes have been made and the options reassessed or updated where appropriate. The SA report has been updated for the Proposed Submission of the DPD, known as **Stage D**.

Table 3 - Stages of the SA Report (based on the Practical Guide to the Strategic Environmental Assessment Directive <sup>5</sup> )		
DPD stage	SA/SEA Stage	
<b>Pre-production</b>	<b>A</b>	<b>Setting the context and objectives, establishing the baseline and deciding on the scope.</b>
	A1	Identify other relevant policies, plans and programmes, and sustainability objectives.
	A2	Collect baseline information.
	A3	Identify sustainability issues and problems.
	A4	Develop the SA framework.
	A5	Consult on the scope of the SA.
<b>Production and Publication</b>	<b>B</b>	<b>Developing and refining options and assessing effects.</b>
	B1	Test the DPD objectives against the SA framework.
	B2	Develop the DPD options.
	B3	Predict the effects of the DPD.
	B4	Evaluate the effects of the DPD.
	B5	Consider mitigation measures and ways to maximise beneficial effects.
	B6	Propose measures to monitor the significant effects of implementing the DPD.
	<b>C</b>	<b>Preparing the SA Report</b>
	C1	Prepare the SA Report.
	<b>IN PROGRESS</b>	<b>D</b>
D1		Public participation on the draft DPD and the SA Report.
D2 (i)		Appraise significant changes.
<b>Submission and Examination</b>	D2 (ii)	Appraise significant changes resulting from representations.
<b>Adoption and Monitoring</b>	D3	Make decisions and provide information.
	<b>E</b>	<b>Monitoring the significant effects of implementing the DPD.</b>
	E1	Finalise aims and methods for monitoring.
	E2	Respond to adverse effects.

### 4.3 Compliance with the SEA Directive / Regulations

The requirement to carry out a SA also incorporates the provision of the European Directive 2001/42/EC to include a SEA. The distinction between the two is that the SEA primarily focuses on environmental effects, whereas the SA expands this remit to incorporate economic and social sustainability. In line with the requirements of the European Directive, the SA report seeks to identify only the **likely significant effects** of the DPD.

<sup>5</sup> A Practical Guide to the Strategic Environmental Assessment Directive: Practical guidance on applying European Directive 2001/42/EC "on the assessment of the effects of certain plans and programmes on the environment", (ODPM) September 2005

The table below shows the locations in this Report which meet the Directive (referring in particular to Annex I which specifies the information required by Article 5(1)).

<b>Table 4 Requirement of the SEA Directive</b>	
<b>Directive requirement</b>	<b>SECTION OF REPORT</b>
(a) An outline of the contents, main objectives of the plan or programme and relationship with other relevant plans and programmes;	2, 5, Appendix 1
(b) The relevant aspects of the current state of the environment and the likely evolution thereof without implementation of the plan or programme;	5, Appendix 2, Appendix 9
(c) The environmental characteristics of areas likely to be significantly affected;	5, Appendix 2, Appendix 9
(d) Any existing environmental problems which are relevant to the plan or programme including, in particular, those relating to any areas of a particular environmental importance, such as areas designated pursuant to Directives 79/409/EEC and 92/43/EEC;	6, 7 Appendix 2
(e) The environmental protection objectives, established at International, Community or Member State level, which are relevant to the plan or programme and the way those objectives and any environmental considerations have been taken into account during its preparation;	6, 7, Appendix 1, Appendix 9
(f) The likely significant effects on the environment, including on issues such as biodiversity, population, human health, fauna, flora, soil, water, air, climatic factors, material assets, cultural heritage including architectural and archaeological heritage, landscape and the interrelationship between the above factors <sup>6</sup> .	6, 7, Appendix 9
(g) The measures envisaged to prevent, reduce and as fully as possible offset any significant adverse effects on the environment of implementing the plan or programme;	3, 6, 7, Appendix 9
(h) An outline of the reasons for selecting the alternatives dealt with, and a description of how the assessment was undertaken including any difficulties (such as technical deficiencies or lack of know-how) encountered in compiling the required information;	6, 7, Appendix 9
(i) A description of the measures envisaged concerning monitoring in accordance with Article 10;	9, Appendix 9.
(j) A non-technical summary of the information provided under the above headings;	1

## **5 Sustainability Objectives, Baseline and Context**

### **5.1 Link to other policies, plans and programmes**

The Council must take account of relationships between the West Berkshire Housing Site Allocations DPD and other relevant policies, plans, programmes and sustainability objectives. This is in addition to the need to take into account environmental protection objectives established at

<sup>6</sup> These effects should include secondary, cumulative, synergistic, short, medium, and long-term permanent and temporary, positive and negative effects

international, European Community and national levels. All of these may influence the options to be considered in the preparation of the Housing Site Allocations DPD. By reviewing these, relationship inconsistencies and constraints can be addressed and potential synergies can be exploited.

This list of relevant policy guidance, plans and strategies has been updated from the Core Strategy SA to take into account any changes that have taken place. The key emerging objectives, targets and issues which have been considered for the SA objectives are summarised in Appendix 1.

Screening exercises were undertaken as part of the Habitats Regulations Assessment. Article 6 (3) and (4) of the Directive 92/43/EEC on the Conservation of Natural Habitats and of Wild Fauna and Flora require an Appropriate Assessment of Development Plans and relates to European sites of nature conservation interest, including Special Areas of Conservation (SACs) and Special Protection Areas (SPAs).

## 5.2 Key environmental, social and economic issues and opportunities

The key environmental, social and economic issues for West Berkshire have been identified through a review of the baseline data collected (Appendix 2), the background information and the evidence base for the Core Strategy and the Housing Site Allocations DPD.

These are largely the same as for the Core Strategy, but due to the nature of the Housing Site Allocations DPD some are less relevant than those for the Core Strategy.

<b>Table 5 Key Sustainability Issues</b>	
<b>Sustainability Element</b>	<b>Local Impact</b>
Social	Ageing population and impact on health care facilities
	Availability of affordable housing
	Access to essential facilities
Environmental	Protecting the historic environment and the heritage assets therein
	Protecting the historical / archaeological, landscape and townscape character of the district
	Impact of nuclear installations within the district
	Reduction in carbon emissions
	Air Quality
	Minimisation of waste production and increase in recycling
	Impact of climate change
	Water supply and sewerage, usage and quality
Flooding	
Material Assets	Unemployment as a result of the recession
	Waste minimisation and recycling
	Use of renewable energy
	Congestion and reliance on the car

### **5.3 Developing the SA Framework**

Developing an SA framework provides a way in which sustainability effects can be described, analysed and compared and forms a central part of the SA process.

A set of sustainability objectives and their indicators, which may be in the form of targets and are a way in which the achievement of the objectives can be measured, make up the SA framework. These objectives and indicators can also be used to monitor the implementation of the DPD.

The objectives were developed for the Core Strategy SA/SEA, having reviewed relevant plans, programmes and policies, the baseline information and previous consultation on the SA. The objectives were updated to reflect changes to the background information and the consultation on the Scoping Report. Due to the scope of the Housing Site Allocations DPD, some of the objectives have been deleted because they either have no relevance or are covered off by the Core Strategy DPD. This is outlined in the Scoping Report (July 2014).

Table 6 below shows the framework for the SA of the Housing Site Allocations DPD. There is reference in the table to the SEA topics to show how the SA objectives have complied with the SEA Directive.

Table 6 Proposed framework for the SA/SEA of the Housing Site Allocations DPD			
SA Objective	SA Sub-Objective	Suggested Indicators	SEA topic
1. To secure provision of sufficient good quality housing to meet objectively assessed needs	1.1 Will it maximise the provision of affordable housing to meet identified need?	<ul style="list-style-type: none"> <li>No. of housing completions</li> <li>No. of Affordable housing completions</li> <li>Households on housing register (WBC Housing Operations)</li> </ul>	Population
	1.2 Will it enable the provision of good quality market housing required to meet identified need?		Human Health
2. To improve health and well being and reduce inequalities	2.1 To support and encourage healthy, active lifestyles	<ul style="list-style-type: none"> <li>General health “not good”</li> <li>Years of potential life lost (ONS)</li> <li>No. of people visiting spots/recreation facilities per annum</li> <li>No. of people visiting parks and gardens per annum</li> </ul>	Human Health
	2.2 To increase opportunities for access to sports facilities		
	2.3 To reduce levels and fear of crime and anti-social behaviour	<ul style="list-style-type: none"> <li>Fear of crime surveys (WBC)</li> <li>No. of violent crime, robberies, vehicle crimes and domestic burglaries per 1000 population</li> </ul>	Population
	2.4 To protect and enhance green infrastructure across the district	<ul style="list-style-type: none"> <li>Residents perception of quality of open space (PMP study)</li> <li>Availability, use and access to green space</li> <li>Percentage of the Rights of Way network in a “favourable” condition</li> </ul>	
3. To safeguard and improve accessibility to services and facilities	3.1 To improve access to education, employment services and facilities	<ul style="list-style-type: none"> <li>Percentage of new residential development within 30 min public transport (or walk) times of a GP, hospital, primary &amp; Secondary school, employment and a major retail centre</li> <li>Proportion of 19yr olds with Level 2 qualifications (5 + GCSEs A* to C)</li> </ul>	Population
	3.2 Will it support development of access to IT facilities including Braodband particularly in rural areas?		
4. To improve and promote opportunities for sustainable travel	4.1 To increase travel choices, especially opportunities for walking, cycling and public	<ul style="list-style-type: none"> <li>Travel to Work data (Census)</li> <li>Bus passenger numbers (LA subsidised)</li> <li>Percentage of new residential development within 30</li> </ul>	Human Health Air

	to and enjoyment of the historic environment		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	7.1 To reduce air pollution	<ul style="list-style-type: none"> <li>Level of air pollutants (NO<sub>2</sub>)</li> <li>Level of traffic flows</li> <li>Proximity to source of poor air quality</li> </ul>	Air
	7.2 To reduce noise levels in main settlements	<ul style="list-style-type: none"> <li>No. of noise complaints per annum received by WBC</li> <li>Proximity to source of noise</li> </ul>	
	7.3 To maintain and improve soil quality	<ul style="list-style-type: none"> <li>Loss of high grade agricultural land to development</li> <li>Loss of greenfield land to development</li> </ul>	Water
	7.4 To maintain and improve water quality	<ul style="list-style-type: none"> <li>Measures of chemical and biological water quality of inland watercourses “good” and “fair” (EA)</li> <li>Incidents of major and significant water pollution (EA)</li> <li>No. of planning permissions granted contrary to the advice of EA on water quality grounds</li> <li>No. of planning approvals granted contrary to the statutory water/sewerage undertakers advice (Thames Water Property Services)</li> </ul>	Soil Human Health
8. To improve the efficiency of land use	8.1 To maximise the use of previously developed land and buildings where appropriate	<ul style="list-style-type: none"> <li>% new dwellings completed at: i) less than 30dph; ii) between 30 and 50dph iii) above 50dph</li> <li>% new and converted dwellings on previously developed land</li> </ul>	Material Assets Soil
9. To reduce consumption of natural resources and manage their use efficiently	9.1 Will it reduce energy use and promote the use of sustainable / renewable energy technologies?	<ul style="list-style-type: none"> <li>% new development achieving EcoHomes “Excellent” of Code Level 3* standards</li> <li>% commercial buildings meeting BREEAM “very good”</li> <li>Installed capacity for energy production from renewable sources</li> </ul>	Material Assets
	9.2 Will it promote the adoption of sustainable design and construction practices?		
	9.3 Will it reduce waste generation and disposal in line with the waste hierarchy and reuse of materials?	<ul style="list-style-type: none"> <li>% total tonnage of all types of waste that has been recycled, composted or used to recover heat power and other sources of energy</li> </ul>	Climate Factors
	9.4 Will it reduce water consumption and promote reuse?	<ul style="list-style-type: none"> <li>% development incorporating water conservation and/or water efficiency measures</li> </ul>	

Table 6 Proposed framework for the SA/SEA of the Housing Site Allocations DPD			
SA Objective	SA Sub-Objective	Suggested Indicators	SEA topic
		<ul style="list-style-type: none"> <li>New development with SUDs installed (EA)</li> </ul>	
	9.5 Will it reduce the consumption of minerals and promote reuse of secondary materials?	<ul style="list-style-type: none"> <li>% development achieving EcoHomes / BREEAM “excellent” of Code level 3* Standards</li> </ul>	
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	10.1 Will it reduce West Berkshire’s contribution to greenhouse gas emissions?	<ul style="list-style-type: none"> <li>Level of car use to work</li> <li>% development achieving EcoHomes / BREEAM “excellent” of Code level 3* Standards</li> </ul>	Climate Factors
	10.2 Will the policy impact on flood risk?	<ul style="list-style-type: none"> <li>No. of planning permissions granted contrary to the advice of the EA, <u>Lead Local Flood Authority or other relevant bodies on flooding grounds</u></li> </ul>	
11. To ensure a strong, diverse and sustainable economic base which meets objectively assessed economic needs	11.1 Will it enable the provision of high quality economic development which responses to business needs and delivers a range of employment opportunities?	<ul style="list-style-type: none"> <li>% people of working age in employment</li> <li>% population claiming Job Seekers Allowance</li> <li>No. and type of non-residential completions</li> <li>% land developed for employment by type which is on previously developed land</li> <li>Vacancy rates within existing centres</li> <li>Footfall rates within existing centres</li> </ul>	Population
	11.2 Will it promote and support key business sectors and utilise employment land effectively and efficiently?		
	11.3 Will it promote and support the vitality and viability of the District’s commercial centres?		

All the objectives have been used for the policies (countryside policies, parking policy). For the housing and Gypsies, Travellers and Travelling Showpeople sites not all objectives have been used as many of the objectives give exactly the same outcome for all housing sites. As a result the following objectives and sub objectives have not been included in the housing site assessments:

Table 7 - SA Objectives not used for Housing and Gypsies, Travellers and Travelling Showpeople Sites	
Objective/Sub Objective	Reason for exclusion
Objection 1 To secure provision of sufficient good quality housing to meet objectively assessed needs	The allocation of housing sites by definition secures the provision of sufficient good quality housing, therefore, all sites would score significantly positive in response to this objective. The Housing Site Allocations DPD will meet the remainder of the Core Strategy housing

	requirement and the first part of the Council's new SHMA figure.
Sub Objective 2.3 To reduce levels and fear of crime and anti-social behaviour	The Core Strategy requires all sites to have regard to 'Secured by design' principles, therefore, the sub objective has no effect.
Sub Objective 3.2 Will it support development of access to IT facilities including broadband particularly in rural areas?	The sub objective will have no effect.
Objective 9 9. To reduce consumption of natural resources and manage their use efficiently	It will not be possible to tell if the objectives have been achieved through the Housing Site Allocations DPD alone. Assessment will be made through the determination of a planning application which will need to have reference to Core Strategy policy CS15 that has specific regard to sustainable construction and energy efficiency.

Table 8 confirms that all of the SEA objectives have been considered in the SA/SEA framework.

<b>Table 8 – integrating the SEA objectives</b>

#### **5.4 Background to Developing and Refining Options and Assessing Effects**

The Housing Site Allocations DPD will have the same objectives as the Core Strategy at this stage. Two of the Core Strategy objectives are not considered relevant to the Housing Site Allocations DPD as they relate to the Economy and Retail, neither of which are to be dealt with by the DPD. A review of the compatibility between the SA objectives and the Core Strategy objectives was carried out in the Core Strategy SA scoping report,

however, as some of the objectives have been tweaked for the Housing Site Allocations DPD, an updated compatibility test has been carried out (see table 9 below). Potential tensions identified in the Core Strategy SA scoping report are the same for this scoping report:

- Impacts on the built and natural environment are heavily dependent on the siting and type of development being proposed and their proximity to sensitive sites.
- Like the remainder of the South East, all future development proposals need to minimise energy consumption, ensure new design incorporate water conservation measures to mitigate against a potential shortage in water supply and reduce where possible vehicular trips.

The Housing Site Allocations DPD objectives are set out in Table 9 below:

<b>Table 9 – Housing Site Allocations DPD Objectives</b>	
<b>A. Tackling Climate Change</b>	To exceed national targets for carbon dioxide emissions reduction and deliver the District's growth in a way that helps to adapt to and mitigate the impacts of climate change
<b>B. Housing Growth</b>	To deliver at least 10,500 homes across West Berkshire between 2006 and 2026. These homes will be delivered in an effective and timely manner, will maximise the use of suitable Brownfield land and access to facilities and services and will be developed at densities within make the most efficient use of land whilst responding to the existing build environment.
<b>C. Housing Needs</b>	To secure provision of affordable and market housing to meet local needs in both urban and rural areas of the district. To provide homes in a way that promotes sustainable communities, providing a mix of house sizes, types and tenures to meet identified needs, and respond to the changing demographic profile of the District.
<b>E. Infrastructure Requirements</b>	To ensure that infrastructure needs (including community services and facilities) arising from the growth in West Berkshire are provided in a timely and coordinated manner, which keeps pace with development in accordance with the detail set out in the Infrastructure Delivery Plan.
<b>F. Green Infrastructure</b>	To ensure that West Berkshire contains a strong network of well-connected and multi-functional green infrastructure which provides an attractive environment to live, work and spend leisure time, providing benefits for health and opportunities for formal and informal recreation.
<b>G. Transport</b>	To put in place a sustainable transport network which supports the growth in West Berkshire, links existing and new development, prioritises walking, cycling and public transport and provides a genuine choice of modes. Traffic management measures will minimise the impact of new development on the existing network.
<b>I. Heritage</b>	To ensure that development to 2026 is planned, designed and managed in a way that ensures the protection and enhancement of the local distinctive character and identity of the built, historic and natural environment in West Berkshire's Towns, villages and countryside.

*Core Strategy objectives D (Economy) and H (Retail) are not considered relevant to the Housing Site Allocations DPD.*

Table 10 below shows the compatibility between the SA objectives and the proposed Housing Site Allocations DPD objectives. The full details of the compatibility test are given in appendix 3.

**Table 10 – SA / DPD objective compatibility**

		SA objectives											Key:		
		1	2	3	4	5	6	7	8	9	10	11

## 6 Developing and Refining Options and Assessing Effects

### 6.1 Introduction

Stage B of the Sustainability Appraisal is the development and refinement of options and policies and an assessment of the effects. This stage incorporates the development of the options and policies, the prediction and evaluation of the effects of the options and subsequent policies that make up the Preferred Options Housing Site Allocations DPD, along with the consideration of any mitigation measures and ways to maximise beneficial effects along the way.

### 6.2 Developing the Options

The West Berkshire Preferred Options Housing Site Allocations DPD implements the framework set by the Core Strategy by allocating non-strategic housing sites across the District in accordance with the spatial strategy of the Core Strategy. This means that the sites to be allocated are in the areas that the Core Strategy has set out as suitable for some level of further growth and that the proposals will conform to the policy details set out in the Core Strategy. Sites for Gypsies, Travellers and Travelling Showpeople are also proposed for allocation and the DPD will include updated policies to guide certain development in the countryside as well as updated parking standards.

### 6.3 Method of Approach

The affects of each option have been tested against the SA objectives that were adopted Scoping Report. The aim of the appraisal was to identify any significant conflicts or combined effects between the options and the SA objectives.

Following the preferred options consultation any changes made to the SA report have been made as tracked changes. Insertions are shown with blue underlined text (example), with deletions crossed through (~~example~~).

## 6.4 Reasonable Alternatives

### 6.4.1 Approach to Site Allocations

Four options were considered for progressing Site Allocations:

- Option 1 – Prepare a Site Allocation and Development Management DPD, undertake Strategic Housing Market Assessment (SHMA) and follow with a new Local Plan
- Option 2 – Prepare a Housing Site Allocations DPD, undertake SHMA, and follow with a new Local Plan
- Option 3 – Prepare a Housing Site Allocations DPD, plus selected housing development management policies, undertake a SHMA, and follow with a new Local Plan
- Option 4 – New Local Plan, based on a new housing number.

All of these options are considered to be reasonable alternatives as they are all approaches that could be taken to producing a new plan for future development in the district.

### 6.4.2 Housing Sites

Within the SA/SEA, only options which are considered reasonable need to be assessed. For the Housing Site Allocations DPD, potential housing sites have been taken to be sites submitted in the SHLAA. All potential sites were assessed in the SHLAA as one of four categories as Table 11 illustrates:

Table 11 SHLAA assessment		
SHLAA assessment	Description	Example
Deliverable	Available now, offers a suitable location for development now and is achievable with a realistic prospect that housing will be delivered on the site within the next five years, and in particular that development of the site is viable.	Sites with planning permission
Developable	Sites are in a suitable location for housing development and there is a reasonable prospect that the site is available and could be viably developed at the point envisaged.	Sites within the settlement boundary
Potentially Developable	Sites where their suitability needs to be further assessed through the plan making process and therefore it is difficult to say that there is a reasonable prospect that a particular site could be delivered at a specific point in time.	Sites adjacent to the settlement boundary with no significant issues that would be difficult to overcome within the plan period
Not currently developable	These sites have significant constraints that mean they are unlikely to come forward in the plan period	Sites in the significant national or international protection / flood zone 3 etc.

All sites were also subject to the Site Assessment process. This process was split into two sections, automatic exclusions (part A) and considerations (part B).

Automatic exclusions identify sites where there are significant constraints to development. This could be a site within flood zone 3, a national or international ecological/biodiversity designation or related to the scale of development in terms of the role and function of a settlement within the settlement hierarchy. In many cases the automatic exclusions support the SHLAA assessment of 'Not Currently Developable'.

A full list of the automatic exclusions and their reasons for inclusion are set out in Table 12 below:

<b>Table 12 Automatic Exclusions</b>		
<b>Exclusion Criteria</b>	<b>Details</b>	<b>Justification</b>
Less than 5 dwellings		Site is too small to be allocated, the majority of these sites will be considered as part of the settlement boundary review.
Planning Permission		These sites do not need to be allocated as they already have planning permission
Within flood zone 3		The NPPF states that residential development is not compatible or suitable in Flood Zone 3. Only sites completely in FZ3 have been excluded at this stage. Further details of the flood risk are taken into consideration at the next stage of assessment.
Within significant national or international habitat/environmental/historic protection	Site of Special Scientific Interest (SSSI), Special Area of Conservation (SAC), Special Protection Area (SPA), Registered Battlefield, Grade 1 / II* Parks and Gardens	The NPPF states that SSSIs, SACs and SPAs should have the same level of protection as European Sites. Therefore sites within these areas have been excluded. The NPPF also states that great weight should be given to significant heritage assets and their settings, and substantial harm to or loss of designated heritage assets of the highest significance (eg. Registered Battlefields and Grade I and II* Registered Parks and Gardens) should be wholly exceptional, therefore sites which have these designations have also been excluded. The Registered Newbury Battlefield and Sandlesford Priory Historic Park and Garden are included on the English Heritage 'At Risk' Register.
Landscape	Adverse impact on the character of the AONB (from LSA)	The NPPF states that great weight should be given to conserving landscape and scenic beauty in the AONB. Landscape Assessments have been carried out on the sites in the AONB and its setting, and where this indicates development would cause harm to the AONB the sites have been excluded.
SHLAA Assessment	Not currently developable	Sites assessed in the SHLAA as not currently developable imply that there are issues with the site that could not easily be resolved within the plan period, or would impact significantly on the deliverability or availability of the site.
Land Use	Protected Employment Land	Areas within a Protected Employment Land designation are protected by policy and without a review of the employment policy it is not acceptable to release land for housing development.
Atomic Weapons Establishment (AWE) consultation zone	Inner	Government policy limits development within Inner Land Use planning consultation zones. This is regulated by the Office for Nuclear Regulation (ONR). Development within the inner zone is unlikely to receive approval from ONR.

<b>Table 12 Automatic Exclusions</b>		
<b>Exclusion Criteria</b>	<b>Details</b>	<b>Justification</b>
Relationship to the surrounding area	Relative scale in relation to existing settlement	The focus for development is in the Settlement Hierarchy. Within in this each settlement has a role and function. Where the size of a site would be out of keeping with this the site has been excluded.
Within settlement boundary		Sites within the settlement boundary do not need to be allocated as there is a presumption in favour of development.

Those sites not ruled out through the automatic exclusion assessment (part A) are considered to be realistic alternatives for development. Part B of the site selection assessment has then been carried out on the sites and SA/SEA was undertaken to inform the site selection work and the subsequent selection of preferred options. The full list of site selection criteria, with their justification is set out in appendix 6A, as this has also formed part of the site assessment work, and informed the SA/SEA. The consultation on the preferred options and further technical work have informed which sites will be taken forward for allocation in the proposed submission DPD.

A list of the sites automatically excluded is given in appendix 7.

Consultation on the Council's Preferred Options was carried out in the summer of 2014 (25<sup>th</sup> July to 12<sup>th</sup> September 2014). Members of the public were consulted on preferred sites for allocation, in some cases, including options from which choices would were to be made. All comments have been taken into account. They have been summarised as key points and a Council response provided to each point (see Statement of Consultation). Further discussions have also taken place with site promoters to discuss specific issues on sites. The site assessment and SA/SEA has been updated, where this is appropriate, to inform the Proposed Submission DPD. Any change made to the Site Assessment and SA/SEA have been made as manual tracked changes. Text additions are shown as underlined blue text (example) with deletions crossed through (~~example~~).

### **6.4.3 Gypsies, Travellers and Travelling Showpeople sites**

The potential suitability of each site submitted to the Council for consideration as a Traveller site was assessed to determine which, if any would be suitable to take forward as preferred sites. Existing sites without the benefit of planning permission and sites which had been granted planning permission but this permission had lapsed were also assessed to determine their suitability.

National policy requires local authorities to make their own assessment of need; identify and update annually a five year land supply of deliverable sites; identify a supply of developable sites for 6 – 10 years and 11 – 15 years of the plan period.

In accordance with the Core Strategy all sites were assessed against the criteria set out in policy CS7. Core Strategy policy CS7 applies to proposed sites located outside settlement boundaries. Any sites proposed within settlement boundaries are considered acceptable in principle, as with conventional housing, subject to material considerations. Policy CS7 will assist in providing suitably located and designed sites. The Core Strategy policy complies with the Planning Policy for Traveller Sites (PPTS). In addition to assessing each site against the criteria set out within the policy, regard has also been had to the relevant national guidance, including the NPPF and PPTS. Details of the assessment against CS7 are shown in appendix 6B.

The site assessments and SA/SEA have then been considered against any technical evidence, supporting information provided with the site submissions and advice from internal consultees to draw conclusions on the suitability of each site for allocation.

A call for sites was carried out in April/May 2014 at which time the Council invited landowners and developers to submit sites they felt were suitable and available as a site for Gypsies and Travellers and Travelling Showpeople. Five sites were submitted during this process and the Council also considered a further four sites. Where sites conflicted with the criteria in the policy they were automatically excluded. Details are set out in Appendix 7.

The remaining sites are considered to be realistic alternatives, and have had SA/SEA carried out on them as alternatives options for development.

#### **6.4.4 Countryside Policies**

The Housing Site Allocations DPD provides an opportunity to review the approach to policies relating to housing, with a particular focus on development in the countryside. This will ensure that there is an up to date policy framework in accordance with the NPPF.

There is considerable reliance on the Saved Policies from the previous Local Plan to determine planning applications. The consistent management of development in the countryside is a priority for the Council with a high number of planning applications each year. Whilst the Planning Inspectorate has generally been supportive of the context of the saved policies it is recognised that as the policies were all drafted and approved prior to the publication of the NPPF and adoption of the Core Strategy, they have 'due weight' in the planning process, rather than full weight.

No reasonable alternatives have been assessed for producing a new set of housing in the countryside policies. Whilst the NPPF provides the framework for development, it does not provide the level of detail required for development management at the local level. The Housing Site Allocations DPD provides an opportunity to provide an up to date set of policies at the earliest opportunity so this option was presented to Members when they were making decisions about the way forward for the development plan and was their preferred way forward. The approach to the development plan is described further in section 6.1.

#### **6.4.5 Parking Standards Policy**

New parking standards are proposed to accompany the Housing Site Allocations DPD. Four options were considered.

- Option 1 - Maintain the current parking policy (An average of 1.5 spaces per dwellings across the district)
- Option 2 - No policy – deal with parking on a case by case basis
- Option 3 - New policy A – a single standard across the whole district
- Option 4 - New policy B – parking standards based on accessibility and location of a site and the type and size of dwellings.

Options 1 and 2 were not considered to be reasonable alternatives.

There are many issues with the implementation of the current parking standards (Option 1), in terms of some areas not having enough parking for the number of cars in a development, and limited amount of flexibility for different types of residential development. Therefore, doing something to change the current position is seen as being important.

Option 2, having no parking policy, would mean that parking would need to be dealt with on a case by case basis. This would not give developers or members of the public certainty of the requirements for new development and could lead to many other difficulties such as a lack of consistency in approach, lack of transparency and difficulties at planning appeals.

Options 3 and 4 are considered to be reasonable alternatives and so will be assessed through the SA/SEA.

#### **6.4.6 Sandleford Park Policy**

New evidence has come forward regarding infrastructure at Sandleford Park, and as a result the Supplementary Planning Document supporting the Core Strategy policy has been updated. At the preferred options stage it was anticipated that the existing Core Strategy policy would be updated to take into account this new evidence and to require a single masterplan to ensure that the site came forward in a comprehensive manner. However, in light of the expected timing of the planning application for the site, there was a necessity to provide this guidance more speedily. Following legal advice, it was decided to update the Supplementary Planning Document (SPD) for the site, rather than amend the policy through the DPD process. Consultation on the updated SPD took place from 12<sup>th</sup> December 2014 to 30<sup>th</sup> January 2015. The updated SPD was adopted by the Council on 3<sup>rd</sup> March 2015. The original SPD was subject to screening to determine whether an SA was required. This was revised in light of the amendments to the SPD and the amendments were not considered to change the outcome of the screening opinion. The SPD to guide development of the site was adopted on 3<sup>rd</sup> March 2015 and has weight as a material consideration in the planning process.

Two options were considered at preferred options, while both were considered as reasonable alternatives at preferred options, neither were taken forward in light of the updated SPD.

- Option 1 – keep the existing Core Strategy policy
- Option 2 – update the Core Strategy policy to reflect the updated evidence.

#### **6.5 Assessment of Options**

Within each spatial area the DPD is looking to allocate the remaining housing requirement from the Core Strategy. More sites have been identified as realistic alternatives than are required, so these form the options tested through the SA/SEA. It is from these options, through the SA/SEA and Site Assessment process and the preferred options consultation, that the sites proposed for allocation have been selected.

The options, preferred policy approaches and policies have been assessed in terms of probability, duration, frequency and reversibility. The following issues have been considered:

- Effect – What is the overall sustainability impact on the SA objectives?
- Likelihood – How likely is it that the effect will actually occur?

- Scale – What is the potential scale of the effect, considering the geographical area and size of the population likely to be affected?
- Duration - Are the potential effects likely to be permanent or temporary?
- Timing – Are the potential effects short, medium or long term?

Potential mitigation has been identified where necessary where the adverse effects could be avoided through introducing conditions or changes in the way in which policies are implemented.

Many of the options had a predominantly neutral effect on the SA objectives. Where sites had a predominantly negative impact they have not been recommended for allocation.

The assessment of the options and policies has been based on the information available at the time and on professional judgement.

## 7 Appraisal

All the objectives have been used for the policies (countryside policies, parking policy). For the housing and Gypsies, Travellers and Travelling Showpeople sites not all objectives have been used as many of the objectives give exactly the same outcome for all housing sites. As a result the following objectives and sub objectives have not been included in the housing site assessments:

### 7.1 Approach to Site Allocations

Four options for the approach to Site Allocations were assessed.

Table 13 Summary of SA/SEA of Approach to Site Allocations			
Approach Option	Summary of SA/SEA of site	Summary of effects	Recommendation
Option 1 Prepare Site Allocation and Delivery DPD, undertake SHMA and follow up with new Local Plan	<b>Overall the site is likely to have a positive effect on sustainability. The SA/SEA highlights two significant positive sustainability effects in terms of delivering new housing.</b> This option has a number of positive sustainability impacts as the DPD would include a wide range of policies. These would include aiming to focus development in sustainable locations where walking, cycling and public transport options are available and where there are a range of local services and facilities easy accessible. Policies included within the plan would aim to reduce or neutralise any negative or uncertain sustainability impacts. This option does have a significantly positive effect on delivery of new homes, as it looks to allocate sites for development in the short time, and following the SHMA develop a Local Plan to allocated additional sites for development to meet the identified objectively assessed need of the District.	<b>Effect:</b> Predominantly positive <b>Likelihood:</b> High. <b>Scale:</b> District Wide <b>Duration:</b> Permanent <b>Timing:</b> Short Term with longer term plan for new Local Plan.	<b>Option is not to be taken forward</b>
Option 2 Prepare Housing Site Allocations	<b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA highlights two significant positive sustainability effects in terms of delivering new housing.</b> This option aims to allocate sites in the short term under the framework set out in the	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High	<b>Option is not to be taken forward</b>

<b>Table 13 Summary of SA/SEA of Approach to Site Allocations</b>			
<b>Approach Option</b>	<b>Summary of SA/SEA of site</b>	<b>Summary of effects</b>	<b>Recommendation</b>
DPD, undertake SHMA, followed by new Local Plan	adopted Core Strategy, with a medium term plan to produce a new Local Plan following the SHMA. This option gives a significantly positive impact on sustainability due to the provision of allocated sites for housing (affordable and market) in the short term. Over the medium and long term the new Local Plan will do this and ensure that policies provide for good quality affordable and market housing, with a knock-on effect on all elements of sustainability. This option does not review a full range of policies or consider development other than Housing. While this does not have a negative impact on sustainability, it is also not positive, as planning applications would be determined using the existing policy framework of the Core Strategy and the Local Plan saved policies.	<b>Scale:</b> District Wide – Initial focus on settlement hierarchy settlements. <b>Duration:</b> Permanent <b>Timing:</b> Short term with longer term plan for new Local Plan.	
Option 3  Prepare Housing Site Allocations DPD plus selected development management policies, undertake SHMA, followed by new Local Plan	<b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA highlights two significant positive sustainability effects in terms of delivering new housing.</b> This option aims to allocate sites in the short term under framework set out in the adopted the Core Strategy, with a medium term plan to produce a new Local Plan following the SHMA. This option gives a significantly positive impact on sustainability due to the provision of allocated sites for housing (affordable and market) in the short term. Over the medium and long term the new Local Plan will do this and ensure that policies provide for good quality affordable and market housing, with a knock-on effect on all elements of sustainability. This option does not review a full range of policies or consider development other than Housing. While this does not have a negative impact on sustainability it is also not positive, as many planning applications would be determined using the existing policy framework of the Core Strategy and the Local Plan saved policies. The option includes some updates to policies, specifically countryside policies which would have a positive impact on environmental sustainability.	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> District Wide – initial focus on settlement hierarchy settlements <b>Duration:</b> Permanent <b>Timing:</b> Short term with longer term plan for new Local Plan.	<b>Option is to be taken forward.</b>
Option 4  Prepare new Local Plan following SHMA	<b>Overall the site is likely to have a positive effect on sustainability. The SA/SEA does not highlight any significant sustainability effects in terms of delivering new housing.</b> This option has a predominantly positive effect on sustainability. A new Local Plan would allow for all policies in the Core Strategy and Local Plan Saved Policies to be updated, giving the greatest opportunities for positive impacts on sustainability. Where there are potential negative or uncertain sustainability effects, the policies within the plan, or mitigation provided by individual developments outlined in the plan, would reduce or neutralise this effect, and in some cases could lead to a positive effect on sustainability.	<b>Effect:</b> Predominantly positive <b>Likelihood:</b> High <b>Scale:</b> District Wide <b>Duration:</b> Permanent <b>Timing:</b> Long Term	<b>Option is not to be taken forward</b>

The SA/SEA indicates that options 1 and 4 will have a predominantly positive impact on sustainability. Options 1, 2, and 3 are shown to have a significantly positive impact on sustainability due to the quicker allocation of sites for housing. While these options would not fully meet the Council's

objectively assessed need, they would meet the short term need, with the new Local Plan meeting the medium and longer term need for housing identified in the SHMA. Option 4 would lead to a significant delay in the Council publishing a plan to allocate housing sites, which would be likely to result in a number of speculative planning applications coming forward. Therefore, this option is not considered to be the best option for the District, as it would result in a significant degree of uncertainty in relation to where new development will go.

Option 3 has been chosen for the approach as this would allow the Council to take forward housing allocations at the earliest opportunity rather than waiting for the SHMA to be published, thereby giving some certainty to members of the public and developers as to where development, in the short term, will take place. The new Local Plan will take into account the full objectively assessed need and allocate sites to meet the medium and longer term, with the Housing Site Allocations DPD meeting the short term need. This approach was chosen over option 2, as it would allow for some policies to be updated. The SA/SEA shows that this element gives option 3 as a slightly more positive impact on sustainability than option 2, as these policies would be based around the Countryside and parking Policies included in the Local Plan Saved Policies (2007) positively impacting on environmental sustainability.

Further reasons for this option being chosen are set out in the Background Topic Paper.

## **7.2 Housing Site Selection**

All sites submitted through the SHLAA have been considered as part of the site selection process. The site selection process has identified realistic alternatives for sites, meaning that only sites with a realistic chance of being deliverable have been considered and taken through the SA and site selection process, as set out above.

In each spatial area all sites considered would be reasonable alternatives, and therefore, the SA/SEA process has been used to identify proposed sites, which are favourable in terms of the impact on sustainability.

All of the site assessment forms, including the SA/SEA, are set out in appendix 9 in the same order as the settlements are discussed below. The tables below outline the findings of the site specific SA/SEAs and site selection information to detail whether or not the sites are recommended for being taken forward for allocation as well as setting out the recommendation from the preferred options stage.

### **7.2.1 Newbury & Thatcham Spatial Area**

#### **7.2.1.1 Newbury**

##### **Newbury**

Newbury is the main urban area within West Berkshire. It is the main focus for housing growth over the plan period with new housing development. Newbury is the main administrative centre for the district with a wide range of retail, employment, leisure and community services and facilities. The town is on the crossroads of the A34/M4, with a number of locally important roads and a railway station linking Newbury to Reading and London to the east and The West Country to the west. Bus services link many of the outlying villages to Newbury. A number of rivers and water courses flow through Newbury, with the River Kennet and Kennet and Avon Canal running through the centre of the town, the river Enborne to the south and the

river Lambourn entering the town to the north west and reaching its confluence with the River Kennet to the east of the town. The areas immediately adjacent to these water courses are within flood zone 2 or 3. Much of the north of Newbury is within a groundwater emergence zone.

There are a number of important environmental and heritage assets within Newbury. The Rivers Lambourn and Kennet are both SSSIs and there are a number of local wildlife sites to the north and south of the town. To the west of Newbury is the site of the First Battle of Newbury and to the south of Newbury lies the Registered Park and Garden of Sandford Priory. Both of these heritage assets are listed in Historic England’s Heritage at Risk Register due to the threat from development.

87 sites were promoted through the SHLAA process, 34 sites were assessed to be potentially developable within the SHLAA. Of these 13 sites were ruled out through the automatic exclusion part of the site assessment criteria ([Part A](#)). The remaining 21 sites were considered reasonable alternatives for development and so an SA/SEA was undertaken for all these sites to inform the site selection work and the subsequent selection of preferred options ([Part B](#)). The table below outlines the findings of the site specific SA/SEAs and details whether or not the sites are being taken forward [for allocation as well as setting out the recommendation from the](#) as preferred options [stage](#).

<p>NEW047D</p> <p>South East Newbury</p> <p>146 <a href="#">140-160</a> dwellings (3.87ha at 30dph)</p>	<p><b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects.</b></p> <p>The site is well related to existing development both to the north, close to local services and facilities, with good opportunities for walking, cycling and public transport. All of this means that there would be a positive impact on sustainability. The site is in an area of low/medium landscape sensitivity and so it is unlikely that there would be an impact on sustainability, especially with mitigation measures introduced. There are great crested newts on the site, which without adequate protection and green corridors would mean development would have a negative impact on sustainability.</p>	<p><b>Summary of effects:</b></p> <p><b>Effect:</b> Predominantly neutral</p> <p><b>Likelihood:</b> High</p> <p><b>Scale:</b> Newbury and Thatcham spatial area</p> <p><b>Duration:</b> Permanent</p> <p><b>Timing:</b> Short</p>	<p><b>The site is recommended for allocation.</b></p> <p>The site is well related to existing development in Newbury and close to local services and facilities. Two areas of the site are promoted for development, which leave a wildlife corridor and maintain a gap between Newbury and Greenham.</p>	<p><b>The site is recommended for allocation.</b></p> <p><a href="#">No additional information submitted at preferred options to change the recommendation; however the wider scope of the site has been reconsidered as a whole.</a></p> <p><a href="#">The majority of the site would be retained in perpetuity as a wildlife corridor/public open space to maintain a gap</a></p>

Table 14 Summary of Newbury Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as allocated site.
	A small area of the site is at risk from surface water flooding, but with appropriate mitigation the potential negative impact should be mitigated. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>	to Long term		<a href="#">between Newbury and Greenham.</a>  The site, when developed together with NEW047C and B has the potential to be delivered holistically, with significant open space provision, retained in perpetuity.
NEW051  Foxglove House, Love Lane, Donnington  40 dwellings (0.34ha at 30dph) <a href="#">&lt;5 dwellings</a>	<b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects.</b> There are a number of positive impacts on sustainability as the site is close to local services and facilities, with good opportunities for walking, cycling and public transport. Part of the site is allotments, which if developed would have a negative impact on sustainability. The proposals indicate that the allotments will be retained, meaning that the impact on sustainability should be neutralised. The site is within a groundwater emergence zone, although there is no history of flooding on the site. Flooding can impact negatively on sustainability, but with appropriate mitigation measures this impact can be reduced. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> Newbury and Thatcham spatial area <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>The site is not recommended for allocation.</b> The site is well related to existing residential development in Newbury. The size of the site means that it could be included in the settlement boundary, rather than allocated as a site for development.  <b>The site will be considered as part of the settlement boundary review.</b>	<b>The site is to be included within the settlement boundary.</b> <a href="#">Part of the site, excluding the allotments, meets the settlement boundary review criteria and therefore, will be included within the settlement boundary.</a>
NEW054  The Vicarage, Greyberry Copse Road, Newbury	<b>Overall the site is likely to have a neutral effect on sustainability, although the SA/SEA highlights a significantly negative effect on environmental sustainability due to the archaeological potential on the site.</b> There would be a significant negative impact on environmental sustainability due to the impact on heritage assets of development on this site. The site is well related to	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> Newbury and Thatcham spatial area	<b>The site is not recommended for allocation.</b> Archaeology on the site is a major constraint to development. Impact on the adjacent listed building and archaeology would be significant.	<b>The site is not recommended for allocation.</b> <a href="#">No additional information submitted at preferred options that would resolve the concerns previously raised.</a>

Table 14 Summary of Newbury Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as allocated site.
11 dwellings (0.36ha at 30dph)	local services and facilities, with opportunities for walking and cycling, giving a positive impact on all elements of sustainability. There are uncertain effects on the character of the landscape, as without landscaping mitigation there could be a negative impact on the character of the landscape. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>	<b>Duration:</b> Permanent <b>Timing:</b> Short to Long term		
NEW103  Sanfoin Cottage, Garden Close Lane, Newbury  90 dwellings (3ha at 30dph) <a href="#">&lt;5 dwellings</a>	<b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects.</b> The site will have positive impacts on sustainability as it is close to local services and facilities with opportunities for walking, cycling and public transport. There are a number of unknown impacts on sustainability due to the site's location adjacent to the Sandleford Park site. There is a risk of surface water flooding on the site, but with mitigation measures the potential negative impact on sustainability should be neutralised. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> Newbury and Thatcham spatial area <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>The site is not recommended for allocation.</b> The site is adjacent to the Sandleford Park strategic site. Significant development has already been allocated to his area.  Access to the site is a concern as additional land from third parties would be required to provide a suitable access, which could impact on deliverability, unless access is provided from Sandleford Park.	<b>The site is to be included within the settlement boundary.</b> <a href="#">Access to the site is via a private road, the site promoter has revised the development potential on the site to less than 5 dwellings, to allow for access to be provided without improvements change the private drive into an adoptable road.</a>  <a href="#">The site is adjacent to the strategic site of Sandleford Park, and will be included within the settlement boundary, as reviewed for Sandleford Park.</a>
NEW104  Land at Warren Road, Newbury	<b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects.</b> It is close to local services and facilities within Wash Common and would benefit from the neighbouring development at Sandleford Park all of which have a positive impact on sustainability. The site is greenfield could have a	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> Newbury and Thatcham	<b>The site is recommended for allocation.</b> The site is well related to existing development and is a small site adjacent to Sandleford Park.	<b>The site is to be included within the settlement boundary.</b> <a href="#">Following the preferred options and a review of the development potential of the site, the site is considered too</a>

Table 14 Summary of Newbury Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as allocated site.
40 dwellings (0.32ha at 30dph) <5 dwellings	negative impact on environmental sustainability. Mitigation measures should be able to reduce the impact on the environment. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>	spatial area <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term		<a href="#">small to be an allocated site.</a>  <a href="#">The site will now be included within the settlement boundary, as reviewed for Sandford Park</a>
NEW105  Land at Yates Copse, Newbury  45 dwellings (1.5ha at 30dph)	<b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects.</b> The site is close to local services and facilities, with opportunities for walking and cycling and good access to the countryside. All of these aspects have a positive impact on sustainability. There are potential negative impacts on environmental sustainability due to the rural location of the site and potential impact on the landscape, and as a result of flood risk on the site. Mitigation measures would help to mitigate this impact, by providing appropriate landscaping and flood mitigation through SUDs. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> Newbury and Thatcham spatial area <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>The site is not recommended for allocation.</b> Development of this site in addition to NEW045 is considered overdevelopment of the area. NEW045 was considered to be better related to the existing settlement than this site. There is potential to impact on Yates Copse area of ancient woodland.	<b>The site is not recommended for allocation.</b> <a href="#">No additional information submitted or comments received at preferred options that would resolve the concerns previously raised.</a>  <a href="#">A revised site area was promoted through the preferred options, but this area is already within the existing settlement boundary, and the site area proposed would not allow for appropriate buffers to the ancient woodland and an access road into the site.</a>
NEW106  Land at Moor Lane Depot, Hill Road, Moor Lane, Speen  42 40 dwellings (1.04ha at 40dph)	<b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA highlights significantly positive impacts in terms of sustainability due to the location of the site giving good opportunities for sustainable modes of travel and access to local services and facilities.</b> The site's location very close to Newbury town centre means that it scores significantly positive in terms of opportunities for sustainable modes of travel and therefore, on sustainability. The site is close to local services and facilities, with easy access to the countryside for supporting active healthy lifestyles, all of which impact positively on sustainability. The	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> Newbury and Thatcham spatial area <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>The site is recommended for allocation.</b> The site is well related to Newbury Town Centre, close to local services and facilities, with good opportunities for walking and cycling as well as public transport.	<b>The site is not recommended for allocation.</b> <a href="#">The site promoter has been unable to demonstrate the ability to achieve suitable, adequate highway access (sightline and gradient are of particular concern). For these reasons the site is not being proposed to be taken forward for allocation as it is not been proven to be deliverable.</a>

Table 14 Summary of Newbury Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as allocated site.
	area is at risk from ground and surface water flooding, which without appropriate mitigation could have a negative impact on sustainability. <a href="#">Unless the required highway improvements can be made there could potentially be a negative impact on social sustainability due to safety concerns. It is likely that with regard to biodiversity on the site, appropriate measures would mitigate any negative impact. The development of the site for housing would have a neutral effect on economic sustainability.</a>			
NEW108  Land at Wildwoods, Kendrick Road, Wash Common  <a href="#">70</a> 69 dwellings (2.3ha at 30dph)	<b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects.</b> There are no positive impacts from this site as it is some distance from local services and facilities, with limited opportunities for walking, cycling and using public transport. There are a number of uncertain impacts as the site is poorly related to existing residential development. Development could have a negative impact on environmental sustainability without appropriate mitigation and buffers. The site is within a surface water flood risk area, which could have a negative impact on sustainability without appropriate mitigation measures. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> Newbury and Thatcham spatial area <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>The site is not recommended for allocation.</b> The site is poorly related to the existing settlement boundary and would require development at Sandleford Park to take place before it was adjacent to residential development. The site is largely wooded with many of the trees being protected by TPOs.	<b>The site is not recommended for allocation.</b> <a href="#">No additional information submitted at preferred options that would resolve the concerns previously raised.</a>

### Site selection summary

[No significant changes have been made to the SA/SEA assessment itself as a result of the consultation; however comments have provided further information about the sites which has helped to refine the details of the sites proposed for allocation.](#)

[Of the 21 sites considered, six sites were considered to have either a significantly negative impact on at least one element of sustainability \(NEW001 / NEW008 / NEW010 / NEW011/ NEW054\), or a predominantly negative impact on sustainability overall \(NEW031\). Therefore, these sites are not recommended for allocation.](#)

Of the remaining sites, none are anticipated to have a significantly negative impact on sustainability. There are a number of positive and negative sustainability impacts predicted, which have been used to determine whether a site is suitable to be taken forward for allocation. In some cases, a negative sustainability impact means that a site is considered less suitable for development than other sites available. As a result of the SA/SEA and site selection process, and following comments received from the preferred options consultation six sites are recommended for allocation in Newbury.

**NEW012** ~~and~~ is recommended for allocation as the SA/SEA does not indicate any potential negative sustainability effects, but does give a number of positive effects due to the proximity of the site to local services and facilities.

**NEW042** is recommended for allocation. The site is located to the north west of Newbury, close to the junction of the A4 and the A34. There are a number of potentially negative sustainability effects from development of the site, all of which could be mitigated against through careful design or specific mitigation measures, such as ~~relocation of the allotments and~~ developing away from the A34 to minimize potential noise and air quality issues. The site was chosen as it is close to local services and facilities, with opportunities for walking and cycling as well as public transport, all of which have a positive impact on sustainability. Consultation with the Parish Council indicated that the principle of development here was acceptable as long as allotments were still available on the site. The proposals for the site do include relocation and expansion of the allotments. As a result of the preferred options consultation the allotments are proposed to be retained in situ, and as a result of landscape assessment work carried out further information regarding the mitigation measures required on the site is available.

**NEW045** and **NEW105** are two sites to the north east of Newbury. There is no significant difference between the two sites in terms of the SA/SEA; the only difference between the two sites is the NEW105 is within a surface water flood risk area and adjacent to an ancient woodland (Yates Copse) and critical drainage area. NEW045 has been recommended for development, over NEW105 as NEW045 is considered to be better related to the existing residential development, without the potential effects on sustainability that could occur as a result of being adjacent to ancient woodland and being within a surface water flood risk area. A reduced site area for NEW105 was promoted through the preferred options consultation, but this area is already within the settlement boundary, and when considering the buffers required for the ancient woodland the development potential on the site is limited.

A group of sites were submitted to the south east of Newbury (**NEW047**). At preferred options ~~Only~~ only one of these sites (**area D**) has been was recommended for allocation, although the SA/SEA does not show any ~~there is no~~ discernible difference between the sites ~~based on the SA/SEA~~. All the sites have protected species on the site, which, without appropriate mitigation measures, would lead to a negative impact on environmental sustainability. Only part of each of the sites has been proposed for development, maintaining a green corridor between the sites and Newbury Racecourse. Following the preferred options sites B and C are now recommended for allocation, to help provide additional flexibility in the housing numbers allocated through the DPD and enable the sites to be masterplanned as a whole. Development of the sites will result in the 'undeveloped' areas being retained as public open space/wildlife corridors in perpetuity. This will result in improved public access to open space in the area.

**NEW106** was recommended for allocation at preferred options as the SA/SEA did not highlight any potential negative sustainability effects. Concern was raised regarding access and the highway impact as a result of development on the site, this was also raise as a significant issue through the preferred options consultation. Additional information was sought from the site promoters to ensure deliverability of the site, in terms of delivering appropriate access, but the information has not been forthcoming, and therefore, the site is no longer recommended for allocation.

The SA/SEA highlights that of the 21 sites considered; one site was highlighted as having a predominantly negative impact on sustainability, five sites are predicted to have a predominantly neutral impact, but are also shown to have a significant negative impact on sustainability.

**NEW001, NEW010 and NEW011** are all at risk from and have a history of flooding which has led to flooding of neighbouring residential areas, even within potential mitigation measures it is not considered appropriate to allocate these sites for residential development.

**NEW008** is a small site which contains a great crested newt breeding pond. Development of the site would be likely to cause harm to these protected species impacting on environmental sustainability and therefore, the site is not recommended for allocation.

**NEW031**, is made up of two parcels of land, separated by the A339. ~~was~~ Originally the site was promoted through the Core Strategy as a strategic site. The site is being promoted as a whole for approximately 500 dwellings, with potential for an additional 300 in a future phase. The Council have calculated a development potential of ~~has potential for~~ approximately 550 dwellings, which is still considered to be strategic in nature and therefore, the site is not considered suitable for allocation at this stage. There are ~~both~~ a number of positive and negative sustainability effects from the site. To overcome the negative impacts, which include, impacting on the character of Donnington, highways, flooding and biodiversity, ~~would require~~ significant amount of mitigation would be required. There is also concern regarding the ability of a site split into two sections by a main road to deliver a cohesive community. All of which mean that it is not considered appropriate to recommend the site for allocation. to reduce the impact. A planning application has been received for the site for 401 dwellings, a local centre, primary school, open space, landscape and associated highway works. In addition to being contrary to policy there are a number of significant highways concerns which have not been resolved.

**NEW054** contains a number of archaeological features, development would lead to a negative impact on the heritage assets of the district, and therefore the site is not considered appropriate for development. While all the sites have good access to local services and facilities within Newbury, these negative impacts are seen to outweigh the positive sustainability impacts of the sites and as a result the site is not recommended for allocation.

**NEW040** is sensitive in terms of biodiversity with potential for a negative effect on environmental sustainability, the proximity to the conservation area and setting of the site also impacts negatively on environmental sustainability. The site is not recommended for allocation due to this potential negative impact on environmental sustainability. In addition the Council has been unable to confirm the site's availability, and therefore, the site is not considered suitable for allocation.

~~Of the remaining sites, the SA/SEA does not highlight any significant differences between the sites. Not all sites are required in Newbury to meet the remaining Core Strategy requirement,~~

**NEW019** is also adjacent to Sandleford Park, but is located further from local services and facilities, giving a greater distance required for walking or cycling, and with a limited bus service passing near to the site. The SA/SEA does not give this site any positive effects on sustainability, the effects are either neutral, uncertain or negative, and as a result the site is not recommended for allocation.

NEW103 and NEW108 are is adjacent to Sandford Park strategic site, and it was considered that development at Sandford Park would need time to consolidate into the community without additional development. NEW108- The site is largely wooded, with many of the trees protected by TPOs. Removal of the woodland would have a negative impact on environmental sustainability, strengthening the case that this site should not be allocated for development.

Following the preferred options, two sites (NEW103 and NEW104) are now recommended for inclusion within the settlement boundary, both sites are adjacent to the Sandford Park strategic site. NEW103 was a rejected site at the preferred options stage due to concerns over access as a result of access being from a private driveway. At preferred options the development potential of the site was reduced to five dwellings, which is acceptable to be accessed from a private driveway, and therefore, the site is recommended for inclusion within the settlement boundary, as part of the boundary review around Sandford Park. NEW104 was considered for allocation at preferred options, however, a review of the development potential of the site shows that the site would be more suitable for inclusion within the settlement boundary, than as an allocated site. Neither site have any significant negative sustainability effects, the only negative effects are that both sites are Greenfield, and NEW103 is within a surface water flood risk area, although there is no history of flooding on the site, and the risk could be mitigated against with SUDs.

~~Both sites had additional issues that would have needed to be resolved, access to NEW103 would require upgrading of a private road (Garden Close Lane) to adoptable standards, or access to come from Sandford Park, while NEW104 is a small site adjacent to Sandford Park. As the site is small it was recommended for including within the settlement boundary. When discussed with members of the Planning Policy Task Group they asked that the site be a preferred option for allocation, to improve the chances of deliverability. The only negative sustainability effect for the site is that it is a greenfield site, the other effects are either positive, neutral or uncertain.~~

~~NEW047D has been recommended for allocation over sites B and C as the areas proposed for development are better related to the existing residential development and closer to local services and facilities at Newbury Retail Park. Areas B and C are used by members of the public as local amenity space and have views over Newbury, which if lost would potentially have a negative impact on all elements of sustainability~~

~~have been recommended for allocation as they do not have any potential negative sustainability effects highlighted by the SA/SEA. NEW106 has a significant positive impact on sustainability due to its location close to the town centre and opportunities for sustainable modes of transport.~~

~~NEW032 and NEW051 are considered too small for allocation and so will be considered as part of the settlement boundary review. Both **NEW032** and **NEW051** sites are well related to the existing settlement and have some level of development already on the site. NEW032 does not have any negative impacts highlighted on the SA/SEA. Part of NEW051 is currently allotments, which would need to be maintained should any development take place to ensure no negative sustainability effects occurred. The proposals for the site include maintaining and improving the allotments and only developing on a small section to the south east of the site. To ensure no negative impact on the allotments, they will remain outside the settlement boundary.~~

### 7.2.1.2 Thatcham

Thatcham is the second identified as a main urban area within West Berkshire, sitting within the Newbury and Thatcham spatial area. The Core Strategy identifies Thatcham as needing a period of consolidation following a significant period of growth in recent years. This means that through the

[plan-led system](#) Thatcham will only receive a limited amount of growth during this plan period. The A4 runs through the town, splitting it into two sections, north Thatcham and south Thatcham. A number of buses serve the town and it has a railway station.

To the south of Thatcham runs the River Kennet ([which is a SSSI](#)) and the Kennet and Avon Canal. The town itself is not at risk from fluvial flooding (the flood zones are located to the south of the developed area of the town), although did suffer badly from surface water flooding during July 2007, with large areas within a surface water flood risk area and two areas designated as critical drainage areas through the SFRA.

[In addition to the SSSI, Thatcham Reeds Beds \(SAC\) and a Local Nature Reserve also lie to the south of the town.](#)

~~A SSSI runs along the River Kennet and Thatcham Reed Beds nature reserve is located to the south of Thatcham.~~

27 sites were promoted through the SHLAA process, with 11 assessed as potentially developable. [All sites promoted through the SHLAA were considered against site selection criteria, which resulted in most sites being automatically excluded in accordance with part A of the assessment. The remaining 9 sites were considered reasonable alternatives for development and so a SA/SEA was undertaken, along with part B of the site assessment, to inform the site selection work and subsequent selection of preferred options. The consultation on the preferred options and further technical work have informed which sites will be taken forward for allocation in the proposed submission DPD. In addition to the 9 remaining sites, 1 new site was submitted as part of the preferred options consultation and 1 site that was previously excluded was resubmitted. Both sites were appraised as reasonable alternatives resulting a total of 11 sites being considered.](#)

[The table below outlines the findings of the site specific assessments/SA/SEAs and details of whether or not the sites are being taken forward for allocation as well as outlining the recommendation from the preferred options stage.](#)

~~No sites were automatically excluded, and so all sites were considered to be reasonable alternatives and so an SA/SEA was undertaken for all 11 sites to inform the site selection work and subsequent selection of preferred options. The table below outlines the findings of the site specific SA/SEAs and details whether or not the site are being taken forward as preferred options.~~

**Table 15 – Summary of Thatcham Sites SA/SEA**

Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
<p>THA006</p> <p>Land at Lower Way Farm, Thatcham</p> <p>50 dwellings</p>	<p><b>Overall the effect on sustainability will be predominantly neutral and the SA/SEA does not highlight any significant sustainability effects.</b></p> <p>The site is close to local services and facilities with opportunities for walking, cycling and use of public transport, which could have a positive effect in terms of sustainability. The site is adjacent to the sewage treatments works, which could negatively impact upon the air quality. There is also the potential for an impact on noise levels, as well as soil and water quality given the close proximity to the treatment works. The majority of development on the site would take place on greenfield land which could negatively impact on the environmental sustainability of the site, and the sites proximity to the SSSI, SAC and Local Nature Reserve mean development on the site could have a negative impact on environmental sustainability. The site could also negatively impact upon the landscape character and built environment as the area provides an important open area which physically and visually separates Newbury from Thatcham. Flooding can have a negative impact on all elements of sustainability. Mitigation measures should reduce this impact.</p>	<p><b>Effect:</b> Predominantly neutral</p> <p><b>Likelihood:</b> High</p> <p><b>Scale:</b> Newbury and Thatcham spatial area</p> <p><b>Duration:</b> Permanent</p> <p><b>Timing:</b> Short to Long term</p>	<p>This site was not appraised as a reasonable alternative at the preferred options stage.</p>	<p><b>The site is not recommended for allocation</b></p> <p>Flood Zones 2 and 3 are located on the southern part of the site, and as the EA have advised that development must be avoided in Flood Zones 2 and 3 this reduces the development capacity on the site. Development is constrained further by the presence of a rising main which runs along the northern part of the site. With a reduced development capacity it is considered that development (see concept plan submitted at Preferred Options stage) fails to reflect the existing settlement pattern and would not relate well to existing development on Lower Way.</p> <p>The Thatcham Landscape Sensitivity Study (LSS, 2009) identifies the site as being located within an area (Thatcham Lakes) which provides an important open area which physically and visually separates Newbury from Thatcham and it is considered that the development of this site would fail to reflect this principle and detract from the separate identities of the two settlements.</p> <p>In addition, the site is adjacent to sewage treatment works which is known to release a foul smell, especially in the summer months. It is considered that the location of the site, adjacent to the sewage treatment works would impact on the quality of life for future residents.</p> <p>The Core Strategy sets out the Spatial Strategy for the District and provides an overall framework to guide development over the plan period. The Core Strategy is clear that Thatcham is to receive a lower allocation than other urban areas given the rapid expansion of</p>

**Table 15 – Summary of Thatcham Sites SA/SEA**

Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
				<p><a href="#">the town in recent years. This is to allow Thatcham a period of consolidation, ensuring the infrastructure and town centre facilities can be upgraded and meet the demands of the existing population. This will enable Thatcham to become more self-contained, encouraging residents to shop and socialise locally. In accordance with the Core Strategy, Thatcham will not accommodate large scale development at this stage and, whilst this site is not large scale, it is considered that there are other sites within the town which are more suitable for allocation.</a></p>
<p>THA007</p> <p>Land at Harts Hill, Thatcham</p> <p>450 dwellings (15ha at 30dph)</p>	<p><b>Overall the site is likely to have a <a href="#">predominantly</a> neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects.</b></p> <p>The site is easily accessible by public transport, walking and cycling and within close proximity of open countryside and local sports facilities to help promote a health active lifestyle, all of which have a positive impact on sustainability. <a href="#">The site is also in close proximity to employment opportunities and local services and facilities which will have a positive impact on economic and social sustainability. Potential negative impacts could occur in relation to the environmental sustainability due to the greenfield nature of the site, the impact on biodiversity and geodiversity and the impact on the character of both landscape and the built environment. Flood risk on the site would have a negative impact on all elements of sustainability, as the site is at risk from surface water flooding. Mitigation measures could reduce the impact of flooding and reduce the impact on sustainability. Development could have an impact on the landscape and change the character of the</a></p>	<p><b>Effect:</b> Predominantly neutral</p> <p><b>Likelihood:</b> High</p> <p><b>Scale:</b> Newbury and Thatcham spatial area</p> <p><b>Duration:</b> Permanent</p> <p><b>Timing:</b> Short to Long term</p>	<p><b>The site is not recommended for allocation</b></p> <p>The Core Strategy sets out that Thatcham only needs a small amount of development over the plan period. The potential on this site is much larger than required, and there are other smaller sites, that are considered more suited to development at this stage. Development on this site of Floral Way would change the character of the built environment, but moving residential development to the east of Floral Way.</p> <p>Availability of the site has not been confirmed.</p>	<p><b>The site is not recommended for allocation</b></p> <p><a href="#">The Core Strategy sets out the Spatial Strategy for the District and provides an overall framework to guide development over the plan period. The Core Strategy is clear that Thatcham is to receive a lower allocation than other urban areas given the rapid expansion of the town in recent years. This is to allow Thatcham a period of consolidation, ensuring the infrastructure and town centre facilities can be upgraded and meet the demands of the existing population. This will enable Thatcham to become more self-contained, encouraging residents to shop and socialise locally. In accordance with the Core Strategy, Thatcham will not accommodate large scale development at this stage and it is considered that there are other sites within the town which are more suitable for allocation.</a></p> <p><a href="#">It is considered that the principle of developing north of Floral Way is not acceptable at this stage and would be contrary to the Core Strategy. The Landscape Sensitivity Study</a></p>

**Summary**

The SA/SEAs do not show any sites to have any significant effects on sustainability; all sites are shown to have a predominantly neutral effect on sustainability.

[No significant changes have been made to the SA/SEA assessment itself as a result of the consultation; however, the comments have provided further information about the sites which has helped to refine the details of the sites proposed for allocation. Following the Preferred Options consultation 1 site \(THA025\) is being recommended for allocation in Thatcham.](#)

[The Core Strategy sets out the Spatial Strategy for the District and provides an overall framework to guide development over the plan period. The Core Strategy is clear that Thatcham is to receive a lower allocation than other urban areas given the rapid expansion of the town in recent years. This is to allow Thatcham a period of consolidation, ensuring the infrastructure and town centre facilities can be upgraded and meet the demands of](#)

the existing population. This will enable Thatcham to become more self-contained, encouraging residents to shop and socialise locally. In accordance with the Core Strategy, Thatcham will not accommodate large scale development at this stage.

It is considered that the principle of developing north of Thatcham (north of Floral Way and Bowling Green Road) is not acceptable at this stage and would be contrary to the Core Strategy. The Landscape Sensitivity Study (2009) is clear that the areas to the north of Thatcham provide an important setting to Thatcham and a rural transition zone between the urban area and the AONB. It is the Council's preferred approach, in accordance with the Core Strategy, to consider this area (including THA007, THA008 THA024 and THA028) as a whole as part of a revised Local Plan, when the area can be holistically planned for ensuring the infrastructure requirements can be delivered to meet the demand from new development, rather than development occurring in a piecemeal manner.

The Core Strategy notes that a key feature of even the larger settlements in West Berkshire is the way in which few have coalesced in recent times and so the blurring of the physical distinction between places has largely been avoided. For the remaining sites in north Thatcham (THA011, THA014, THA019, THA027 and THA037) the above principle is compounded by the perception of merging Cold Ash and Thatcham and the potential adverse impact on the settlement pattern, either individually or combined. Other sites in Thatcham are considered to be more appropriate for allocation.

As a result the sites north of Thatcham (**THA007, THA008, THA011, THA014, THA019, THA024, THA027, THA028 and THA037**) are not recommended for allocation.

Of the 2 sites to the south of Thatcham, **THA006** is not recommended for allocation. The Thatcham Landscape Sensitivity Study (LSS, 2009) identifies the site as being located within an area (Thatcham Lakes) which provides an important open area which physically and visually separates Newbury from Thatcham and it is considered that the development of this site would fail to reflect this principle and detract from the separate identities of the two settlements. The constraints on the site reduce the developable area, setting any development back from Lower Way which would fail to reflect the existing settlement pattern and would not relate well to existing development along this road. In addition, the close proximity of the sewage treatment works could impact on the quality of life for future residents. Another site in Thatcham is considered to be more appropriate for development.

**THA025** is recommended for allocation. THA025 offers a site which is well related to the existing settlement and is of a scale appropriate to the level of growth required for the town. In addition, whilst the Landscape Sensitivity Study (2009) outlines that the site is in an important area (Thatcham Lakes) which physically and visually separates Newbury from Thatcham it is not considered that development on this site, given its particular location, would detract from the principle of maintaining the separate identity of the two settlements. Provided the necessary information and assessments are provided, along with the implementation of appropriate avoidance and mitigation measures, to ensure the legally protected habitats and species present in the SAC and SSSI are not adversely affected, it is considered this site is suitable for allocation.

Thatcham only needs a limited number of dwellings through the core strategy (approximately 60 dwellings). The majority of the sites submitted have potential for significantly more than the required number of dwellings and so it would not be appropriate to consider the sites for allocation through this DPD. Consideration of these sites would be more appropriate through the new Local Plan. THA007 / THA008 / THA011 / THA024 / THA028 all have

a development potential of more than 100 dwellings. Development of these sites would be most appropriate as a comprehensive development of the whole site, rather than as part of a site and so they are not recommended for allocation.

THA014 / THA027 are poorly related to the existing settlement without additional sites being developed. The SA/SEA highlights that development of these sites would have a negative impact on the character of the built environment and subsequently have a negative effect on environmental sustainability. As a result these sites have not been recommended for allocation.

THA025 is the only site in Thatcham to be recommended for allocation. The only negative sustainability impact highlighted on the SA/SEA is due to the site being Greenfield. The site is well related to the existing settlement, close to local services and facilities with good opportunities for walking and cycling, as well as use of public transport. All of which have a positive effect on sustainability.

### 7.2.1.3 Cold Ash

Cold Ash is a Service Village, where some limited development is appropriate. Cold Ash is located to the north of Thatcham, with the north and eastern part of the village adjacent, or within the AONB. No water courses run through the village, so there is no risk of fluvial flooding, surface water flood risk is limited to a small area to the south of the village. Run off from Cold Ash can have an impact on surface water flooding in Thatcham and any development would need to take account of this risk.

Eight sites were submitted through the SHLAA process, with four sites being assessed as potentially developable. Following landscape assessment work COL010 was ruled out on landscape grounds. A ninth site (COL011) was submitted after the initial finalisation of the SHLAA in December 2013. This site was assessed as potentially developable, [although following landscape work the site was ruled out on landscape grounds](#). A SA/SEA was subsequently undertaken on these four [three](#) sites to inform the site selection work and the subsequent selection of preferred options. [The consultation on the preferred options and further technical work have informed which sites will be taken forward for allocation in the proposed submission DPD](#). The table below outlines the findings of the site specific SA/SEAs and details whether or not the sites are being taken forward as preferred options [for allocation as well as setting out the recommendation from the preferred options stage](#).

#### [Preferred options consultation responses:](#)

- [COL002 - 40 responses](#)
- [COL004 – 1 response](#)
- [COL006 - 29 response](#)
- [COL011 – 19 responses](#)
- [Cold Ash - 4 responses](#)

These have been carefully assessed but no new or additional information has been submitted that would rule the site out if the appropriate mitigation is put in place.</a></p> <p><a href="#">This mitigation will include taking into account the outcomes of technical studies including a Flood Risk Assessment, an extended phase 1 habitat survey and the contamination assessment.</a></p>
<p>COL011</p>	<p><b>Overall the site is likely to have a neutral effect on</b></p>	<p><b>Effect:</b></p>	<p><b>The site is recommended for</b></p>	<p><a href="#">Additional landscape work</a></p>

Table 16 – Summary of Cold Ash Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
Land at Gold Ash Hill  15 dwellings (0.5ha at 30dph)	<b>sustainability. The SA/SEA does not highlight any significant sustainability effects.</b> The site is located within a village setting, with good access to local services and facilities within the village, which will have a positive impact on sustainability. However, there will be a degree of car dependency for travel to employment and wider higher level services and facilities, which could have a negative impact on sustainability, in terms of an increase in greenhouse gas emissions. The site is at risk from surface water flooding, without appropriate mitigation flooding can have a negative impact on all elements of sustainability.	Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> Newbury and Thatcham spatial area <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>allocation for 6 dwellings</b> The site is well related to the existing settlement and in line with the exiting building line.	<a href="#">carried out following the preferred options consultation indicates that development of this site would result in harm to the AONB.</a>

### Site Selection Summary

The SA/SEAs do not show any of the sites to have any significant sustainability effects, all sites are shown to have a predominantly neutral effect on sustainability.

[No significant changes have been made to the SA/SEA assessment itself as a result of the consultation; however, the comments have provided further information about the sites which has helped to refine the details of the sites proposed for allocation. Following the Preferred Options consultation 2 sites are now recommended for allocation.](#)

[As Cold Ash is in close proximity to the AONB the potential impact on the natural beauty of the landscape and the special qualities of the AONB is the paramount consideration when sites are being assessed. A Landscape Assessment has been undertaken for sites COL002, COL006 and COL011 and advised of whether the sites should be allocated and whether mitigation/enhancement measures would be possible to ensure that the negative impact on the character of the AONB, and consequential negative impact on environmental sustainability, is minimized](#)

[COL002 is recommended for allocation. The developable area takes into account the potential deliverability of the site. Appropriate mitigation will be required. This will include taking into account the outcomes of a Flood Risk Assessment which includes the provision of safe flow routes and appropriate flood mitigation measures. This will reduce the potential for negative environmental impact. The FRA will inform the final capacity of the site.](#)

**COL004** has [is](#) not been recommended for allocation due to the site's relationship to the existing settlement. The SA/SEA highlights a potential negative impact on environmental sustainability due to the impact on the character of the landscape and built environment.

[COL006 is recommended for allocation. The site can deliver a low density linear development in accordance with the outcomes of the Landscape Capacity Assessment which reflects the existing settlement pattern.](#)

~~significant difference between the SA/SEAs for COL002 / COL006 / COL011. All three sites have been recommended for allocation. COL002 and COL011 are recommended for a lower number of dwellings than the development potential. This is because development of the sites needs to be done in keeping with the existing building line of linear development, or there would be a negative effect on environmental sustainability.~~

## **7.2.2 Eastern Area Spatial Area**

### **7.2.2.1 Eastern Urban Area**

The Eastern Urban Area consists of Purley on Thames, Tilehurst and Calcot and lies within the Eastern spatial area. The area has a close functional relationship with Reading. A broad location was identified in the Core Strategy covering the Eastern Urban Area, the Rural Service Centre of Theale and the land in between as an area of search within which to find future development sites.

As one of the District's urban area, the Eastern Urban Area is a focus for development within the District and has relatively good accessibility to employment opportunities. Access to other facilities and services varies and the area draws upon the wider range of facilities available in Reading.

There are good local bus connections and a mainline station at Tilehurst with trains to Reading and London and northwards to Oxford.

The Core Strategy points out that there are high quality landscape and environmental assets in this part of West Berkshire which includes the Thames National Path and North Wessex Downs AONB which adjoins the urban area. The Kennet Valley East Biodiversity Opportunity Area lies to the south of Reading. Landscape assessment work was carried out on 3 sites due to the relationship between this part of the District and the North Wessex Downs AONB. This has advised on developable area and necessary mitigation for these sites.

To the south of the urban area much of the land is within Flood Zones 2 and 3. There are also issues relating to traffic congestion, particularly in the vicinity of the motorway junction. Proximity to Junction 12 of the M4 as well as the A4 causes additional impacts in terms of noise and air quality.

25 sites were identified in the SHLAA and 12 were assessed as potentially developable. Three were automatically excluded as they are located within the settlement boundary. The remaining nine sites were considered reasonable alternatives for development and an SA/SEA was undertaken for these sites to inform the site selection work and the subsequent selection of preferred options. [Due to the technical issues in the Eastern spatial area that were highlighted by the site selection process, a wider range of options were tested in the Eastern spatial area than in the other three spatial areas. The consultation on the preferred options, and further technical work has informed which sites will be taken forward for allocation in the proposed submission DPD.](#) The table below outlines the findings of the site specific SA/SEAs and details whether or not the sites are being taken forward [for allocation as well as setting out the recommendation from the preferred options stage.](#)

The site selection process has highlighted some technical issues in the Eastern spatial area as a whole. This has resulted in a wider range of options being tested in the Eastern spatial area than in the other three spatial areas. This is to enable final choices to be informed by additional technical work and consultation.

Preferred Options consultation responses:

Table 17 Summary of Eastern Urban Area Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
<p>EUA003</p> <p>Stoneham's Farm, Long Lane, Reading, RG31 5UG</p> <p>15 dwellings (0.77ha at 20dph)</p>	<p><b>Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.</b></p> <p>Development of this site would not lead to any significant sustainability issues. There are positive impacts on sustainability as the site is close to local services and facilities enabling walking and cycling and the promotion of healthy, active lifestyles. There is potential for a negative impact on environmental sustainability unless the mitigation measures set out in the Landscape Assessment are adhered to. <a href="#">The cumulative impact of developing both EUA003/008 and EUA033 would have a negative impact on the character of the AONB and therefore, on environmental sustainability which could not be mitigated.</a> Due to the site's proximity to ancient woodland and trees protected by TPOs, appropriate buffers would need to be provided to avoid negative impacts on sustainability. The site is within an area at risk from surface water flooding. Although there is no evidence of the site flooding, if it did this would have a negative effect on sustainability. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic</a></p>	<p><b>Effect:</b> Predominantly neutral</p> <p><b>Likelihood:</b> High</p> <p><b>Scale:</b> Eastern Area</p> <p><b>Duration:</b> Permanent</p> <p><b>Timing:</b> Short to Long term</p>	<p><b>The site is recommended for allocation as one of the option to be explored further, alongside EUA008.</b></p> <p>The site is well related to local services and facilities with good opportunities for walking and cycling both locally and in towards Reading.</p> <p>Development will need to take into account the Landscape Assessment, with only part of the site being considered suitable for development. Appropriate mitigation measures will be required to ensure no harm to the landscape character of the AONB.</p>	<p><b>The site is recommended for allocation in conjunction with EUA008.</b></p> <p><a href="#">A significant number of responses were received during the consultation, however these have been followed up and no significant new or additional information was submitted that would rule the site out for development.</a></p> <p><a href="#">The site is being promoted for 15 dwellings, in a mix of sizes.</a></p> <p><a href="#">The site should be planned and developed comprehensively with EUA008, including footpath and cycle linkages.</a></p>

Table 17 Summary of Eastern Urban Area Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
	<a href="#">development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>			
EUA007  Turnhams Farm, Pincents Lane, Tilehurst (Pincents Hill).  285 dwellings ( <del>9.5ha at 30dph</del> )	<b>Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.</b> There are positive impacts on sustainability as the site is close to local services and facilities enabling walking and cycling and the promotion of healthy, active lifestyles. However, there are also a number of negative environmental impacts resulting from the development of the site including the site's proximity to biodiversity and geodiversity assets. Appropriate buffers, mitigation and careful design would be required to mitigate the potential negative environmental impacts. As the areas proposed for development are not adjacent to existing residential areas this has the potential for a negative impact on social sustainability. Part of the site is within a surface water flood risk area; although there is no evidence of the site flooding, if it did, this would have a negative impact on all elements of sustainability. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> Eastern Area <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>The site is recommended for allocation as one of the options to be explored further.</b> The site is well related to local services and facilities, both for access locally and in to Reading. Work has been done since the previous planning application (and subsequent appeal) to take into account the impact on the landscape. There are a number of ecological, environmental, water supply, archaeological and highways issues that would need to be resolved.	<b>The site is not recommended for allocation.</b> <a href="#">Significant concern was raised during the preferred options consultation regarding the traffic impact from IKEA, as both IKEA and the site would share access from Pincents Lane. This is also indicated by the Council's Transport Assessment.</a>  <a href="#">Further landscape work carried out as part of the preferred options reduced the developable area of the site from that proposed by the site promoter, but removing the eastern portion of the site.</a>  <a href="#">Given that the IKEA scheme is yet to be fully implemented, it is considered appropriate to allow time for the IKEA traffic situation to be monitored before allocation of the site can be considered.</a>
EUA008  Stoneham's	<b>Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA highlights potentially negative effects on environmental sustainability (without</b>	<b>Effect:</b> Predominantly neutral	<b>The site is recommended for allocation as one of the options to be explored</b>	<b>The site is recommended for allocation in conjunction with EUA003.</b>

Table 17 Summary of Eastern Urban Area Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
Farm, Long lane, Reading RG31 5UG  <a href="#">60 dwellings</a> <del>44 dwellings</del> <del>(2.1ha at 20dph)</del>	<b>mitigation).</b> There would be no significant sustainability impacts from development on this site. The site scores predominantly neutral, with positive scores in relation to sustainable transport, walking and cycling options as well as opportunities for active, healthy lifestyles and lack of flood risk. The site is in the AONB, therefore there is potential, without mitigation, for the site to have a significantly negative impact on the character of the landscape. The Landscape Assessment indicates that development would be appropriate on part of the site, and sets out the mitigation measures that would be required to reduce the impact of development on the environment. <a href="#">The cumulative impact of development of both EUA003/008 and EUA033 would have a negative impact on the character of the AONB and therefore, on environmental sustainability which could not be mitigated. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>	<b>Likelihood:</b> High <b>Scale:</b> Eastern Area <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>further, alongside EUA003.</b> The site is well related to local services and facilities with good opportunities for walking and cycling both locally and in towards Reading. Development will need to take into account the Landscape Assessment, with only part of the site being considered suitable for development. Appropriate mitigation measures will be required to ensure no harm to the landscape character of the AONB.	<a href="#">A significant number of responses were received during the consultation, however, these have been assessed and followed up and no significant new or additional information was submitted that would rule the site out.</a>  <a href="#">The site is being promoted for up to 80 dwellings, by the site promoter. However, the Council believe that a density similar to that of the surrounding area would be more appropriate giving approximately 60 dwellings on the site.</a>  <a href="#">The site should be planned and developed comprehensively with EUA003 including footpath and cycle links.</a>
EUA025  Land adjacent to Junction 12 of the M4, Bath Road  50-100	<b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA highlights that development of the whole site would have a negative and potentially significantly negative impact on social sustainability. Limiting the size of developable area and introducing mitigation would mean no significant sustainability effects.</b>  There is potential for significant negative impacts of air quality and noise on this site due to the proximity to the M4/A4	<b>Effect:</b> Predominantly neutral (with mitigation) <b>Likelihood:</b> High <b>Scale:</b> Eastern Area <b>Duration:</b>	<b>Part of the site is recommended for allocation as one of the options to be explored further.</b>  The site is well related to the existing settlement, close to local service and facilities, including the bus interchange	<b>Part of the site is recommended for allocation.</b> <a href="#">Only a small proportion of the site is considered appropriate for development due to the proximity to M4 junction 12 causing amenity issues in terms of exposure to noise and air pollution. This was an issue</a>

Table 17 Summary of Eastern Urban Area Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
<p> dwellings (1.7ha to 3.4ha at 30dph)</p>	<p>junction. Mitigation measures would need to be included, including careful design to minimise the impact. Flooding is also a risk on the southern part of the site, with ground water and surface water flood risk also present on the site. An FRA will identify the risk of flooding and direct development towards the least risky parts of the site. SUDs and other flood mitigation will be required. The site scores positively in terms of access to employment and services and facilities and opportunities for walking, cycling and public transport.</p> <p><a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a></p>	<p>Permanent <b>Timing:</b> Short to long term</p>	<p>at the retail park. Only part of the site is recommended for allocation due to air and noise pollution generated by the M4/A4 and the flood risk on the southern part of the site. The Environment Agency strongly recommends that this site is not allocated. The smaller area for development will also reduce any conflict with the Highways Agency's proposed Smart Motorway Scheme (proposed to start at junction 12).</p>	<p><a href="#">raised during the consultation.</a></p> <p><a href="#">Highways England have not raised any objection to development on the site, however, the site is proposed to be used as a compound site for the M4 Smart Motorway scheme, and, therefore, the site would need to come forward slightly later in the plan period.</a></p>
<p>EUA026</p> <p>Land adjacent to Bath Road and Dorking Way, Calcot</p> <p><a href="#">35 dwellings</a></p> <p><del>24 dwellings</del> (<del>0.8ha at</del> <del>30dph</del>)</p>	<p><b>Overall the site is likely to have a neutral effect on sustainability (with mitigation) and the SA/SEA does not highlight any significant sustainability effects.</b></p> <p>There is potential for negative impacts of air quality and noise due to proximity to the A4 but with appropriate mitigation measures and design this impact should be mitigated against. A small part of the site is within an area at risk from surface water flooding, with the appropriate Flood Risk Assessment and mitigation measures (inc. SUDs) there should not be an impact on sustainability. There are a number of positive impacts in relation to sustainable transport and access to local services and facilities. This easy access should reduce the need for private car travel, reducing the impact on environmental sustainability. <a href="#">Whilst housing development contributes towards economic development in the short term</a></p>	<p><b>Effect:</b> predominantly neutral (with mitigation) <b>Likelihood:</b> High <b>Scale:</b> Eastern Area <b>Duration:</b> Permanent <b>Timing:</b> Short to long term</p>	<p><b>The site is recommended for allocation as one of the options to be explored further.</b></p> <p>The site is well related to the existing settlement, close to local service and facilities, including the bus interchange at the retail park.</p>	<p><b>The site is recommended for allocation.</b></p> <p><a href="#">Highways England have not raised any objection to development on the site, however, the site is proposed to be used as a compound site for the M4 Smart Motorway scheme, and, therefore, the site would need to come forward slightly later in the plan period.</a></p> <p><a href="#">The proposed number of dwellings has been increased to take into account comments</a></p>

Table 17 Summary of Eastern Urban Area Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
	<a href="#">through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>			<a href="#">made by the site promoter in the consultation (who would like to see a minimum of 50dph), and considering the density of the neighbouring residential areas.</a>
EUA031  Land to the east of Sulham Hill  <a href="#">Approx. 35 dwellings</a> <del>29 dwellings</del> (0.96ha at 30dph)	<b>Overall the site is likely to have a neutral effect on sustainability and the SA/SEA does not highlight any significant sustainability effects.</b> There are no significant, positive or negative, impacts from this site. The site is well located for services and facilities as well as having good public transport links into Reading, giving a number of positive sustainability impacts. There are potential negative impacts relating the loss of greenfield land, although with appropriate mitigation the negative impact could be reduced. <a href="#">Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> Eastern Area <b>Duration:</b> Permanent <b>Timing:</b> short to long term	<b>The site is recommended for allocation as one of the options to be explored further.</b> The site is well related to the existing residential development, and local service and facilities and is not at risk from flooding. There are no significant issues on the site.	<b>The site is recommended for allocation.</b> <a href="#">A significant number of responses were received during the consultation, however, these have been assessed and followed up and no significant new or additional information was submitted that would rule the site out.</a>  <a href="#">The capacity of the site has been increased to take into account the site promoter's comments (who would like to see approximately 40 dwellings), and considering the density of the neighboring residential areas.</a>
EUA032  Land to the East of Sulham Hill, between Barefoot Copse and Cornwell	<b>Overall the site is likely to have a neutral effect on sustainability and the SA/SEA does not highlight any significant sustainability effects.</b> There are no significant impacts from this site. The site is well located for services and facilities as well as having good public transport links into Reading. There is potential for development of the site to have a negative impact on the character of the landscape as the site is rural in nature,	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> Eastern Area <b>Duration:</b>	<b>The site is not recommended for allocation.</b> While the site is close to local services and facilities, significant improvements would be required to the highway network to enable	<b>The site is not recommended for allocation.</b> <a href="#">No alternative access is available to the site, meaning that access would need to come from Sulham Hill, which is not considered acceptable in landscape terms.</a>

Table 17 Summary of Eastern Urban Area Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
Copse  45 dwellings (1.5ha at 30dph)	despite being adjacent to residential development on one site. The Landscape Assessment work carried out indicates that the site would be suitable for development with appropriate mitigation. <del>Access to the site is via Sulham Hill which is narrow in places, and does not have footways, which could lead to issues of Road Safety without appropriate and extensive mitigation.</del> <a href="#">Access would need to come from Vicarage Wood Way. Access onto Sulham Hill would have a negative impact on the character of the landscape, and therefore, the impact on environmental sustainability could not be mitigated. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>	Permanent <b>Timing:</b> Short to Long term.	development to take place. This would significantly change the character of the rural lane (Sulham Hill). This is not considered appropriate.	
EUA033  Land to the east of Long Lane and south of Blackthorn Close  30 dwellings (1ha at 30dph)	<b>Overall the site is likely to have a neutral effect on sustainability and the SA/SEA does not highlight any significant sustainability effects.</b> There are no significant impacts from this site. The site is well located for services and facilities as well as having good public transport links into Reading, meaning the site scores positively on these elements of sustainability. The site is rural in nature and adjacent to the AONB, meaning that there would be potential for development to harm the character of the landscape or to change the character of the built environment. The Landscape Assessment work indicates that the site would be suitable for development, although appropriate mitigation measures would be required to ensure that the potential negative impact was reduced and neutralised where possible. <a href="#">The cumulative impact of development of both EUA0033 and EUA003/008 would have a negative impact on the character of the AONB and</a>	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> Eastern Area <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term.	<b>The site is recommended for allocation as one of the options to be explored further.</b> The site is adjacent to existing residential development, close to local service and facilities. There are no significant issues on the site.	<b>The site is not recommended for allocation.</b> <a href="#">The landscape assessment states that this site should not be developed alongside EUA003/008, giving a preference for development on EUA003/008, due to the cumulative impact development of both sites would have on the AONB.</a>  <a href="#">Highway improvements to reduce flood risk and improve road safety along Long Lane and at the junction with Long Lane/Sulham Hill would also be required. While these issues do</a>

Table 17 Summary of Eastern Urban Area Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
	<p><a href="#">therefore, on environmental sustainability which could not be mitigated.</a> The site is adjacent to ancient woodland and a local wildlife site, as well as having some TPOs on site. Appropriate mitigation and buffers would be required to mitigate this impact. A small part of the site is within an area at risk from surface water flooding, with the appropriate Flood Risk Assessment and mitigation measures (inc. SUDs) there should not be an impact on sustainability. <a href="#">Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a></p>			<p><a href="#">not impact on the SA/SEA, they are a implementation issue, which could impact on viability, developability and deliverability, which other sites being considered in the area do not have.</a></p>
<p>EUA035</p> <p>72 Purley Rise, Purley on Thames</p> <p>357 dwellings (1.24 at 30dph)</p>	<p><b>Overall the site is likely to have a neutral effect on sustainability and the SA/SEA does not highlight any significant sustainability effects.</b></p> <p>There are no significant positive or negative impacts on sustainability from this site. The site scores positively in terms of opportunities for sustainable travel and health, active lifestyles as it is close to local services and facilities. There are no biodiversity or environmental designations near to or on the site. The proximity to the railway line could cause noise and air pollution, but careful design and use of only part of the site could mitigate this impact. The site is at risk from surface and groundwater flooding, although with appropriate mitigation the negative impact should be reduced. <a href="#">Landscape work carried out during the preferred options stage states that only part of the site would be suitable for development (in line with the proposed developable area). Without adequate mitigation, as set out in the landscape assessment there would be potential for a negative impact on environmental sustainability. Whilst housing development contributes</a></p>	<p><b>Effect:</b> Predominantly neutral</p> <p><b>Likelihood:</b> High</p> <p><b>Scale:</b> Eastern Area</p> <p><b>Duration:</b> Permanent</p> <p><b>Timing:</b> Short to Long term.</p>	<p><b>The site is recommended for allocation as one of the options to be explored further.</b></p> <p>The site is well related to the existing settlement, close to local services and facilities. Access to the site would need to be resolved.</p>	<p><b>The site is recommended for allocation.</b></p> <p><a href="#">Landscape work carried out for the site states that part of the site would be suitable for development, subject to appropriate mitigation.</a></p> <p><a href="#">The site promoter has confirmed that adequate access can be provided to the site.</a></p>

Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
	<a href="#">towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>			

### Site Selection Summary

[No significant changes have been made to the SA/SEA assessment itself as a result of the consultation; however, the comments have provided further information about the sites which has helped to refine the details of the sites proposed for allocation.](#)

[Following the Preferred Options consultation five sites are recommended for allocation, with three sites being rejected.](#)

[EUA003 site is recommended for allocation.](#) The developable area of the site takes into account the outcomes of the Landscape Assessment to mitigate the potential negative environmental sustainability effects.

[It is proposed that the site should be developed comprehensively alongside EUA008. The policy for the site will also ensure that linkages between the sites are encouraged, especially for pedestrians and cyclists.](#)

[EUA007 – This site is not recommended for allocation, although it was one of the preferred option. At preferred options stage a number of potential negative effects were predicted, particularly in terms of environmental sustainability, it is acknowledged that appropriate buffers, careful design and a number of other mitigation measures, inducing improvements to the access, would be required to mitigate the potential negative environmental impacts. Further landscape work carried out as part of the preferred options consultation reduces the proposed developable area to the western area only, stating that for landscape reasons, development would need to relate to the industrial estate, rather than the residential areas to the east.](#)

[Through the consultation significant concern was raised regarding the impact of IKEA, in particular the impact on traffic, given that the site and IKEA share an access road \(Pincents Lane\). Significant modelling work has been carried out to assess the impact of IKEA. Modelling of the A4 Bath Road/Dorking Way/Pincents Lane junction has revealed much sensitivity north of the A4 due to multiple accesses and activities in this location. Significant mitigation will be required in the area to alleviate queuing. The TA work to accompany the DPD also shows the potential for traffic queuing back from the A4 in the ‘assessment case’ with development at Pincents Lane. Therefore, it is considered that it would be prudent to monitor the impact of IKEA on the Pincents Lane/A4 junction and the A4 and then consider the site for allocation at a later date, potentially through the new Local Plan once IKEA has been implemented.](#)

[EUA008 – The site is recommended for allocation. The developable area of the site takes into account the location of the site within the AONB, in line with the landscape assessment. Mitigation, as set out in the Landscape Character Assessment would be required to ensure no negative impacts on](#)

environmental sustainability. The site promoters would like to see up to 80 dwellings on the site, however, the Council have considered the density of the surrounding residential development and therefore, propose that the site would only be suitable for approximately 60 dwellings, up from the 44 proposed as part of the Preferred Options consultation.

It is proposed that the site should be developed comprehensively alongside EUA003. The policy for the site will also ensure that linkages between the sites are encouraged, especially for pedestrians and cyclists.

The Landscape Character Assessment has raised concern over the cumulative impact of developing EUA003/008 and EUA033, stating that development of both sites would have a negative impact on the AONB. The LCA states a preference for development of EUA003/008 over EUA033.

**EUA025** - part of the site is recommended for allocation, despite the site promoter wishing to develop the whole of the site outside the flood zones for up to 250 dwellings. The SA/SEA gives a neutral effect for the site as a result of limiting the developable area of the site to take account of flood risk and the potential impact on air and noise pollution from the M4. Mitigation to address the potential negative impacts of air and noise pollution will still be required.

The developable area proposed is located in between the A4 and the existing residential development. Highways England have said that the site would need to be developed later in the plan period as the site is required as a site compound for the M4 Smart Motorway scheme until September 2018.

**EUA026** is recommended for allocation. Mitigation to address the potential negative impacts of air and noise pollution will be required due to the close proximity of the site to the A4.

Highways England have said that the site would need to be developed later in the plan period as the site is required as a site compound for the M4 Smart Motorway scheme until September 2018.

**EUA031** is recommended for allocation. The only negative impact in the SA/SEA resulting from development of this site is due to the Greenfield nature of the site. The development potential of the site has been increased to take into account the density of the existing surrounding development.

**EUA032** is not recommended for allocation, and did not form one of the preferred options. The SA/SEA does not highlight any significant sustainability issues however, the Landscape Character Assessment undertaken for the site states that access to the site from Sulham Hill would have a negative impact on character of the AONB, and an alternative access would need to be provided. No alternative access is possible to the site, and therefore, development of the site would lead to a negative impact on environmental sustainability that could not be mitigated. Other sites recommended for allocation do not have this negative impact and therefore, this site is not recommended for allocation.

**EUA033** is not recommended for allocation, although it was included as a preferred option. The Landscape Character Assessment indicated that development of this site, alongside EUA003/008 would have a negative cumulative impact on the AONB and only one of the sites should be developed. The preferred options consultation raised significant concerns regarding flooding of Long Lane adjacent to the site, at the proposed

access point to the site. During the exceptionally wet weather in January/February 2014 the road was closed for several weeks due to flooding in this location. The Council are content that the existing arrangements are adequate during normal wet weather conditions, but that during exceptionally wet weather the flood can flood, and this would need to be address in order to safeguard the development. A solution is possible, but would involve expensive engineering to raise the road level and provide a culvert for the surface water flow path.

The Council's Highways Development Control Team has also raised concerns about the width of Long Lane and sight lines at the junction of Long Lane and Sulham Hill with additional traffic using the road from the site. Improvements would be required for the development to be considered acceptable.

These highways improvement requirements are a constraint on development which the other sites being considered for allocation do not have. While a solution is possible it could impact on viability and deliverability of the site and therefore, the sites are not justified to be taken forward at this stage.

**EUA035** is recommended for allocation. Landscape work carried out on the site as part of the preferred options indicates that part of the site is suitable for development, subject to certain mitigation measures. The SA/SEA has been updated to reflect this, a negative score is now recorded against conserving and enhancing the local distinctiveness of the character of the landscape, however, with the required mitigation there would be a neutral impact on environmental sustainability. The site promoter has confirmed that a suitable access to the site can be provided in line with Manual for Streets.

#### **7.2.2.2 Theale**

Theale is a rural service centre located to the east of West Berkshire. Theale has a wide range of shops and businesses that need to be maintained an enhanced. The Village is located along the A4, adjacent to junction 12 of the M4 and the A340 to Pangbourne. There is also a railway station linking the village to Reading and London to the east and Newbury to the west.

The river Kennet and the Kennet and Avon canal flow to the south of the village. Much of the land to the south and east of the village is within flood zone 2. Flood zone 3 does not extend north of the railway line. The AONB is to the north east of the village.

13 sites were promoted through the SHLAA process, five sites were assessed as potentially developable, three sites were promoted for employment, rather than housing sites. None of the potentially developable sites were excluded through the automatic exclusion, and so were considered reasonable alternatives for development.

An SA/SEA was undertaken for all these sites to inform the site selection work and the subsequent selection of preferred options. The table below outlines the findings of the site specific SA/SEAs and details from the preferred options, and following the consultation. ~~whether or not the site are being taken forward as preferred options.~~

#### Preferred options consultation responses:

- Theale general – 47 responses
- THE001 – 81 responses
- THE003 – 66 responses
- THE005 – 72 responses
- THE009 – 70 responses
- Rejected sites – 4 responses

Table 18 – Summary of Theale Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
<p>THE001</p> <p>Former Sewage Works, Theale</p> <p><del>138</del> <u>90</u> dwellings (<del>3.45ha at 40dph</del>)</p>	<p><b>Overall the site has an unknown effect on sustainability. The SA/SEA does not highlight any significant sustainability effects.</b></p> <p>The site is close to local services and facilities within Theale, with good opportunities for walking, cycling and public transport all giving the site a positive score in terms of sustainability. <a href="#">The Landscape Assessment for the site has indicated that only part of the site would be suitable for development, with significant buffers required to mitigate the impact on the AONB.</a> The site is a brownfield site, on previously contaminated land, meaning that development of the site could have a positive impact on soil quality and improve the character of the area. The site is close to the M4 which, without appropriate mitigation could lead to significant noise and air quality issues and a knock-on effect on sustainability. The site is also at risk from flooding, from a number of sources, which without appropriate mitigation would lead to a negative impact on sustainability. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a></p>	<p><b>Effect:</b> Predominantly unknown</p> <p><b>Likelihood:</b> High</p> <p><b>Scale:</b> Eastern Area</p> <p><b>Duration:</b> Permanent</p> <p><b>Timing:</b> Short to Long term</p>	<p><b>The site is recommended as an option for allocation for approximately 90 dwellings</b></p> <p>The site is close to local services and facilities within Theale. The site area has been reduced to take into account the area of the site within flood zone 2.</p> <p>Access to the site is an issue and would need to be resolved.</p>	<p><b>The site is not recommended for allocation.</b></p> <p><a href="#">There are significant concerns regarding access to the site, as additional land would be required along Blossom Lane to provide adequate access.</a></p> <p><a href="#">The site is poorly related to the existing settlement and the landscape assessment states that buffers would be required to the edge closest to the settlement, further separating the site from the existing settlement.</a></p>
<p>THE002</p> <p>Whitehart Meadow, Theale</p> <p><del>224</del> <u>225</u> dwellings (<del>5.6ha at 40dph</del>)</p>	<p><b>Overall the site has largely neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects.</b></p> <p>The site is close to local services and facilities within Theale, with good opportunities for walking, cycling and public transport all giving the site a positive score in terms of sustainability. The site is close to the M4 which, without appropriate mitigation could lead to significant noise and air quality issues and a knock-on effect on sustainability. The site is also at risk from flooding, from a number of sources, which without appropriate mitigation would lead to a negative impact on sustainability. <a href="#">The development of the</a></p>	<p><b>Effect:</b> Predominantly neutral</p> <p><b>Likelihood:</b> High</p> <p><b>Scale:</b> Eastern Area</p> <p><b>Duration:</b> Permanent</p> <p><b>Timing:</b> Short to Long term</p>	<p><b>The site is not recommended for allocation</b></p> <p>The site is adjacent to the M4 meaning noise and air quality issues on the site. A pylon is located in the centre of the site.</p> <p>The Environment Agency strongly recommends that this site is not allocated as 90% of the site is in flood zone 2.</p>	<p><b>The site is not recommended for allocation.</b></p> <p><a href="#">A sequential test would be required to allocate the site. Other suitable sites with a lower risk of flooding are available in Theale and across the district, so the Council would be unable to carry out the sequential test.</a></p>

Table 18 – Summary of Theale Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
	<a href="#">site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>			
THE003  North Lakeside, The Green, Theale  42-15 dwellings (1.4ha at 30dph)	<b>Overall the site has largely neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects.</b> The site is close to local services and facilities within Theale, with good opportunities for walking, cycling and public transport all having a positive impact on sustainability. <a href="#">The Landscape Assessment on the site has indicated that only part of the site would be suitable for development, with significant buffers required to mitigate the impact on the AONB.</a> There is a small risk of surface water flooding on the site, which could have a negative impact on sustainability without appropriate mitigation measures. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> Eastern Area <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>The site is recommended as an option for allocation</b> The site is well related to the existing settlement, close to local services and facilities within Theale.	<b>The site is recommended as an option for allocation for approximately 15 dwellings</b> <a href="#">The developable area of the site has been reduced in size after a Landscape Assessment was carried out for the site and concluded that only a smaller area of the site would be suitable for development.</a>
THE005  Land at junction 12, Theale  45-50 dwellings (3.86ha at 40dph)	<b>Overall the site has largely neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects</b> The site is close to local services and facilities within Theale, with good opportunities for walking, cycling and public transport. All having a positive impact on sustainability. There are a number of potential negative impacts on sustainability, unless mitigation measures are introduced. The site is close to the M4/A4 motorway junction, which would lead to noise and air quality issues. Development of the site would also reduce the gap between Calcot and Theale which would have an impact on environmental sustainability. Development of a small area of the site	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> Eastern Area <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>The site is recommended as an option for allocation for approximately 50 dwellings</b> The site is well related to Theale and close to local services and facilities. Development of a small part if the site reduces the impact on some of the negative factors impacting on the site and would help to improve the pedestrian / cycle route along High Street between Theale	<b>The site is not recommended for allocation</b> <a href="#">The Council cannot carry out the required sequential test as other sites, with a lower flood risk, are available in the area. Therefore, the site cannot be allocated for development.</a>

Table 18 – Summary of Theale Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
	adjacent to Theale itself would help to mitigation these impacts, along with other mitigation measures that could be considered. Flood risk is an issue on the site and could have a negative impact on sustainability without appropriate mitigation measures. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>		and Calcot.	
THE009  Field between A340 and The Green  125–70 dwellings (3.17ha at 30dph)	<b>Overall the site has largely neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects</b> The site is close to local services and facilities within Theale, with good opportunities for walking, cycling and public transport, all of which have a positive impact on sustainability. <a href="#">The Landscape Assessment on the site has indicated that only part of the site would be suitable for development, with significant buffers required to mitigate the impact on the AONB.</a> The site is adjacent to the AONB, meaning there could be a negative impact on the character of the landscape and environmental sustainability. Mitigation measures should reduce this impact. The site is also at risk from flooding, with some evidence of flooding having taken place. Flooding can impact negatively on sustainability, but mitigation measures work to reduce this impact. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> Eastern Area <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>The site is recommended as an option for allocation</b> The site is close to local services and facilities in Theale. There are no significant issues on the site that could not be overcome.	<b>The site is recommended as an option for allocation for approximately 70 dwellings</b> <a href="#">The developable area of the site has been reduced in size after a Landscape Assessment was carried out for the site and concluded that only a smaller part of the site would be suitable for development.</a>

### Site selection summary

The SA/SEA shows that all the sites are likely to have a predominantly neutral effect on sustainability. None of the sites have any significantly negative impacts. [At preferred options four sites were recommended as options for development \(THE001, THE003, THE005 and THE009\), with one](#)

site being rejected (THE002). Following the preferred options consultation two sites are recommended for allocation (THE003 and THE009) but for a smaller amount of development, with THE001 and THE005 being rejected.

THE001 was a preferred option, but is no longer recommended for allocation. While the SA/SEA does not show any significant effects on sustainability, there are a number of concerns regarding access to the site and the relationship of the site to the existing settlement of Theale. There is limited scope for improving the accessibility to the site along Blossom Lane, without acquiring third party land. The Landscape Assessment carried out for the site states that part of the site would be suitable for development, but requires landscaping on the boundaries of the site, inducing the boundary with the existing open space to the south of the site. Therefore, the site, which is already detached from the existing residential development, would be further removed and screened from the settlement.

THE002 was not has not been recommended for allocation at preferred options and that remains the recommendation. due to the site's location adjacent to the M4 and the fact that high voltage cables cross the site, with a pylon located in the centre of the site. The SA/SEA indicates a number of potential negative sustainability impacts in terms of potential for air and noise pollution, due to the proximity of the site to the M4 and flood risk on the site. The Environment Agency has strongly recommended that the site is not allocated as 90% of the site is located within flood zone 2. If the site was to be allocated then a sequential test would be required, but as other suitable sites are available for development the Council would be unable to carry out this assessment. It is noted that the site promoter has lodged a flood map challenge with the Environment Agency, but no changes have been made to the flood zones at this time. In line with the sequent approach other sites, where there is no flood risk, or a lower risk of flooding, are considered for allocation before sites where there is a risk of flooding. High voltage cables also cross the site, with a pylon located in the centre of the site. While this is not a showstopper in terms of actually preventing development it does result in an amenity impact that other sites in the area do not have.

All other sites in Theale have been recommended as options for allocation, with the final recommendation for allocation coming following the consultation.

THE003 and THE009 have few potential negative impacts highlighted in the SA. They are well related to the settlement, close to local services and facilities, and any potential negative impacts could be mitigated against. THE001 and THE005 have more potential negative sustainability impacts due to their location in flood zone 2 and the proximity of the M4, and or, A4 to the sites. Mitigation measures would be possible, but more would be required that for THE003 and THE009. Flood risk at THE001 could be mitigated by only allocating part of the site, outside the flood zone, in line with the sequential approach and advice from the EA.

THE003 was a preferred option and part of the site is recommended for allocation. The SA/SEA does not show any significant sustainability impacts, and overall the effect is considered to be predominantly neutral. Landscape assessment work carried out on the site indicates that part of the site is suitable for development, with adequate mitigation being provided to protect the setting of the AONB. The landscape assessment requires a 10m buffer to the lake, which significantly reduces any potential flood risk on the site.

Part of THE005 was a preferred option, but is no longer recommended for allocation. The SA/SEA does not highlight any significant sustainability issues, although there are a number of potential impacts due to the location of the site adjacent to the M4 and A4 and the flood risk on the site. The

site is largely located within flood zone 2, with a small part of the site in flood zone 3. The Environment Agency requires any allocation for development in a flood zone to be subject to a sequential test. Other suitable sites are available across the District and therefore, the sequential test cannot be carried out.

THE009 was a preferred option and part of the site is recommended for allocation. The SA/SEA does not highlight any significant negative effects. The site is located within the setting of the AONB, and therefore, there would be a potential negative effect on environmental sustainability in terms of the impact on the setting of the AONB. Landscape Assessment work states that approximately half of the site would be suitable for development, with the remaining western part of the site being retained as an open landscape buffer between the edge of the village and Englefield Park. With the mitigation proposed, including the smaller site area it is unlikely that there would be a negative impact on the AONB.

### **7.2.3 East Kennet Valley Spatial Area**

#### **7.2.3.1 Burghfield Common**

Burghfield Common is one of the two Rural Service Centres within the East Kennet Valley spatial area and will be a focus for development within this area because of the range of services and facilities available.

The Atomic Weapons Establishment (AWE) has a base to the west of Burghfield Common and the village falls within the middle and outer consultation zones.

There are several environmental assets in Burghfield Common – there are local wildlife sites immediately north and south of the settlement boundary and areas of ancient woodland scattered around the eastern part of the village.

13 sites were promoted through the SHLAA process and 10 of these sites were assessed to be potentially developable within the SHLAA. Two were ruled out through the automatic exclusion part of the site assessment criteria because of significant environmental constraints (BUR003) and poor relationship to the settlement (BUR009). A further site was taken out of the site selection process (BUR017) because it falls within the settlement boundary ~~where there is a presumption in favour of development it~~ and has planning permission (14/03422/FLUEXT). Another site was subsequently withdrawn. The remaining 9 sites were considered reasonable alternatives for development and so a SA/SEA was undertaken on these sites to inform the site selection work and the subsequent selection of preferred options. The consultation on the preferred options, and further technical work has informed which sites will be taken forward for allocation in the proposed submission DPD.

Two sites were submitted through the preferred options consultation. One was automatically excluded as it is not adjacent to the Burghfield Common settlement boundary, and would result in development of a scale not in keeping with the role and function of the rural service centre (BUR018). The second site, originally formed part of BUR002, but the landowners have requested that the site be considered independently as part of the settlement boundary review (BUR019) rather than as part of BUR002. The site was promoted for up to 4 dwellings, and therefore, was automatically excluded from the site selection process.

The table below outlines the findings of the site specific SA/SEAs and details whether or not the sites are being taken forward [for allocation as well as setting out the recommendation from the](#) as preferred options [stage](#).

[Preferred Options consultation responses:](#)

- [Burghfield Common – 14 responses](#)

25 6 dwellings (0.86 at 30dph)	<a href="#">the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>	Long term		
BUR004  Land opposite 44 Lamden Way, Burghfield Common  10 dwellings (0.32ha at 30dph).	<b>Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.</b> The site would have a positive impact on sustainability in terms of access to local services and facilities, including access to the countryside and for opportunities to use walking, cycling and public transport. The site is not at risk from flooding, which is also positive in terms of sustainability. There are potentially negative impacts from the site being greenfield. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> East Kennet Valley <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>The site is recommended for allocation, with BUR002 and BUR002A.</b> The site is well related to existing services and facilities, close to local services and facilities. There are no significant issues on the site.	<b>The site is recommended for allocation as part of BUR002.</b> <a href="#">No additional information submitted at preferred options to change recommendation</a>
BUR005  Land between Reading Road and Gully Copse, Burghfield Common  70 4 dwellings (2.35ha at 30dph)	<b>Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.</b> The site is quite close to local services and facilities, although is on the very edge of the village. There are opportunities for walking, cycling and using of public transport. The extension of the village outside the existing building line could have a negative impact on social sustainability, but changing the character of the village.	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> East Kennet Valley <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>The site is not recommended for allocation.</b> The site is not as well related to the existing settlement pattern as other sites within the village. Development of the site would extend the village well beyond the existing building line	<b>The site is not recommended for allocation.</b> <a href="#">No additional information submitted at preferred options to change recommendation</a>
BUR006  Land adjacent to Bolt Hole, Hollybush Lane,	<b>Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.</b> The site will have positive impacts in relation to access to local services and facilities and opportunities for walking, cycling and public transport. There are potential negative	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> East	<b>The site is not recommended for allocation.</b> The site is well related to the village, close to the infant and secondary schools as well as other local facilities. However,	<b>The site is not recommended for allocation.</b> <a href="#">No additional information submitted at preferred options to change recommendation</a>

Table 19 Summary of Burghfield Common Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification for proposed submission
Burghfield Common  60 58 dwellings (1.92ha at 30dph)	impacts on environmental sustainability in relation to protected species on the site, mitigation measures would be required to minimise this impact. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>	Kennet Valley <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	development of the site would extend the village to the west, and without other neighbouring sites being developed this would extend the village's building line.  The site is unpopular locally and other sites within the village are seen as preferable to this one.	
BUR007  Land adjoining Man's Hill, Burghfield Common  <a href="#">Firlands Farm, Hollybush Lane, Burghfield Common</a>  <del>600 dwellings</del> (20ha at 30dph) <a href="#">300 dwellings</a>	<b>Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.</b> The site is well related to the existing settlement with good access to local services and facilities which has a positive impact on sustainability. Opportunities for walking, cycling and public transport are also positive in terms of sustainable travel. There are potential negative impacts on environmental sustainability in relation to protected species on the site. Mitigation measures would be required to minimise this impact. There is a negative impact on sustainability as the site is greenfield. Mitigation measures, including good design methods, would help to reduce this impact. The site as a whole is very large, and so in many cases the level of the impact would depend on the size of development taking place. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> East Kennet Valley <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>The site is not recommended for allocation.</b> The site is well related to the village, close to the infant and secondary schools as well as other local facilities. However, development of this site would extend the village to the west. Development potential on the site is greater than is required for Burghfield Common, as a Rural Service Centre within the Settlement Hierarchy.  The site is unpopular locally and other sites within the village are seen as preferable to this one.	<b>The site is not recommended for allocation.</b> <a href="#">No additional information submitted at preferred options to change recommendation</a>  <a href="#">Development of the whole site is not considered of an appropriate scale of development for the role and function of Burghfield Common as a rural service centre.</a>  <a href="#">Despite submitting a planning application for up to 129 dwellings (revised to 90 dwellings on appeal) the site promoter has made it clear they would like to see up to 300 dwellings on the site.</a>  Part of the site has been granted planning permission for up to 90 dwellings on appeal. <a href="#">The Council are challenging the decision.</a>

Table 19 Summary of Burghfield Common Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification for proposed submission
<p><a href="#">BUR007A</a>  <a href="#">Firlands Farm,</a>  <a href="#">Hollybush</a>  <a href="#">Lane,</a>  <a href="#">Burghfield</a>  <a href="#">Common</a></p> <p><a href="#">Planning application 14/01730/OUT MAJ</a> for 129 dwellings. Farm, Clay Hill Road, Burghfield Common  287 dwellings (9.56ha at 30dph)  <u>Approx. 100 dwellings</u>	issues. The site is close to local services and facilities with opportunities for walking, cycling and public transport all of which have a positive impact on sustainability. There is a potential negative impact on environmental sustainability without appropriate ecological mitigation measures. <a href="#">The site is greenfield which has a negative impact on environmental sustainability. Mitigation measures such as good design techniques would help to mitigate this impact. Housing development contributes towards economic sustainability during the construction stage of the site and through the lifetime of the development as it will provide a workforce and increased population using local economies. Housing development contributes towards economic sustainability in the short term during the construction stage of the site it is not seen to promote key business sectors and business development in the longer term. Development of this site would result in the loss of agricultural land. The land owner has stated that mitigation in the form of additional land elsewhere close to the farm could be provided if required, however, this gives an uncertain sustainability impact.</a>	High <b>Scale:</b> East Kennet Valley <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	existing settlement, close to local services and facilities. There are no significant issues on the site.	<a href="#">on the site, and development of part of the site is considered appropriate.</a>

### Site selection summary

[No significant changes have been made to the SA/SEA assessment itself as a result of the consultation; however the comments have provided further information about the sites which has helped to refine the details of the sites proposed for allocation.](#)

[Following the preferred options consultation two sites are recommended for allocation, with six sites being rejected. One site has been granted planning permission on appeal since the preferred options consultation, although the Council are challenging the decision.](#)

~~The SA/SEAs of the specific sites for Burghfield Common highlighted that all 11 sites assessed in the SHLAA as potentially developable had predominantly neutral effects and none had any significant effects.~~

**BUR005** and **BUR008** are not considered suitable for development because they are not as well related to the settlement pattern as other sites in Burghfield Common (for example BUR002, BUR002a, BUR004 and BUR015) and development would extend the village well beyond the existing building line. Furthermore, site BUR008 is rural in nature and development would have an impact on the landscape character and the character of the

built environment. Development of the whole site would be out of keeping with the village's role and function within the settlement hierarchy. This would have a negative impact on the character of the built environment, with a possible negative effect on environmental sustainability. However, careful design and smaller site areas could reduce the impact.

**BUR008** lies within an area of surface water flood risk. As highlighted in the table above, flooding has the potential to impact upon all elements of sustainability, and mitigation includes choosing sites that are not at risk of flooding. BUR002, BUR002a, BUR004, BUR005, BUR006, BUR009, BUR011 and BUR015 are not at risk of flooding. There are access concerns with BUR008; however these can be mitigated against by way of road impacts thus reducing the negative environmental effect. It is for these reasons that BUR005 and BUR008 are not recommended for allocation. [A planning application was submitted for BUR008, refused and dismissed on appeal \(March 2015\). An application for a smaller site has now been submitted \(August 2015\). The reasons for rejecting the site are considered to be the same whether the whole site, or part of the site is considered for development.](#)

**BUR006, BUR007** and **BUR011** have a number of positive effects – they are well related to the existing settlement and close to local facilities. However development would extend the village to the west, well beyond the existing building line, resulting in a negative impact on the character of the built environment, with a possible negative effect on environmental sustainability. Whilst mitigation could reduce the impact to some degree, to overcome the out of keeping extension to the west, additional sites to the west would need to be found. There is a further negative effect on environmental sustainability due to the presence of protected species on both BUR006 and BUR007 and a wetland on BUR011, although mitigation would reduce the impact. BUR007 is at risk of surface water flooding. It is for these reasons that the sites are [not reasonable alternatives for considered unsuitable for development and are not being recommended for allocation. Planning permission has been granted on appeal for part of BUR007 however, this is currently being challenged by the Council. Through the preferred options consultation the site promoters requested that the smaller site area be considered. The smaller site was reassessed for the planning appeal, and did not show any significant differences from the consideration of the whole site. As the appeal outcome is being challenged, it is necessary to assess the smaller scheme.](#)

**BUR002, BUR002A, BUR004** and **BUR015** have been recommended for allocation and have a number of positive impacts in terms of sustainability due to their location close to local services and facilities. ~~All four sites~~ [None of the sites](#) are not at risk of flooding, which ~~has~~ [gives](#) a neutral impact upon sustainability. There are potential negative environmental sustainability impacts on all sites in relation to the greenfield nature of the sites. Furthermore, BUR002 and BUR015 have potential negative environmental sustainability impacts as a result of ecology constraints; however mitigation measures can reduce the impacts. [The site promoters for BUR002/002A/004 have confirmed that no development would take place on the wooded parts of the site, which will help to further reduce the potential negative impact on environmental sustainability. The development potential for BUR002/002A/004 has been reduced to take into account the need to preserve the existing woodland on the site.](#)

[BUR019 was originally promoted as part of BUR002, 002A, 004, but at preferred options the site promoter requested that the site be excluded from the larger group and considered as part of the settlement boundary review. The site has a development potential of less than 5 dwellings, and meets the settlement boundary review criteria, and therefore, will be included within the settlement boundary.](#)

### 7.2.3.2 Mortimer

Mortimer is one of the two Rural Service Centres within the East Kennet Valley spatial area and will be a focus for development within this area because of the range of services and facilities available.

There is a train station to the east of Mortimer which provides connections to Reading and Basingstoke. The village is served by a regular bus service to Tadley, Burghfield, ~~Mortimer rail station~~ and Reading. There are local wildlife sites immediately north of the settlement boundary and one south of the recreation ground in the centre of the village.

Stratfield Mortimer Parish Council are producing a Neighbourhood Plan.

Seven sites were promoted through the SHLAA process and four of these sites were assessed to be potentially developable within the SHLAA. Two were ruled out through the automatic exclusion part of the site assessment criteria because of TPOs across the whole of site (MOR002) and a poor relationship to the settlement (MOR007). A further site was taken out of the site selection process (MOR004) because it has planning permission. The remaining four sites were considered reasonable alternatives for development and so a SA/SEA was undertaken on these sites to inform the site selection work and the subsequent selection of preferred options.

[The Preferred Options consultation asked for comments on two options for allocating sites in Mortimer.](#)

- [Option 1, through the Neighbourhood Development Plan \(NDP\).](#)
- [Option 2 where the Council would allocate the site/s, with two preferred options sites to be considered if the Council were to allocate sites](#)

[The consultation responses gave significant support for the allocation of sites to come through the NDP.](#)

[The Council propose to allocate Mortimer Parish Council, approximately 110 dwellings, allowing them to choose the specific site to allocate through the NPD. At this stage the Council do not proposed to allocate a site in Mortimer. However, should the NDP not come forward within 2 years of the adoption of the DPD, the council would look to step in and allocate a site or sites within the village.](#)

The table below outlines the findings of the site specific SA/SEAs and details whether or not the sites are being taken forward as preferred options.

[Preferred Options consultation responses:](#)

- [Mortimer General – 36 responses](#)
- [MOR005 – 12 responses](#)
- [MOR006 – 29 responses](#)
- [Rejected sites – 7 responses](#)

Church of England Schools, Victoria Road, Mortimer  477-110 dwellings (5.89ha at 30dph)	on the site, which could have a negative impact unless appropriate mitigation measures are implemented. Mitigation would also be required in terms of ecology and biodiversity to ensure there would not be a negative impact on environmental sustainability. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>	Kennet Valley <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	facilities within the village. Access issues would need to be resolved.	
MOR008  Land at north east corner of Spring Lane, Mortimer  15 dwellings (0.5ha at 30dph)	<b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects.</b> There are a number of positive impacts as the site is close to local services and facilities and well related to existing development. The main negative impact of the site is that there is a risk and history of surface water flooding. Mitigation measures could help to reduce this risk. <del>The NPPF sequential test requires that where there are options without a risk of flooding these are considered before sites with a risk of flooding.</del> Development without appropriate mitigation could also have a negative impact on ecology and biodiversity. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> East Kennet Valley <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>The site is not recommended for allocation.</b> While the site is well related to existing services and facilities and well related to existing development surface water flooding is a concern. There are other sites within the village which do not have the same level of flood risk, or history of flooding which are considered more appropriate for development in line with the sequential approach.	<a href="#">Mortimer's NDP will allocate a site, or sites, for development.</a>

### Site selection summary

[It has been agreed that the allocation of sites in Mortimer will be done through the Neighbourhood Development Plan. Therefore, there is no need for the council finalise the site selection process as this will be done through the NDP.](#)

The SA/SEAs of the specific sites for Mortimer highlighted that all four sites assessed in the SHLAA as potentially developable had predominantly neutral effects and none had any significant effects.

Sites MOR005 and MOR006 have been recommended for allocation. Both sites are well related to the existing settlement and local services and facilities thus having a positive impact in terms of sustainability. There are potential negative environmental effects for both sites; however the effect can be reduced through mitigation. MOR005 is adjacent to trees that are protected by Tree Preservation Orders (TPOs), and there are TPOs to the west of site MOR006. Appropriate buffers will therefore be required between the trees and any development.

MOR006 is near to a site with Great Crested Newts, so an extended phase 1 habitat survey will be required. Parts of MOR005 and MOR006 are within areas at risk from surface water flooding – the southern half of MOR005 and two narrow sections of MOR006. There is no evidence of flooding on MOR006, but with appropriate design and mitigation measures, including SUDs, this impact would be minimised.

MOR001 was not considered suitable for development because of the impact that development would have upon the character of the landscape, with a possible negative effect on environmental sustainability. For this reason the site was not considered suitable for allocation, particularly because there are sites in Mortimer that would have a lesser impact on the landscape. The site also has a potential negative effect on environmental sustainability because it is a greenfield site, however all of the potentially developable sites in Mortimer are greenfield.

Whilst development of site MOR008 would not impact upon the landscape and the site is well related to the existing settlement and the local services and facilities contained within it the site is at risk and has a history of surface water flooding. Flooding has the potential to impact upon all elements of sustainability, and mitigation includes choosing sites that are not at risk of flooding. For this reason, the site is not considered suitable for allocation because there are other sites within Mortimer that are not at risk of flooding.

### **7.2.3.3 Aldermaston**

Aldermaston is one of West Berkshire's service villages and sits within the East Kennet Valley spatial area. One of the Atomic Weapons Establishment sites is located in Aldermaston, therefore, the village is located within the inner consultation zone. The presence of AWE limits the development potential in the village, despite the village being designated as a service village in the Core Strategy.

Three sites were promoted through the SHLAA process, none of which were assessed as potentially developable. One site already had planning permission, and the other two were assessed as not currently developable, due to their proximity to AWE.

Therefore, no sites in Aldermaston are recommended for allocation.

### **7.2.3.4 Woolhampton**

Woolhampton is one of West Berkshire's service villages and sits within the East Kennet Valley spatial area. As a service village, Woolhampton is suitable only for a limited amount of development due to the more limited range of services available.

The A4 runs through Woolhampton and there is a railway station within the village. Woolhampton is served by a frequent bus service that runs along the A4 connecting the village with Newbury and Reading.

The River Kennet and the Kennet and Avon Canal runs to the south of Woolhampton, and the area immediately [to the](#) south, west and east of the existing settlement boundary lies within flood zones 2 and 3.

There are a number of important environmental assets within Woolhampton. There are areas of ancient woodland to the north and west of the existing settlement boundary, two Local Wildlife Sites (one to the north of the settlement boundary and a second to the west of the settlement just north of the A4), and two SSSI's to the south and west of the settlement boundary.

Five sites were promoted through the SHLAA process, and four were assessed to be potentially developable within the SHLAA. site WOOL004 was excluded because the whole of the site falls within flood zone 3 which is grounds for automatic exclusion. A sixth site (WOOL006) was submitted after the initial finalisation of the SHLAA in December 2013, and this [but](#) was assessed to be potentially developable. A SA/SEA was subsequently undertaken on these five sites to inform the site selection work and detail whether or not the sites are being taken forward [for allocation, as well as setting out the recommendations from the](#) as preferred options [stage](#).

The table below outlines the findings of the site specific SA/SEAs and details, [from the preferred options and](#) whether or not the sites are being taken forward [for allocation](#). as preferred options.

[Preferred options consultation responses:](#)

- [Woolhampton general – 4 responses](#)
- [WOOL001 – 12 responses](#)
- [WOOL006 – 11 responses](#)
- [Rejected sites – 2 responses](#)

<b>Site details</b>	<b>Summary of SA/SEA of site</b>	<b>Summary of effects</b>	<b>Recommendation and justification as a preferred option</b>	<b>Recommendation and justification as site for allocation</b>
WOOL001  Land north of Bath Road, Woolhampton  20 dwellings (0.66ha at 30dph)	<b>Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.</b> There are no significant sustainability effects on the site, and in many cases development on this site will not have an impact on the sustainability objectives. The proximity of the site to local services and facilities will bring sustainability benefits – the site will encourage active healthy lifestyles and opportunities for walking, cycling and public transport. The site could potentially have a negative impact on environmental sustainability in terms of biodiversity unless appropriate mitigation measures are provided to protect the adjacent designated areas. The proposals for the site have taken this into account, so it is anticipated that this potential negative impact would be neutralised with mitigation. The	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> East Kennet Valley <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>The site is recommended as an option for allocation (as an alternative to WOOL006).</b> The site is well related to the existing development in Woolhampton, close to local services and facilities. There are no significant issues with the site. Potential negative impacts in relation to biodiversity and noise and air pollution, but this can be overcome and neutralised with mitigation measures.	<b>The site is not recommended for allocation.</b>  <a href="#">The site is not the preferred option of the Parish Council, and is adjacent to ancient woodland. While this could be mitigated it is not a restriction faced by the other site considered for allocation.</a>

Table 21 Summary of Woolhampton Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
	site's proximity to the A4 gives another potential negative impact on social sustainability in terms of air and noise pollution. With appropriate mitigation it is likely that this impact would be required. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>			
WOOL002  Station Yard, Woolhampton  40 dwellings (0.33ha at 30dph)  <5 dwellings.	<b>Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.</b> The site is close to local services and facilities offering positive effects in terms of sustainability and scores positively in terms of health, active lifestyles and opportunities for walking, cycling and public transport. The site is also previously developed land and development of the site could result in an improvement to the soil quality and general character of the area surrounding the site. However, there are potential negative impacts due to the site's location within flood zone 2 and the proximity to the railway line. Flooding has the potential to impact on all elements of sustainability, and air and noise pollution can impact on environmental and social sustainability. Mitigation measures would need to be considered to reduce the impact. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> East Kennet Valley <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>The site is not considered suitable for allocation.</b> While the site is well related to the existing settlement and close to local services and facilities. Access to the site and the risk of flooding mean that the site is not considered suitable for allocation	<b>The site is recommended for inclusion within the settlement boundary.</b>  <a href="#">Taking into account the restricted access to the site and flood risk, there is limited development potential on the site, which means that site is too small for allocation. However, the site does meet the criteria to be included within the settlement boundary.</a>
WOOL003  Land adjoining Woolhampton allotment, Bath Road,	<b>Overall the site is likely to have a negative effect on sustainability.</b> Overall the site is likely to have a neutral effect on sustainability; however the effect on sustainability with flooding is shown to be significantly negative. There is a history of flooding on the site. Mitigation measures could help	<b>Effect:</b> Negative <b>Likelihood:</b> High <b>Scale:</b> East Kennet Valley	<b>The site is not considered suitable for allocation.</b> Most of the site is at risk from flooding, either in flood zone 2 or 3. There is a history of flooding on the site. Other sites	<b>The site is not recommended for allocation.</b> <a href="#">The reasons remain the same as at preferred options stage. The council would be unable to carry out the required</a>

Table 21 Summary of Woolhampton Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
Woolhampton 42 10 dwellings (0.4ha at 30dph)	to reduce the risk of flooding, but they are unlikely to be able to neutralise the impact. While the site scores positively on healthy, active lifestyles and opportunities for walking, cycling and public transport the risk of flooding outweighs the positive impacts the site could have. There are other sites within Woolhampton that are not within flood zone 3 that will be considered for development over and above this site. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>	<b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	within Woolhampton are not at risk from flooding and therefore are considered more suitable sites for allocation in line with the NPPF.	<a href="#">sequential test for the site as there are other sites within Woolhampton that are not within a flood zone.</a>
WOOL005 Land adjacent to Victoria Park, Woolhampton 44 10 dwellings (0.36ha at 30dph)	<b>Overall the site is likely to have a predominantly neutral effect on sustainability and the SA/SEA does not highlight any significant sustainability issues with the site.</b> The site gives opportunities for active, healthy lifestyles due to its proximity to local services and facilities and to the open countryside and canal. The site is well served by public transport, with both bus and train services stopping in the village. All these have a positive impact on sustainability. The location of the site adjacent to the A4 could have a negative impact on social and environmental sustainability. With mitigation and good design this impact could be minimised. The site is also within flood zone 2 and in an area of surface water flood risk, flooding can have a negative impact on all elements of sustainability. Appropriate mitigation can help to reduce this risk, as can considering sites where there is no risk of flooding before those where there is a risk. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>	<b>Effect:</b> predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> East Kennet Valley <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>The site is not considered suitable for allocation.</b> The site is not immediately adjacent to the settlement boundary and therefore is poorly related to the existing residential area	<b>The site is not recommended for allocation.</b> <a href="#">The reasons for rejection at Preferred Options still stand.</a> <a href="#">The council would be unable to carry out the required sequential test for the site as there are other sites within Woolhampton that are not within a flood zone.</a>
WOOL006	<b>Overall the site is likely to have a predominantly neutral</b>	<b>Effect:</b>	<b>The site is recommended as</b>	<b>The site is recommended for</b>

Table 21 Summary of Woolhampton Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
<p>Land to the north of the A4, Woolhampton</p> <p>65 dwellings (2.2ha at 30dph)</p> <p><a href="#">30 dwellings</a></p>	<p><b>effect on sustainability and the SA/SEA does not highlight any significant sustainability issues with the site.</b></p> <p>The site is sustainable in terms of access to local services and facilities including the open countryside for supporting an active, healthy lifestyle and access to education and employment. There are opportunities for walking, cycling and public transport. The site's location next to the A4 means that there could be a negative impact on sustainability in relation to air quality and noise pollution, without appropriate mitigation and design. The site is not at risk from flooding which scores neutrally in terms of sustainability. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a></p>	<p>Predominantly neutral</p> <p><b>Likelihood:</b> High</p> <p><b>Scale:</b> East Kennet Valley</p> <p><b>Duration:</b> Permanent</p> <p><b>Timing:</b> Short to Long term</p>	<p><b>an option for allocation (as an alternative to WOOL001).</b></p> <p>The site is well related to the existing settlement, close to local services and facilities. Development of the whole site would be out of keeping with the role and function of the village within the settlement hierarchy. Potential negative impacts in relation to noise and air pollution, but this can be overcome through mitigation measures.</p>	<p><b>allocation.</b></p> <p><a href="#">Consultation indicated that this was the parish Council's preferred option for development along the A4 (running east/west) rather than north/south. This also takes into account the oil pipeline that runs across the north of the site, ensuring that development would not prevent access to the pipeline should it be required.</a></p> <p><a href="#">Approximately half the site is proposed for development for approximately 30 dwellings. This is considered to be an appropriate amount of development for a service village such as Woolhampton and no additional allocations are necessary.</a></p>

### Site selection summary

[No significant changes have been made to the SA/SEA assessment itself as a result of the consultation; however, the comments have provided further information about the sites which has helped to determine the details of which site is to be allocated.](#)

[Following the preferred options one site is recommended for allocation, with three sites rejected and one site recommended for inclusion within the settlement boundary.](#)

The SA/SEAs of the specific sites for Woolhampton highlighted that four sites (WOOL001, WOOL002, WOOL005 and WOOL006) had predominantly neutral effects with no significant effects. A fifth site,

WOOL003 was appraised to have a negative effect because of a significant risk of flooding on half of the site (Flood Zone 3). Whilst mitigation could help minimise the risk, it would not neutralise the impact. [For this reason the site was not recommended for allocation.](#) Officers therefore,

recommended that WOOL003 was not recommended as a preferred option for allocation, and when discussed with Members at a meeting of Planning Policy Task Group on 6 June 2014, this recommendation was supported. The Environment Agency requires that any site recommended for allocation that is within a flood zone is supported by a sequential test. As alternative options are available in Woolhampton outside the flood zones the Council would be unable to carry out the sequential test for this site. Comments were received from the site promoter as part of the preferred options stating that during the January/February 2014 floods the site did not flood, but this does not change the fact that much of the site is at risk from flooding, and a sequential test would be required for the site to be allocated.

WOOL002 and WOOL005 are also at risk from flooding, being within Flood Zone 2. The SA/SEA indicates a potentially negative impact on all elements of sustainability as a result. While mitigation could be provided to reduce the impact, a sequential test would need to be carried out prior to the allocation of the sites, and as above the Council are unable to carry out a sequential test as there are alternative suitable sites outside the flood zones which can be allocated. It is acknowledged there were some positive effects with WOOL005 in relation to healthy, active lifestyles and opportunities for walking, cycling and public transport, the negative effect of the flooding outweighed the positive effects.

The main difference that separates out sites WOOL001, WOOL002, WOOL005 and WOOL006, is that WOOL002 and WOOL005 Flood Zone 2, and WOOL005 also falls within an area at risk of surface water flooding. As highlighted in the table above, Flooding has the potential to impact upon all elements of sustainability, and mitigation includes choosing sites that are not at risk of flooding. Although

Both WOOL001 and WOOL006 are not at risk of flooding and this has a neutral impact upon sustainability. The risk of flooding coupled with the lack of access and potential contamination of site WOOL002 and the poor relationship of WOOL005 to the settlement boundary led officers to not recommend sites WOOL002 and WOOL006 for allocation. This recommendation was supported by Members at a meeting of Planning Policy Task Group on 6 June 2014.

At preferred option state WOOL001 and WOOL006 were recommended as options to each other, with the final site being chosen for allocation as a result of the consultation. Sites WOOL001 and WOOL006 are both recommended as options for allocation. They are both well related to the existing settlement of Woolhampton, and whilst development has the potential to result in negative environmental effects on sustainability for sites WOOL001 and WOOL006, mitigation measures can ensure that any potential negative impacts are reduced or neutralised. Both sites are located in close proximity to the A4 which could result in noise and air pollution without mitigation measures. WOOL001 could potentially have a negative impact on environmental sustainability in terms of biodiversity due to the ancient woodland adjacent to the site. However, the proposals for the site have taken this into account, so it is anticipated that this potential negative impact would be neutralised with mitigation (i.e. 15 metre buffer between development and the ancient woodland).

Following the consultation WOOL006 comes out as the preferred site for allocation. The Parish Council support the allocation of the site, although request that the developable area of the site is re-orientated to run east-west along the A4, rather than north-south as proposed in the DPD (a view supported by the site promoter). It is thought that extending development along the A4, could help to improve the road safety in the village, by increasing the urban edge along this section of the A4 and slowing traffic down on the approach to the village centre. The re-orientation would also mean that there would be no impact on the oil pipeline that runs across the top of the site, and would also leave a large proportion of the site as green

infrastructure. The consultation raised concerns over the potential impact of development at WOOL001 on flooding of the properties on the opposite site of the A4, due to surface run off along New Road Hill.

WOOL002 is not proposed for allocation, but is recommended for inclusion within the settlement boundary. Access to the site is restricted, and the site is within flood zone 2, therefore, the development potential on the site has been reduced to less than 5 and therefore, would not be allocated. The site meets the criteria for the settlement boundary review, and therefore, will be included within the settlement boundary.

~~Members supported the officer recommendation for sites WOOL001 and WOOL006 to be options for allocation at a meeting of Planning Task Group on 6 June 2014.~~

## **7.2.4 AONB Spatial Area**

### **7.2.4.1 Hungerford**

Hungerford is a rural service centre within the North Wessex Downs AONB. The Core Strategy sets out that in the western part of the AONB development will be focused in Hungerford, as it is the most sustainable rural service centre. Hungerford performs a significant role for a large catchment area. The town centre has a wide range of services and facilities and there are good transport connections. There are a limited number of local bus services, mainly linking Hungerford to Marlborough to the west and a mainline train station with services to Newbury, Reading and London Paddington as well as to the west. The A4 runs to the north of the town and the M4 junction lies approximately 3 miles north of Hungerford. The village of Eddington lies immediately to the north of Hungerford adjacent to the A4 Bath Road.

A number of watercourses flow through Hungerford, with the Kennet and Avon Canal running through the north of the town, and the River Dun to the north west of the town reaching its confluence with the River Kennet to the east of the town. The areas immediately adjacent to these water courses are within flood zone 2 or 3. Much of the land to the north, east and west lies within a groundwater emergence zone.

There are a number of important environmental and heritage assets within Hungerford. Two SSSIs run along the Rivers Dun and Kennet, with a SAC also present to the east of the town between the River Kennet and the A4. There are a number of local wildlife sites to the north east of the town. Hungerford Common lies to the east of the town. The town centre and the centre of Eddington village lie within conservation areas with a number of listed buildings.

~~Twenty four~~ 24 sites were identified in the SHLAA and ~~fifteen~~ 15 were assessed as potentially developable. An additional site was submitted after the publication of the SHLAA in December 2013 and this was assessed as potentially developable. Of these, ~~6~~ 8 were ruled out through the automatic exclusion part of the site assessment criteria, because they were either within the existing settlement boundary (HUN017, HUN018), were Protected Employment Areas (HUN008, HUN012, HUN014, HUN023) Landscape Assessment work indicated an unacceptable impact on the AONB (HUN026), or have potential for less than 5 dwellings (HUN021). The remaining ~~9~~ 14 sites were considered reasonable alternatives for development and an SA/SEA was undertaken for all these sites to inform the site selection work and the subsequent selection of preferred options.

Six sites were consulted on as options for development at the preferred options stage, with five sites being considered as a single site (HUN003, HUN005, HUN006, HUN015, HUN020) and HUN007 being considered as the alternative, consultation responses and further technical work has informed which site will be taken forward for allocation in the proposed submission DPD. The table below outlines the findings of the site specific SA/SEAs and details whether or not the sites are being taken forward for allocation as well as setting out the recommendations from the as preferred options stage.

Preferred Options consultation responses:

- Hungerford General – 11 responses
- HUN007 – 54 responses
- HUN003, 005, 006, 015, 020 (Eddington Sites) – 44 responses
- Rejected sites – 9 responses

<b>Table 22 - Summary of Hungerford Sites SA/SEA</b>				
<b>Site details</b>	<b>Summary of SA/SEA of site</b>	<b>Summary of effects</b>	<b>Recommendation and justification as a preferred option</b>	<b>Recommendation and justification as site for allocation</b>
HUN001  Rear of Westbrook Farmhouse, Smitham Bridge Road  <u>25 26 dwellings (1.31 ha at 20dph)</u>	<b>Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.</b> The site is well located for services, employment and public transport options. There are opportunities for walking and cycling. The site is in close proximity to open countryside and has access to sport and recreational facilities, which would help promote a healthy active lifestyle. There are public transport options in Hungerford and the site is within walking distance of the railway station. All of this means that there would be a positive impact on sustainability. A landscape assessment has concluded that the development could be accommodated subject to mitigation/enhancement measures. Water voles are present in the eastern ditch but could be protected with mitigation. The site is located within a groundwater and surface water flooding area. Flood zones 2 and 3 are present along the eastern boundary. <u>Mitigation in the form of SUDs would be required, and the developable area reduced to take into account the flood zones. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</u>	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> AONB spatial area <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>The site is not recommended for allocation.</b> There is potential to consider a more comprehensively planned development along with HUN008, should this become available following review of Protected Employment Areas. The site is located partly within flood zone 2 and 3 and is subject to a risk from groundwater and surface water flooding. Environment Agency advice is not to allocate for development.	<b>The site is not recommended for allocation.</b> <u>There is potential to consider a more comprehensively planned development to the west of Hungerford in the future including HUN008, HUN028 and HUN022, dependent on decisions made about the future role and function of Hungerford through a review of the spatial strategy. Part of the site is within flood zone 2 and 3, although the site promoter has confirmed that no development would take place within the flood zones. Access to the site is currently a concern as Smitham Bridge Road is very narrow.</u>
HUN003	<b>Overall the site is likely to have a neutral effect on</b>	<b>Effect:</b>	<b>This site is recommended for</b>	<b>The site is not recommended</b>

Table 22 - Summary of Hungerford Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
<p>Hungerford Veterinary Centre, Bath Road, Hungerford</p> <p>5 dwellings (0.25ha at 20dph)</p>	<p><b>sustainability, and the SA/SEA does not highlight any significant sustainability effects.</b></p> <p>The site is reasonably well located for services, education and public transport options, although not as well related as other sites adjacent to Hungerford itself. It is close to employment opportunities to the north of Hungerford, but some distance from schools. There are, however, opportunities for walking and cycling. The site is in close proximity to open countryside. The site is previously developed land being part of the grounds of the Veterinary Centre. All of this means that there would be a positive impact on sustainability. A landscape assessment has concluded that the development could be accommodated subject to mitigation/enhancement measures. Any development would require careful design to respect the site's semi-rural location opposite the Kennet Valley and its role as a part of the gateway to Hungerford.</p> <p>There could be negative environmental impacts from the proximity to the A4 but these could potentially be mitigated by good design. <a href="#">There is a potential negative impact due to the proximity of the site to a SSSI and SAC, mitigation measures would be required to reduce this impact, including screening for HRA at planning application stage should the site be allocated. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a></p>	<p>Predominantly neutral</p> <p><b>Likelihood:</b> High</p> <p><b>Scale:</b> AONB spatial area</p> <p><b>Duration:</b> Permanent</p> <p><b>Timing:</b> Short to Long term</p>	<p><b>inclusion within the settlement boundary.- Sites at Eddington are considered an alternative to a site to the south of Hungerford.</b></p> <p>The site is reasonably well located for access to facilities and services in Hungerford, although not as well related as sites adjacent to Hungerford itself. Table 22 - Summary of Hungerford Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
	retention of the existing tree boundary would be needed <a href="#">to reduce the negative impact on the landscape character. There is a potential unknown impact on biodiversity and geodiversity as further assessment work is required on the site to determine whether there are any protected species on the site. The proximity to the Kennet and Lambourn SSSI and SAC means that HRA screening would be required at planning application stage should the site be allocated for development. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>		created by developing this site, subject to appropriate mitigation measures. The town council preference is for sites to the north of Hungerford which will have less impact on town centre congestion.	<a href="#">Regulations Assessment</a> ,  <a href="#">Transport Assessment work carried out by the Council indicates that traffic levels through Hungerford are likely to be higher as a result of development to the north, due to the distance from Education facilities.</a>
HUN007  Land east of Salisbury Road  100+ dwellings (5.1ha at 20dph)	<b>Overall the site is likely to have a predominantly neutral effect on sustainability and the SA/SEA does not highlight any significant sustainability issues with the site.</b> The site is well located for services, education and public transport options, although the majority of employment facilities are to the north of Hungerford. There are, however, opportunities for walking and cycling. The site is in close proximity to open countryside and has access to sport and recreational facilities, which would help promote a healthy active lifestyle. All of this means that there would be a positive impact on sustainability. The landscape impact assessment of development on this site shows that it would not be appropriate to develop this entire site, and any design would need to incorporate the suggested mitigation. <a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> AONB spatial area <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>Northern part of the site is recommended as an option for allocation in the DPD. Site is considered an alternative to the sites at Eddington.</b> The site is well located for access to facilities and services in Hungerford, particularly to schools. The landscape assessment states that little harm to the AONB would be created by developing this site, subject to limiting the developable area and appropriate mitigation measures.	<b>The site is recommended for allocation for approximately 100 dwellings on the northern part of the site.</b> <a href="#">Additional transport work carried out indicates that the traffic impact on the High Street would be less as a result of development on this site due to the closer proximity to education facilities. There are fewer potential impacts from this site than the other preferred options site (no environmental impact on SSSI/SAC, no economic impact due to loss of employment). Additionally there is more certainty over the deliverability of this site due to the single ownership.</a>
HUN015	<b>Overall the site is likely to have a predominantly neutral effect on sustainability and the SA/SEA does not</b>	<b>Effect:</b> Predominantly	<b>This site is recommended for inclusion within the</b>	<b>The site is not recommended for allocation.</b>

Table 22 - Summary of Hungerford Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
<p>Land at Bath Road, Eddington</p> <p>5.7 dwellings (0.33ha at 20dph)</p>	<p><b>highlight any significant sustainability issues with the site.</b></p> <p>The site is reasonably well located for services, education and public transport options, although not as well related as other sites adjacent to Hungerford itself. It is close to employment opportunities to the north of Hungerford, but some distance from education facilities. There are, however, opportunities for walking and cycling. The site is in close proximity to open countryside. All of this means that there would be a positive impact on sustainability. Development would need careful design in accordance with the recommendations of the Landscape Sensitivity Assessment. <a href="#">The site is adjacent to a BOA and SSSI and close to a SAC, mitigation would be required to ensure the potential negative impacts of development are mitigated. HRA screening would be required at planning application stage. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a></p>	<p>neutral</p> <p><b>Likelihood:</b> High</p> <p><b>Scale:</b> AONB spatial area</p> <p><b>Duration:</b> Permanent</p> <p><b>Timing:</b> Short to Long term</p>	<p><b>settlement boundary. <p>dwelling (0.86ha at 20dph)</p>	<p>walking and cycling. The site is in close proximity to open countryside. The site is previously developed land and there are opportunities for sensitive design to reduce the current visual impacts on this prominent part of the gateway along the A4 into Hungerford. There could be negative environmental impacts from the proximity to the A4 <a href="#">and the SSSI and SAC</a> but these could potentially be mitigated. <a href="#">HRA screening would be required, by good design. Loss of the employment opportunity at the garden centre will have a negative impact on economic sustainability, without an alternative facility being provided (of which there is no evidence to suggest it would be) there is limited scope for mitigation.</a></p>	<p><b>Timing:</b> Short to Long term</p>	<p>employment and public transport options. The site is previously developed land. The landscape assessment states that little harm to the AONB would be created by developing this site, and there is potential for reducing the current visual impact.</p>	<p><a href="#">Kennet and Lambourn SSSI/SAC, with some potential for impact on these protected areas which would require screening for Habitats Regulations Assessment.</a></p> <p><a href="#">Transport Assessment work carried out by the Council indicates that traffic levels through Hungerford are likely to be higher as a result of development to the north, due to the distance from Education facilities.</a></p> <p><a href="#">Allocation of this site would result in the loss of the garden centre and the employment opportunity that this offers. As the site is currently in this usage, this adds an uncertainty over its deliverability.</a></p>
<p>HUN021</p> <p>Five Bar and Grill / The Lamb, Charnham Street, Hungerford</p> <p><a href="#">≤5 dwellings</a> 7 dwellings (0.33ha at 20dph)</p>	<p><del>Overall the site is likely to have a predominantly neutral effect on sustainability and the SA/SEA does not highlight any significant sustainability issues with the site.</del></p> <p>The site is well located for services, employment and public transport options, although educational facilities are to the south of Hungerford. There are, however, opportunities for walking and cycling. The site is in close proximity of open countryside and has access to sport and recreational facilities, which would help promote a healthy active lifestyle. All of which gives a positive sustainability impact. The site is at risk from surface water and groundwater flooding, although with suitable mitigation the potential negative sustainability impact should be minimised.</p>	<p><b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> AONB - Hungerford <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term</p>	<p><del>The site is recommended to be included within revised settlement boundary.</del></p> <p>The site is small and development has already taken place on the part of the site within the settlement boundary. The site is close to local services and facilities in the centre of Hungerford.</p>	<p><b>The site is recommended to be included within revised settlement boundary.</b></p> <p><a href="#">The site has been granted planning permission (on appeal) for 2 dwellings and meets the settlement boundary review criteria.</a></p>

Table 22 - Summary of Hungerford Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
<p>HUN022</p> <p>Land to the west of Salisbury Road, Hungerford</p> <p><del>55.3</del> dwellings (<del>2.63ha at 20dph</del>)</p>	<p><b>Overall the site is likely to have a predominantly neutral effect on sustainability and the SA/SEA does not highlight any significant sustainability issues with the site.</b></p> <p>The site is well located for services, education and public transport options, although the majority of employment facilities are to the north of Hungerford. There are, however, opportunities for walking and cycling. The site is in close proximity to open countryside and has access to sport and recreational facilities, which would help promote a healthy active lifestyle. All of which give a positive impact on sustainability. The landscape assessment indicates that only part of the site would be suitable for development and a number of mitigation measures would be required to ensure development did not have a negative impact on environmental sustainability.</p>	<p><b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> AONB - Hungerford <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term</p>	<p><b>The site is not recommended for allocation.</b></p> <p>The site does not relate as well to the existing residential development as other sites around Hungerford, therefore, other sites are considered more appropriate for allocation</p>	<p><b>The site is not recommended for allocation.</b></p> <p><a href="#">No additional comments were received on this site as part of the preferred options consultation.</a></p> <p><a href="#">There is a concern over access to the site, without development of other sites to the west of Hungerford. The proposed access point to the site is within the area of the site assessed as not suitable for development on landscape grounds.</a></p>
<p>HUN028</p> <p>Land south of Chilton Way, Hungerford</p> <p><del>75.6</del> dwellings (<del>3.78ha at 20dph</del>)</p>	<p><b>Overall the site is likely to have a predominantly neutral effect on sustainability and the SA/SEA does not highlight any significant sustainability issues with the site.</b></p> <p>The site is well located for services, education and public transport options, although the majority of employment facilities are to the north of Hungerford. There are, however, opportunities for walking and cycling. The site is in close proximity to open countryside and has access to sport and recreational facilities, which would help promote a healthy active lifestyle. All of which give a positive impact on sustainability. The site is located in the AONB; without development in line with the recommendations in the landscape assessment there would be a negative impact on environmental sustainability. The site is not located adjacent to the settlement boundary, meaning without other sites being developed the development of this site would have a negative impact on environmental sustainability. The site is within a groundwater emergence zone. Mitigation measures would be required to ensure there would not be a negative impact on all elements of sustainability.</p>	<p><b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> AONB - Hungerford <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term</p>	<p><b>The site is not recommended for allocation.</b></p> <p>The site does not relate as well to the existing residential development as other sites around Hungerford, therefore, other sites are considered more appropriate for allocation</p>	<p><b>The site is not recommended for allocation.</b></p> <p><a href="#">No additional comments were received on this site as part of the preferred options consultation.</a></p> <p><a href="#">There are concerns over access to the site, as it relies on access being provided through a neighbouring site (HUN022), which in itself has access issues due to the reduced developable area on landscape grounds</a></p>

## Site selection summary

The main change since the consultation is that the employment related SA/SEA objective has been added back into the SA/SEA assessment for the sites. This is particularly relevant for Hungerford as development of one of the sites would result in the loss of employment should the site be allocated for housing.

The SA/SEA highlights that of the 10 4 sites considered most had a predominantly neutral effect on sustainability. A number of sites (HUN005, HUN007, HUN022-HUN026) would have a significant environmental impact if the whole site that was proposed were to be developed. The Landscape Sensitivity Assessment has indicated that only parts of these sites would be suitable without harm to the landscape of the AONB. As a result of this, reduced site areas have been considered. The Preferred Options DPD made it clear that the two preferred options consulted on were options, from which the most suitable site, following further technical evidence and consultation, would be taken forward. There was no intention that both sites would be allocated for development.

One of the main concerns of residents of Hungerford is the traffic impact of development on the High Street. Transport Assessment work has been carried out looking at the impact of traffic based on current travel to work/school patterns, which indicates HUN007 is likely to be better in terms of traffic impact as it is closer to education provision and services and facilities in the Town Centre than the Eddington sites (HUN003, 005, 006, 015, 020). The Eddington sites are detached from Hungerford itself, separated from the Town Centre by the River Kennet and Lambourn and the Kennet and Avon canal. The site is adjacent to the Kennet and Lambourn Floodplain SSSI and a Special Area of Conservation (although separated by the A4). While mitigation measures could be provided to minimise the impact, there could be an impact on viability or delivery, which would not be an issue for HUN007 which is not close to any special environmental designations. Development of the Eddington Sites, as a whole, or HUN020 specifically, would most likely result in the loss of the Garden Centre, which generates local employment and is an amenity for the local community. So while the site does contain some brownfield land, development would result in the loss of a local amenity. There are some concerns regarding access to HUN005, as the proposed access point to the site is located outside the area considered acceptable for development by the landscape assessment. Access to this site would need to come through the development of another of the sites to the south. The landscape assessment has also reduced the developable area further since the Preferred Options consultation, reducing the capacity on this part of the site to approximately 30 dwellings. The Council's landscape work indicates that development of the Eddington Sites should not be carried out as a single homogenous group, but each area should be developed independently, to reduce the impact on the AONB. This causes uncertainty as to whether the site can or should be delivered holistically, which could result in piecemeal development in this area. This, together with the fact that parts of the sites are in existing uses does cause doubt as to the quantum of development that can realistically be expected to come forward to boost the Council's land supply in the short to medium term.

There are therefore a number of issues regarding the development of the Eddington Sites, which while not show stoppers, are additional constraints which HUN007 does not have, and could impact on the viability of delivery of the sites in the short term. Therefore, HUN007 is recommended for allocation in the DPD. At preferred options it was suggested that HUN003 and HUN015 could be considered as part of the settlement boundary review. This was not referred to within the Preferred Options DPD text itself, and following a review of the settlement boundaries it is not considered appropriate to include these sites within the revised settlement boundary.

The other potential options for growth are to the west or to the south. **HUN001**, to the west, was not a favoured option. Part of the site is located within flood zone 2 and 3 and Environment Agency advice prior to the preferred options was not to allocate for development. It was also considered that there could be potential to plan a comprehensive development should site HUN008 become available following a review of Protected Employment Areas. Although the site promoter for HUN001 has stated that it is unlikely that the sites could be developed together, this is something that may be considered appropriate in the future. There are concerns regarding access to the site. The access to the site is narrow, where as the access to either of the other preferred sites is from a main road, therefore, achieving appropriate access, and limiting the impact on the immediate road network is easier. There is scope for comprehensive development to the west of Hungerford to be considered in the future dependent on a review of the spatial strategy for the District which will consider Hungerford's future role.

~~A number of sites were submitted adjacent to Eddington. Though these are not as well related to Hungerford as sites adjacent to the town itself, and have potential negative noise and air quality impacts from the proximity to the A4 it was considered that they presented a potential option for the growth of Hungerford. Concern had been expressed that sites further south would impact considerably more on traffic levels through the town centre. To the south of Hungerford site HUN007 is better related to schools and facilities than **HUN022** and therefore has been recommended as an alternative option to sites to the north at Eddington. This site is well related to facilities, particularly schools and the landscape impact could be mitigated with a potential beneficial effect in softening the southern edge of Hungerford.~~

**HUN021** is recommended for inclusion within the settlement boundary. The majority of the site already has planning permission for residential development, and the remainder of the site was granted planning permission (on appeal) in September 2015. The site meets the requirements of the settlement boundary review criteria and will be included within the revised settlement boundary.

**HUN022** and **HUN028** were not recommended as a preferred options. The sites are less well related to the existing development, as are separated from development to the north by the water works, and there are access concerns as a result of the landscape assessment work. The proposed access point to the site is to come through part of the site assessed as not suitable for development on landscape grounds. Therefore, access to the site is restricted unless other sites to the west of Hungerford come forward, which are not considered appropriate at this stage.

~~**HUN026** is not recommended on landscape grounds and because it would be poorly related to the settlement pattern without development of other adjacent sites.~~

#### **7.2.4.2 Lambourn**

Lambourn is a rural service centre within the North Wessex Downs AONB. It serves a more local catchment than Hungerford and there is particular emphasis on the needs of the equestrian industry. The Core Strategy states that more limited development than at Hungerford will take place due the village's comparatively smaller district centre and relative remoteness. There are limited public transport opportunities, with a 2 hourly bus service linking Lambourn to Newbury. There is also an intermittent link to Swindon Railway Station.

The River Lambourn (which is a SSSI) runs flows through the town, but only a very limited area along the watercourse is lies within flood zones 2 or 3. Much of Lambourn, however, lies within a groundwater emergence zone.

There are a number of important environmental and heritage assets within Lambourn and its vicinity. ~~The River Lambourn is a designated SSSI.~~ The core of the town lies within a conservation area with a number of listed buildings.

Eleven sites were identified in the SHLAA and five were assessed as potentially developable. All sites promoted through the SHLAA were considered against site selection criteria, which resulted in six being automatically excluded in accordance with part A of the assessment. The remaining five sites were considered reasonable alternatives for development and so a SA/SEA was undertaken, along with part B of the site assessment, to inform the site selection work and subsequent selection of preferred options. The consultation on the preferred options and further technical work has informed which sites will be taken forward for allocation in the proposed submission DPD. In addition to the remaining five sites one new site was submitted as part of the preferred options consultation and this was also assessed as a reasonable alternative.

~~These were considered reasonable alternatives for development and an SA/SEA was undertaken for these sites to inform the site selection work and the subsequent selection of preferred options.~~

The table below outlines the findings of the site specific assessments/SA/SEAs and details whether or not the sites are being taken forward for allocation as well as outlining the recommendation from the preferred options stage. ~~as preferred options.~~

	<p>Potential negative impacts could occur in relation to the environmental sustainability due to the site's location in the AONB. As long as appropriate mitigation measures are introduced in line with the Landscape <a href="#">Sensitivity</a> Assessment the impact should be mitigated. Flooding could also have a negative impact on all elements of sustainability unless appropriate mitigation measures are provided.</p>			<p><a href="#">the character and form of the settlement and increase pressure for replacement facilities in environmentally sensitive areas.</a></p> <p><a href="#">A revised site area and layout plan was submitted by the site promoter as part of the Preferred Options consultation in order to address the concerns raised through the site assessments. However it is considered that the proposals do not go far enough to address the concerns. The LSA states that the scale of the whole site as assessed related well to the settlement pattern. However it is felt that the revised proposals, whilst addressing concerns over access, are out of character with the existing settlement pattern.</a></p>
<p>LAM005</p> <p>Land adjoining Lynch Lane, Lambourn</p> <p><a href="#">Approximately 60 dwellings (3.06ha at 20 dph)</a></p> <p>56 dwellings (2ha at 20dph)</p>	<p><b>Overall the site is likely to have a <a href="#">predominantly neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.</a></b></p> <p>The site is well related to local services and facilities within the village, including <a href="#">access to the countryside</a>, all of which would enable walking and cycling and promote healthy, active lifestyles which would have a positive impact on sustainability. <a href="#">In addition, the development is close to local employment opportunities provided through the racehorse industry and local services/facilities, which will have a positive impact on economic and social sustainability.</a></p> <p>Potential negative impacts could occur in relation to the environmental sustainability due</p>	<p><b>Effect:</b> Predominantly neutral</p> <p><b>Likelihood:</b> High</p> <p><b>Scale:</b> AONB - Lambourn</p> <p><b>Duration:</b> Permanent</p> <p><b>Timing:</b> Short to Long term</p>	<p><b>Site is recommended for allocation (excluding the area of the site at risk from flooding).</b></p> <p>The site is well related to existing services and facilities within Lambourn. Development can take place on the site without needing to develop the area of the site within the flood zone</p>	<p><b>The site is recommended for allocation</b></p> <p><a href="#">The site is well related to existing services and facilities within Lambourn.</a></p> <p><a href="#">Whilst the site is within the AONB a Landscape Sensitivity Assessment has been carried out and indicates that development on the site would be acceptable in landscape terms, subject to mitigation measures to ensure the protection of existing landscape features. In addition the LSA states that both sites LAM007 and LAM005 could only be developed in part concurrently or either one or</a></p>

**Table 23 – Summary of Lambourn Sites SA/SEA**

Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
	<p>to the site's location within the AONB and the proximity of the site to the SSSI and SAC. As long as appropriate mitigation measures are introduced, including those set out within the Landscape <a href="#">Sensitivity</a> Assessment, the impact should be mitigated <a href="#">and deliver positive effects on sustainability</a>. Flooding could also have a negative impact on all elements of sustainability unless appropriate mitigation measures are provided. <a href="#">Developing outside Flood Zones 2 and 3 will help to reduce the flood risk and potential impact on sustainability</a>.</p>			<p><a href="#">the other selected.</a></p> <p><a href="#">The northern and north eastern part of the site lie within Flood Zones 2 and 3 and within an area of surface water flood risk, whilst the whole site lies within a groundwater emergence zone. No development will take place within the Flood Zones and a Flood Risk Assessment (FRA) will be required to support a planning application, along with implementation of appropriate flood risk mitigation measures.</a></p> <p><a href="#">Development on the site will not adversely affect the SSSI/SAC. A Habitats Regulations Assessment (HRA) will be required to accompany any planning application. The development will need to provide a significant buffer/stand-off between the development and the SSSI/SAC. An extended phase 1 habitat survey would also be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected.</a></p> <p><a href="#">The site has been identified as having a high archaeological potential and therefore further investigation will be required as part of a planning application via an archaeological desk</a></p>

**Table 23 – Summary of Lambourn Sites SA/SEA**

Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
				<a href="#">based assessment as a minimum and field evaluation if necessary.</a>
<p>LAM007</p> <p>Land between Folly Road, Rockfel Road / Bridleways and Stork House Drive, Lambourn</p> <p>24-25 dwellings (1.2ha at 20dph)</p>	<p><b>Overall the site is likely to have a <a href="#">predominantly</a> neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.</b></p> <p>The site is well related to local services and facilities within the village, including <a href="#">access to</a> the countryside, all of which would enable walking and cycling and promote healthy, active lifestyles which would have a positive impact on sustainability. <a href="#">In addition, the development is close to local employment opportunities provided through the racehorse industry and local services/facilities, which will have a positive impact on economic and social sustainability.</a></p> <p>Potential negative impacts could occur in relation to environmental sustainability due to the site's location in the AONB. Mitigation measures in line with the Landscape <a href="#">Sensitivity Assessment</a> should reduce this impact <a href="#">and deliver positive effects on sustainability.</a></p>	<p><b>Effect:</b> Predominantly neutral</p> <p><b>Likelihood:</b> High</p> <p><b>Scale:</b> AONB - Lambourn</p> <p><b>Duration:</b> Permanent</p> <p><b>Timing:</b> Short to Long term</p>	<p><b>Site is recommended for allocation</b></p> <p>The site is located close to local services and facilities within Lambourn</p>	<p><b>The site is not recommended for allocation</b></p> <p><a href="#">Although the site is located close to local services and facilities within Lambourn and relates well to the existing settlement, the site is largely in use as turnout paddocks for the adjacent yard. The equestrian industry plays a vital role within the local rural economy of Lambourn and surrounding areas. As such the loss of the site for housing development would be contrary to policy CS12 of the Core Strategy. Policy CS12 aims to prevent pressure for redevelopment of existing facilities to other uses and the fragmentation of existing sites. Such pressures could lead to the decline of the industry locally, threaten the character and form of the settlement and increase pressure for replacement facilities in environmentally sensitive areas.</a></p> <p><a href="#">Whilst the southern area of the site is used as turnout paddocks the Council's Highways Team have concerns regarding an access onto Folly Road which would impact on the delivery of the northern section of the site. In addition the LSA states that both sites LAM007 and LAM005 could only be developed in part concurrently or either one or the other selected.</a></p>
LAM009	<b>Overall the site is likely to have a</b>	<b>Effect:</b>	<b>The site is not recommended</b>	<b>The site is not recommended for</b>

**Table 23 – Summary of Lambourn Sites SA/SEA**

Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
<p>Land east of Hungerford Hill, Lambourn</p> <p>30 dwellings (1.5ha at 20dph)</p>	<p><b><u>predominantly</u> neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.</b></p> <p>The site is well-related <u>located close</u> to local services and facilities within the village, including <u>and has good access to</u> the countryside, which should have a positive impact on sustainability. <u>However, it is separated from the main core of the village by low density housing to the north and east and could have a negative impact on the built environment.</u></p> <p>There are concerns over road safety <u>and the delivery of an appropriate access</u>, which could have a negative impact on all elements of sustainability unless improvements are made to the highway network <u>and suitable access arrangement implemented</u>. This does also limit opportunity for encouraging walking and cycling, which could reduce the sustainability of the site. <u>In addition, potential negative impacts could occur in relation to the environmental sustainability due to the site's location within the AONB. As long as appropriate mitigation measures are introduced, including those set out within the Landscape Sensitivity Assessment, the impact should be mitigated and deliver positive effects on sustainability.</u> <u>Whilst the site itself is within Flood Zone 1 more than half of the site lies within a Critical Drainage Area, which increases the risk of flooding and could result in negative impacts upon all elements of sustainability. The implementation of appropriate mitigation measures could reduce the impacts of any such negative effects.</u> <u>While the site itself is not at risk from flooding, flood risk within the village is an issue and</u></p>	<p>Predominantly neutral</p> <p><b>Likelihood:</b> High</p> <p><b>Scale:</b> AONB - Lambourn</p> <p><b>Duration:</b> Permanent</p> <p><b>Timing:</b> Short to Long term</p>	<p><b>for allocation</b></p> <p>The site is steeply sloping with potential access and road safety issues. Other sites within the village are considered to have less of an impact on the landscape and built environment.</p>	<p><b>allocation</b></p> <p><u>The site is steeply sloping, resulting in concern over the ability to provide suitable access arrangements and potential road safety issues.</u></p> <p><u>The relationship with the existing settlement is poor, and the site is separated from the main core of the village by low density housing to the north and east</u></p> <p><u>Other sites within the village are considered to have less of an impact on the landscape and built environment.</u></p>

**Table 23 – Summary of Lambourn Sites SA/SEA**

Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
	<p>development here would need to have appropriate SUDs to ensure that development did not lead to worsening flooding elsewhere, as this would have a negative impact on sustainability.</p>			
<p>LAM013</p> <p>Windsor House Paddocks, Lambourn</p> <p>42 dwellings (2.1ha at 20dph)</p>	<p><b>Overall the site is likely to have a <u>predominantly neutral</u> negative effect on sustainability as the SA highlights significant flood risk</b></p> <p><u>The site is well related to local services and facilities within the village, including access to the countryside, all of which would enable walking and cycling and promote healthy, active lifestyles which would have a positive impact on sustainability. In addition, the development is close to local employment opportunities provided through the racehorse industry and local services/facilities, which will have a positive impact on economic and social sustainability. Potential negative impacts could occur in relation to environmental sustainability due to the greenfield nature of the site and it's location in the AONB. Development of the site also has the potential to negatively impact on sustainability due to the flood risk on the site, which gives rise to serious concerns. Mitigation could be considered to reduce the risk of flooding, however historical flooding has been due largely to groundwater flooding, augmented by surface water.</u></p> <p>There is a significant risk of flooding on this site, which could impact negatively on all aspects of sustainability. Mitigation could be considered, but much of the flood risk and history of flooding is a result of groundwater flooding. There are no other significant issues on this site, but the risk</p>	<p><b>Effect:</b> Predominantly <u>neutral</u> negative</p> <p><b>Likelihood:</b> High</p> <p><b>Scale:</b> AONB - Lambourn</p> <p><b>Duration:</b> Permanent</p> <p><b>Timing:</b> Short to Long term</p>	<p><b>The site is not recommended for allocation</b></p> <p>The site suffers from significant flooding, from both ground and surface water sources</p>	<p><b>The site is not recommended for allocation</b></p> <p><u>Whilst the site is well related to the existing settlement, it sits within a groundwater emergence zone, an area of surface water flood risk and a Critical Drainage Area. Council records show that the site flooded in both 2007 and 2014 when severe flooding occurred across West Berkshire. In 2007 the flooding on this site occurred to such an extent that it also flooded the adjacent road (Crowle Road). The risk of flooding and the history of flooding on the site have therefore weighed strongly against the allocation of this site.</u></p> <p><u>Whilst it is appreciated that very often technical solutions can be implemented to reduce the risk of flooding, it is considered that there are alternative sites within Lambourn which are more appropriate for allocation.</u></p> <p><u>The site promoter responded to the Preferred Options consultation and submitted a revised layout plan, which reduced the number of dwellings on the site to 35 and included a large area in the centre of the site for flood</u></p>

**Table 23 – Summary of Lambourn Sites SA/SEA**

Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
	<p>of flooding outweighs the other positive factors on the site.</p>			<p><a href="#">mitigation. This revised layout plan does not reflect the current settlement pattern and further highlights the concern regarding flood risk.</a></p>
<p><a href="#">LAM015</a></p> <p><a href="#">Land adjacent to Newbury Road, Lambourn</a></p> <p><a href="#">Approximately 5 dwellings</a></p>	<p><b><a href="#">Overall there are no significant sustainability issues with this site and it is likely to have a predominantly neutral effect on sustainability.</a></b></p> <p><a href="#">The site is well related to local services and facilities within the village, including access to the countryside, all of which would enable walking and cycling and promote healthy, active lifestyles which would have a positive impact on sustainability. In addition, the development is close to local employment opportunities provided through the racehorse industry and local services/facilities, which will have a positive impact on economic and social sustainability. Potential negative impacts could occur in relation to the environmental sustainability due to the greenfield nature of the site and its location within the AONB. As long as appropriate mitigation measures are introduced, including those set out within the Landscape Sensitivity Assessment, the impact should be mitigated and deliver positive effects on sustainability.</a></p> <p><a href="#">Flooding could also have a negative impact on all elements of sustainability unless appropriate mitigation measures are provided.</a></p>	<p><b><a href="#">Effect:</a></b> <a href="#">Predominantly neutral</a></p> <p><b><a href="#">Likelihood:</a></b> <a href="#">High</a></p> <p><b><a href="#">Scale:</a></b> <a href="#">AONB - Lambourn</a></p> <p><b><a href="#">Duration:</a></b> <a href="#">Permanent</a></p> <p><b><a href="#">Timing:</a></b> <a href="#">Short to Long term</a></p>	<p><a href="#">This site was not appraised as a reasonable alternative at the preferred option stage – new site submission.</a></p>	<p><b><a href="#">Part of the site is recommended for allocation</a></b></p> <p><a href="#">The site is adjacent to the existing settlement boundary and well related to existing services and facilities within Lambourn.</a></p> <p><a href="#">As the site is within the AONB a Landscape Sensitivity Assessment has been carried out and indicates that development on part of the site would be acceptable in landscape terms, subject to mitigation measures to ensure the protection of existing landscape features. It states that the north eastern part of the site would result in harm to the natural beauty and special qualities of the AONB, but the south western part of the site adjacent to the road could be developed subject to a series of requirements set out within the LSA to conserve and enhance the AONB.</a></p> <p><a href="#">The south western part of the site sits within a groundwater emergence zone and therefore a Flood Risk Assessment (FRA) would be required as part of any planning application to demonstrate how all potential sources of flooding, including groundwater flood risk has been taken into account in the design of the development. A</a></p>

Table 23 – Summary of Lambourn Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
				<a href="#">SUDS scheme would need to be implemented to ensure no adverse impact on the River Lambourn SSSI/SAC.</a>

### Site selection summary

[The SA/SEAs do not show any sites to have any significant effects on sustainability; all sites are shown to have a predominantly neutral effect on sustainability.](#)

[No significant changes have been made to the SA/SEA assessment itself as a result of the consultation; however, the comments have provided further information about the sites which has helped to inform and refine the details of the sites proposed for allocation. Following the Preferred Options consultation LAM005 and part of LAM015 are being recommended for allocation in Lambourn.](#)

[As Lambourn is in the AONB the potential impact on the natural beauty of the landscape and the special qualities of the AONB is a paramount consideration when sites are being assessed. A Landscape Sensitivity Assessment \(LSA, 2011 and 2015\) has been carried out on the sites to ensure development would not cause harm to the natural beauty and special qualities of the AONB.](#)

[LAM002A is not recommended for allocation. A revised site area and layout was submitted as part of the Preferred Options consultation. Development of this site would potentially result in the loss of land associated with the racehorse industry, the loss of which would be contrary to policy CS12 of the Core Strategy. In addition, the proposal is out of character with the existing settlement pattern. Other sites within Lambourn are considered to be more appropriate for development.](#)

[LAM005 is recommended for allocation. The site is well related to the existing settlement, close to the centre of the village and can deliver housing without causing harm to the natural beauty and special qualities of the AONB. Development will not take place within flood zones 2 and 3, and a significant buffer will be provided between the SSSI/SAC and any development on the site.](#)

[LAM007 is not recommended for allocation. This site was selected as a preferred option, however through the consultation it has become apparent that the southern part of the site is currently in use as turn-out paddocks for an adjacent racing yard. The loss of the land for housing development would be contrary to policy CS12 of the Core Strategy and cannot be taken forward as an allocation. Whilst the southern part of the site is in use associated with the racehorse industry, concern has been raised regarding access to the northern part of the site which would impact upon delivery.](#)

[LAM009 is not recommended for allocation. The topography of the site raises concern over the ability to achieve suitable access arrangement and the relationship of the site to the existing settlement is poor. Other sites within the village are considered to be more appropriate for development.](#)

LAM013 is not recommended for allocation. The site is located in the centre of the village, with easy access to services and facilities. However, the risk of flooding and the history of flooding on the site have weighed strongly against the allocation of this site. The revised layout plan submitted as part of the preferred options consultation does not reflect the current settlement pattern and further highlights the concern regarding flood risk. Other sites within Lambourn are considered to be more appropriate for allocation.

Part of LAM015 is recommended for allocation. This site was submitted as part of the preferred options consultation and therefore was not previously consulted upon. The south western part of the site adjacent to the road could be developed without resulting in harm to the natural beauty and special qualities of the AONB, subject to the implementation of the mitigation measures set out within the LSA (2015). The site can deliver a low density linear development which reflects the existing settlement pattern.

~~The SA/SEA highlights that of the 5 sites considered most had a predominantly neutral effect on sustainability. Site LAM013 has a significant risk of flooding and has not been recommended for allocation for this reason. There are other potential sites in Lambourn with less flood risk.~~

~~The sites recommended for allocation, LAM005 and LAM007 are well related to the settlement. Though LAM005 includes a small area within flood zone 2 and 3, it is not proposed that development extends this far east on the site. These sites are considered more suitable than LAM002A, where concerns had been expressed regarding traffic and access and LAM009, which also has potential access issues, is steeply sloping and likely to have more impact on the landscape and built environment than the preferred sites.~~

#### **7.2.4.3 Pangbourne**

Pangbourne is a rural service centre within the North Wessex Downs AONB. It is a thriving community which plays an important role as service centre for the eastern areas of the AONB and provides a district centre shopping function with a range of services and facilities. It is served by a mainline station with trains to Reading and London and northwards to Oxford. There are also a number of local bus services. The Core Strategy points out, however, that opportunities for development are constrained by environmental considerations in terms of the floodplain and the sensitivity of the landscape. This will restrict the amount of development to take place at Pangbourne.

Pangbourne is located on the River Thames, which flows to the north of the town. The River Pang flows through the centre of the village. The areas immediately adjacent to these water courses are within flood zone 2 or 3 as is a large area to the south and east of Pangbourne. Much of Pangbourne and the land to the south and east lies within a groundwater emergence zone.

There are a number of important environmental and heritage assets within Pangbourne and its vicinity. Two [Sites of Special Scientific Interest \(SSSIs\)](#) lie to the south east of the village. ~~†~~The village core is a designated conservation area with a number of listed buildings.

Eight sites were identified in ~~through~~ the SHLAA, and two ([PAN001 and PAN002](#)) were assessed as potentially developable [within the SHLAA \(the excluded sites were ruled out for the following reasons – PAN005 and PAN006 both have grant of planning permission for residential development and are located within the settlement boundary, PAN008 is located within the settlement boundary, PAN009 and PAN010 are poorly related to the settlement boundary, and PAN011 is within Flood Zone 3\)](#). These were considered reasonable alternatives for development and an SA/SEA was undertaken for these [two](#) sites to inform the site selection work and the subsequent selection of preferred options. The table below outlines the

findings of the site specific SA/SEAs and details whether or not the sites are being taken forward as preferred options. [for allocation as well as setting out the recommendations from the preferred options stage.](#)

Preferred Options consultation responses:

- [Pangbourne general comments – 1 response](#)
- [PAN001 – 126 responses](#)
- [PAN002 – 132 responses](#)
- [Rejected sites – 1 response](#)

[A petition objecting to the development of both PAN001 and PAN002 for housing was received which contained 217 signatures.](#)

<b>Table 24 - Summary of Pangbourne Sites SA/SEA</b>				
<b>Site details</b>	<b>Summary of SA/SEA of site</b>	<b>Summary of effects</b>	<b>Recommendation and justification as a preferred option</b>	<b><a href="#">Recommendation and justification of site for allocation</a></b>
<p>PAN001</p> <p>Land at Green Lane, Pangbourne</p> <p>36 dwellings (1.8ha at 20 dph)</p>	<p><b>Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.</b></p> <p>Development of this site would not lead to any significant sustainability issues. <del>There are positive impacts on sustainability as the site is close to local services and facilities enabling walking and cycling and the promotion of healthy, active lifestyles. There is potential for a negative impact on environmental sustainability unless the mitigation measures set out in the Landscape Assessment are adhered to. There is no flood risk on the site, which has a positive impact on sustainability.</del></p> <p><a href="#">The site is close to local facilities and services in Pangbourne. The nearest bus stop is located on Pangbourne Hill which is served by a bi-hourly service to Reading and Upper Basildon. Development could provide an opportunity to enhance the bus service. The site therefore scores positively on the social and economic elements of sustainability. The site is in close proximity to open countryside which will help to promote a healthy active lifestyle, and this will further enhance the positive score in relation to social sustainability. Additional traffic could impact upon road safety, and this could be exacerbated due to road widening and the provision of footpaths is not possible. The uncertain impact upon the BAP Habitat could be mitigated against if required. The Landscape Sensitivity Assessment indicates that development on the site would be suitable, although</a></p>	<p><b>Effect:</b> Predominantly neutral</p> <p><b>Likelihood:</b> High</p> <p><b>Scale:</b> AONB / Pangbourne</p> <p><b>Duration:</b> Permanent</p> <p><b>Timing:</b> Short to Long term</p>	<p><b>The site is recommended for allocation.</b></p> <p>The site is located in a rural service centre in close proximity to local services and facilities. The Landscape Assessment has concluded that low rise development could be accommodated and would not be visually intrusive subject to mitigation and enhancement measures. However potential impact to the highway network remains of concern.</p>	<p><b>The site is not recommended for allocation.</b></p> <p><a href="#">The surrounding roads to the site are narrow and unsuitable for the additional volumes of traffic that would be generated by development. Road widening is not possible. There are no footways in the vicinity of the site and these could not be provided. The site is therefore considered unsuitable for development.</a></p>

Table 24 - Summary of Pangbourne Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	<a href="#">Recommendation and justification of site for allocation</a>
	<p><a href="#">appropriate mitigation and enhancement measures would be required to ensure that the potential negative impact on environmental sustainability is avoided. Development would impact negatively upon environmental sustainability due to the site being greenfield. However, the adopted Core Strategy Development Plan Document is clear that for the district's housing requirement to be met, development on greenfield sites on the edge of settlements is necessary. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term. Development of the greenfield site for residential development is not considered to impact upon water quality, soil quality or noise levels, so the impact on environmental sustainability would be negligible.</a></p>			
<p>PAN002</p> <p>Land north of Pangbourne Hill and west of River View Road, Pangbourne</p> <p>35 dwellings</p>	<p><b>Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.</b></p> <p>Development of this <a href="#">site</a> would not lead to any significant sustainability issues. <del>There are positive impacts on sustainability as the site is close to local services and facilities enabling walking and cycling and the promotion of healthy, active lifestyles. There is potential for a negative impact on environmental sustainability unless the mitigation measures set out in the Landscape Assessment are adhered to.</del></p> <p><a href="#">The site is close to local facilities and services in Pangbourne, as well as being within walking distance of Pangbourne rail station and adjacent to a bus stop with a bi-hourly service to Reading and Upper Basildon. Development could provide an opportunity to enhance the bus service. The site therefore scores positively on the social and economic elements of sustainability. The site promoter has indicated that a planning application will provide public open space and a children's play area which will help to promote a healthy active lifestyle,</a></p>	<p><b>Effect:</b> Predominantly neutral</p> <p><b>Effect:</b> Predominantly neutral</p> <p><b>Likelihood:</b> High</p> <p><b>Scale:</b> AONB / Pangbourne</p> <p><b>Duration:</b> Permanent</p> <p><b>Timing:</b> Short to Long term</p>	<p><b>Part of the site, in line with the landscape assessment, is recommended for allocation.</b></p> <p>The site is located in a rural service centre in close proximity to local services and facilities. The Landscape Assessment has concluded that some development could be accommodated on the lower part of the site subject to mitigation and enhancement measures. However potential impact on the highway network could be an issue</p>	<p><b>Part of the site, in line with the landscape assessment, is recommended for allocation.</b></p> <p><a href="#">The site promoter undertook an assessment of the junction for a planning application for the development of 35 dwellings on the site which concluded that the increase in traffic at the junction would have little impact at the junction. The Council's Highways and Transport team concurred with the results of the assessment.</a></p> <p><a href="#">It came to light at the preferred options stage that dormice are present on the site. An extended phase 1 habitat</a></p>

Table 24 - Summary of Pangbourne Sites SA/SEA

	<p>as will the close proximity of the site to open countryside. This further enhances the positive score in relation to social sustainability.</p> <p>Whilst there are uncertain impacts upon archaeology, dormice and road safety, there are mitigation measures that can be implemented so that the impacts on the environmental and social elements of sustainability are ameliorated against. The Landscape Sensitivity Assessment indicates that development on part of the site would be suitable, although appropriate mitigation and enhancement measures would be required to ensure that the potential negative impact on environmental sustainability is avoided. Development would impact negatively upon environmental sustainability due to the site being greenfield. However, the adopted Core Strategy Development Plan Document is clear that for the district's housing requirement to be met, development on greenfield sites on the edge of settlements is necessary.</p> <p>The site is adjacent to an area at risk from surface water flooding; development on the site could lead to a worsening of flood risk elsewhere without appropriate mitigation measures. Should flooding occur, it would have a negative impact on all elements of sustainability</p> <p>The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</p> <p>Development of the greenfield site for 35 residential dwellings is not considered to impact upon water quality, soil quality or noise levels, so the impact on environmental sustainability would be negligible.</p>			<p>survey will be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, if appropriate to ensure any protected species were not adversely affected.</p>

### Site selection summary

The SA/SEA highlights that both sites considered had a predominantly neutral effect on sustainability, with neither site having a shown to have any significant sustainability effects impacts.

At preferred options, PAN002 was recommended for allocation, and Members at the Planning Policy Task Group held on the 6<sup>th</sup> June ~~on the~~ asked that PAN001 was also consulted on as an option for allocation due to the limited development opportunities in Pangbourne.

No significant changes have been made to the SA/SEA assessment as a result of the consultation; however the comments have provided further information about the sites which has helped to refine details of the site proposed for allocation.

As Pangbourne is located within the AONB, the potential impact on the natural beauty of the landscape and the special qualities of the AONB is the paramount consideration when sites are being assessed. The Landscape Sensitivity Assessment (LSA) has indicated that only part of PAN002 would be suitable without harm to the landscape of the AONB. The LSA for site PAN001 advises that whilst the site is visually exposed, low rise development would be acceptable.

PAN001 is a Biodiversity Action Plan (BAP) habitat, and at the preferred options stage it came to light that there are dormice present on site PAN002. In both cases, an extended phase 1 habitat survey would be required at the planning application stage together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, if necessary, to ensure any protected species were not adversely affected.

A consultation response was received that advised of there being restrictive covenants on site PAN001. The site promoters clients have been unable to confirm whether the covenants exist or not. The site promoters of PAN002 have not advised of there being any legal constraints to the site.

At the preferred options stage it was acknowledged that there were ~~Both sites have~~ some highways concerns for both sites. For PAN001 ~~there is concern that~~ the roads are often narrow surrounding the site and may be unsuitable for the additional volumes of traffic that the development of the site would generate. The Council's Highways and Transport team have since advised that it is not possible to widen the surrounding roads. Furthermore, there are no footways in the vicinity and it is not possible to provide any. As a result, the site is not considered suitable for development.

In respect of ~~For~~ PAN002 there is was concern regarding the impact on the restricted Pangbourne Hill/A340 Tidmarsh Lane junction. The site promoter undertook an assessment of the junction for a planning application for the development of 35 dwellings on the site which concluded that the increase in traffic at the junction would have little impact at the junction. The Council's Highways and Transport team concur with the results of the assessment.

#### **7.2.4.4 Bradfield Southend**

Bradfield Southend is one of West Berkshire's service villages and sits within the eastern part of the North Wessex Downs Area of Outstanding Natural Beauty (AONB). As a service village, Bradfield Southend is suitable only for a limited amount of development due to the more limited range of services available.

While there are public transport opportunities within the village, the bus service is two hourly. There is no train station.

The River Pang runs to the south of Bradfield Southend, and the area immediately around the river lies within flood zones 2 and 3.

There are a number of environmental assets within Bradfield Southend, with areas of ancient woodland and a Local Wildlife Site south of the settlement.

Five [our](#) sites were promoted through the [Strategic Housing Land Availability Assessment \(SHLAA\)](#) process, and three [wo](#) were assessed to be potentially developable within the SHLAA (site BRS001 was excluded because of the impact that development would have upon the landscape and BRS002 was excluded because the site could accommodate fewer than 5 dwellings, both of which are grounds for automatic exclusion). [A fifth site was submitted after the finalisation of the SHLAA in December 2013, and this was assessed to be potentially developable.](#) A SA/SEA was subsequently undertaken on these three sites to inform the site selection work and detail whether or not the sites are being taken forward as preferred options. [for allocation as well as setting out the recommendations from the preferred options stage.](#)

[At the preferred options stage a sixth site was submitted for consideration, BRS006. This site has been subject to a SA/SEA.](#)

[Preferred Options consultation responses:](#)

- [Bradfield Southend general – 5 responses](#)
- [BRS004 – 16 responses](#)
- [Rejected sites – 4 responses](#)

The table below outlines the findings of the site specific SA/SEAs and details whether or not the sites are being taken forward as preferred options. [for allocation as well as setting out the recommendation from the preferred options stage.](#)

**Site selection summary**

The SA/SEAs of the specific sites for Bradfield Southend highlighted that all three sites assessed in the SHLAA as potentially developable had [show that all four sites are likely to have a](#) predominantly neutral effects [on sustainability.](#) and [None of the sites](#) had any significant effects.

[No significant changes have been made to the SA/SEA assessment itself as a result of the consultation; however, the comments have provided further information about the sites which has helped to refine the details of the site proposed for allocation.](#)

As Bradfield Southend is in the AONB the impact on the landscape is critical. A ~~LCA Landscape Character Assessment~~ has advised of mitigation/enhancement measures to ensure that the negative impact on the character of the AONB, and consequential negative impact on environmental sustainability, is minimised. Mitigation measures include reducing the area that is acceptable for development. For site BRS005, the area ~~now~~ considered as acceptable for development is too small to allocate.

A ~~The LCA Landscape Character Assessment~~ has advised that the development of both BRS003 and BRS004 would erode the traditional linear pattern of development in Bradfield Southend therefore resulting in a potential negative effect on environmental sustainability. Nonetheless, because Bradfield Southend is identified as a rural service village, there is only the need for a limited amount of development, so there is only the need to develop both BRS003 and BRS004. The ~~LCA Landscape Character Assessment~~ also advises that if BRS003 was developed on its own (i.e. BRS004 remained undeveloped), it would be very poorly connected to the rest of the village.

BRS003 is at risk of surface water flooding and there was evidence of this in early 2014. [The site access and eastern boundary of BRS006 lie within an area susceptible to surface water flooding.](#) Flooding has the potential to impact upon all elements of sustainability, and mitigation includes choosing sites that are not at risk of flooding. BRS004 is not within an area at risk of flooding, [although](#) standing water was reported on the site in early 2014. [The Council's Principal Engineer has advised that this is not a showstopper to development, however a Flood Risk Assessment would be required with the submission of any planning application, and sustainable drainage systems \(SUDs\) will be required as part of any development that takes place.](#)

BRS004 is recommended for allocation because it is well related to the existing settlement and would be suitable for a small number of dwellings that would be in keeping with the size and function of Bradfield Southend as a service village.

[BRS006 was submitted at preferred options. Landscape Assessment work indicates that part of the site would be suitable for development. The site has limited visual and built connections with the existing built form. As a service village only a limited amount of development is suitable for Bradfield Southend, therefore, it was decided that the site would not be put forward for development as it had not been subject to early consultation with the public, and BRS004 was considered to be better related to the existing settlement and a more suitable site for development.](#)

#### **7.2.4.5 Chieveley**

Chieveley is a service village within the North Wessex Downs AONB. A limited amount of development, to meet local needs and maintain vibrant, balanced communities within their own sense of identity, is required through the Core Strategy. The village is located to the north west of the junction 13 of the M4, with the A34 passing to the east of the village.

There are no water courses running through the village, with the whole village in flood zone 1. Small areas of the village are within a surface water flood risk area, and there is anecdotal evidence of highway flooding within the village.

The centre of the village is within a conservation area.

29 12 sites were submitted through the SHLAA, [of these 5 have been](#) six of which were assessed as potentially developable. Those sites assessed as not currently developable in the SHLAA are as a result of the landscape assessment work indicating that development would not be acceptable as it would cause harm to the AONB. [CHI015 and CHI016 were automatically excluded through the site selection process at preferred options, CHI015 due to the impact of development on the AONB and CHI016 as the development potential of the site is less than 5 dwellings. SA/SEA has not been carried out for these sites.](#) Of the potentially developable sites two were ruled out at the automatic exclusion stage of the site assessment process. CHI015 on landscape grounds and CHI016 as the development potential was considered too small to allocate. A further site (CHI007) was withdrawn from the SHLAA in July 2014. The remaining three sites were considered as reasonable alternatives for development and so an SA/SEA was undertaken for all these sites to inform the site selection work and the subsequent selection of preferred options. [Following the preferred options and additional technical work the remaining potentially developable sites have been automatically excluded as the development potential on the site has been reduced to less than 5 dwellings \(CHI001, CHI010 and CHI017\).](#) These three sites meet the settlement boundary review criteria and will be included within the revised settlement boundary for Chieveley. For completeness table 23 has been retained, although no change have been made since the preferred options as the sites have now been automatically excluded in Part A of the site assessment process.

The table below outlines the findings of the site specific SA/SEAs and details [from the preferred options where three sites were assessed.](#) whether or not the sites are being taken forward as preferred options.

Preferred Options consultation responses:

- [Chieveley General – 2 responses](#)
- [CHI010 – 1 response](#)
- [Rejected sites – 2 responses](#)

Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
CHI001  The Colt House, Green Lane, Chieveley  <5 dwellings (0.24ha at	<b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects.</b>  The site is within easy walking distance of the village core in a residential area on the edge of the village, which gives a positive impact on sustainability. The village’s location close to the A34 and M4 means that there are a number of opportunities for access to employment throughout West Berkshire and beyond, with a positive impact on economic sustainability. The site is within the AONB, and without appropriate landscape mitigation measures development	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> AONB - Chieveley <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>The site is not recommended for allocation.</b>  Green Lane is rural in nature with large detached housing along it. A development of 5 houses would be out of keeping with the character of the area.  The site could be considered as part of the settlement boundary review.	<b>Site to be included within settlement boundary.</b> <a href="#">Development potential on the site means that the site is too small to allocate, and can be automatically excluded through the site selection process.</a>  <a href="#">The site will be included within the revised settlement boundary, as proposed at</a>

Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
20dph)	would have a negative impact on environmental sustainability.			<a href="#">Preferred Options.</a>
CHI010  Land adjacent to Coombe Cottage, High Street, Chieveley  <del>7-5</del> dwellings ( <del>0.37ha at</del> 20dph)	<b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects.</b> The site is well related to the village core, close to local services and facilities, which will maximise the opportunities for walking within the village and give a positive impact on sustainability. The Village's location close to the A34 and M4 means that there are a number of opportunities for access to employment throughout West Berkshire and beyond, giving a positive impact on economic sustainability. Development would take place on greenfield land and could have an impact on the local green infrastructure, with a negative impact on environmental sustainability without appropriate mitigation measures. Without appropriate landscape mitigation measures there could be a negative impact on environmental sustainability as a result of the site being in the AONB. The site is at risk from surface water flooding, which without appropriate mitigation could have a negative impact on sustainability.	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> AONB - Chieveley <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>The site is recommended for allocation.</b> The site is related to Chieveley, at the centre of the village with good access to local services and facilities.  The site could be considered as part of the settlement boundary review.	<b>Site to be included within settlement boundary</b> <a href="#">Further assessment and following results of the consultation the development potential of the site has been revised to less than 5 dwellings.</a> <a href="#">Therefore, the site can be automatically excluded through the site selection process.</a>  <a href="#">The site will be included within the revised settlement boundary rather than be allocated.</a>
CHI017  The Old Stables, Green Lane, Chieveley  <del>≤5</del> dwellings ( <del>0.25ha at</del> 20dph)	<b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects.</b> The site is within easy walking distance of the village core in a residential area on the edge of the village, giving a positive impact on sustainability. The village's location close to the A34 and M4 means that there are a number of opportunities for access to employment throughout West Berkshire and beyond, with a positive impact on economic sustainability. The site is a residential garden and therefore classified as greenfield land and the location within the AONB could lead to a negative impact on environmental sustainability unless appropriate landscape mitigation measures are provided.	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> AONB - Chieveley <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>The site is not recommended for allocation.</b> Green Lane is rural in nature with large detached housing along it. A development of 5 houses would be out of keeping with the character of the area. The site could be considered as part of the settlement boundary review.	<b>Site to be included within settlement boundary</b> <a href="#">Development potential on the site means that the site is too small to allocate, and can be automatically excluded through the site selection process.</a>  <a href="#">The site will be included within the revised settlement boundary, as proposed at Preferred Options.</a>

## Site Selection Summary

The SA/SEA for all sites should show that all sites will have a predominantly neutral effect on sustainability. None of the sites are shown to have any significant sustainability impacts.

As Chieveley is in the AONB the impact on the landscape is critical. All sites have been assessed through a Landscape Assessment which says that development, subject to appropriate mitigation measures, would be acceptable. Without the mitigation measures development could have a negative impact on environmental sustainability.

No sites are recommended for allocation in Chieveley. While three sites were considered reasonable alternatives at preferred options stage, with one site being recommended for allocation (CHI010) and two for inclusion within the settlement boundary (CHI001 and CHI017), following additional assessment of the development potential on the sites, all have potential for less than 5 dwellings, and therefore, can be considered as part of the settlement boundary review. All sites meet the review criteria, and therefore, are proposed for inclusion in the settlement boundary. One of the main issues raised at the consultation in relation to CHI010 was associated with access. A small development of less than 5 dwellings overcomes the access concerns, as access can be provided via the existing driveway without the need for additional improvements. This will limit the amount of traffic added to the High Street, which was also a concern raised at preferred options.

~~CHI001 and CHI017 have not been recommended for allocation due to the potential negative impact on the character of the built environment and subsequent negative impact on environmental sustainability. Existing development along Green Lane is linear in character and made up of large detached homes. Development would need to be in keeping with the existing development to avoid a negative impact on sustainability. While the sites are not being recommended for allocation, they could be considered as part of the settlement boundary review.~~

~~CHI010 has been recommended for allocation. The site is located at the centre of Chieveley village, next to the village hall. There are a number of positive sustainability impacts due to the location. There is a potential for a negative impact on environmental sustainability due to the location within the AONB, but with the appropriate mitigation measures this impact should be neutralised. The site is within a surface water flood risk area, which would require mitigation to ensure no negative impacts on sustainability occurred.~~

#### **7.2.4.6 Compton**

Compton is a service village located in the AONB. It is a historic village with medieval origins. There is a conservation area, and many listed buildings.

Compton has an 'opportunity site' in the form of the Pirbright Institute which is expected to close shortly and come forward for mixed use development during the plan period. Redeveloping the site in accordance with the adopted SPD provides the opportunity to positively enhance many aspects of sustainability. This means that Compton has a greater level of growth than would normally be expected in a service village.

Compton is located close to both the M4 and A34 corridors running east west and north south. However the local roads are rural and not suitable for heavy traffic.

Parts of Compton lie within Flood Zones 2 and 3 and are therefore unsuitable for development. There are additional issues of groundwater and surface water flooding and the village was badly affected during the February 2014 floods.

The village is reasonably well served with facilities for its size, having a primary and secondary school, a pub and shop and a number of social facilities.

12 sites were promoted through the SHLAA process. [All of the sites promoted through the SHLAA were considered against site selection criteria which resulted in 7 being automatically excluded in accordance with Part A of the site selection assessment at preferred options, with a further two sites automatically excluded following additional landscape work carried out following the preferred options consultation.](#) Two of the sites assessed as not currently developable in the SHLAA are as a result of poor proximity to Compton. A further two are within the settlement boundary. One was ruled out by the Landscape assessment and a further two on flooding grounds. The remaining five ~~three~~ sites were considered reasonable alternatives for development and so [Part B of the site selection assessment was carried out and](#) an SA/SEA was undertaken for all these sites to inform the site selection work and the subsequent selection of preferred options. [The consultation on the preferred options and further technical work have informed which sites will be taken forward for allocation in the proposed submission DPD.](#) The table below outlines the findings of the site specific SA/SEAs and [site selection information to](#) details whether or not the sites are [recommended for](#) being taken forward as preferred options [for allocation as well as setting out the recommendation from the preferred options stage.](#)

### Site selection summary

The SA/SEA of the specific sites shows that COM004 will have a predominantly positive effect on sustainability whilst COM001, COM010, COM011, and COM012 would all have a predominantly neutral effect.

No significant changes have been made to the SA/SEA assessments itself as a result of the consultation. Further clarification has been provided and further landscape work undertaken to help refine the details of some of the sites being considered. Following the Preferred Options consultation, one site, COM004, is recommended for allocation.

Compton is located within the AONB and the potential impact on the natural beauty of the landscape and the special qualities of the AONB is the paramount consideration when sites are being assessed. Landscape assessment work has been undertaken for all of the five sites considered through the SA/SEA assessment process. Sites have either had their development potential reduced to take in to account the area of the site considered appropriate for development in landscape terms or they have been considered not suitable for any development.

The village is prone to flooding from the River Pang, River Roden, groundwater, surface water and sewerage/waste water infrastructure and experienced flooding recently in 2000, 2001, 2007 and 2014. A Flood Risk Study undertaken to inform the Pirbright Institute SPD showed groundwater flooding in Compton to be complex and closely related to groundwater levels and rainfall/river flows. Flood risk is therefore a key concern in the area and would require appropriate mitigation.

COM004 is recommended for allocation. The SA/SEA of COM004 shows that it will have significant positive sustainability effects. This is because development of the site will result in the redevelopment of a large previously developed site which relates well to the existing settlement, thereby having a significant positive impact on environmental sustainability. The re-use of a brownfield site is a priority in national and local planning policy taking precedent over greenfield sites. Redevelopment of the site in accordance with the adopted SPD will have further benefits for environmental sustainability, including making a positive contribution to landscape character and providing areas of green infrastructure. Redevelopment of the site

offers an opportunity for regeneration of a large site and to reduce its impact on the landscape and AONB which in part is visually prominent and detracts from the character of the village. Consultation with the Parish Council has shown that the allocation of the site would be supported. Redevelopment would enable decontamination of the site to an appropriate level suitable for the proposed land uses. The proposal would be a residential-led mixed use scheme providing some employment development appropriate to its rural location resulting in a neutral/positive impact on economic sustainability. Site COM004 is an identified opportunity site within the Core Strategy and has an adopted SPD for the site meaning that its potential for development has already been accepted. An allocation of this scale means that there is not a requirement to make additional allocations in the service village of Compton, which would normally only be suitable for a more limited amount of development.

COM001 is not recommended for allocation. Development on the site would have a predominantly neutral effect on sustainability. The landscape assessment concluded that some development could be accommodated on part of the site subject to mitigation and enhancement measures. The site is located within a groundwater emergence zone and is adjacent to Flood Zones 2 and 3 and an area of surface water flood risk and could have a negative impact on all elements of sustainability which would require mitigation. The site is in an area of archaeological potential, is a greenfield site and the Compton Village Design Statement has identified the site as an area of important open space in the village. With the allocation of COM004, there is no requirement for any additional allocation in Compton.

COM010 is not recommended for allocation. Development on the site would have a predominantly neutral effect on sustainability. The sites location within the AONB has the potential to impact on the landscape and settlement pattern and as such the landscape assessment concluded that only part of the site would be suitable for development subject to mitigation and enhancement measures. The site is at risk from groundwater flooding causing a potential negative sustainability impact which would require mitigation. The potential landscape and flooding concerns combined with the greenfield nature of the site could result in negative impacts on environmental sustainability. With the allocation of COM004, there is no requirement for any additional allocation in Compton.

The SA/SEA of the remaining sites (COM001, COM010, COM011 and COM012) sites shows that all sites will have a predominantly neutral effect on sustainability. No sites are shown to have any significant sustainability impacts. Mitigation would be required at COM001, COM010, COM011 and COM012 to address flood risk from groundwater flooding which would have a significant impact on all aspects of sustainability. With the allocation of COM004, there is no requirement for any additional allocation in Compton.

#### **7.2.4.7 Great Shefford**

Great Shefford is a service village located to the west of West Berkshire, within the AONB. A limited amount of development, to meet local needs and maintain a vibrant, balanced community with their own sense of identity is required in service villages. The A338 runs through the village. There are intermittent bus services in to Newbury.

The river Lambourn flows through the centre of the village from Lambourn in the north to Newbury to the south. An ordinary water course flowing from the north of Great Shefford meets the Lambourn just to the east of the village. Flood zones 2 and 3 follow the same line as the rivers through the village. The majority of the village is also within a surface water flood risk area, with the centre of the village being designated as a critical drainage area in the SFRA. There is a history of significant flooding in the village and flooding in January / February 2014 led to the village largely being cut off due to a number of road closures.

Two sites were promoted through the SHLAA, one of which was assessed as potentially developable (GSH001). GSH002, was assessed as not currently developable due to its location within flood zone 3 and the critical drainage area. An SA/SEA was undertaken for GSH001 to inform the site selection work and subsequent selection of preferred options [and recommendations for allocation](#).

[Preferred Options Consultation response](#)

- [Great Shefford general – 7 responses](#)

Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
GSH001  Land east of Spring Meadows, Great Shefford  46 15 dwellings (0.8ha at 20dph)	The site is close to local facilities and services within the village and to the countryside which would encourage walking and cycling, with a positive impact on sustainability. The site is in a surface water flood risk area. Flooding has a negative impact on all elements of sustainability, some mitigation measures may be able to improve the situation. Great Shefford itself has a history of flooding, which many mean that mitigation measures do not remove the risk, and subsequent impact on sustainability.	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> AONB – Great Shefford <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>The site is not recommended for allocation</b>  Due to the flood risk within the village, and history of flooding resulting in all road in and out of the village being closed (Jan/Feb 2014).	<b>The site is not recommended for allocation.</b>  <a href="#">No additional information submitted at preferred options to change recommendation.</a>  <a href="#">Further technical evidence, in the form of a groundwater flood risk study, has been carried out and indicates that part of the site is at risk from groundwater flooding</a>

**Site selection summary**

While the SA/SEA indicates that GSH001 would have a predominantly neutral sustainability impact and does not highlight any significant sustainability issues, the site is not recommended for allocation due to the [significant](#) flood risk within the village. While the site itself is not at risk from fluvial flooding (although it is in a surface water [and groundwater](#) flood risk area), the impact of flooding in the village is [so](#) significant that additional development is not considered appropriate.

**7.2.4.8 Hermitage**

Hermitage is one of West Berkshire’s service villages within the North Wessex Downs Area of Outstanding Natural Beauty (AONB). [A limited amount of development to meet local needs and maintain vibrant, balanced communities with their own sense of identity is required through the Core Strategy.](#) It is in a rural location but close to both the M4 and A34 corridors running east west and north south. As a service village, Hermitage is suitable only for a limited amount of development due to the more limited range of services available.

While there are public transport opportunities [available](#) within the village, the bus service is intermittent [and t](#). There is no train station.

No water courses run through the village, so there is no risk of fluvial flooding. There are, however, areas at risk of surface water flooding across the village.

There are a number of environmental assets within Hermitage, with areas of ancient woodland to the west of the settlement and Local Wildlife Sites to the west, north and south.

~~11~~ 2 sites were promoted through the SHLAA process [for residential development](#), and ~~four~~ five were assessed to be potentially developable within the SHLAA. [All sites promoted through the SHLAA were considered against site selection criteria, which resulted in six sites being automatically excluded in accordance with part A of the assessment.](#) ~~Five~~ Four of the sites were excluded because [they are](#) inappropriate in scale to the role and function of the settlement hierarchy [some which are also poorly related to the existing settlement](#) (HER010, HER012, HER013, HER014, HER015), ~~which is a ground for automatic exclusion.~~ A further two sites were ~~taken out of the site selection process~~ [excluded, one](#) due to the site having planning permission [and being located within the settlement boundary](#) (HER003) and [one for](#) being too small to allocate [and poorly related to the existing settlement](#) (HER007).

[One site \(HER016\) which was assessed as not currently developable in the SHLAA was taken forward for further assessment as a reasonable alternative despite the SHLAA assessment as it had similar attributes as another site \(HER011\) which was assessed within the SHLAA as potentially developable.](#)

[Therefore five sites were considered reasonable alternatives for development and so a SA/SEA was undertaken, along with part B of the site assessment, to inform the site selection work and subsequent selection of preferred options. The consultation on the preferred options and further technical work have informed which sites will be taken forward for allocation in the proposed submission DPD.](#)

~~A SA/SEA was subsequently undertaken on the sites to inform the site selection work and detail whether or not the sites are being taken forward as preferred options.~~

The table below outlines the findings of the site specific [assessments/SA/SEAs](#) and details whether or not the sites are being taken forward [for allocation as well as outlining the recommendation from the preferred options stage.](#) ~~as preferred options.~~

[Preferred options consultation responses:](#)

- [HER011 – 11 responses \(10 processed and 1 inadmissible\)](#)
- [HER004 – 1 response](#)

### Site selection summary

The SA/SEAs of the specific sites for Bradfield Southend highlighted that all three sites assessed in the SHLAA as potentially developable had predominantly neutral effects and none had any significant effects.

The SA/SEAs do not show any sites to have any significant effects on sustainability; all sites are shown to have a predominantly neutral effect on sustainability.

No significant changes have been made to the SA/SEA assessment itself as a result of the consultation; however, the comments have provided further information about the sites which has helped to refine the details of the sites proposed for allocation. Following the Preferred Options consultation HER001 and part of HER004 are being recommended for allocation in Hermitage.

As Hermitage is in the AONB the potential impact on the natural beauty of the landscape and the special qualities of the AONB is the paramount consideration when sites are being assessed. is critical. A Landscape Sensitivity Character Assessment (LSA, 2011 and 2014) has been undertaken

for sites HER001, HER004 and HER009, and advised of mitigation/enhancement measures to ensure that the negative impact on the character of the AONB, and consequential negative impact on environmental sustainability, is minimized. For sites HER001, HER004 and HER009. Mitigation measures include reducing the area that is acceptable for development and the protection and enhancement of key landscape features. For site HER004, only a small area is suitable for development, however the site forms part of the open gateway to Hermitage from the south.

HER001 is recommended for allocation. The site is well related to the existing settlement and development of the site would result in little harm to the natural beauty of the landscape, subject to the implementation of mitigation measures set out within the LSA (2011). A small part of the site is at risk from surface water flooding and a small part sits within a critical drainage area. However, through the preparation of a Flood Risk Assessment (FRA) appropriate mitigation measures can be identified and implemented as part of any proposed development scheme.

Part of HER004 is recommended for allocation. Only a small part in the northwest corner of the site is to be allocated in accordance with the LSA (2011). The site is well related to the existing settlement and could be developed in conjunction with HER001 to provide a cohesive and comprehensive development. A small part of the site is at risk from surface water flooding and a large part sits within a critical drainage area. However, through the preparation of a Flood Risk Assessment (FRA) appropriate mitigation measures can be identified and implemented as part of any proposed development scheme.

HER009 is not recommended for allocation. The site is in a prominent location but largely screened from the AONB. The LSA (2014) states that development would impact on the character of Manor Lane, impact on the footpath crossing the site and development of the whole site would widen the otherwise narrow settlement on the west side of Hampstead Norreys Road. However, it concludes that there is development potential on only part of the site subject to mitigation measures to conserve and enhance the natural beauty of the AONB. Similar to HER001 and HER004, small parts of the site are within areas of surface water flood risk, however through the preparation of Flood Risk Assessment (FRA) appropriate mitigation measures can be identified and implemented as part of any proposed development scheme. It is considered that other sites within Hermitage are more appropriate for development.

HER011 and HER016 are not recommended for allocation. Development of these sites would extend the village to the north of Manor Lane, along Hampstead Norreys Road. It is considered that such expansion would not be appropriate and would be poorly related to the existing settlement pattern.

~~Sites HER001, HER004 and HER009 are all at risk of surface water flooding. Flooding has the potential to impact upon all elements of sustainability, and mitigation includes choosing sites that are not at risk of flooding. Whilst sites HER011 and HER016 are not at risk of flooding, their proximity to the M4 motorway has the potential to have a negative impact on environmental sustainability. Furthermore, these two sites are poorly related to Hermitage and in the case of HER011, would result in significant environmental sustainability effect due to the impact that development would have on the character of Oare. It is for these reasons that HER011 and HER016 are considered unsuitable for development and are not being recommended for allocation.~~

~~Because Hermitage is identified as a rural service village, there is only the need for a limited amount of development. There is therefore not the need to develop sites HER001, HER004 and HER009 together. It is considered that HER001 is better related to the settlement than HER009, and is~~

therefore being recommended for allocation. Site HER004 has been ruled out because, as aforementioned, the site forms part of the open gateway to Hermitage from the south.

#### 7.2.4.9 Kintbury

Kintbury is a service village located in south west West Berkshire, within the AONB. A limited amount of development, to meet local needs and maintain vibrant, balanced communities with their own sense of identity is required through the Core Strategy. The village is located just south of the A4. There is a railway station to the south north of the village with links to Newbury, Reading and London to the east and Bedwyn to the west.

The river Kennet, (which is an SSSI) and the Kennet and Avon canal flow lie to the south north of the village, but with the flood zones also predominantly travel north of the river railway line and so away from the village itself. The SSSI follows the river Kennet again to the south of the village. The majority of the village is within a groundwater emergence zone, with small areas within surface water flood risk areas. The southern northern and central part of the village is within a conservation area.

14 sites were promoted through the SHLAA process, nine 9 of which were assessed as potentially developable. Of these, 1 was later withdrawn. Those sites assessed as not currently developable in the SHLAA are as a result of the landscape assessment work indicating which concluded that development would not be acceptable as it would cause harm to the AONB. Of the potentially developable sites, one site was ruled out through the automatic exclusions part of the assessment criteria (KIN006, due to development potential of less than 5). The remaining eight 8 sites were considered reasonable alternatives for development and so an SA/SEA was undertaken for all these sites to inform the site selection work and the subsequent selection of preferred options. The consultation on the preferred options and further technical work have informed which sites will be taken forward for allocation in the proposed submission DPD. The table below outlines the findings of the site specific SA/SEAs and details whether or not the sites are being taken forward as preferred options for allocation as well as setting out the recommendation from the preferred options stage.

#### Preferred options consultation responses:

- KIN006/07 – 17 responses
- KIN008/009 – 1 response
- Kintbury - 4 responses

Table 30 – Summary of Kintbury Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
KIN004 Kintbury Park Farm, Irish Hill Road, Kintbury	<b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects.</b> The site is well related to existing services and facilities within Kintbury with opportunities for walking and cycling and healthy active lifestyles, giving a positive impact on sustainability. <del>The impact on the landscape</del>	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> AONB - Kintbury <b>Duration:</b>	<b>The site is not recommended for allocation</b> Development here would have an impact on the rural character of this area. Only a very small area of the site is	<b>The site is not recommended for allocation</b> <u>Development on the site would have an impact on the rural character of the area. The undeveloped rural character of the site provides an attractive natural edge to the east of the Conservation</u>

Table 30 – Summary of Kintbury Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
18 dwellings (0.89ha at 20dph)	could have a negative impact on environmental sustainability. Significant landscape mitigation measure would be required which significantly reduce the area suitable for development. The site is within a groundwater emergence zone, with potential for groundwater flooding which could lead to a negative impact on all elements of sustainability. Mitigation measures should reduce this impact. <a href="#">There is the potential for a negative impact on environmental sustainability due to the site's location both within the AONB and its location in Kintbury, adjacent to the Conservation Area. A LSA has been carried out which concludes that only a limited part of the site has potential to deliver housing without causing harm to the natural beauty and special qualities of the AONB subject to a number of mitigation measures. The site lies within a groundwater emergence zone. Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.</a>	Permanent <b>Timing:</b> Short to Long term	acceptable for development in landscape terms.  Other sites in Kintbury are considered to be more appropriate for development.	<a href="#">Area and even a linear development along Irish Hill Road could have a potential impact on the setting of the Conservation Area. Other sites in Kintbury are considered to be more appropriate for development.</a>
KIN006  Land east of Layland Green, Kintbury  <a href="#">Approx 10 dwellings as a combined site with KIN007</a> 4 dwellings (0.2ha at 20dph)	<b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects.</b> The site is well related to the existing settlement close to local services and facilities with good opportunities for walking and cycling, giving a positive impact on sustainability. <a href="#">Development on this site has the potential to improve the built environment through a well designed scheme. There is also the potential for a negative impact on environmental sustainability due to the site's location is within the AONB. However, a LSA has been carried out which concludes that the site has potential to deliver housing without causing harm to the natural beauty and special qualities of the AONB subject to a number of mitigation measures. As the site is close to a site with Great Crested Newts, there is</a>	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> AONB - Kintbury <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>The site is recommended for allocation as part of a wider allocation with KIN007</b> The site is well related to the existing settlement and local services and facilities.	<b>The site is recommended for allocation as part of a wider allocation with KIN007</b> <a href="#">Particular concerns were raised in the preferred options consultation about the impacts on flooding, highway safety and biodiversity. These have been followed up but no new or additional information has been submitted that would rule the site out, subject to suitable mitigation measures being put in place including taking into account the outcomes of a Flood Risk Assessment (FRA) for the site.</a>

**Table 30 – Summary of Kintbury Sites SA/SEA**

Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
	<p>therefore <a href="#">also</a> potential for a negative impact on environmental sustainability, unless appropriate <a href="#">avoidance and</a> mitigation measures are implemented <del>as set out in the assessments</del>. <a href="#">Mitigation measures would also need to be put into place to remove potential negative impacts on environmental sustainability for the woodland TPO on KIN007. There is the potential for a negative impact on environmental sustainability unless the site is developed in line with the outcome of the contamination assessment. Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.</a></p>			
<p>KIN007 Land east of Layland Green, Kintbury  <a href="#">Approx 10 dwellings as a combined site with KIN007</a> 9 dwellings (0.44ha at 20dph)</p>	<p><b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects.</b></p> <p>The site is well related to the exiting settlement close to local services and facilities with good opportunities for walking and cycling, giving a positive impact on sustainability. <a href="#">Development on this site also has the potential to improve the built environment through a well designed scheme.</a> <del>The site is within the AONB close to a site with great crested newts, there is potential for a negative impact on environmental sustainability, unless appropriate mitigation measures are implemented as set out in the assessments.</del> <a href="#">There is the potential for a negative impact on environmental sustainability due to the site's location within the AONB. However, a LSA has been carried out which concludes that the site has potential to deliver housing without causing harm to the natural beauty and special qualities of the AONB subject to a number of mitigation measures. As the site is close to a site with Great Crested Newts, there is also potential for a negative impact on environmental sustainability, unless</a></p>	<p><b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> AONB - Kintbury <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term</p>	<p><b>The site is recommended for allocation as part of a wider allocation with KIN006</b></p> <p>The site is well related to the existing settlement and local services and facilities.</p>	<p><b>The site is recommended for allocation as part of a wider allocation with KIN006</b></p> <p><a href="#">Particular concerns were raised in the preferred options consultation about the impacts on flooding, highway safety and biodiversity. These have been followed up but no new or additional information has been submitted that would rule the site out, subject to suitable mitigation measures being put in place including taking into account the outcomes of a Flood Risk Assessment (FRA) for the site.</a></p>

**Table 30 – Summary of Kintbury Sites SA/SEA**

Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
	<p><a href="#">appropriate avoidance and mitigation measures are implemented. Mitigation measures would also need to be put into place to remove any potential negative impacts on environmental sustainability for the woodland TPO on KIN007. There is the potential for a negative impact on environmental sustainability unless the site is developed in line with the outcome of the contamination assessment. Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.</a></p>			
<p>KIN008</p> <p>Land to the east of Layland Green and south of Holt Road, Kintbury</p> <p>13 dwellings (0.64ha at 20dph)</p>	<p><b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects.</b></p> <p>The site is close to local services and facilities with opportunities for walking and cycling, which give a positive impact on sustainability. <del>The site is within the AONB, the Landscape Assessment indicates that only a small part of the site would be suitable for development without a significant impact on the character of the landscape and therefore, have a negative impact on environment sustainability. Mitigation measures would be required on the small area of the site to ensure there wasn't a negative impact on sustainability. The site is at risk from ground and surface water flooding, without appropriate mitigation this would have a negative impact on all elements of sustainability. There is also the potential for a negative impact on environmental sustainability due to the site's location within the AONB. A LSA has been carried out which concludes that although the western part of the site is well connected to the settlement edge, development of the whole site would be out of scale with most of Kintbury and would constitute an unacceptable expansion of the settlement. As the site is close to a site with Great Crested Newts, there is also potential for a negative</del></p>	<p><b>Effect:</b> Predominantly neutral</p> <p><b>Likelihood:</b> High</p> <p><b>Scale:</b> AONB - Kintbury</p> <p><b>Duration:</b> Permanent</p> <p><b>Timing:</b> Short to Long term</p>	<p><b>The site is not recommended for allocation</b></p> <p>Only a very small area of the site is suitable for development in landscape terms. The site would need to be developed alongside other sites to improve its relationship to the existing settlement and gain access. Other sites in Kintbury are considered more appropriate for development.</p>	<p><b>The site is not recommended for allocation</b></p> <p><a href="#">The acceptable developable area is poorly related to existing residential development, without additional sites being developed in order to improve this relationship and gain access. This would result in development not in keeping with the role and function of Kintbury as a service village.</a></p>

**Table 30 – Summary of Kintbury Sites SA/SEA**

Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
	<p><a href="#">impact on environmental sustainability, unless appropriate avoidance and mitigation measures are implemented. The site lies within a groundwater emergence zone. Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.</a></p>			
<p>KIN009</p> <p>Land to the east of Layland Green, Kintbury</p> <p>16 dwellings (0.8ha at 20dph)</p>	<p><b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects.</b></p> <p>The site is close to local services and facilities with opportunities for walking and cycling, giving a positive impact on sustainability. <del>The site is located in the AONB close to a site with great crested newts, without appropriate mitigation measures development could have a negative impact on environmental sustainability. The site is at risk from groundwater flooding. Flood risk can have a negative impact on all elements of sustainability unless appropriate mitigation measures are provided.</del> <a href="#">Development on the site has the potential to improve the built environment through a well designed scheme. There is also the potential for a negative impact on environmental sustainability due to the site's location within the AONB. However, a LSA has been carried out which concludes that the site has potential to deliver housing without causing harm to the natural beauty and special qualities of the AONB subject to a number of mitigation measures. As the site is close to a site with Great Crested Newts, there is also potential for a negative impact on environmental sustainability, unless appropriate avoidance and mitigation measures are implemented. Part of the site is within a groundwater emergence zone. Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.</a></p>	<p><b>Effect:</b> Predominantly neutral</p> <p><b>Likelihood:</b> High</p> <p><b>Scale:</b> AONB - Kintbury</p> <p><b>Duration:</b> Permanent</p> <p><b>Timing:</b> Short to Long term</p>	<p><b>The site is not recommended for allocation</b></p> <p>The site would need to be allocated and developed as part of a wider allocation to improve the site's relationship to the existing settlement. Development of a larger group of sites would be out of keeping with the role and function of Kintbury as a service village.</p>	<p><b>The site is not recommended for allocation</b></p> <p><a href="#">The acceptable developable area is poorly related to existing residential development, without additional sites being developed in order to improve this relationship and gain access. This would result in development not in keeping with the role and function of Kintbury as a service village.</a></p>

**Table 30 – Summary of Kintbury Sites SA/SEA**

Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
<p>KIN011</p> <p>Land adjoining The Haven, Kintbury</p> <p><a href="#">Approx 20 dwellings (10.8ha at 20dph)</a></p>	<p><b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects.</b></p> <p>The site is close to local services and facilities with good opportunities for walking and cycling, giving a positive impact on sustainability. <del>The site is in the AONB and close to a great crested newt site. Without mitigation measures development would lead to a negative impact on environmental sustainability. The site is in a groundwater emergence zone, therefore there is potential for groundwater flooding. Flooding can have a negative impact on all elements of sustainability unless mitigation measures are provided.</del> <a href="#">The site has a strong relationship with the existing settlement and is close to local services and facilities with good opportunities for walking and cycling, giving a positive impact on sustainability. Development on this site has the potential to improve the built environment through a well designed scheme. The site is not anticipated to have a significant traffic impact on the wider highway network at this level of development, however particular concern has been expressed locally regarding the combined potential traffic impact with the additional apartments currently being constructed at Inglewood. There could be potential for a negative impact on sustainability if these road safety concerns could not be overcome. There is also the potential for a negative impact on environmental sustainability due to the site's location within the AONB. However, a LSA has been carried out which concludes that the site has potential to deliver housing without causing harm to the natural beauty and special qualities of the AONB subject to a number of mitigation measures. As the site is close to a site with Great Crested Newts, there is also potential for a negative impact on environmental sustainability unless appropriate avoidance and mitigation measures are implemented.</a></p>	<p><b>Effect:</b> Predominantly neutral</p> <p><b>Likelihood:</b> High</p> <p><b>Scale:</b> AONB - Kintbury</p> <p><b>Duration:</b> Permanent</p> <p><b>Timing:</b> Short to Long term</p>	<p><b>The site is not recommended for allocation</b></p> <p>Significant concerns about the traffic impact of development on the highway network</p>	<p><b>The site is not recommended for allocation</b></p> <p><a href="#">At the preferred options stage the site was not recommended for allocation primarily because of highway concerns. Sight lines are poor at the Inkpen Road/The Haven junction and the Inkpen Road / High Street junction is also restricted regarding width and sight lines. Extensive on street car parking within the High Street also limits potential for additional traffic flow. However, since the preferred options consultation further technical work has been undertaken on the site. This has shown that the required visibility splays can be achieved from land within Sovereign's control at the Inkpen Road/The Haven junction and therefore this issue can be resolved. In addition, the Highways team does not consider that the increase in traffic at the Inkpen Road / High Street junction (in relation to all the existing traffic using this junction) would be of sufficient concern to prevent allocation of this site for housing for 20 dwellings. Further development at this location would however be of concern. Although the main technical reasons for not proposing the site for allocation at the preferred options stage have been overcome, Council Members have responded to the concerns expressed locally over the cumulative impacts of additional development in Kintbury</a></p>

**Table 30 – Summary of Kintbury Sites SA/SEA**

Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
	<p><a href="#">Part of the site lies within a groundwater emergence zone. Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a></p>			<p><a href="#">together with the previously approved development at Inglewood, phase 3 of which is still currently under construction. As KIN006 /007 was previously identified as a preferred site and was consulted upon at the preferred options stage, they consider that the public have been given more opportunity to comment on this as an option for future development. They have therefore requested that consideration of KIN011 is deferred until an informed assessment can be made of the cumulative impact of traffic generated from the additional dwellings at Inglewood with that generated from KIN006/007. It is therefore proposed that the site should be considered further through the preparation of the new Local Plan.</a></p>
<p>KIN015</p> <p>Land to the east of Layland Green, Kintbury</p> <p>29 dwellings (1.4ha at 20dph)</p>	<p><b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects.</b></p> <p>The site is close to local services and facilities, with opportunities for walking and cycling which give a positive impact on sustainability. <del>The site is located within the AONB, the landscape assessment indicates that part of the site would be suitable for development as long as the mitigation measures set out are adhered to, without these mitigation measures there could be a negative impact on environmental sustainability. The site is poorly related to the existing settlement pattern unless other sites were developed, giving a negative impact on environmental sustainability. The site is also in a surface water flood risk area. With appropriate mitigation measures the potential negative impact on</del></p>	<p><b>Effect:</b> Predominantly neutral</p> <p><b>Likelihood:</b> High</p> <p><b>Scale:</b> AONB - Kintbury</p> <p><b>Duration:</b> Permanent</p> <p><b>Timing:</b> Short to Long term</p>	<p><b>The site is not recommended for allocation</b></p> <p>The site is poorly related to the existing settlement without other sites being developed. Development of this, with other sites, would be out of keeping with the role and function of Kintbury as a service village.</p>	<p><b>The site is not recommended for allocation</b></p> <p><a href="#">The acceptable developable area is poorly related to existing residential development, without additional sites being developed in order to improve this relationship and gain access. This would result in development not in keeping with the role and function of Kintbury as a service village.</a></p>

**Table 30 – Summary of Kintbury Sites SA/SEA**

Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
	<p>all elements of sustainability should be reduced. <a href="#">There is also the potential for a negative impact on environmental sustainability due to the site's location within the AONB and its location relative to the main settlement of Kintbury. However, a LSA has been carried out which concludes that some of the site has the potential to deliver a very limited number of dwellings without causing harm to the natural beauty and special qualities of the AONB subject to a number of mitigation measures. As the site is close to a site with Great Crested Newts, there is also potential for a negative impact on environmental sustainability, unless appropriate avoidance and mitigation measures are implemented. Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a></p>			
<p>KIN016 Land at Deane, Inkpen Road, Kintbury  18 dwellings (0.9ha at 20dph)</p>	<p><b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects</b> The site is close to local services and facilities, with opportunities for walking and cycling, giving a positive impact on sustainability. <del>There is concern over traffic impact on road safety, which without mitigation measures could have a negative impact on all element of sustainability.</del> The site is located in the AONB and close to a great crested newt site, without appropriate mitigation measures development could lead to a negative impact on environmental sustainability. <a href="#">The site is not anticipated to have a significant traffic impact on the wider highway network at this level of</a></p>	<p><b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> AONB - Kintbury <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term</p>	<p><b>The site is not recommended for allocation</b> Significant concerns about the traffic impact of development on the highway network</p>	<p><b>The site is not recommended for allocation</b> <a href="#">The acceptable developable area is poorly related to existing residential development, without additional sites being developed in order to improve this relationship and gain access. This would result in development not in keeping with the role and function of Kintbury as a service village.</a></p>

Table 30 – Summary of Kintbury Sites SA/SEA				
Site details	Summary of SA/SEA of site	Summary of effects	Recommendation and justification as a preferred option	Recommendation and justification as site for allocation
	<p><a href="#">development. There is also the potential for a negative impact on environmental sustainability due to the site's location within the AONB. However, a LSA has been carried out which concludes that part of the site has potential to deliver housing without causing harm to the natural beauty and special qualities of the AONB subject to a number of mitigation measures. As the site is close to a site with Great Crested Newts, there is also potential for a negative impact on environmental sustainability unless appropriate avoidance and mitigation measures are implemented. A very small part of the site lies within a groundwater emergence zone. Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a></p>			

**Site selection summary**

The SA/SEA of the specific sites shows that all sites will have a predominantly neutral effect on sustainability. No sites are shown to have any significant sustainability impacts.

[No significant changes have been made to the SA/SEA assessment itself as a result of the consultation; however, the comments have provided further information about the sites which has helped to refine the details of the sites proposed for allocation. Following the Preferred Options consultation 1 site \(KIN006 and KIN007 is regarded as a combined site\) is recommended for allocation.](#)

As Kintbury is in the AONB the [potential](#) impact on the [natural beauty of the](#) landscape [and the special qualities of the AONB is the paramount consideration when sites are being assessed.](#) ~~is critical.~~ A number of sites have had their development potential reduced to take into account the area of the site considered appropriate for development in landscape terms. The developable area for KIN004, KIN008 KIN015 have [been very](#)

significantly reduced to ensure that development would not cause harm to the natural beauty and special qualities of the AONB have negative impact on the character of the AONB, and consequential negative impact on environmental sustainability.

**KIN004** is not recommended for allocation. ~~considered suitable for development as development, even within the area designated as acceptable in landscape terms would change the character of the built environment, but developing on the opposite side of Irish Hill Road to existing residential development. The SA/SEA indicates that development could have a negative impact on environmental sustainability and so the site has not been recommended for allocation.~~ Development on the site would have an impact on the rural character of the area. The undeveloped rural character of the site provides an attractive natural edge to the east of the Conservation Area and even a linear development along Irish Hill Road could have a potential impact on the setting of the Conservation Area. Other sites in Kintbury are considered to be more appropriate for development.

**KIN006 and KIN007** ~~have been~~ are recommended for allocation as a single combined allocation. The sites are well related to the existing settlement, close to local services and facilities and can deliver housing without causing harm to the natural beauty and special qualities of the AONB. ~~The only potential negative sustainability impact is due to the site's location within the AONB, which with mitigation measures could be reduced.~~

**KIN011** ~~is not recommended for allocation. At the preferred options stage the site was not recommended for allocation primarily because of highway concerns. Sight lines are poor at the Inkpen Road/The Haven junction and the Inkpen Road / High Street junction is also restricted regarding width and sight lines. Extensive on street car parking within the High Street also limits potential for additional traffic flow. However, since the preferred options consultation further technical work has been undertaken on the site. This has shown that the required visibility splays can be achieved from land within Sovereign's control at the Inkpen Road/The Haven junction and therefore this issue can be resolved. In addition, the Highways team does not consider that the increase in traffic at the Inkpen Road / High Street junction (in relation to all the existing traffic using this junction) would be of sufficient concern to prevent allocation of this site for housing for 20 dwellings. Further development at this location would however be of concern. Although the main technical reasons for not proposing the site for allocation at the preferred options stage have been overcome, Council Members have responded to the concerns expressed locally over the cumulative impacts of additional development in Kintbury together with the previously approved development at Inglewood, phase 3 of which is still currently under construction. As KIN006 /007 was previously identified as a preferred site and was consulted upon at the preferred options stage, they consider that the public have been given more opportunity to comment on this as an option for future development. They have therefore requested that consideration of KIN011 is deferred until an informed assessment can be made of the cumulative impact of traffic generated from the additional dwellings at Inglewood with that generated from KIN006/007. It is therefore proposed that the site should be considered further through the preparation of the new Local Plan.~~

**KIN008, KIN009, KIN015 and KIN016** are not recommended for allocation. Their acceptable developable areas ~~of KIN015, KIN009 and KIN008 themselves~~ are poorly related to the existing residential development, without additional sites being developed in order to improve this relationship and gain access. This would have a negative impact on the character of the built environment, with a possible negative effect on environmental sustainability. Development of additional sites to link these ~~two~~ sites to the existing settlement would result in development not in keeping with the role and function of Kintbury as a service village.

KIN016 and KIN011 have a number of positive impacts in terms of sustainability due to their location close to local services and facilities. However, there are significant highways concerns regarding access to the sites and the impact of development of the highway network. This means that these sites are not considered appropriate for development.

### 7.3 Gypsies and Travellers and Travelling Showpeople Site Selection

Gypsies, Travellers and Travelling Showpeople sites are located across the district. [Following a Call for Sites in May/June 2014](#) ~~Ten sites have been submitted or were considered by the Council for allocation. Three have been~~ [Four sites were](#) automatically excluded; [two excluded](#) due to landscape concerns (GTTS1 and GTTS8), ~~or one due to the inappropriate~~ size of the [final](#) development (GTTS4), and a further site [the fourth site](#) was found to be no longer available (GTTS6A).

The remaining six sites were considered [as](#) reasonable alternatives for development and so an SA/SEA was undertaken for all these sites to inform the site selection work and subsequent selection of preferred options. [The consultation on the preferred options and further technical work have informed which sites will be taken forward for allocation in the proposed submission DPD.](#)

The table below outlines the findings of the site specific [assessments/SA/SEAs](#) and details whether or not the sites are being taken forward as preferred options [for allocation as well as outlining the recommendation from the Preferred Options stage.](#)

#### [Preferred options consultation responses:](#)

- [Long Copse Farm \(GTTS2\) – 69 responses](#)
- [New Stocks Farm, Paices Hill \(GTTS5\) – 10 responses](#)
- [Land at Clappers Farm – corner of Bloomfield Hatch Lane and Cross Lane \(GTTS6B\) – 70 responses \(64 processed and 6 inadmissible\)](#)
- [Padworth Farm \(GTTS9\) – 10 responses](#)
- [General – 6 responses \(5 processed and 1 inadmissible\)](#)
- [Table of rejected sites – 3 responses](#)

1 pitch	The site is 2.5km to local services and facilities, with opportunities for walking and cycling which might lead to a high car dependency.	<b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	been established for the site.	

### Site Selection Summary

The SA/SEA of the specific sites shows that all sites will have a predominantly neutral effect on sustainability. No sites are shown to have any significant sustainability impacts.

[No significant changes have been made to the SA/SEA assessment itself as a result of the consultation; however, the consultation comments and additional technical work have provided further information about the sites which has helped to refine the details of the sites proposed for allocation.](#)

**GTTS3 and GTTS7** are [not recommended for allocation](#). ~~Both sites are~~ Both sites are located adjacent to existing settlements (Burghfield Common and Purley-on-Thames respectively) and the SA/SEA highlights a potential negative impact on the character of the built environment, however mitigation measures could be put in place to minimise this impact. Due to concerns regarding the impact on the existing settled community these sites are not recommended for allocation. [GTTS7 has subsequently been taken forward as a housing site allocation.](#)

[GTTS5 is recommended for allocation](#). The SA/SEA for GTTS5 does not highlight any potentially negative sustainability impacts. The site is an existing Gypsy and Traveller site and while the proposals [allocation will](#) involve changing a number of [existing](#) transit pitches to permanent pitches, the principle of Gypsies and Travellers on the site is established. [The GTAA has concluded that there is no demand for additional transit pitches within the period to 2029.](#)

[GTTS9 is not recommended for allocation](#). ~~This~~ is a very small site (proposed for 1 pitch) located in a rural area. ~~But the SA/SEA only highlights one potential negative impact on sustainability due to the site's Greenfield nature.~~ [Following the Preferred Options consultation the certainty of site delivery could not be ascertained.](#)

**GTTS6B** is recommended for allocation as an area of search. ~~Is a Council owned site and while in a rural in location the site is still close to services and facilities within nearby settlements.~~ [The identified preferred options site \(GTTS6B\) forms part of wider Council landholding, Clappers Farm, and the whole of the site is now being considered as an area of search \(GTTS6\). Comments and concerns raised through the preferred options consultation has resulted in the wider Clappers Farm landholding \(GTTS6\) being considered as an area of search from within which a site for up to 9 pitches will be delivered through the Local Plan.](#)

[Despite being located in a rural location, the area of search is close to some local services and facilities nearby, and has good access to both A33 and the M4.](#)

[GTTS2 is recommended for allocation. This](#) is an existing Travelling Showpeople site [yard](#). The SA/SEA highlights the potential negative impacts on sustainability due to the ~~G~~greenfield nature of the majority of the site, and flood risk on the site. Mitigation measures could be introduced, including developing areas of the site outside the flood zones, to mitigation the risk of flooding. [This is an established existing yard, with good access to services and facilities. Effective landscaping will be required to ensure the impact of any development on the wider landscape is minimised.](#) ~~The established use on the site and the need for additional Travelling Showpeople plots arising from the existing circus has resulted in the site being recommended for allocation.~~

#### 7.4 Countryside Policies

No reasonable alternatives were considered for the countryside policies. The proposed countryside policies have had an SA/SEA carried out on them. This highlights the potential positive and negative sustainability impacts of each policy. The table below sets out the summary of the SA/SEA, and the changes made to the policies following the consultation.

<b>Policy</b>	<b>Summary of SA/SEA</b>	<b>Summary of effects</b>	<b>Change since Preferred Options</b>
<b>Policy 1</b>  Location of New Housing in the <a href="#">Countryside</a>	<del>This policy is unlikely to have impact on sustainability. The policy could be removed.</del> <a href="#">This policy is likely to have a positive impact on maximising the opportunity to provide sustainable housing to meet local needs. Housing outside settlement boundaries is required by the policy to take account of the scale and character of the surrounding dwellings. The potential negative impacts of the policy result from the higher greenhouse gases and consequent air pollution stemming from the need for greater car use in a rural area. Also, development in the countryside has the potential to impact on green infrastructure and biodiversity. The mitigation measures relate to specific sites that would be considered under this policy, the comparison with other potential sites within an area and options for travel choice. The settlements in the policy are at the bottom of the settlement hierarchy which promotes the most sustainable settlements for development. Therefore, the quantity of development arising from these sources is limited.</a>	<b>Effect:</b> predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> District Wide <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>Policy retained.</b> <a href="#">Changes made to the policy as a result of consultation to make clear that development is supported in smaller villages with a settlement boundary, and sets out which villages these are. The policy also sets out where development may be permitted outside the settlement boundaries. A significant change has been made to the SA/SEA as a result of reassessing the revised policy. While there is still an overall neutral impact on sustainability there are positive social sustainability impacts as a result of new development.</a>
<b>Policy 2</b>  Rural <a href="#">Housing</a> Exceptions Policy	<del>This policy is likely to have a significantly positive impact on maximising the provision of affordable housing to meet identified local needs. as this is the primary aim of the policy. The potential negative impacts of the policy result from the main aim of the policy to be to provide affordable housing in areas where there are few facilities and poor transport facilities. to meet identified needs in rural areas. The mitigation measures relate to specific</del>	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High-Medium <b>Scale:</b> District	<b>Policy retained.</b> <a href="#">Some small changes made to clarify where rural exceptions sites are appropriate and how local need can be demonstrated. No significant changes made to the SA/SEA as a result of the revised policy.</a>

Table 32 – Summary of Countryside Policy SA/SEAs			
Policy	Summary of SA/SEA	Summary of effects	Change since Preferred Options
	sites that would be considered under this policy, and the comparison with other potential sites within an area, and options for travel choice <del>amongst other things</del> . There is a risk that environmental sustainability could be overridden by greater benefit to social or economic sustainability. The policy states that any site being considered under the policy needs to review whether any more suitable alternatives are available locally, this will help to ensure completely unsuitable sites come forward. <a href="#">Providing this accommodation in the rural area will provide a local workforce for rural businesses so is a positive impact.</a>	Wide <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	
<b>Policy 3</b>  Design and materials of Housing in the Countryside	This policy is related to the design and materials used for new development. There are positive impacts on sustainability in relation to access to services and facilities and protection and enhancements to the environment. The policy is likely to have a neutral effect on all other SA/SEA objectives.	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> District Wide <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>Policy retained.</b> <a href="#">No change made to the policy.</a>  <a href="#">Through the preferred options consultation criticism was made of policy 3 for repeating policies within the Core Strategy. Although it was proposed to delete the policy as a result of the consultation, Council Members requested that the policy was retained to reinforce the need for sensitive design.</a>
<b>Policy 4</b>  Conversion of Existing Redundant Buildings in the Countryside to Residential Use	The policy will have a significantly positive impact on maximising the use of previously developed land and buildings, there will also be positive impacts in relation to waste disposal, reducing the consumption of minerals and reuse of secondary materials and reducing West Berkshire's greenhouse gas emissions, as the policy is promoting the use of existing resources that are no longer required for their original use.	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <del>High</del> <a href="#">Medium</a> <b>Scale:</b> District Wide <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>Policy retained.</b> <a href="#">Changes made to the policy to provide clearer advice for applications by including key points from the supporting text into the policy. No changes were made to the SA/SEA outcomes as a result of the changes to the policy.</a>
<b>Policy 5</b>  Housing related to Agricultural and Forestry Development	The policy is likely to have a positive impact on economic and social sustainability as it is related to the provision of housing related to agriculture, and forestry <a href="#">and equestrian</a> businesses within the countryside. There is potential for a negative impact on environmental sustainability in relation to green infrastructure, as the provision of accommodation could result in a loss of green infrastructure on a site being considered under the policy.	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> District Wide	<b>Combined into a single policy relating to development for rural workers.</b> <a href="#">As a result of the consultation policies 5 – 8 have been combined into a single policy referring to rural workers. This brings the policy in line with the NPPF and removes the repetition between the 4 policies. The policy</a>

Table 32 – Summary of Countryside Policy SA/SEAs			
Policy	Summary of SA/SEA	Summary of effects	Change since Preferred Options
<a href="#">Housing related to Rural Workers</a>		<b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<a href="#">has been updated to give a criteria based policy. No changes were made to the SA/SEA outcomes as a result of the changes to the policy.</a>
<b>Policy 6</b>  Housing related to the Equestrian and Racehorse industry	The policy is likely to have a positive impact on economic and social sustainability as it is related to the provision of housing related to the equestrian and racehorse industry within the countryside. There is potential for a negative impact on environmental sustainability in relation to green infrastructure, as the provision of accommodation could result in a loss of green infrastructure on a site being considered under the policy.	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> District Wide <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	
<b>Policy 7</b>  Housing related to Educational Development	The policy is likely to have a positive impact on economic and social sustainability as it is related to the provision of housing essential to educational development within the countryside. There is potential for a negative impact on environmental sustainability in relation to green infrastructure, as the provision of accommodation could result in a loss of green infrastructure on a site being considered under the policy.	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> District Wide <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	
<b>Policy 8</b>  Housing related to Medical, Social or Community Facilities	The policy is likely to have a positive impact on economic and social sustainability as it is related to the provision of housing essential to medical, social or community facilities within the countryside. There is potential for a negative impact on environmental sustainability in relation to green infrastructure, as the provision of accommodation could result in a loss of green infrastructure on a site being considered under the policy.	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> District Wide <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	
<b>Policy 6 9</b>	The policy is likely to have a positive impact on the retention and	<b>Effect:</b>	<b>Policy retained.</b>

Policy	Summary of SA/SEA	Summary of effects	Change since Preferred Options
Extension of existing dwellings within the Countryside	improvement of existing housing <del>and</del> the character of the landscape and built environment. <del>and to minimise the risk of flooding.</del> The potential negative impact results from the potential loss of biodiversity where land of biodiversity value lost to an extension, garden or parking space. This can be mitigated through Core Strategy policy CS17. <del>and the supporting evidence for policy 9 could be amended to require an assessment of the potential impact on biodiversity.</del>	Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> District Wide <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<a href="#">Changes made to the policy as a result of consultation to give a criteria based policy using material set out in the supporting text.</a> <a href="#">No changes made to the SA/SEA outcome as a result of the changes to the policy.</a>  <i><a href="#">Policy renumbered: Policy 6</a></i>
<b>Policy 7 10</b> Replacement of existing dwellings	The policy is likely to have a positive impact on the improvements to the quality of housing <a href="#">whilst reusing previously developed land and protecting</a> <del>and</del> the character of the landscape and <a href="#">heritage.</a> built environment <del>and to minimise the risk of flooding.</del> The potential negative impact result for the potential <a href="#">impact on the character of the countryside and potential</a> loss of biodiversity where a replacement dwellings removes an existing habitat. This can be mitigated through the Core Strategy policy CS17. <del>and the supporting evidence for policy 11 could be amended to require an assessment of the potential impact on biodiversity.</del>	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> District Wide <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>Policy retained.</b> <a href="#">Changes made to the policy as a result of consultation to give a criteria based policy using material set out in the supporting text.</a> <a href="#">No changes made to the SA/SEA outcome as a result of the changes to the policy.</a>  <i><a href="#">Policy renumbered: Policy 7</a></i>
<b>Policy 8 11</b> Extension of Residential Curtilages	This policy is likely to have a positive impact on the <del>retention and</del> improvement of existing housing, the protection of green infrastructure, the character of the landscape and built environment and to minimise the risk of flooding. The potential negative impact results from the potential loss of biodiversity where land of biodiversity value is used as residential garden or parking space. This can be mitigated through Core Strategy policy CS17. <del>and the supporting evidence for policy 11 could be amended to require an assessment of the potential impact on biodiversity.</del>	<b>Effect:</b> Predominately neutral <b>Likelihood:</b> <del>High</del> <a href="#">Medium</a> <b>Scale:</b> District Wide <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>Policy retained.</b> <a href="#">Changes made to the policy as a result of consultation to give a criteria based policy using material set out in the supporting text.</a> <a href="#">No changes made to the SA/SEA outcome as a result of the changes to the policy.</a>  <i><a href="#">Policy renumbered: Policy 8</a></i>

[Changes were made to the policies following the preferred options consultation, the policies have then been reassessed thorough the SA/SEA process, although overall very few changes have been made to the overall SA/SEA outcomes.](#)

Four of the original policies (Policies 5, 6, 7, 8) have been combined into a single policy relating to housing for rural workers (new policy 5), rather than having individual policies for different types of workers. Overall this does not make a difference to the SA/SEA, but it does being the policy in line with the NPPF, which only refers to rural workers.

Changes have been made to policy 1, which have resulted in a change in the SA/SEA outcomes, from having no impact on sustainability, the revised policy sets out a number of positive social impacts, in particular relating to the provision of new housing.

Overall the policies will not have an impact on any element of sustainability, although together there are a number of positive impacts on all elements of sustainability, in particular social sustainability as the policies aim to guide the development of new housing within the countryside.

## 7.5 Parking Standards Policy

Two options were considered as reasonable alternatives for the parking policy. The table below outlines the findings of the site specific SA/SEAs and details which policy option is to be taken forward.

<b>Table 33 Summary of Parking Policy SA/SEA</b>				
<b>Policy Option</b>	<b>Summary of SA/SEA of site</b>	<b>Summary of effects</b>	<b>Recommendation and justification at Preferred Options</b>	<b>Recommendation and justification at Proposed submission</b>
Option 3  A new, single standard for car parking across all locations and dwellings type/size	<b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects.</b> This option would see benefits from incorporating design, travel planning, electric charging points and cycle parking but would apply a single approach to the level of car parking required. This approach would take no account of how accessible a location was or what type or size the dwelling was. This is likely to be less effective and could result in unsuitable levels of parking which may increase the level of unsafe on street parking or have a negative impact in terms of the amount of hard standing / parking areas in a development. Good design of parking areas can also help to reduce actual and perceived crime.	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> District wide <b>Duration:</b> Permanent <b>Timing:</b> Short to Long term	<b>Policy approach is not taken forward</b> The SA/SEA does not indicate that this option would be as beneficial as option 4.	<b>Policy approach is not taken forward</b> No additional information submitted at preferred options to indicate this would be a more suitable approach
Option 4  A new policy based on location, and dwellings type/size	<b>Overall the site is likely to have a neutral effect on sustainability. The SA/SEA does not highlight any significant sustainability effects.</b> This option aims to provide adequate parking through well designed parking solutions which will help to reduce the level of unsafe on street parking that occurs. It also includes the requirement for travel plans and travel information packs for	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> District wide	<b>Policy approach is taken forward</b> The SA/SEA shows a more positive benefit as a result of option 4. This option is in line with the guidance set out in the NPPF.	<b>Policy approach is taken forward</b> General support through the preferred options for this approach to parking standards. SA/SEA outcomes for this

Table 33 Summary of Parking Policy SA/SEA				
Policy Option	Summary of SA/SEA of site	Summary of effects	Recommendation and justification at Preferred Options	Recommendation and justification at Proposed submission
	residential development and the need to provide electric charging points and cycle parking. <a href="#">Good design of parking areas can also help to reduce actual and perceived crime.</a> This all seeks to increase the number of journeys made by sustainable modes that have less of an impact on the environment and help to improve health and wellbeing. The approach to car parking levels that seeks to take account of accessibility of location and the type and size of dwelling also seeks to reflect the differing need for parking according to these factors.	<b>Duration:</b> Permanent <b>Timing:</b> Short to Long term		option are the same as for the final version of the policy, and therefore, a separate SA/SEA has not been carried out for the final policy.

The full SA/SEA tables are set out in Appendix 12.

The SA/SEA indicates that both options 3 and 4 would have a predominantly neutral impact on sustainability, with neither showing any significant sustainability effects. The main difference between the two policies in sustainability terms is the potential impact on Road Safety.

Option 3, has an uncertain effect, as a single standard does not take into account local need, which could result in inappropriate parking (too much or too little) being provided. [The existing Council parking policy sets a single standard across the district, and has resulted in issues in implementation, especially in town centre locations and in area where there are residents parking zones. While this option would consider a new single standard, it could still result in similar issues of ensuring adequate parking is provided with new development.](#)

Option 4, which has been taken forward for the new parking standards, does consider local need. The policy is based on the NPPF (paragraph 39). It considers: the accessibility of a development, the type of development, availability and opportunities for public transport and / or car clubs, local car ownership and an overall need to reduce the use of high-emission vehicles. It sets a range of parking standards depending on the location, type and size of development.

[The actual parking policy has not been subject to a separate SA/SEA as the level of detail provided in the policy is far greater than would be picked up in the SA tables. The SA/SEA outcomes are the same as for the SA/SEA of option 4.](#)

## 7.6 Sandleford Park Policy

Two options were considered as reasonable alternatives for the Sandleford Park policy at preferred options, although neither option has been taken forward, as it was considered more appropriate to update the SPD.

The table below outlines the findings of the site specific SA/SEA and details which policy option is to be taken forward.

Table 34 Summary of Sandleford Park SA/SEA			
Policy Option	Summary of SA/SEA of site	Summary of effects	Recommendation
Option 1  Keep existing Sandleford Park Policy (Core Strategy)	<b>Overall the policy is likely to have a neutral effect on sustainability. The SA/SEA highlights a significantly positive effect on environmental sustainability due to the creation of a Country Parkland.</b> There is a significant positive impact from this policy in terms of the creation of a Country Parkland on the southern part of the site. The policy aims to make sure that there are no significant negative impact which could not be mitigated against.	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> Newbury and Thatcham spatial area <b>Duration:</b> Permanent <b>Timing:</b> Short to Medium term	<b>Policy approach is not taken forward</b>
Option 2  New Sandleford Park Policy taking into account new evidence.	<b>Overall the policy is likely to have a neutral effect on sustainability. The SA/SEA highlights two significantly positive effects, firstly on environmental sustainability due to the creation of a Country Parkland and secondary on all elements of sustainability through the provision of additional accesses to the site and enhanced education provision on the site.</b> There is a significant positive impact from this policy in terms of the creation of a Country Parkland on the southern part of the site and in terms of accessibility to services and facilities, as the policy would require additional all vehicle accesses to the site and additional education provision. The policy aims to make sure that there are no significant negative impact which could not be mitigated against.	<b>Effect:</b> Predominantly neutral <b>Likelihood:</b> High <b>Scale:</b> Newbury and Thatcham spatial area <b>Duration:</b> Permanent <b>Timing:</b> Short to Medium term	<del>Policy approach is taken forward</del> <b>Policy approach is not taken forward</b>

The full SA/SEA tables are set out in Appendix 12.

The SA/SEA indicates that both options would have a predominantly neutral impact on sustainability. Option 1 shows one significant positive effect on environmental sustainability in terms of creation of a Country Parkland, Option 2, has the same significant positive effect on environmental sustainability, but also has a significantly positive effect on all elements of sustainability as the new policy would improve access to and from the site, but requiring additional accesses and enhancing education provision on the site as a result of the new evidence.

Option 2 has been chosen to take forward and a new policy has been included in the DPD. The new policy will help to ensure that the site is developed holistically as one site. The additional accesses will improve access to and from the site itself, but also improve the potential negative impact additional traffic could have on the surrounding highway network by maximising the alternative routes to and from the site.

In the end neither option was taken forward, as it was considered more appropriate, following legal advice, to update the SPD, due to the expected timing of the planning application. The updated SPD was subject to a 7 week period consultation and was adopted on 3<sup>rd</sup> March 2015, together with its consultation statement. The original SPD was subject to SA Screening, which determined that an SA was not required. The screening was revisited for the updated SPD, but the outcomes were considered to be the same, and therefore, no change was made to the Screening opinion.

## **8 Next Stages**

Regulation 30 requires submission of the SA/SEA Report and any revision or supplements to it to the Secretary of State alongside the Housing Site Allocations DPD.

The SA/SEA Report is being published alongside the proposed submission DPD, and comments on the SA/SEA report are invited at this stage. The formal consultation period will last 6 weeks from the 9<sup>th</sup> November until 21<sup>st</sup> December 2015.

Following the Proposed Submission consultation the SA/SEA report will be updated to reflect any changes made as a result of the consultation.

A final SA/SEA Report, to meet the SA and SEA requirements, will be published alongside the submission version of the DPD.

## **9 Implementation**

The SEA Directive (European Directive 2001/42/EC “The assessment of the effects of certain plans and programmes on the Environment”) requires that the significant environmental effects of implementing a plan or programme should be monitored in order to identify at an early stage any unforeseen adverse effects, and to be able to undertake appropriate remedial action. SA monitoring will cover the significant sustainability effects as well as the environmental effects.

The suggested monitoring regime includes (sourced from the European Commission, 2003):

- Determination of the scope of monitoring
- Identification of the necessary information
- Identification of existing sources of information
  - Data at project level
  - General environmental monitoring and
  - Other data
- Filling the gaps
- Procedural integration of monitoring into the planning system
- Taking remedial action

In particular and in line with the guidance, monitoring will be focused on significant environmental effects, such as those;

- Which indicate a likely breach of international, national or local legislation, recognised guidelines or standards
- That may give rise to irreversible damage with a view to identifying trends before such damage is caused
- Where there was uncertainty over possible adverse effects, and where monitoring would enable mitigation measures to be taken

As the Housing Site Allocations DPD is a daughter document of the Core Strategy, the Monitoring Framework of the Core Strategy will be used to monitor the impact of the DPD. The key indicators fed into the Monitoring Framework which will be monitored and relevant conclusions will be included in the Annual Monitoring Report which is produced in December each year. The Monitoring framework is set out in appendix 6 of the Core Strategy, and contains more detail on the monitoring indicators and how they will be measured.

Monitoring should involve measuring indicators which enable a causal link to be established between implementation of the Core Strategy and Housing Site Allocations DPD and the likely significant effect being monitored. Potential indicators have been proposed in the Scoping Report context and baseline (see table 6) for each of the SA sub-objectives, drawing from existing sources to ensure the recording of data for the indicator is already established (at Unitary, Regional or National level). The effectiveness of policies should be assessed against measurable targets. Some policies aim to deliver a qualitative rather than quantitative outcome and in such instances it is appropriate to monitor whether the policy is delivering the intended trend of direction of travel.

In many cases information used in monitoring will be provided by outside bodies. This has already been evidenced by the additional baseline information provided by the statutory environmental consultees during the Core Strategy SA/SEA process.

## **10 Conclusions on the Overall Sustainability of the Housing Site Allocations DPD**

As a result of the SA work undertaken during the development of the Housing Site Allocations DPD and following the preferred options consultation, the most sustainable options were proposed for taking forward into the proposed submission version of the DPD.

The preferred options represented the best available options at that stage and were considered to achieve the sustainability objectives of the Housing Site Allocations DPD. The approach taken in the proposed submission Housing Site Allocations DPD is considered to represent the best options, which have been considered, to achieve the sustainability objectives of the DPD. If the DPD is successfully implemented and the negative effects identified are successfully mitigated where appropriate, then future development in West Berkshire will result in positive sustainability impacts and sustainable development. This SA Report recommends that the sites and policies are accepted as the proposed submission document.

The Housing Site Allocations DPD sits under the Core Strategy, to deliver the housing requirement, with additional flexibility, as required by the Core Strategy. The Core Strategy and Housing Site Allocations DPD achieve a balance between making provision for development to meet local needs, taking into account infrastructure requirements and the extensive environmental constraints of the area, and displaying flexibility to respond to changing circumstances across the time frame of the Core Strategy and Housing Site Allocations DPD.

<b>Local level:</b>		

Overall aim or purpose of document	Objectives / Targets	Implications for the West Berkshire Housing Site Allocations DPD
<b>West Berkshire Council Core Strategy 2006 - 2026</b>		
<p>Sets out the long term vision for West Berkshire to 2026 and translates this into spatial terms, setting out proposals for where development will go, and how this development will be built. The Core Strategy aims to make the different settlements within West Berkshire even more attractive places within which to live, work and enjoy leisure time. The Core Strategy sets out the overall framework for the more detailed policies and site specific proposals to be contained in other documents of the Local Plan.</p>	<ol style="list-style-type: none"> <li>1. Tackling Climate Change - To exceed national targets for carbon dioxide emissions reduction and deliver the District's growth in a way that helps to adapt to and mitigate the impacts of climate change</li> <li>2. Housing Growth - To deliver at least 10,500 homes across West Berkshire between 2006 – 2026. These homes will be delivered in an effective and timely manner, will maximise the use of suitable Brownfield land and access to facilities and services and will be developed at densities within make the most efficient use of land whilst responding to the existing build environment.</li> <li>3. Housing Needs - To secure provision of affordable and market housing to meet local needs in both urban and rural areas of the district. To provide homes in a way that promotes sustainable communities, providing a mix of house sizes, types and tenures to meet identified needs, and respond to the changing demographic profile of the District.</li> <li>4. Economy - To provide for a range of sizes and types of employment land and premises in the right locations to respond to the forecast changes in economic activity, the location of new residential development and the specific needs of the rural economy, including the equestrian and horseracing industries.</li> <li>5. Infrastructure Requirements – To ensure that infrastructure needs (including community services and facilities) arising from the growth in West Berkshire are provided in a timely and coordinated manner, which keeps pace with development in accordance with the detail set out in the Infrastructure Delivery Plan.</li> <li>6. Green Infrastructure - To ensure that West Berkshire contains a strong network of well-connected and multi-functional green infrastructure which provides an attractive environment to live, work and spend leisure time, providing benefits for health and opportunities for formal and informal recreation.</li> <li>7. Transport - To put in place a sustainable transport network which supports the growth in West Berkshire, links existing and new development, prioritise walking, cycling and public transport and provides a genuine choice of modes. Traffic management measures will minimise the impact of new development on the existing network.</li> <li>8. Retail – To achieve growth in retail activity and consequently increase the vitality and vibrancy of town centres in West Berkshire. To meet the range of shopping needs for residents and visitors largely through completion of the Parkway development and through the regeneration of Thatcham town centre. To provide for local shopping need in town, district and local centres to serve the needs of existing and future residents.</li> <li>9. Heritage - To ensure that development to 2026 is planned, designed and managed in a way that ensures the protection and enhancement of the local distinctive character and identity of the built, historic and natural environment in West Berkshire's Towns, villages and countryside.</li> </ol>	<p>The Core Strategy provides the framework for the more detailed policies and site specific proposals to be contained within the Housing Site Allocations DPD.</p>
<b>West Berkshire Council Local Transport Plan (2011 – 2026)</b>		
<p>Sets out the Council's transport policy framework. West Berkshire's vision for transport is "to develop effective transport solutions for all by increasing choice and minimising congestion". This means delivering a transport system which supports the economic vitality of West Berkshire, as well as providing choice and opportunities for residents to be able to access the services they need in a sustainable way where possible that minimises harm to the environment. For transport solutions to be effective, transport networks need to be managed in a</p>	<ul style="list-style-type: none"> <li>• To improve travel choice and encourage sustainable travel</li> <li>• To support the economy and quality of life by minimising congestion and improving reliability on West Berkshire's transport networks;</li> <li>• To maintain, make best use of and improve West Berkshire's transport networks for all modes of travel;</li> <li>• To improve access to services and facilities;</li> <li>• To improve and promote opportunities for healthy and safe travel;</li> <li>• To minimise energy consumption and the impact of all forms of travel on the environment.</li> </ul>	<p>Ensure that the policies have regard to the vision and objectives of the Plan. West Berkshire is geographically diverse with a mix of rural and urban areas, each with its own set of issues and opportunities. The LTP uses the same spatial approach as the Core Strategy: Newbury &amp; Thatcham, The Eastern Area, The North Wessex AONB and The East Kennet Valley</p>

Appendix 1 – Relevant Plans and Programmes

Overall aim or purpose of document	Objectives / Targets	Implications for the West Berkshire Housing Site Allocations DPD
way which promotes safety and minimises the existence and impacts of congestion.		
<b>West Berkshire Council Strategy 2015 - 19</b>		
<p>Sets out the Council's priorities and a realistic set of objectives that can be delivered over the next four years.</p> <p>The strategy's overarching vision is: Keeping West Berkshire a great place in which to live, learn, work and do business.</p>	<p>The strategy sets out four key priority areas which are underpinned by a set of universal principles to guide how the council are responding to the changes in policy, financial and legislative landscape. The four priority areas are:</p> <ul style="list-style-type: none"> <li>• Caring for and protecting the vulnerable</li> <li>• Promoting a vibrant district</li> <li>• Improving education</li> <li>• Protecting the environment</li> </ul>	<p>The Council strategy is a key document for the Local Plan</p>
<b>West Berkshire Council's Corporate Equality Policy 2012</b>		
<p>West Berkshire Council thinks that everyone deserves to live in a community where people get along with each other, where no-one feels excluded and where everyone has a chance to play a full part in local life.</p>	<p>A set of Equality Objectives and Activities set out the areas of the Council's work where it is focussing efforts to achieve equality and value diversity in West Berkshire</p>	<p>The Housing Site Allocations DPD will need to reflect the priorities and agenda of this Policy.</p>
<b>Housing Strategy 2010-2015</b>		
<p>The Housing Strategy has been produced to make sure West Berkshire Council provides the right housing services to meet local needs and priorities.</p>	<p>The actions identified in the strategy reflect and contribute towards achieving the housing vision. Priority will be given to activities that contribute to:</p> <ul style="list-style-type: none"> <li>• The prevention of homelessness by early and proactive intervention</li> <li>• Provision of new affordable housing to meet urgent and immediate identified needs</li> <li>• Green and sustainable activities that reduce fuel poverty and minimise domestic CO2 emissions</li> <li>• Meeting the needs of our rural communities</li> <li>• Partnership working to make sure we work efficiently and in a joined-up way with our partners</li> <li>• Performance management to monitor, review and improve our delivery of the action plan.</li> </ul>	<p>The Housing Site Allocations DPD will need to reflect the priorities of this strategy.</p>
<b>Homelessness Strategy 2013-2018</b>		
<p>The Homelessness Strategy for West Berkshire lays out a vision for tackling homelessness over the next 3 years, based on a comprehensive review of the current position and an analysis of future trends.</p>	<p>There are five main objectives, which are:</p> <ol style="list-style-type: none"> <li>1. Continue to prevent homelessness and sustain tenancies</li> <li>2. Mitigating the negative impacts of the welfare and housing reforms</li> <li>3. Make the best use of the District's housing stock</li> <li>4. Improving the life chances of homeless people</li> <li>5. Proactively work with partners to provide a co-ordinated approach to tackling and preventing homelessness</li> </ol>	<p>The need to increase the supply of affordable housing has clear linkages with planning policy and implications for the Housing Site Allocations DPD.</p>
<b>Health and Wellbeing Strategy</b>		
<p>The health and wellbeing strategy sets out how the Council will manage Public Health, bridging the gap between health and social care systems.</p>	<p>The Strategy's priorities for the first 2 years are:</p> <ul style="list-style-type: none"> <li>• Addressing childhood obesity in primary school children</li> <li>• Giving every child and young person the best start in life</li> <li>• Supporting those over 40 years old to address lifestyle choices detrimental to health</li> <li>• Supporting a vibrant district</li> </ul>	<p>Ensure that the Housing Site Allocations DPD takes into account the priorities set out within the Health and Wellbeing Strategy.</p>

Overall aim or purpose of document	Objectives / Targets	Implications for the West Berkshire Housing Site Allocations DPD
	<ul style="list-style-type: none"> <li>Promoting independence and supporting older people to manage their long term conditions.</li> </ul>	
<b>Preliminary Flood Risk Assessment</b>		
<p>The PFRA provides a high level overview of flood risk across West Berkshire from local sources of flooding. Including surface water, groundwater, ordinary watercourses and canals. It also considered flooding from main rivers because of the interaction between main rivers and local sources of flooding.</p>	<ul style="list-style-type: none"> <li>- Describe arrangements for partnerships and collaboration for the ongoing assessment of flood risk, data collection and means of public engagement.</li> <li>- Summarise the methodology used for the PFRA and the scrutiny and review procedures.</li> <li>- Assess historic flood events within West Berkshire from local sources and the consequences of these events.</li> <li>- Assess the potential harmful consequences of future flood events within West Berkshire.</li> <li>- Review the indicative Flood Risk Areas</li> </ul>	<p>The PRFA supports and informs the SFRA and provides details on areas susceptible to flooding that may need to be considered within the Housing Site Allocations DPD.</p>
<b>North Wessex Downs AONB Management Plan</b>		
<p>The Management Plan emphasises sustainable development that brings together environmental, economic and community benefits. The Plan gives a background to the area and the issues facing it to facilitate the area becoming more well known as an entity. 74% of West Berkshire is located within the AONB.</p>	<p>Each year the North Wessex Downs AONB will develop a delivery plan which sets out who is doing what, describes the North Wessex Downs AONB team in action, identifies the lead body, and defines the outcomes to be delivered. The delivery plan includes 19 objectives, which are based around 8 themes: about the land; land management; biodiversity; historic environment; natural resources; development; communities; leisure and tourism. These objectives help to deliver an overall vision for the North Wessex Downs AONB.</p>	<p>Ensure that policies have regard to the themes and objectives set out in the Management Plan.</p>
<b>Thames Basin Heaths Delivery Plan – Thames Basin Heaths Special Protection Area: Mitigation Standards for Residential Development</b>		
<p>The delivery plans aims to:</p> <ul style="list-style-type: none"> <li>Provide a strategic approach to identifying avoidance measures to prevent in combination/ cumulative impacts on the SPA arising from recreational pressure with new residential development;</li> <li>Define the nature, scale and general location standards of avoidance measures, to be met for housing development through green infrastructure;</li> <li>Increase the quality of the local environment through the provision of green infrastructure; semi natural informal greenspace;</li> <li>Assist local planning authorities in providing greater clarity for developers / public over where and how new housing development may be undertaken;</li> <li>Streamline determination of planning applications.</li> </ul>	<p>The broad goal of the Plan is to ensure that the delivery of current housing allocations complies with the requirements of the Habitat regulations with respect to the Thames Basin Heaths SPA.</p> <p>The Thames Basin Delivery Plan is intended as a research and information document which will be implemented through the LDFs that include the Thames Heath as an SPA.</p> <p>The Delivery Plan is a key component of a three part approach to mitigating recreational impacts; off site avoidance measures, on site access management and on site habitat management. All three approaches are required in parallel to safeguard the SPA from recreation impacts that may arise from new housing development.</p>	<p>The Housing Site Allocations DPD needs to consider the Draft Thames Basin Heaths Delivery Plans as this has implications for development within the South East corner of West Berkshire.</p>
<b>AWE Radiation Emergency Preparedness &amp; Public Information Regulations</b>		
<p>AWE Radiation Emergency Preparedness &amp; Public Information Regulations</p>	<p>The Radiation (Emergency Preparedness and Public Information) Regulations 2001 (REPPPIR) aims to protect members of the public from a radiation emergency that could arise from work with ionising radiation. The regulations establish a framework of emergency preparedness measures to ensure that members of the public are properly informed and prepared, in advance, about what to do in the unlikely event of a radiation emergency occurring, and provided with information if a radiation emergency actually occurs.</p> <p>REPPPIR adopt many of the emergency planning principles of the Control of Major Accident Hazards Regulations 1999 (COMAH) and formalise into regulations previous</p>	<p>In West Berkshire Council area there are two sites which need to comply with the above legislation. These two sites are both run by Atomic Weapons Establishment who have sites, both based in West Berkshire: AWE Aldermaston and AWE Burghfield.</p>

Overall aim or purpose of document	Objectives / Targets	Implications for the West Berkshire Housing Site Allocations DPD
	emergency planning arrangements with local authorities that have been in place around nuclear licensed premises for many years.	

### Summary of Key Emerging Local Level Objectives/Targets:

Level/Topic	Relevant Objectives (amalgamated from Review of National Policy) <i>Target (where relevant)</i>
<b>Local</b>	
<b>Environment</b>	Conserve and enhance landscape character and diversity, remoteness, tranquillity, biodiversity, preserve the historic environment including battlefields and sites of historic significance, protect and improve the urban environment, raise the profile of West Berkshire's unique and innovative cultural benefits
	Identify an appropriate balance between recreation and nature conservation and improve access to the countryside
	Ensure appropriate level/distribution of open space and recreational facilities to meet local needs, enhance open space within the defined settlements
	Protect the best and most versatile land, avoid fragmentation, support some farm diversification and agricultural development
	Protect, restore and manage grazing heathland- Greenham and Crookham Commons
	Support the restoration of the Kennet and Avon Canal and enhance its recreational value without harming the environmental character and ecology
<b>Resources</b>	Sustain natural resources, promote low carbon economy and energy conservation
	Overcome issues associated with the availability of water resources and recent low flows, promote water conservation
	Increase the amount of waste to be recycled
	Make maximum use of urban land
<b>Social</b>	Develop appropriate skills for the future
	Reduce the risk factors for vulnerable young people and families of offending and anti-social behaviour.
	Reducing crime and anti-social behaviour.
	To achieve greater social inclusion and to tackle all forms of social exclusion
	Support vibrant communities
	To improve educational standards
	Encourage sustainable travel
	To address the needs of all disadvantaged and excluded groups particularly focusing on older people, put in place preventative measures for vulnerable children and young people
	Plan for the delivery of 10,500 dwellings of a variety of types in a variety of locations to meet identified housing needs. Locate housing to have regard to sustainable development, provide affordable housing to meet local needs, and ensure the creation of quality housing schemes which maintain and enhance the character and appearance of the area in which they are located.
	Develop appropriate skills for the future
<b>Economy</b>	Direct development to most sustainable locations
	Enable some limited development to take place in rural areas
	To improve road safety, accessibility, buses and community safety, in addition to prioritising areas relating to congestion, air quality, safer roads and accessibility

## Appendix 2 - Baseline Information

### 1 Context

West Berkshire is located in the South East of England, within the former administrative area of the county of Berkshire. It is a Unitary Authority and covers an area of 704 square kilometres, extending from Hungerford in the west to Calcot in the east. In land use terms the area is predominately rural in character, with approximately 74% of the land area making up part of the North Wessex Downs Area of Outstanding Natural Beauty. Newbury, Thatcham, Hungerford, Theale, Purley, Tilehurst, Calcot and Burghfield Common are the largest settlements in the area.

Figure 1 - Context of West Berkshire

### 2 Social

In 2011 the Census showed West Berkshire with a population of 154,000. Figures indicate that the population has increased by 6% between 2001 and 2011. Approximately 75% of the population is concentrated in the Kennet Valley at strategic points along the A4 and on the western side of Reading. The remaining area comprises smaller settlements sitting within a diverse landscape. West Berkshire has one of the most dispersed populations in the South East with 253 people per hectare.

17% of the West Berkshire population is of retirement age (65 years and over) compared with a national average of 18%. The average age in West Berkshire is 39.4 years, the same as the national average. The 20 to 34 years age group makes up 16% of the population.

When compared nationally, there is a significantly lower proportion of people in West Berkshire who define themselves as coming from a black or ethnic minority (BME) background (5% of West Berkshire residents as a whole, compared to 14% of people in England and Wales). Although this is a relatively small proportion of the total population, this amounts to some 8,000 residents in the District.

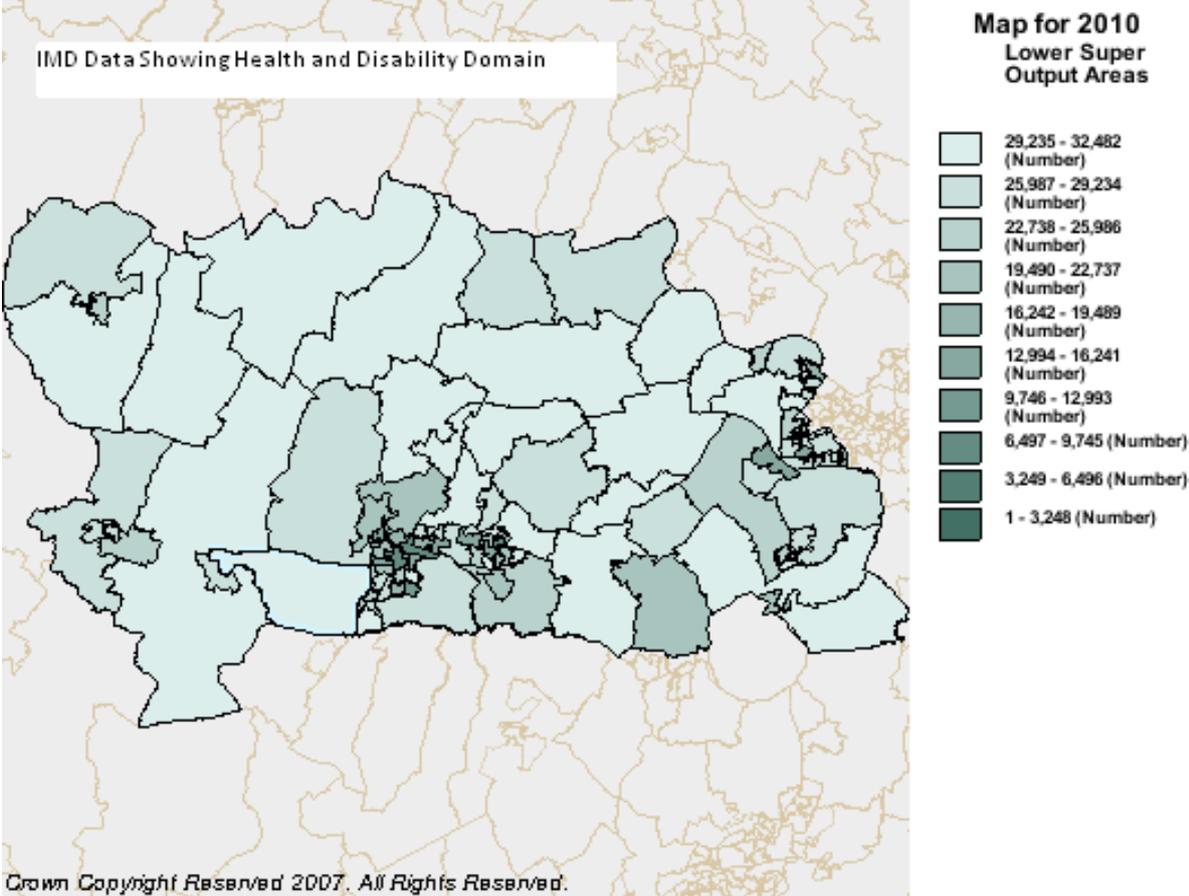

In response to the Census 2011, 164 people in West Berkshire self-identify as Gypsy or Irish Traveller. The majority of these people live within two authorised sites; a privately owned site in Aldermaston with 39 pitches and a site managed by the Council in Burghfield with 15 pitches. Although some Gypsies and Travellers live a nomadic lifestyle, which means they live in different places around the country, others live on the same site for extended periods of time.

**Future trends:** In the future, there is likely to be a large increase in the proportion of older people. The population of the area as a whole is projected to rise by 10% to 170,100 by 2021, and the population of over 65 yrs is forecast to grow by almost 64% between 2006 and 2026<sup>1</sup>. In comparison, it is predicted that the population in the South East Region will rise by 10% 2021, while the population of those aged over 65 will rise by 34%. The number of people aged 85+ is expected to rise by 41%, by 2021, which will have implications on adult social care provision within the district.

**2.1 Health**

People in West Berkshire consider themselves relatively healthy. According to the 2011 Census, 86% of people stated that their health was ‘good’ - compared with 84% of people in the South East and 81% of people nationally. The map below uses ODPM’s Indices of Multiple Deprivation to show relative levels of deprivation across the district in terms of selected social care factors. These include relative ages of residents, proportion of people with a limiting long term illness, proportion of people whose health is “not good” and numbers of unpaid carers providing 20 hours or more care per week.

**Figure 2 – Indices of Multiple Deprivation data showing health deprivation and**

disability.

<sup>1</sup> ONS, Subnational Population Projections, 2008

Wards in the darker colours show the most deprived areas in the District in terms of social care. We can see these are spread over the more rural areas across the district and within and around Newbury. A lot of the wards on the Reading fringe do not feature significantly.

In the 2001 Census, over 2,100 households reported having a child with a limiting long term illness. Disabled children account for approximately 2% of the school age population in West Berkshire - a figure of 1,103 according to the 2001 Census (Data from 2011 census is not yet available and will be added when available).

**Future trends:** Nationally, we are living longer and have greater long-term care needs. It is acknowledged that people want quality services that meet the full range of individual need, more local care, and the ability to take greater control over their health whilst being supported to remain as independent as possible. Changes in population and communities mean that we are less likely to be part of a close knit family providing support. For isolated rural communities this may mean additional transport links to services and the increased availability and use of broadband and other ICT technologies to provide local access to information about health, social care, housing and other Council services. Increased need for home adaptations or more specialised accommodation geared to allow as much independence as possible while supporting changing abilities is also likely.

## 2.2 Education

West Berkshire has a higher than average proportion of people with higher qualifications (HND, degree or higher) at 32% of people of working age. Despite the district's relatively good performance in education, significant numbers of the working population have no qualifications (17% compared to 23% nationally) and poor literacy and numeracy skills. This has important social implications since there are significant links between basic numeracy / literacy and levels of crime and health. Low levels of skills also potentially acts as a break on the economy with local employers unable to find people with the necessary skills from the local labour pool. Skills and labour gaps exist in certain key areas, particularly in the public sector, the construction industry and tourism.

**Future trends:** Educational trends are moving towards higher levels of achievement. West Berkshire has a high performance standard in primary schools with over 80% of children leaving primary schools with good literacy (87%) and numeracy (82%) skills. Overall, a higher proportion of 16-17 year olds remain in education and training in West Berkshire, compared to the South East more generally and to England. Significantly, West Berkshire has a much higher retention of 17 year olds in education or training than compared to either the region or nationally. Small increases in children reaching school age are placing increasing pressure on school places where schools are already at capacity.

In response to improving the basic skills of adults, the Council is continuing to steer provision to certain groups of the population, achieved through a combination of adult funding arrangements, fee concessions for students aged 60+, encouragement, funding and professional support for the development of provision targeted at addressing learning needs of prioritised groups and curriculum planning.

## 2.3 Housing

According to the 2011 Census, 70% of all housing in West Berkshire is owner-occupied - compared to 64% nationally. A very small proportion (1%) is being purchased under a shared ownership scheme whilst the remainder of households are in rented accommodation. About half of all rented accommodation is rented from a Registered Social Landlord (i.e. a housing association).

The average size of households in West Berkshire is 2.46 people. This is roughly in line with the average in Berkshire of 2.48 although is slightly higher than the national average of 2.36. Both nationally and within the district, overall household size has been declining since the 1950s. An easily overlooked consequence of this relatively rapid decline is, of course, that more dwellings are needed to accommodate the same population.

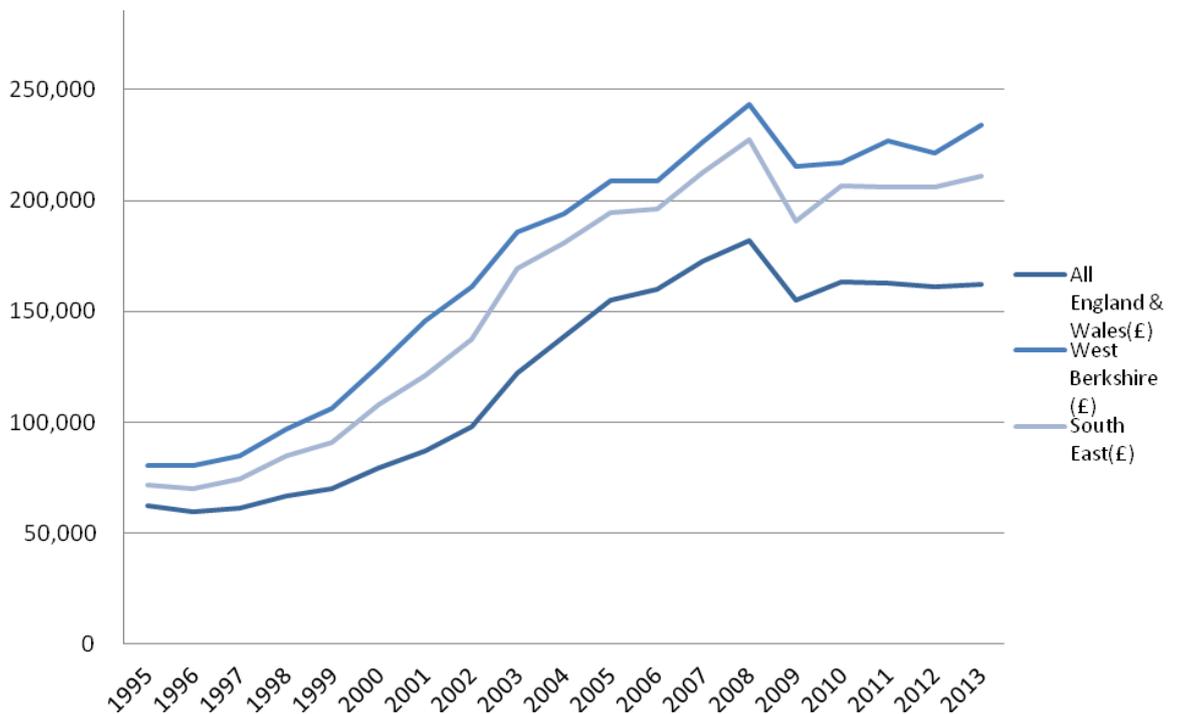

House prices have risen by 194% between 1995 and 2013 making West Berkshire one of the most expensive places to buy a house outside London. Prices have fallen as a result of the economic downturn, but they are still higher than the national average and are now very similar to their 2007 values. In January 2013 the average house price in West Berkshire was £233,906. A single income household would need to earn considerably above the average wage to receive a 90% mortgage on an average flat. This highlights the increasing need for affordable housing for local people and key workers within the district.

**Table 1** below shows the average annual house prices (all tenures) 2000-2013:

January	Average House Price (£)	
	West Berkshire	South East
2000	125,731	107,729
2001	145,568	121,077
2002	160,884	137,742
2003	185,607	169,516
2004	194,114	181,152
2005	208,678	194,518
2006	208,589	196,165
2007	226,503	212,640
2008	243,352	227,610
2009	215,479	190,898
2010	216,919	206,868
2011	226,876	206,051
2012	221,685	206,037
2013	233,906	211,054

Source: Land Registry

**Figure 3 – Average house price for West Berkshire compared to the South East and England and Wales**

Source: Land Registry Price Index

**Future trends:** A single income household would need to earn considerably above the average wage to receive a 90% mortgage on an average flat, which would therefore be out of reach of many wage earners without some form of assistance. This has a major impact on the ability to find and retain younger staff in general and key workers in particular and a growing impact with the escalation in the projected need for care workers in the community. As of April 2012 there were 4076 households registered on the Common Housing Register,

an increase from 2785 in April 2006. This increase is partly due to the economic downturn and it is possible that West Berkshire could experience a sharper increase in the number of applicants in the coming months. The housing transfer list for West Berkshire is held by Sovereign Housing Association. There are a high number of local people who either need a home of their own or require more suitable accommodation. The highest requirement is for one bedroom accommodation which reflects the increasing numbers of single person households trying to get on the property ladder. A shortage of affordable housing in rural areas which are popular and attractive places to live is a particular problem. Demand for new houses is high with local people competing with new residents such as commuters, people with second homes and the retired to purchase houses. This can create unbalanced communities, drive up house prices and deny local people the chance of securing a home of their own.

## 2.4 Deprivation

Overall, the district of West Berkshire ranks 288 out of 326 local authority areas, making it the 39<sup>th</sup> least deprived district in England. West Berkshire has a total of 97 Super Output Areas (SOAs) and the ten most deprived are shown in table 2 below. The table also shows the overall ranking out of all SOAs in the country. None of the West Berkshire SOAs fall within the top 20% most deprived in the country. The England ranking is 1 to 32,482 with 1 being the most deprived and 32,482 being the least deprived.

**Table 2 – Top ten most deprived SOAs in West Berkshire (2010)**

Rank in West Berkshire	SOA	Ward	Rank of IMD in England
1	E01016295	Greenham	6258
2	E01016673	Calcot	10495
3	E01016336	Thatcham North	10971
4	E01016347	Victoria	11225
5	E01016346	Victoria	11362
6	E01016325	Speen	11954
7	E01016280	Clay Hill	14190
8	E01016279	Clay Hill	14746
9	E01016312	Northcroft	14857
10	E01016340	Thatcham West	14962

In terms of 'Barriers to Housing and Services' (one of the IMD indices), a large proportion of the District is classified as being deprived; mainly due to the rurality of the area. Communities that are highlighted as being most deprived will have limited access to services and affordable housing. The generally high affluence of the region and of West Berkshire masks pockets of deprivation and exclusion. There are communities with individuals and families who experience particular difficulties as a consequence of being poor within a generally wealthy region.

**Future trends:** The main deprivation issue facing the area is that of barriers to housing and services. The need for affordable housing is likely to increase over the coming years. Sufficient and affordable housing in rural areas is also likely to remain a major concern, often resulting in young adults unable to buy or rent accommodation locally.

## 2.5 Crime and Safety

Nationally levels of crime have been declining; the year ending March 2013 saw a 7% decrease in police recorded crime on the previous year. Over the same period West Berkshire saw a 13% reduction in all crimes committed. Local priorities identified by the

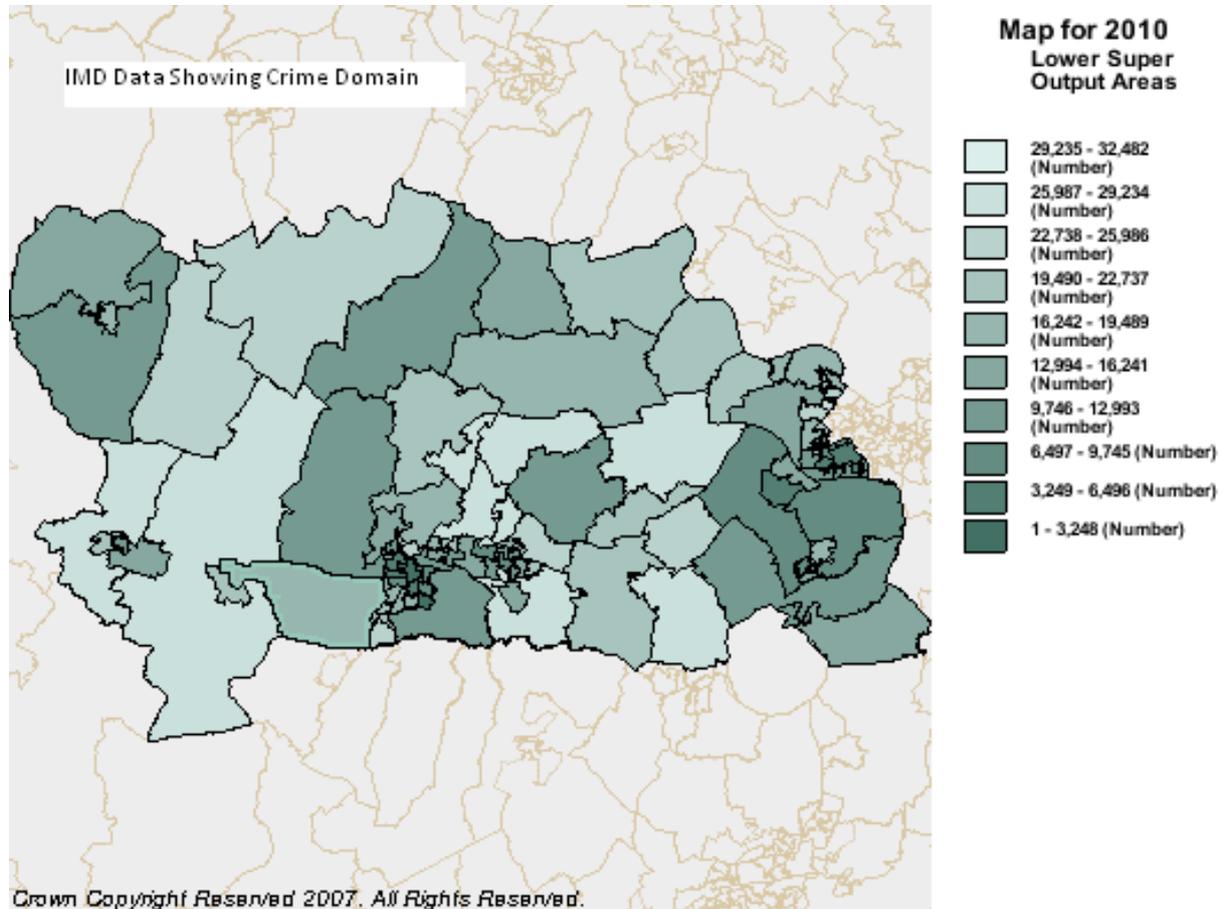

community and the police are largely associated with Speeding, Theft, Anti-Social behaviour and Rural Crime.

The majority of crime in West Berkshire naturally occurs in the more densely populated areas, with Newbury being the main hotspot for crime as well as attracting crime to it. Crime in the district occurs mostly in the evenings and especially overnight.

Most offenders are young and between the ages of 14 and 24, however younger people (aged 16 to 50) make up the majority of victims, with the risk of experiencing crime decreasing as age increased.

The map below shows crime across the district according to DCLG’s Indices of Multiple Deprivation. This measures the incidence of crime for the four major crime themes (burglary, theft, criminal damage and violence) and represents the occurrence of personal and material victimisation.

**Figure 4 – Indices of Multiple Deprivation data showing crime and disorder.**

Source: DCLG, Indices of Multiple Deprivation, 2010

One of the main areas for offending is Newbury town centre with the peak time for offending being between 9 pm and midnight on a Friday and 9 pm – 3 am on a Saturday and Sunday, which shows a direct link to the night time economy. The 3 motorway service areas in West Berkshire are hotspots for thefts from family vehicles and lorry loads. Both Membury and Moto Service Stations are also significant hotspots for making off without payment/bilking offences.

The results of the West Berkshire Council Community Safety survey 2008 showed that the majority of people, 87%, feel safe outside during the day in their local area. This changes

after dark where almost a third of residents did not feel safe. The most commonly perceived anti social behaviour problems in West Berkshire are speeding vehicles, teenagers hanging around and inconsiderate parking. Despite a relatively low crime rate in the district, perceptions and fear of crime does not appear to diverge significantly from the national picture. The 2007/8 West Berkshire Council Annual Satisfaction Survey shows crime is of universal concern irrespective of where people live.

**Future trends:** Although the level of crime is of importance to the residents of the area, it is antisocial behaviour that is of more concern as this has a direct effect on the quality of life and general appearance of the area. A large number of the complaints received relate to anti-social behaviour attributed to young people and in some cases this is more to do with lack of tolerance by older residents. However, since the district is in line to see an increase in the older population, this is likely to lead to less tolerance towards the behaviour of young people.

## 2.6 Formal and Informal recreation and sport

The Council is responsible for maintenance, management and enhancement of all parks and open spaces owned by the Council. The West Berkshire Open Space and Leisure Assessment of Need 2005 highlighted the following:

- There is sufficient provision of open space, in quantitative terms and public opinion of West Berkshire's open spaces is generally positive. There is however concern that open spaces should not be sold, but retained.
- It is considered that the quality and accessibility of open spaces can be enhanced through the provision of seating and toilets; improving access and use for all and creating more effective links to increase accessibility.
- The provision of sports halls and swimming pools exceeds demand based on the demand and supply modelling carried out as part of the study.

The assessment does not give indication of likely future condition of recreational facilities nor future demand. A new assessment will be done as part of the evidence base for the SAD.

## 3 Environment

### 3.1 Landscape

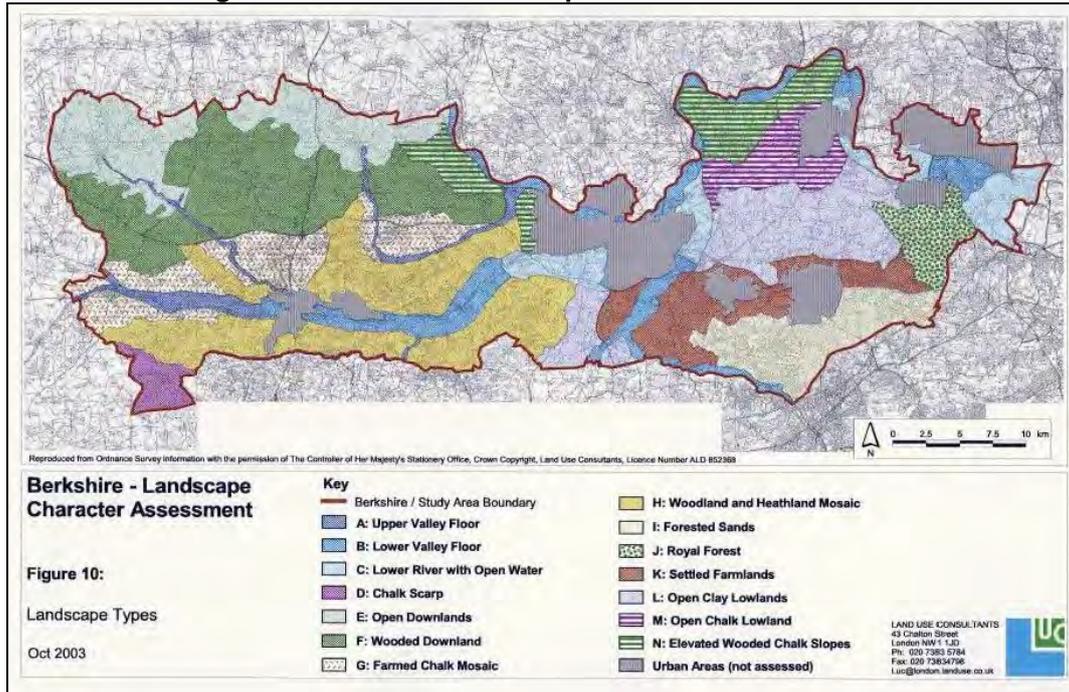

The District can be divided into five National Character Areas, these are Thames Basin Heaths (in the south), Hampshire Downs, Berkshire and Marlborough Downs (in the north), Chilterns (in the north-east) and Thames Valley (in the south-east)<sup>2</sup>.

The Berkshire Landscape Character Assessment<sup>3</sup> (2003) identifies 14 landscape types which are subdivided into potential character areas.

<sup>2</sup> National Character Area Profiles , Natural England, 2014

<sup>3</sup> Berkshire Landscape Character Assessment, Joint Strategic Planning Unit, 2003.

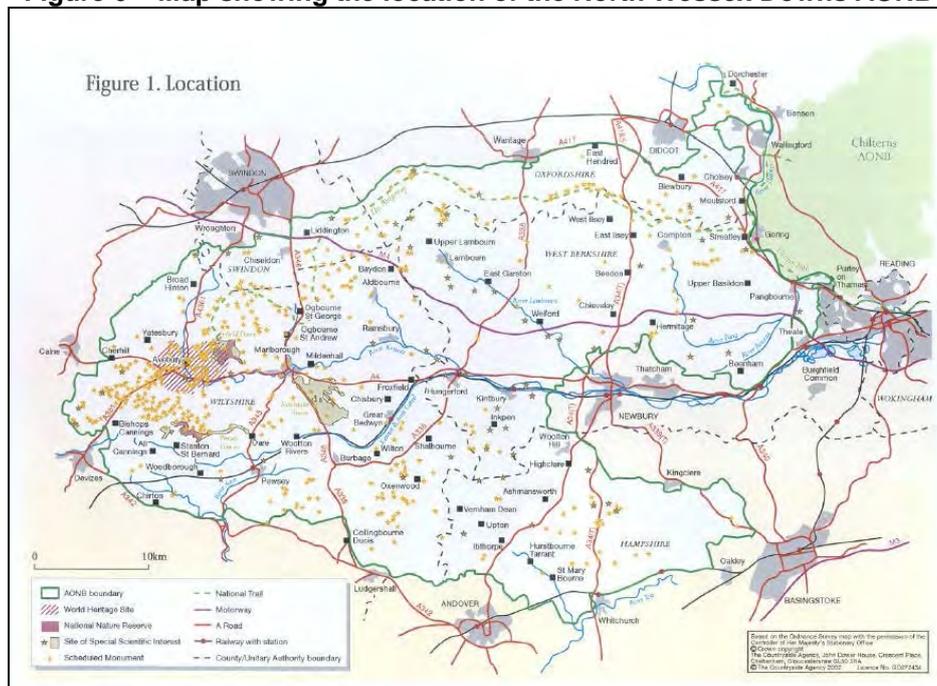

**Figure 5 – Berkshire Landscape Character Assessment**

Source: Berkshire Landscape Character Assessment, 2003

74% of West Berkshire lies within the North Wessex Downs Area of Outstanding Natural Beauty which is a landscape of national importance. Within the AONB the diversity and mix of landscapes include<sup>4</sup>: Chalk Upland; Chalk Dipslopes and Lowland and Chalk with Tertiary or Gravel Deposits; Western Wooded Chalkland; Lambourn Valley; Pang Valley; Kennet Valley; Thames Valley; Wooded Lowland Farming; Gravel Plateau Woodlands with Pastures and Heaths; Plateau-edge Transitional Matrix; London Clay with Gravel Ridges; Small scale Wooded Valley Farmland; Large scale Valley Farmland; Parkland.

**Figure 6 – Map showing the location of the North Wessex Downs AONB**

Source: North Wessex Downs AONB [www.northwessexdowns.org.uk](http://www.northwessexdowns.org.uk), 2005.

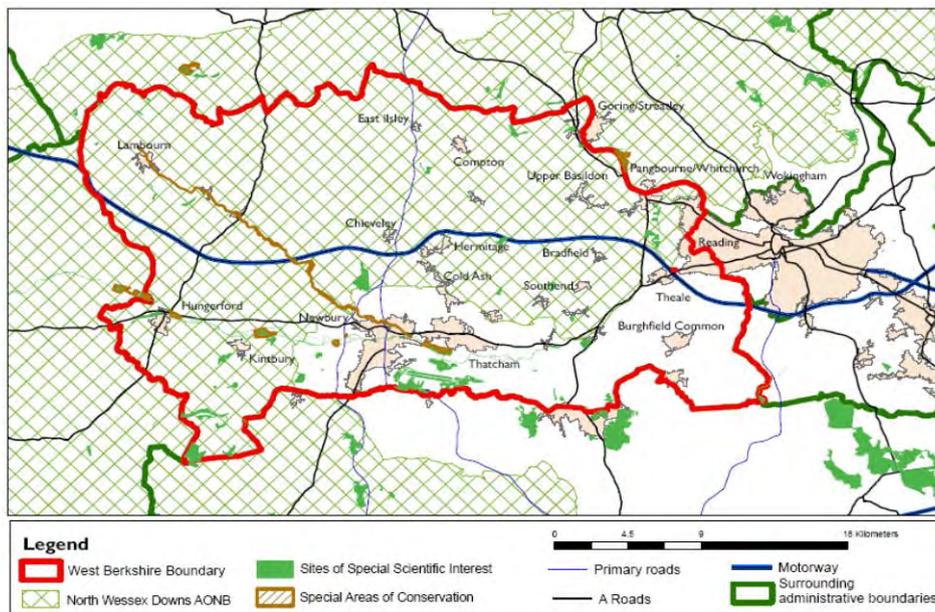

<sup>4</sup> North Wessex Downs AONB Integrated Landscape Character Assessment, 2002

**Future trends:** The Berkshire Landscape Character Assessment states that the current driving forces relating to landscape change are agriculture/forestry, recreation and development. Agriculture is currently in recession and inevitable restructuring of the agricultural economy is resulting in increased farm units and expansion, or conversely land coming out of production resulting in lifestyle and hobby farms. In addition, a loss of markets in forestry has resulted in a decline in woodland management especially those of ancient origin managed under traditional regime. Development is also a powerful force for change. The increasing pressure from expanding business economies and the need to accommodate housing is threatening landscape character. Other potential changes to landscape character relate to energy crops, mineral extraction (although sympathetic restoration has resulted in the creation of important new wetland landscape and habitats) and telecommunications. Tourism and recreation can also threaten landscape character.

### 3.2 Biodiversity

The District has a number of designated sites of international, national, regional and local conservation importance.

**Figure 7 – Location of SSSIs and SACs in relation to West Berkshire and the North Wessex downs AONB.**

- **Special Areas of Conservation (SAC):** There are three SACs in West Berkshire.

Area	Quality and importance	Vulnerability
River Lambourn	One of the best sites in the UK for Ramunculion Fluitantis and Callitricho-Batrachion (Aquatic Vegetation) and the European Bullhead. The river is a site that supports significant presence of the Brook Lamprey.	Area of high water quality, quality and habitat quality. Localised higher water nutrient levels and siltation associated with sewage treatment works.
Kennet and Lambourn Floodplain	On of the UK’s more extensive known populations of Desmoulin’s Whorl snail	Require open, unshaded conditions, with an adequate supply of high quality water and water levels. Majority of population are not considered to be under threat.

Area	Quality and importance	Vulnerability
Kennet Valley Alderwoods	Alluvial Forests of Ash and Alder	Dependent on maintenance of constantly high ground water levels. The site is subject to low levels of intervention and natural process are allowed to prevail therefore, there are no known threats to groundwater levels.

- **Sites of Special Scientific Interest (SSSI):** West Berkshire currently has 51 SSSIs covering 1,348.9 ha<sup>5</sup>. The table below lists the habitat designations in West Berkshire.

Habitat designated	Number of sites
Alder Woodlands	1
Ancient Woodland	10
Ancient Woodland and Heathland	1
Ancient Woodland and Wet Grassland	1
Chalk Grassland	10
Chalk Grassland and Ancient Woodland	1
Chalk Grassland and Lichens	1
Chalk Stream	7
Heathland	1
Lake and Wetland	1
Meadow	1
Neutral Grassland	3
Neutral to Acidic Grassland	1
Ponds and Marsh	1
Pools and Wet Woodland	1
Reed Beds	2
Wet Grassland	2
Wet Grassland and Chalk Stream	1
Wet Grassland and Reed bed	1
Wet Heath and Ancient Woodland	1
Wet Marsh	1

30 of the SSSIs are considered to be in a favourable state, with 17 sites in an unfavourable but recovering state. 2 sites (River Kennet and River Lambourn) are considered to be in an unfavourable no change state with 2 sites (Woolhampton Reed Bed and Boxford Chalk pit) considered to be unfavourable declining.

- **Special Protection Areas (SPA):** There are no SPAs in West Berkshire, however the south eastern corner of the District (around the village of Beech Hill) falls within the 5km zone of the Thames Basin Heath SPA.
- **Local Nature Reserves:** There are three sites within the District.
  - Thatcham Reed Beds,
  - Hose Hill Lake,
  - Burghfield, and Padworth Common.
- **Wildlife Heritage Sites (WHS):** There are 508<sup>6</sup> sites (6,401.69 ha) designated for their Wildlife Heritage in west Berkshire.

<sup>5</sup> Natural England, 2013

- **Other sites:** West Berkshire has a rich range of habitats including hedgerows, veteran trees and wildlife corridors as well as conservation verges which are managed differently to normal verges and are sympathetic to the wildlife that flourishes on them. In addition, smaller extant features, which form a mosaic of fragmented sites throughout the area, are important when considered as a whole and connections to and between such sites are also of great value.
- **Protected species:** The water vole is Britain's fastest declining mammal. The Thames region is one of the country's strongholds for the animal and even here the decline has been dramatic. Farmland still supports large numbers of birds, but great changes have occurred to the management of farmland over the past 30 years and a downward trend can be seen.

**Future trends:** Thames Valley Environmental Records Centre have stated that without adequate protection, conservation and enhancement, the biodiversity and ecology of existing areas will continue to be threatened by development pressure.

### 3.3 Common Land

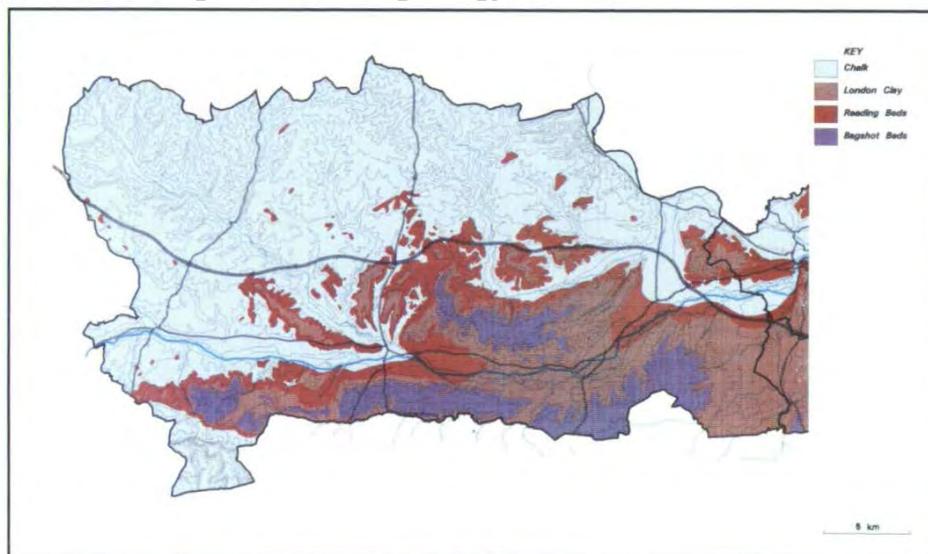

West Berkshire has a chain of commons throughout the area under pressure from recreational use, including town commons still under traditional grazing, such as Hungerford Common.

### 3.4 Geology

The main elements of West Berkshire's underlying geology are Chalk, London Clay, Reading and Bagshot Beds. In many areas alluvial deposits and plateau gravels are superimposed upon this geology. Chalk underlays much of the area covered by the AONB, while the Bagshot Beds are found to the south of the District stretching from the west to the east. The London Clay and Reading Beds are located in areas between the Chalk and the Bagshot Beds.

Rushall Farm Pit is currently the only Regionally Important Geological/ Geomorphological Site (RIGS) in West Berkshire. Although seven of the districts SSSIs have been identified for their geological value.

**Figure 8 – Solid geology of West Berkshire.**

<sup>6</sup> Thames Valley Environmental Records Centre (TVERC), 2007

Source: Newbury District Wide Landscape Assessment, Landscape Design Associates, 1993.

### 3.5 Historic Environment

There are 6436 items listed in the West Berkshire Historic Environmental Record (HER), which contains records of all the physical remains of past human activity in the district<sup>7</sup>. The HER contains details of all West Berkshire's nationally designated sites as well as structures and buildings of local interest.

West Berkshire's statutory designations include:

- **Listed Buildings:** The District has 1877 listed buildings; 42 Grade I, 107 Grade II\*, and 1,728 Grade II. These include the Tudor mansions at Shaw House and Ufton Court, the Georgian mansion at Basildon Park, the Norman church of Avington, and the 1950's St Johns Church in Newbury. The 2012 list by English Heritage of buildings at risk included 8 listed buildings and structures at risk in West Berkshire.
- **Conservation Areas:** There are 52 designated conservation areas.
- **Scheduled Monuments:** Nearly 100 sites/structure are identified as Scheduled Monuments, including sites that lie across the District boundary. These include a wide range of types and chronological periods, including the Neolithic Long Barrow at Combe Gibbet, the extensive collection of Bronze Age barrows in the Lambourn Seven Barrows Group, the late medieval and Civil War site at Donnington Castle and the Cruise Missile storage facilities (GAMA Site) at Greenham Common.
- **Historic Parks and Gardens:** West Berkshire has 13 registered Parks and gardens which are formally designated by English Heritage.
- **Historic Battlefields:** There are two Historic Battlefields; Newbury I and II Civil War Battlefield sites. The Register specifically mentions the risk to the battlefield posed by potential development around its fringes.

The 2013 English Heritage "Heritage at Risk" Register identifies three buildings, six Scheduled Monuments, three historic parks and gardens and one battlefield at risk in West Berkshire. These are listed in the table below:

**Table 3 - Heritage at Risk in West Berkshire**

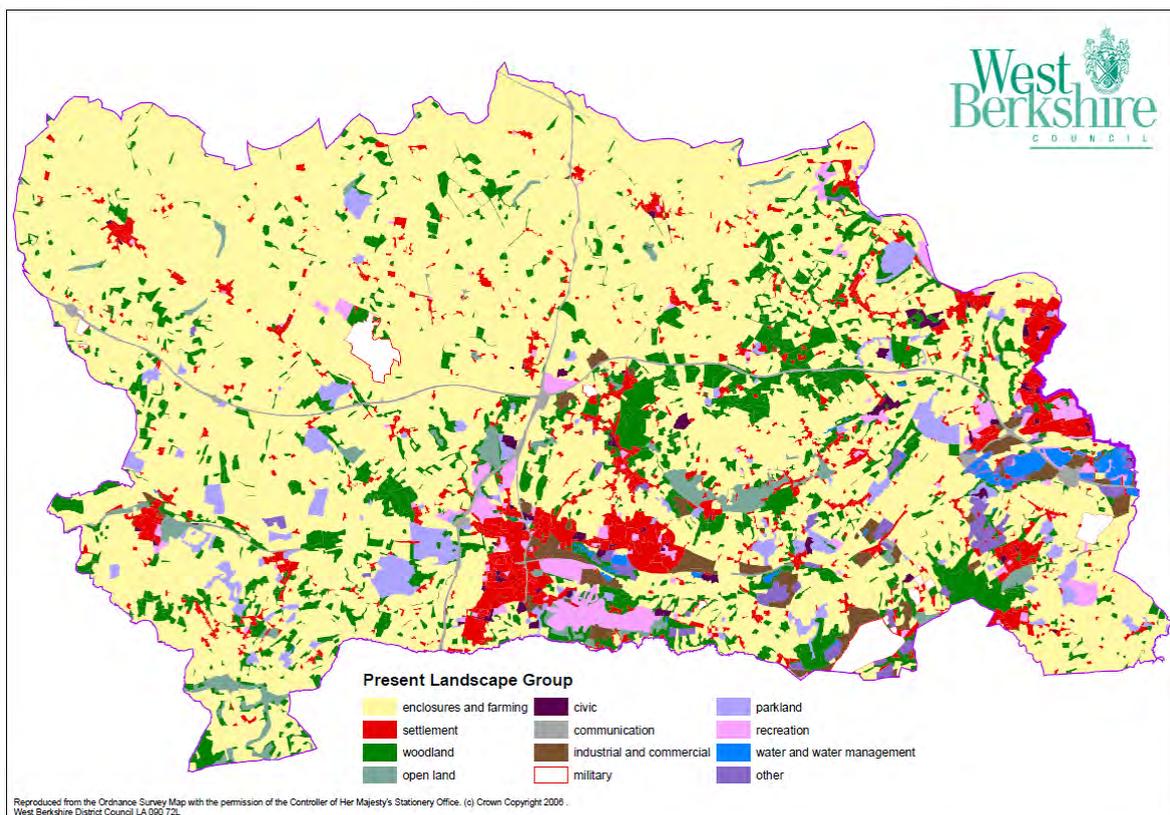

Site / Building at risk	Designation	Vulnerability
Chapel of St Leonard, East of Manor Farmhouse, Brimpton Road, Brimpton	Scheduled Monument and Listed Building grade II*	Vacant building
Pair of gate piers 204 meters east of entrance to Home Farm, Park Lane, Hampstead Marshall	Listed building grade I, RPG grade II	Eroding of brick work
Three pairs of gate piers and walls around gardens and terrace at Home Far, Park Lane Hampstead Marshall	Listed Building grade I, RPG grade II	Weed growth and erosion
Long Barrow at Combe Gibbet, Gallows Down, Combe / Inkpen	Scheduled Monument	Vehicle damage / erosion
East Ilsley Down round barrows, East Ilsley	Scheduled Monument	Arable ploughing
Long barrow on sheep down, 1km north of East Ilsley	Scheduled Monument	Arable ploughing
Bowl barrow 30m north of Bitham Lane, Inkpen	Scheduled Monument	Arable Ploughing

<sup>7</sup> [www.heritagegateway.org.uk](http://www.heritagegateway.org.uk)

Site / Building at risk	Designation	Vulnerability
Two bowl barrows 500m NE of Stancombe Farm, Lambourn	Scheduled Monument	Animal burrowing
Membury Camp, Lambourn		Arable ploughing
Aldermaston Court, Aldermaston	Registered park and garden grad II, 12 LBs, part in CA	Perceived lack of beneficial use and resources
Sandleford Priory, Greenham	Registered Park and Garden grade II, 2 LBs	Development
Shaw House, Newbury	Registered park and garden grade II, 6LBs, 2 CAs	Additional funding required to restore all the garden areas
First Battle of Newbury, Enborne / Newbury / Speen	Registered Battlefield, 4LBs	Housing development around fringes.

Mapping of current and past land use has recently been undertaken for all of West Berkshire as well as for the North Wessex Downs Area of Outstanding Natural Beauty through the Historic Landscape Characterisation Project.

**Figure 9 – Present land use according to the Historic Landscape Characterisation Study for West Berkshire<sup>8</sup>.**

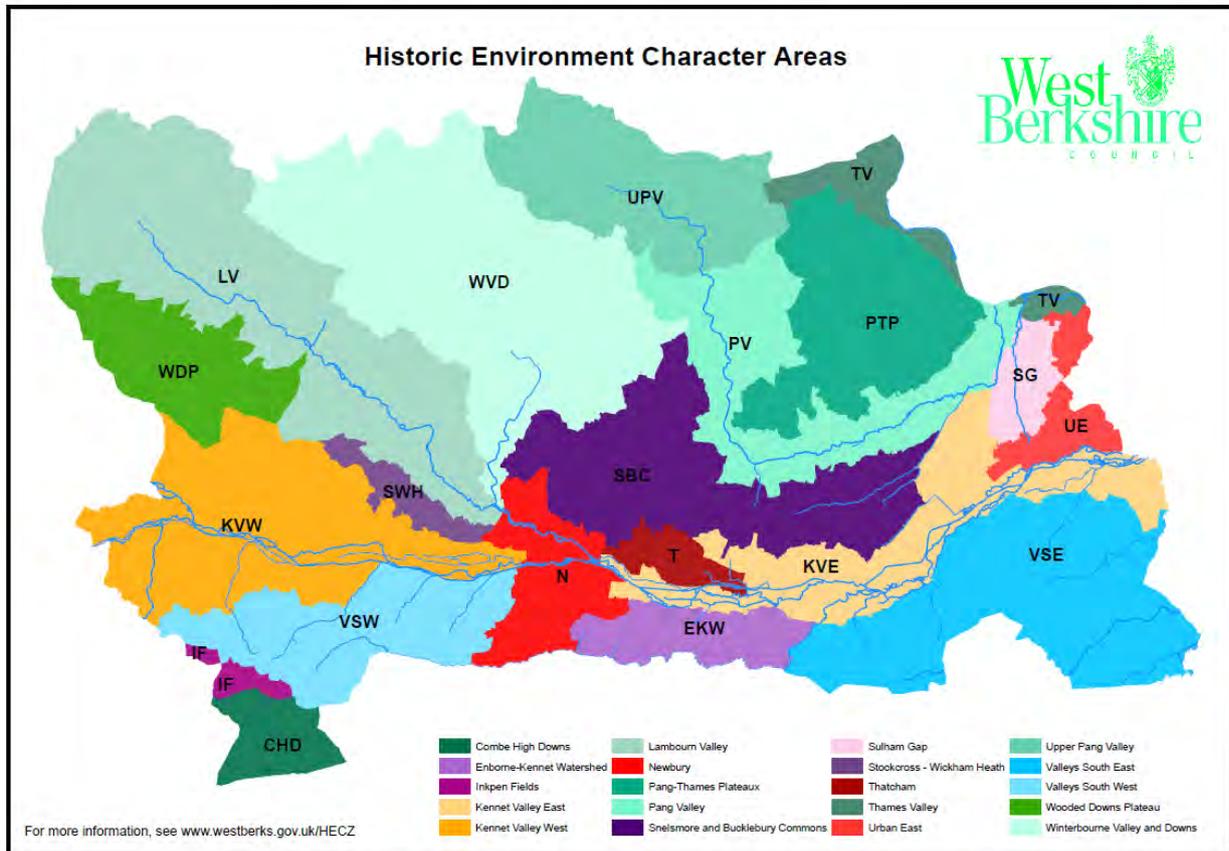

The Historic Environment Character Zoning (HECZ) project carried out by West Berkshire Council’s Archaeology Service aimed to identify distinct areas and zones where common characteristics could be mapped. Its objective was to provide a more comprehensive account of the historic environment resource that will enable the valuable and non-renewable historic features of the district to be better understood and better cared for into the future. The Historic Landscape Characterisation (HLC) project did not consider archaeology. The result

<sup>8</sup> Historic Landscape Characterisation Project, West Berkshire Council, 2007

of this process was the division of the district into 23 Historic Environment Character Areas (HECAs), which were further subdivided into 91 Historic Environment Character Zones (HECZs). Each HECA has a similar landscape history and evolution as well as geographical characteristics; HECZs were identified by having common traits in archaeological monuments, buildings, land-use or settlement patterns.

**Figure 10 – Historic Landscape Character Areas for West Berkshire<sup>9</sup>.**

**Future trends:** Conservation Area status has contributed to the conservation of the historic character of West Berkshire, although this is difficult to quantify. The conservation of historic buildings and areas has helped to sustain the distinctive communities in the District. Conservation needs are not necessarily incompatible with building new housing for local needs if care is taken over design.

### 3.6 Climatic Factors

The World Meteorological Organization (WMO) requires the calculation of averages for consecutive periods of 30 years, with the latest covering the 1961-1990 period. However, many WMO members, including the UK, update their averages at the completion of each decade. Thirty years was chosen as a period long enough to eliminate year-to-year variations. These averages help to describe the climate and are used as a base to which current conditions can be compared.

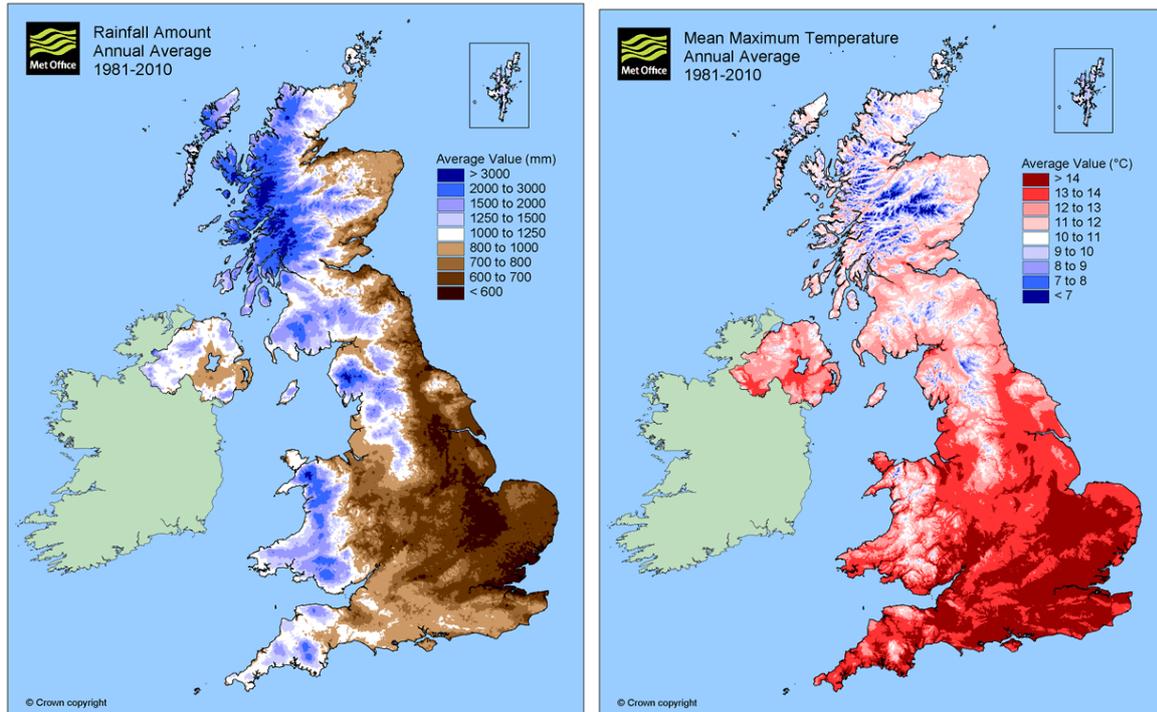

Changing weather patterns may be seen as direct indicators of climate change. The Met Office's average figures for the South East of England (South East and Central South) for 1981-2010 indicate that minimum daily temperatures ranged from 1.4°C in February to a minimum of 12.2°C in July, while maximum temperatures ranged from 7.5°C in January to

<sup>9</sup> Historic Environment Character Zoning Project, West Berkshire Council, 2007

22.0°C in July. Average monthly rainfall in the South East varies from 51.7mm in July to 92.8mm in October with an average annual total of 787.6mm.

**Figures 11 and 12 - Average annual rainfall (mm) and the average annual maximum temperature (°C) for 1981-2010.**

**Figure 12 – Average annual rainfall 1981 – 2010 Figure 13 – Average annual maximum temp. 1981 - 2010**

Source: Met Office (Crown copyright). [www.metoffice.gov.uk](http://www.metoffice.gov.uk)

The next set of climate change scenarios for the UK is known as UKCIP08<sup>10</sup>. The climate of the United Kingdom and recent trends<sup>11</sup> is the first in the UKCIP08 series of reports. Its summary of the main findings are:

- Warming of the global climate system is unequivocal, with global average temperatures having risen by nearly 0.8 °C since the late 19th century, and rising at about 0.2 °C/decade over the past 25 years.
- It is very likely that man-made greenhouse gas emissions caused most of the observed temperature rise since the mid 20th century.
- Global sea-level rise has accelerated between mid-19th century and mid-20<sup>th</sup> century, and is now about 3mm per year. It is likely that human activities have contributed between a quarter and a half of the rise in the last half of the 20th century.
- Central England Temperature has risen by about a degree Celsius since the 1970s.
- Temperatures in Scotland and Northern Ireland have risen by about 0.8 °C since about 1980, but this rise has not been attributed to specific causes.
- Annual mean precipitation over England and Wales has not changed significantly since records began in 1766. Seasonal rainfall is highly variable, but appears to have decreased in summer and increased in winter, although with little change in the latter over the last 50 years.
- All regions of the UK have experienced an increase over the past 45 years in the contribution to winter rainfall from heavy precipitation events; in summer all regions except NE England and N Scotland show decreases.

<sup>10</sup> UK 21st Century Climate Scenarios, UK Climate Impacts Programme, 2008.

<sup>11</sup> The climate of the United Kingdom and recent trends, Geoff Jenkins, Matthew Perry and John Prior, Hadley Centre, Met Office, Exeter (December 2007)

- Severe windstorms around the UK have become more frequent in the past few decades, though not above that seen in the 1920s.
- Sea-surface temperatures around the UK coast have risen over the past three decades by about 0.7 °C.
- Sea level around the UK rose by about 1mm/yr in the 20th century, corrected for land movement. The rate for the 1990s and 2000s has been higher than this.

**Future trends:** Understanding and adapting to the realities of climate change will be one of the challenges the District will be faced with. Climate change scenarios for the UK (UKCIP02) provide the best information on which to form an understanding of climate change, it shows that it is expected to be more pronounced in the South East than in any other UK region. Nationally it is estimated that there will be an annual warming by the 2080s of between 1 and 5 °C, with greater summer warming in the south-east than the north-west, and with greater warming in summer and autumn than in winter and spring. Over the same period, although annual rainfall totals are not expected to show much change, winters are expected to be up to 30% wetter than at present, and summers up to 50% drier<sup>12</sup>. A changing climate will bring about more storms, heavier rain, stronger winds and more summer heat-waves. It will have an impact on the landscape and our lifestyles; rare wildlife habitats and species may be threatened by the changing climate; farming could suffer from more pests, worse soil erosion and a decrease in agricultural land; more intense rain, rising sea levels and wetter soils will increase flood risk; and water supplies will be affected along with our demands made on them.

### 3.7 Air Quality

The Council monitors air quality within West Berkshire. The principal source of air pollution in West Berkshire is exhaust emissions from road traffic.

Under the Environment Act, Councils are required to review and assess air quality in their area. If any standards are being exceeded or are unlikely to be met by the required date that area should be designated an air quality management area and the Council must draw up and implement an action plan aimed at reducing levels of the pollutant.

National air quality objectives have been designated for priority pollutants - benzene, 1,3-butadiene, carbon monoxide, lead, nitrogen dioxide, particles (PM10), sulphur dioxide, ozone and PAH. These have been set on the basis of scientific and medical evidence on the health effects of each pollutant, and according to the practicability of meeting standards. In West Berkshire all the air quality objectives are generally being met except for nitrogen dioxide on some busy roads and intersections. As a result of this an Air Quality Management Area (AQMA) has been declared at one section of the A339 in Central Newbury. The associated Air Quality Management Plan (AQMP) has been developed and is being implemented. Levels of nitrogen dioxide are declining, which could be associated with the improvement to emissions from vehicle exhaust as well as implementation of the AQMP.

**Future trends:** Air quality continues to be monitored across the district, and delivery of the AQMA continues in the AQMA.

### 3.8 Water Quality

High levels of nitrates are found in areas of poor water quality. There are no Nitrate Sensitive Areas in West Berkshire, but there are large areas covered by Nitrate Vulnerable Zones (NVZs). NVZs apply to areas where surface and/or groundwater contains nitrate concentrations in excess of 50mg/l. The widespread classification of NVZs in West Berkshire is reflective of the land use within the area and the intensive agricultural practices which are employed. As a consequence farmers within NVZs are required to comply with

<sup>12</sup> UKCIP02 Climate Change Scenarios for the UK, UK Climate Impacts Programme, [www.ukcip.org.uk](http://www.ukcip.org.uk).

mandatory Action Programme measures designed to protect both ground and surface waters against pollution caused by nitrates from agriculture.

In September 2011 62% of England was designated as a Nitrate Vulnerable Zone (NVZ). Approximately three quarters of West Berkshire is now designated as a NVZ, including Newbury, Thatcham and the eastern part of the district including Theale and Calcot.

Three different types of NVZs have been identified in West Berkshire:

- Surface Water;
- Groundwater; and
- Existing.

The most prominent is the groundwater NVZ, which covers much of the northern and western areas of West Berkshire.

**Future Trends:** The South East Plan highlights that meeting water quality standards is a challenge for the region. Together with tightening water quality standards, a growing population and development pressures, are placing extra demands on the sewerage treatment infrastructure and the waters receiving effluent. Turbidity of the water in the Kennet is also an issue locally.

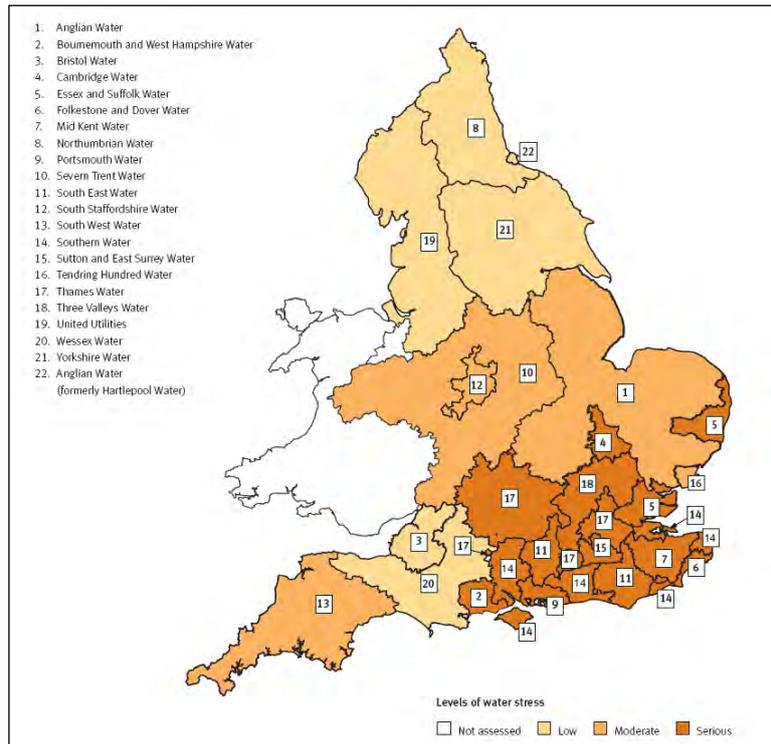

### 3.9 Water Resources

Water resources within West Berkshire are managed by water and wastewater services company Thames Water. The District is located within two (2) Water Resource Zones; the Kennet Valley Resource Zone and the Swindon and Oxfordshire Resource Zone (SWOX). Above ground water resources include the rivers Pang, Lambourn and Kennet. The primary groundwater resource is the chalk aquifer that underlies much of eastern and southern England, this aquifer is tapped by a number of bores that supply potable water to the district. The Environment Agency, in its document *Water for People and the Environment (2009)*, indicated that West Berkshire is within an area with “serious levels of water stress”. In addition, much of the district has water resources that are either over licensed, over abstracted or there is no water available for abstraction<sup>13</sup>.

**Future Trends:** Climate change is anticipated to have an impact on water supply due to more extreme climatic variability. Hotter summers are expected to result in increased water usage and reduce the period when groundwater sources can refill, in addition, soil moisture is expected to be reduced in summer, resulting in increased use of irrigation for crops. Overall, increased population and the effects of climate change are going to place greater pressures on a finite resource. The Environment Agency suggests that within less than thirty years there will be a major water shortage in the South East unless there is a reduction in the amount of water used or new resources are found. Thames Water has forecast that there will be a deficit of water of 60 million litres per day by 2030 in the SWOX zone unless new water resources are found. Water conservation measures are going to be required to ensure an adequate water supply into the future.

<sup>13</sup> Water for people and the environment, Water Resources strategy for England and Wales (2009), Environment Agency, [www.environment-agency.gov.uk](http://www.environment-agency.gov.uk)

**Figure 13 – Water Stressed Areas in England**

Source: Environment Agency (Crown Copyright). [www.environment-agency.gov.uk](http://www.environment-agency.gov.uk)

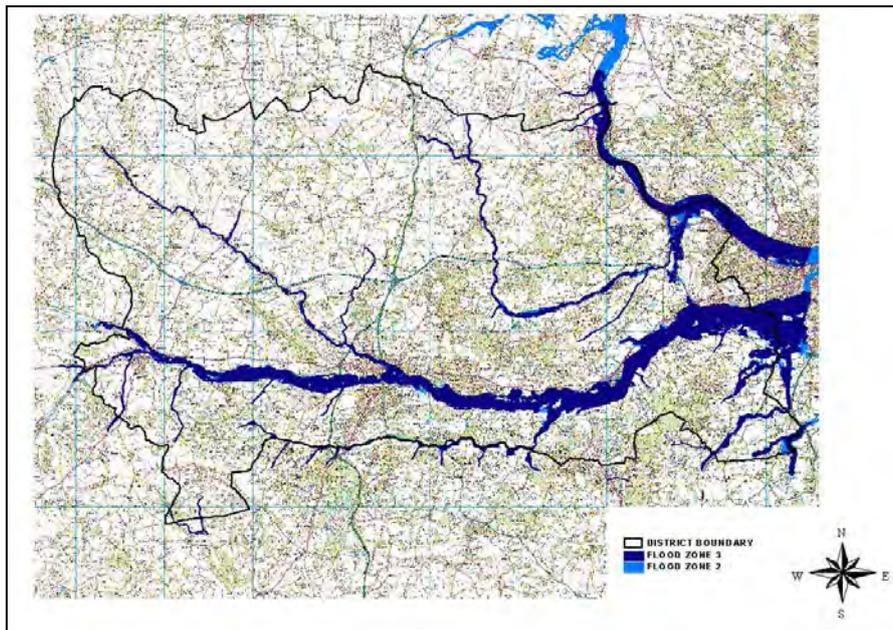

### 3.10 Flood Risk

There are various forms of flooding which all present various levels of risk. Flooding can occur from rivers, the sea, from land, groundwater, sewers, reservoirs, canals and other artificial sources. West Berkshire has undertaken a Strategic Flood Risk Assessment (SFRA)<sup>14</sup> as required by the NPPF, in consultation with the Environment Agency to “determine the variation of flood risk across and from their area as the basis for preparing appropriate policies for flood risk management for these areas”.

The SFRA will inform the Site Allocations DPD and highlights requirements for specific development sites in relation to flood and drainage infrastructure.

The risk of flooding within West Berkshire is widespread, arising not only from rivers but also from surface water and groundwater flooding. The events of the summer of July 2007 were a timely reminder of the impacts that flooding can have upon the local community. A relatively large number of homes and businesses within West Berkshire are at risk of flooding, arising from a number of sources including river flooding, localised runoff, groundwater flooding and sewer flooding. The SFRA has delineated the District into zones of ‘low’, ‘medium’, and ‘high’ probability of fluvial flooding in accordance with PPS25, it has modelled the impacts of climate change, and it has investigated the risk of groundwater and surface water flooding which has resulted in a series of ‘Critical Drainage Areas’ being identified to inform the planning process.

<sup>14</sup> West Berkshire Council, Strategic Flood Risk Assessment Level 1, May 2008

**Figure 14 – Flood Zone Map of West Berkshire**

Source: Environment Agency (Crown Copyright). [www.environment-agency.gov.uk](http://www.environment-agency.gov.uk)

**Future Trends:** A considerable amount of research is being carried out worldwide in an endeavour to quantify the impacts that climate change is likely to have on flooding in future years. Climate change is perceived to represent an increasing risk to low lying areas of England, and it is anticipated that the frequency and severity of flooding will change measurably within our lifetime.

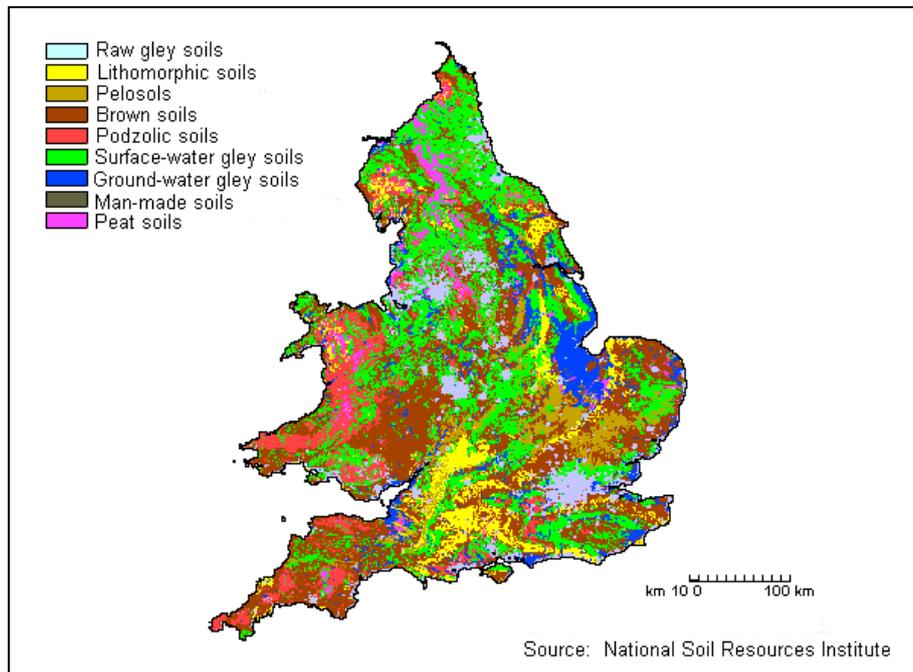

According to the SFRA for West Berkshire, climate change will not markedly increase the extent of river flooding within most areas of the District, however those properties (and areas) that are currently at risk of flooding may be susceptible to more frequent, more severe flooding in future years. The ‘best practice’ approach adopted throughout England is that Flood Zone 2 Medium Probability is considered a reasonable approximation of the likely extent of the High Probability Flood Zone in 100 years as a result of climate change. Climate change will also potentially increase the frequency and intensity of localised storms over the District, this could exacerbate localised drainage problems.

Climate change will increase flood risk as more intense rainfall will increase peak river flow. In the summer, dry soils are unable to absorb heavy rainfall fast enough which results in severe localised flooding. Winter soils will tend to be wetter on average and will similarly be unable to absorb heavy rainfall fast enough. These changes in rainfall duration and intensity will have direct implications on river flooding, local flash flooding and we could see areas not previously flooded experiencing flooding for the first time.

### 3.11 Soil

West Berkshire has a number of different soil types ranging from sandy with low fertility, to loamy with high fertility. There are naturally wet soils associated with river valleys and dry well drained soils on hillsides. The Environment Agency, DEFRA, and other research bodies concerned with soil science, such as the National Soil Resources Institute, have been undertaking research on soils in the UK and are actively promoting the protection of soil health. Healthy soils are vital to a sustainable environment. They produce food and timber, filter water, store carbon, support wildlife and the built landscape, and preserve records of our ecological and cultural past.

Figure 15– Soil types of England and Wales

Erosion of soil through intensive agricultural activities, contamination by heavy metals, nutrient loss, degradation of soil biodiversity, atmospheric pollution and the effects of climate change are all threats to the ongoing sustainable use of soils in the UK. In West Berkshire, increasing urbanisation, the continuation of unsustainable agricultural activities and the potential for increased flooding due to climate change are the major concerns.

**Future Trends:** There is evidence that soil degradation is continuing in the UK and around the world despite greater awareness of the importance of soils. DEFRA has developed a *Soil Action Plan for England (2004-2006)* and issued a draft *Soil Strategy for England* in March 2008. The intention of the Action Plan and Strategy is to increase the sustainable use of soils in England and ensure that the protection of soil health is a consideration in decisions made relating to land use planning. There is increasingly a better understanding of the importance of soils to sustainable agriculture and food production. Sustainable agricultural techniques and organic food production methods have increased in recent years and are predicted to continue to gain importance in the future. The European Commission adopted the Thematic Strategy for Soil Protection and had been working towards a ‘Soil Framework Directive’.

## 4 Material Assets

### 4.1 Previously developed land

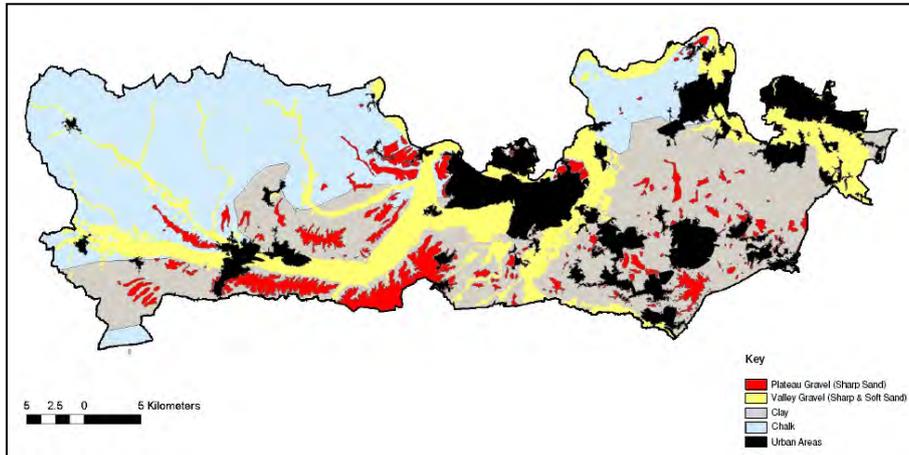

The NPPF encourages the re-use of previously developed land, and as such 78.5% of West Berkshire’s gross completions (2006/07 – 2011/12) have been on previously developed land

**Future Trends:** In line with continuing trends for the South East of England, it is anticipated that the amount of previously developed land available for development in West Berkshire will decline as government policy of focusing development on previously developed land continues to take effect. The reduced reliance on windfall development contributing to supply may also mean that the level of Greenfield allocations may need to be higher than in the past.

### 4.2 Minerals

West Berkshire has long been a major area for mineral extraction. Historically, clay and chalk were the main minerals produced, however since the beginning of the 20<sup>th</sup> Century, aggregates such as sand and gravel have been the main minerals extracted to supply the building and construction industry.

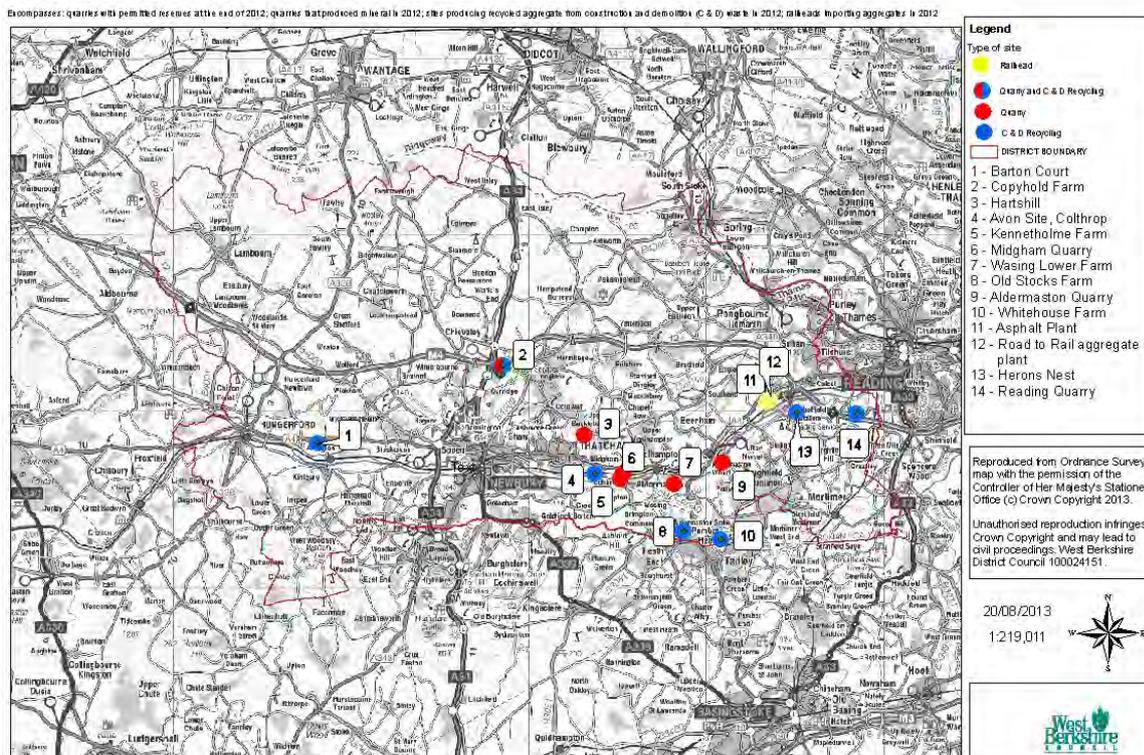

**Figure 16 – West Berkshire Simplified Geology**

Source: Berkshire Joint Strategic Planning Unit, Annual Monitoring Report 2007

West Berkshire includes two major depots for importing aggregates by rail. These are situated on adjacent sites at Theale, importing crushed rock from South Wales and Northern Ireland and marine dredged sand and gravel from Thames wharves. The map below shows West Berkshire’s active minerals sites.

**Figure 17 – Mineral sites in West Berkshire**

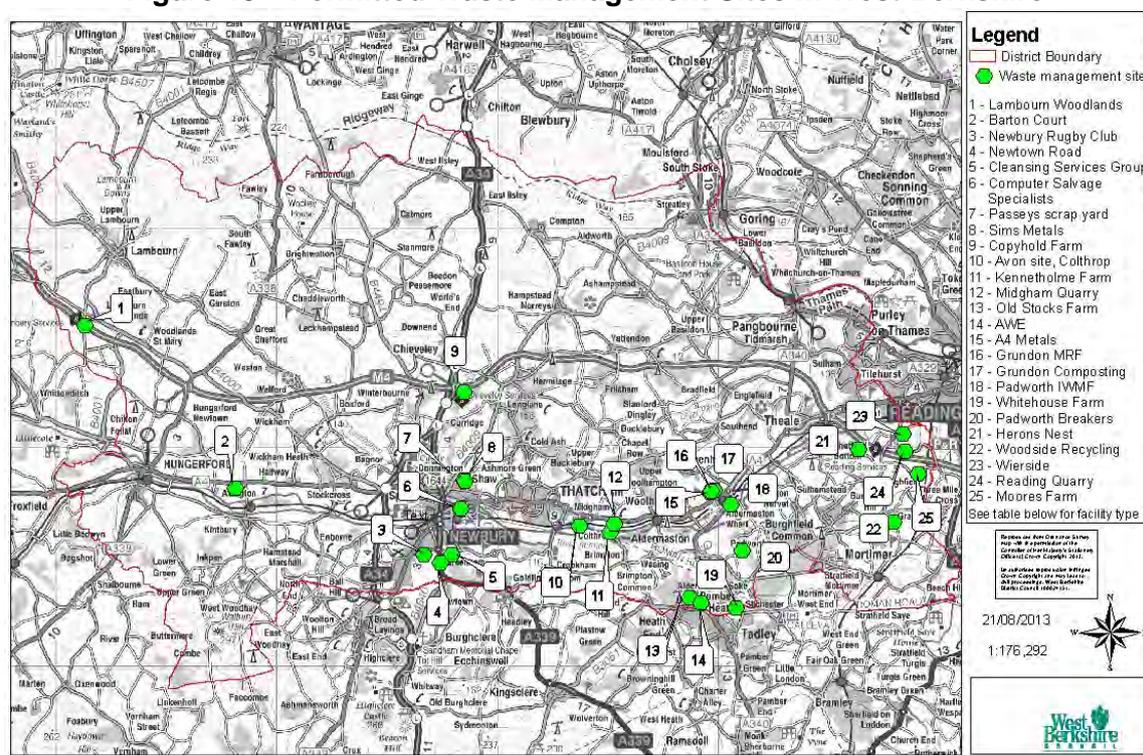

**Future Trends:** The recycling of aggregates is likely to increase in the future, with the demand for virgin aggregates for building and construction largely dependent on the economic situation.

Minerals are a finite resource and the reserves between Newbury and Thatcham and outside the AONB are largely worked out, as a result of this there is likely to be pressure for mineral development in the AONB.

### 4.3 Waste

In England about 228 million tonnes of waste per year is produced, about a quarter of which comes from homes and businesses. In West Berkshire just under 500,000 tonnes of waste was produced in 2011/12. Of this 16% was municipal solid waste, 31% from commercial and industrial waste, 49% from construction, demolition and evacuation and 4% hazardous waste. The map below shows the locations of permitted Waste management sites in West Berkshire.

**Figure 18 – Permitted Waste Management Sites in West Berkshire**

Reliance on landfill for municipal waste has reduced over time, from 65% of all waste in 2008/09 to 20% in 2011/12. The table below shows the trend in waste management.

**Table 4 – Waste generated by West Berkshire**

	2008/09	2009/10	2010/11	2011/12
% Composted	2.2%	16.9%	17.6%	21.2%
% Recycled	31.7%	22.8%	23.2%	24.4%
% Disposed of to Landfill	65%	47%	44%	20%
% energy from waste	0.3%	11.6%	13%	31.4%

Source: Waste Management, October 2012, West Berkshire Council

**Future Trends:** The Government has set challenging targets to increase the recycling of household waste and reduce dependence on landfill. The England Waste Strategy 2007 sets

out targets for recycling and composting. For recycling and composting of household waste the target is at least 45% by 2015 and 50% by 2020; and in the recovery of municipal waste 67% by 2015 and 75% by 2020.<sup>15</sup> The use of technologies, such as Anaerobic Digestion and using Combined Heat and Power are also becoming more prevalent with the increasing pressures of carbon emission reduction. In response, to these challenges, West Berkshire Council has developed a Waste Management Strategy (2002–2022) to tackle the above strategic waste management issues facing West Berkshire and to plan for the future.

#### 4.4 Renewable Energy

West Berkshire is one of the highest electricity users in the South East, and is in the upper quartile of local authorities for CO<sub>2</sub> emissions within the region. On a per capita basis domestic CO<sub>2</sub> emissions are higher than the national average (2.7 tonnes compared to 2.4 tonnes nationally<sup>16</sup>).

The Climate Act 2008 established a legally binding target to reduce the UK's greenhouse gas emissions by at least 80% below base year levels by 2050.

Development plans should support in principle the development of renewable energy and develop criteria based policies. Such development needs to be located and designed to minimise adverse impacts on landscape, wildlife and amenity. A strategic landscape sensitivity study for wind turbine development has been undertaken by the North Wessex Downs AONB which will be used to inform the production of the SAD DPD.

**Future Trends:** Domestic energy consumption has been declining since 2005 accompanied by a decline in domestic CO<sub>2</sub> emissions. It is likely that with continued promotion of reducing energy consumption and policies aimed at improving energy efficiency that this decline will continue.

#### 4.5 Economy

West Berkshire is located in the Thames Valley sub region which is a world class business region and one of Europe's fastest growing economies. The Thames Valley sub-region accounts for 15% of UK computer services employment. Over the next 10 years, according to the Thames Valley Economic Partnership (TVEP), this area will grow at a faster rate than the South East and the UK as a whole, and is expected to generate 105,000 new jobs by 2015. The Thames Valley sub region is a base for 65 of the world's top 250 company spenders on Research and Development.

West Berkshire has a strong industrial base characterised by new technology industries with a strong service sector and several manufacturing and distribution firms. International companies with an office or base in West Berkshire include; Vodafone, Bayer and Striker. The Atomic Weapons Establishment (AWE) at Aldermaston is also an important centre for employment. In 2012 82.6% of the working age population in West Berkshire was economically active (i.e. are either employed, or unemployed but available to start work, looking for work, or waiting to start a job). As well as having a higher proportion of people economically active, the district also has a significantly larger proportion of people in employment – and as a consequence, a lower proportion of people unemployed.

Like other areas nationally, West Berkshire is experiencing the negative effects of the economic downturn. There has been a decrease in house prices and a rise in unemployment in the area. The number of job seekers in West Berkshire is now at levels not seen since the last recession. However, West Berkshire, like other areas in the Thames Valley, is a resilient economy and likely to drive economic recovery. Despite this, the recession will present a number of challenges for West Berkshire Council and other bodies.

<sup>15</sup> England Waste Strategy 2007, DEFRA

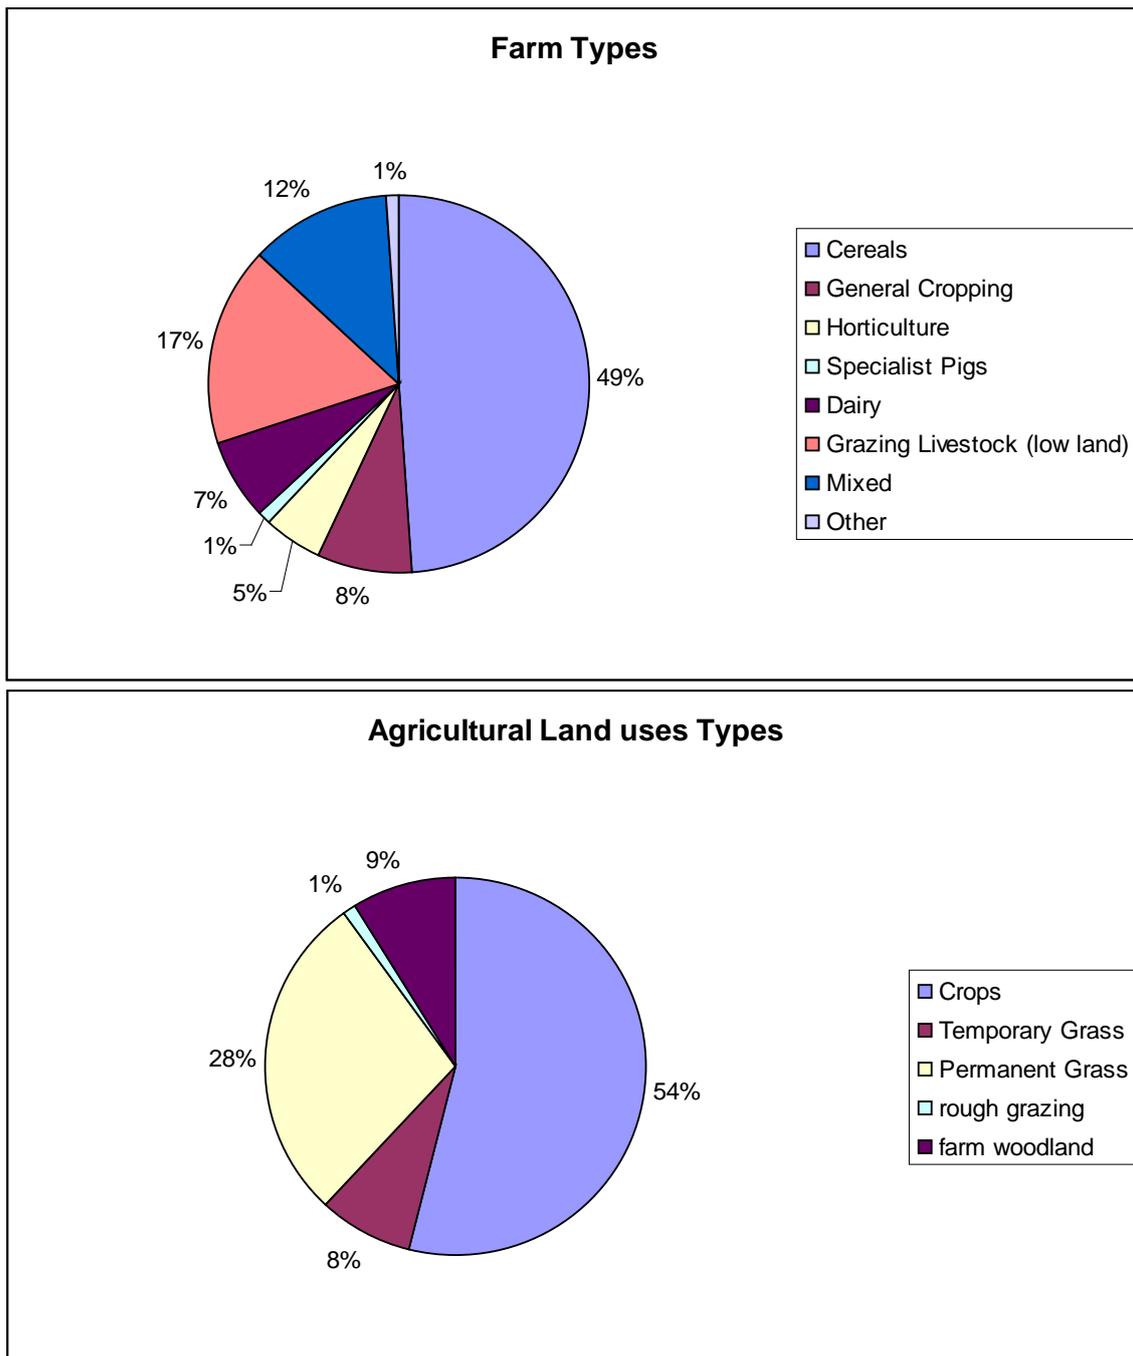

<sup>16</sup> HECA Data Report West Berkshire Council, United Sustainable Energy Agency, 2010

**4.6 Agriculture**

Defra’s agricultural census for June 2010 shows that there were 65,580 ha of agriculturally managed land in Berkshire managed by some 635 agricultural holdings. There are 2284 people employed directly in the agricultural sector in West Berkshire.

Over half of the agricultural area was under arable cropping (54%), and around one third was grazed. Defra assigns each of the registered agricultural holdings to a main farm type on the basis of their principal outputs. This shows that nearly 50% of farms were devoted to cereal crops such as wheat, 29% were grazed livestock farms (i.e. beef and sheep). The charts below show the different agricultural land use and farm types in West Berkshire.

**Figures 19 and 20 - Farm types and Agricultural land use types in West Berkshire**

Source: June 2010 Agricultural and Horticultural Survey – England

**Future Trends:** The Government has identified a vision for the future of British agriculture in Defra's *Farming for the Future Programme*<sup>17</sup>. Key themes arising for this are the need to cut carbon emissions resulting from farming activities, increasing the efficiency of the management of nutrients on farms and reducing pollution. There are further plans to increase the skills to make UK farming more competitive, and achieve higher standards of animal health<sup>18</sup>.

#### 4.7 Tourism

Tourism is significant for West Berkshire but not a major industry. A report: *The Economic Impact of Tourism* was prepared by Tourism South East Research Services on behalf of West Berkshire District Council in July 2007. The report details the following information on tourism in West Berkshire and its contribution to the local economy:

“Overall, an estimated 485,500 staying trips were spent in West Berkshire District in 2005, of which around 396,000 were made by domestic visitors (82%) and 89,700 by overseas visitors (18%). Staying trips result in an estimated 1.53 million bednights in the District. Domestic visitors account for 62% of these nights and overseas visitors accounted for 38%. Approximately 3.43 million tourism day trips were made to the District (lasting more than 3 hours and taken on an irregular basis) in 2005. Total expenditure by visitors to West Berkshire is estimated to have been in the region of £199.91 million in 2005.

With the addition of other expenditure such as the expenditure on goods and services by friends and relatives visitors were staying with, or visiting, total expenditure associated with overnights trips to West Berkshire in 2005 was approximately £211,682,000.<sup>19</sup>

**Future Trends:** One of the priorities of A Breath of Fresh Air, West Berkshire's Sustainable Communities Strategy, is to realise the tourist potential and increase the number of tourist visitors to West Berkshire.

#### 4.8 Employment

82.6% of the working age population in West Berkshire are considered to be economically active, a slight decrease on the figure in 2010/11 (82.9%). Of these 78.8% are in employment, compared to 74.6% in the south east and 70.5% nationally. 11.7% of the working age population are self-employed compared to the national rate of 9.6%.

Despite the recession levels of unemployment in West Berkshire have remained relatively low, and continue to be below the national average. In August 2012, 1.8% of working age people in West Berkshire were claiming Job Seekers Allowance, a rise from 0.8% in January 2008, although claimants peaked at 2.1% in February 2009. Nationally 3.8% of the working age population are claiming Job Seekers Allowance. The table below indicate the main sectors of employment in West Berkshire:

**Table 5 – Employment by sector**

	West Berkshire (%)	South East (%)	England & Wales (%)
Manufacturing	8	7	9
Construction	8	8	8
Retail / Wholesale	16	16	16
Public Utilities (electricity, gas, water)	2	1	1
Information & Communication, finance &	14	10	8

Professional, scientific & Technical activities	8	8	7
Accommodation & Food service activities	4	5	6
Transport & Storage	4	5	5
Other	13	13	12

Source: ONS, Census 2011

Over 85% of businesses have 10 or fewer people working in them and these account for 23% of total employment, meaning that the majority of businesses in West Berkshire are small to medium in size.

**Future Trends:** There are a number of issues facing West Berkshire due to its location within the Thames Valley. Sustainable economic growth in the area is threatened by congestion, delays on the area's transport systems, a shortage of labour with the appropriate range of skills, the high cost of housing in the area and pressures on essential services and infrastructure. The Council's Core Strategy aims to "to help maintain a strong, diverse and sustainable economic base in West Berkshire."

#### 4.9 Transport

West Berkshire is served by the M4 motorway, and the A4, A34 and A339 trunk roads providing good road access to major urban areas outside of the district, including Oxford, London, Swindon and Bristol. Although links to and from the area are good, the largely rural nature of West Berkshire makes accessibility within the district more of an issue. A large proportion of the residents live in rural towns, villages and hamlets and, through the difficulty in providing viable public transport to these areas, are dependent on the motor car for access to services and facilities.

According to the Movement Framework for Newbury (Atkins, 2005), at present, demand exceeds available capacity on the highway network, particularly at peak times, resulting in an average delay per vehicle of between 35% and 43% of an average journey time on key routes within Newbury in the morning peak being spent in delays or queuing.

Newbury, Thatcham and the Reading corridor have a reasonable public transport service, with up to 5 buses and 3 trains per hour. Reading - just to the east of the district - is a major confluence on the strategic rail network, providing direct and efficient access to key urban centres across the country. The disabled are quite well catered for both as individuals and as groups on public transport in West Berkshire; buses have a terminal and priority access to Newbury's principal shopping street, and there is a telephone information service for bus and route times. Bus services are provided in the majority of towns and larger villages in West Berkshire. In addition there are a number of community transport schemes ranging from community buses to cars that help ensure provision and access across the district.

The rural nature, dispersed population and affluence of West Berkshire can be considered problematic for the provision of a frequent and financially viable bus service as people tend to sway towards the convenience of the car. There is a relatively high level of car ownership and usage in West Berkshire. The 2011 census shows that there were 132,000 vehicles licensed in the district (Department for Transport Vehicle License Data). Of these vehicles 105,000 are cars and this amounts to 1.6 cars per household in the district, compared to 1.6 for the South East, or 1.4 for England more widely.

The 2011 census shows that for West Berkshire, 71% of people travelled to work by car. This is significantly higher than the South East average of 66%, or for England and Wales (62.6%). A relatively lower proportion of people use public transport to get to work, perhaps reflecting the geographically dispersed nature of the population and the marginally longer distances travelled. A relatively similar proportion of people either work from home, or walk to work. Noticeable is the small proportion of people who cycle to work, although this is reflected nationally also.

**Table 6 – Modes of travel to work**

	West Berkshire (%)	South East (%)	England and Wales (%)
Work mainly from home	7.6	6.6	5.4
Public Transport	8.9	14.3	26
Car / Motorcycle	70.9	66.5	63.4
Bicycle	2.6	3	2.9
Walk	9.4	10.9	10.7

Source: Census 2011

The distance travelled to work, as shown in the 2011 Census, shows that for working aged residents of West Berkshire, the average distance travelled is 16.9km (10 miles), an increase of 2km from the 2001 Census. The England and Wales average at 2011 was 15km.

Distance travelled	Total persons	% Working people
Less than 2km	12,398	15%
2km to less than 5km	12,674	16%
5km to less than 10km	11,932	15%
10km to less than 20km	10,948	13%
20km to less than 30km	6,241	8%
30km to less than 40km	2,997	4%
40km to less than 60km	2,827	3%
60km and over	4,124	5%
Working mainly from home	10,689	13%
Other	6,849	8%
Total distance	1,081,177km	
Average distance (km)	16.9	
Total persons in West Berkshire in employment (16-74 years)	81,679	

Source: Census 2011

**Accidents:** In 2012, there were 484 casualties in West Berkshire, (21% of which occurred on the A34 and M4). The number of vehicle accidents in West Berkshire resulting in fatalities or serious injuries has been decreasing over the last seven years. Since 2003 the rate of casualties (total of fatal, serious and slight) per 1000 population has been consistently lower for West Berkshire than for the rate for the Thames Valley as a whole

**Future Trends:** Despite traffic levels showing a decline in overall traffic levels, it is estimated that the longer term trend of continual traffic growth will continue. Forecasts from the National Transport Model suggest that motor vehicle traffic in 2035 will be 43% higher than in 2003. Rail passenger demand is predicted to continue growing, especially with electrification of the line between London and Newbury.

The West Berkshire Local Transport Plan aims to implement a number of policies relating to road, rail and public transport, in particular, increased usage of public transport and a reduction in the use of the car. There are also objectives in relation to encouraging walking and cycling.

### Appendix 3 – Compatibility of the SA Objectives with the West Berkshire Housing Site Allocations Objectives

	Sustainability Objectives										
	1	2	3	4	5	6	7	8	9	10	11
<b>West Berkshire Housing Site Allocations DPD Objectives</b>	To secure provision of sufficient good quality housing to meet objectively assessed needs	To improve health and well being and reduce inequalities	To safeguard and improve accessibility to services and facilities	To improve and promote opportunities for sustainable travel	To protect and enhance the natural the environment	Ensure that the built, historic and cultural environment is conserved and enhanced	To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	To improve the efficiency of land use	To reduce consumption of natural resources and mange their use efficiently	To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	To ensure a strong, diverse and sustainable economic base which meets objectively assessed economic needs

<i>Comments:</i>											

**Key:**

- ++ Strongly supports sustainable objectives
- + Supports sustainable objectives
- 0 Neutral
- ? Uncertain
- Works against sustainable objectives
- Works strongly against sustainable objectives

Housing Site Allocations DPD objectives:

**A. Tackling Climate Change**

To exceed national targets for carbon dioxide emissions reduction and deliver the District's growth in a way that helps to adapt to and mitigate the impacts of climate change

**B. Housing Growth**

To deliver at least 10,500 homes across West Berkshire between 2006 – 2026. These homes will be delivered in an effective and timely manner, will maximise the use of suitable Brownfield land and access to facilities and services and will be developed at densities within make the most efficient use of land whilst responding to the existing build environment.

### **C. Housing Needs**

To secure provision of affordable and market housing to meet local needs in both urban and rural areas of the district. To provide homes in a way that promotes sustainable communities, providing a mix of house sizes, types and tenures to meet identified needs, and respond to the changing demographic profile of the District.

### **E. Infrastructure Requirements**

To ensure that infrastructure needs (including community services and facilities) arising from the growth in West Berkshire are provided in a timely and coordinated manner, which keeps pace with development in accordance with the detail set out in the Infrastructure Delivery Plan.

### **I. Heritage**

To ensure that development to 2026 is planned, designed and managed in a way that ensures the protection and enhancement of the local distinctive character and identity of the built, historic and natural environment in West Berkshire's Towns, villages and countryside.

## Appendix 4 – Glossary

Term	Acronym	Definition
<b>Adoption</b>		Formal approval by the Council of an LDD whereupon it achieves its full weight.
<b>Alternatives</b>		Different ways of achieving the Plan objectives. Sometimes referred to as Options.
<b>Annual Monitoring Report</b>	<b>AMR</b>	Annual statement analysing the implementation of policies. Produced in December. This is a statutory requirement of the new planning system.
<b>Appropriate Assessment</b>	<b>AA</b>	Regulations require that an appropriate assessment is carried out to determine the impact of plans and projects on sites of European importance for nature conservation.
<b>Area of Outstanding Natural Beauty</b>	<b>AONB</b>	Areas of land designated under the National Parks and Access to the Countryside Act 1949, where the primary purpose is the conservation and enhancement of natural beauty, which includes protecting flora, fauna, geology and landscape features. Natural England is responsible for formally designated AONBs and advising on policies for their protection. 74% of West Berkshire is within the North Wessex Downs AONB.
<b>Air Quality Management Area</b>	<b>AQMA</b>	Area designated (under the Environment Act) by local authorities following local assessment of air quality where individual pollutants are forecast to exceed standards defined in the National Air Quality Strategy.
<b>Berkshire Buckinghamshire &amp; Oxfordshire Wildlife Trust</b>	<b>BBOWT</b>	An independent country-based trust working to conserve and enhance wildlife
<b>Biodiversity Action Plan</b>	<b>BAP</b>	A Plan with a list of actions designated to protect and restore biological systems
<b>Biodiversity Opportunity Area</b>	<b>BOA</b>	An area identified to have the greatest opportunity for habitat creation and recreation
<b>Building Research Establishment Environmental Assessment Method</b>	<b>BREEAM</b>	An environmental assessment method for buildings which sets standards for best practice in sustainable design
<b>Conformity</b>		LDD's normally have to fit in to the policies set out in higher documents = conformity
<b>Conservation Area</b>		Area of special architectural or historical interest.
<b>Core Strategy</b>		The overall spatial planning policies and objectives for an area.
<b>Council Strategy</b>		Statement of the Council's aims and priorities.
<b>Council</b>		In this context, the local planning authority; in this case West Berkshire Council. References to full Council are to the meeting of all elected members which is the Council's supreme decision making body.
<b>Cumulative Effects</b>		Effects that result from changes caused by a project, plan, programme or policy in association with other past, present or reasonably foreseeable future plans and actions.
<b>Department of Communities and Local Government</b>	<b>DCLG</b>	Communities and Local Government sets policy on local government, housing, urban regeneration, planning and fire and rescue. Replaced the ODPM.
<b>Development Plan Document</b>	<b>DPD</b>	A statutory document which is the primary consideration in determining planning applications. It is required to undergo public testing (inquiry or examination before an independent inspector or panel).
<b>Environment Agency</b>	<b>EA</b>	Public body for protecting and improving the environment in England and Wales.
<b>Evidence Base</b>		Background information on the District, including its needs and predictions of what might be needed in the future
<b>Examination</b>		In this context the forum at which an independent inspector considers the soundness of a development plan document.
<b>Executive</b>		In this case, the Council's lead decision making body comprised of elected members.
<b>Geographical Information System</b>	<b>GIS</b>	Technology that manages, analyses, and disseminates geographic knowledge.

Term	Acronym	Definition
<b>Housing Trajectory</b>		Diagram showing housing delivery and expected trends of development.
<b>Indicator</b>		Measurement of change to a system or objective.
<b>Infrastructure Delivery Plan</b>	<b>IDP</b>	A document which identifies future infrastructure and services needs for the district over the Core Strategy period
<b>Landfill</b>		The disposal of waste material by tipping into voids in the ground.
<b>Local Development Documents</b>	<b>LDD</b>	<p>The Town and Country Planning (Local Planning) (England) Regulations 2012 define a LDD as:</p> <p><i>“Any document prepared by a local planning authority individually or in cooperation with one or more other local planning authorities, which contains statements regarding one or more of the following –</i></p> <p><i>(i) the development and use of land which the local planning authority wish to encourage during any specified period;</i></p> <p><i>(ii) the allocation of sites for a particular type of development or use;</i></p> <p><i>(iii) any environmental, social, design and economic objectives which are relevant to the attainment of the development and use of land mentioned in paragraph (i); and</i></p> <p><i>(iv) development management and site allocation policies, which are intended to guide the determination of applications for planning permission.”</i></p> <p>LDDs therefore include the local plan and related SPDs, along with the AMR. As the statement of community involvement refers to part of the process of plan preparation, it is also defined as a local development document (but it is not a development plan document as it does not contain policies for use of land).</p>
<b>Local Development Scheme</b>	<b>LDS</b>	A public statement of the Council’s programme for the production of development plan documents.
<b>Local Plan</b>		The portfolio of LDDs that provides the framework for delivering the spatial strategy for the area
<b>Local Strategic Partnership</b>	<b>LSP</b>	A grouping of local stakeholders – local councils, business, voluntary sector – working together in the local community. The local LSP is the West Berkshire Partnership Board.
<b>Local Transport Plan</b>	<b>LTP</b>	A plan setting out a transport planning policy framework and strategy for the delivery of local transport measures until 2026
<b>Listed Building</b>		Building included on a list of buildings of architectural or historic interest.
<b>Material consideration</b>		A factor or document which can be taken into account in deciding a planning application.
<b>Mitigation</b>		Measures to avoid, reduce or offset the adverse effects of the plan on sustainability
<b>Monitoring</b>		Check of effectiveness of policies
<b>National Planning Policy Framework</b>	<b>NPPF</b>	A simplified set of national policies published by the government in March 2012 that replaces the government guidance formerly contained in Planning Policy Guidance Notes (PPGs), Planning Policy Statements (PPSs), Minerals Planning Guidance Notes (MPGs) and Minerals Policy Statements (MPS’).
<b>National Planning Practice Guidance</b>	<b>NPPG</b>	On-line guidance produced by the Department for Communities and Local Government in March 2014 that supplements the NPPF and supersedes previous planning practice guidance
<b>Objective</b>		Statement of what is intended, specifying the desired direction of change
<b>Office Deputy Prime Minister</b>	<b>ODPM</b>	Former government department whose responsibilities have now been taken over by the Department of Communities and Local Government
<b>Planning Inspectorate</b>		National agency which supplies independent planning inspectors. Their main work is the processing of planning and enforcement appeals and holding examinations into regional spatial strategies and local development frameworks.

Term	Acronym	Definition
<b>Previously Developed Land</b>	<b>PDL</b>	Previously Developed Land. Defined by Government as land which 'is or was occupied by a permanent structure, including the curtilage of the developed land and any associated fixed surface infrastructure.' <sup>1</sup>
<b>Planning Policy Guidance</b>	<b>PPG</b>	Government statement of its planning policy. Were gradually being replaced by PPS' but now replaced by the NPPF and NPPG
<b>Planning Policy Statements</b>	<b>PPS</b>	Former Government statement of its planning policies. Now replaced by the NPPF and NPPG, although PPS10 (Waste) will remain in place until replaced by a revised PPS10 and the National Waste Management Plan for England is released.
<b>Public Examination</b>	<b>EPP</b>	See Examination above.
<b>Primary Aggregates</b>		Naturally occurring sand, gravel and hard rock used for construction purposes
<b>Recycled Materials</b>		Aggregate materials that are recovered from construction and demolition processes and from excavation on construction sites.
<b>Special Area of Conservation</b>	<b>SAC</b>	An SSSI additionally designated a Special Area of Conservation.
<b>Special Protection Area</b>	<b>SPA</b>	An are designated to protect the habitats of threatened species of wildlife under EU Directive 92/43
<b>Sustainable Community Strategy</b>		Strategic objectives and action plan produced by the LSP (see LSP Below).
<b>Sustainable Urban Drainage</b>	<b>SUDs</b>	
<b>Sustainability Appraisal</b>	<b>SA</b>	A single appraisal tool which provides for the systematic identification and evaluation of the economic, social and environmental impacts of a proposal
<b>Scheduled Ancient Monument</b>		Nationally important archaeological site included in the Schedule of Ancient Monuments.
<b>Statement of Community Involvement</b>	<b>SCI</b>	Adopted document setting out the Council's policy for involving the community in the preparation and revision of planning policy documents, and in the consideration of planning applications within the District.
<b>Scoping</b>		Process of deciding the scope and level of detail of the SEA.
<b>Screening</b>		Process of deciding if a plan or programme requires an SEA or other assessment.
<b>Spatial Strategy</b>		An integrated planning/development strategy aiming to achieve a range of objectives.
<b>Stakeholder</b>		In this context an organisation or individual with an interest in local planning matters.
<b>Strategic Environmental Assessment</b>	<b>SEA</b>	A process to ensure that significant environmental effects arising from policies, plans and programmes are identified, assessed, mitigated, communicated to decision-makers, monitored and that opportunities for public involvement are provided.
<b>Special Protection Area</b>	<b>SPA</b>	Strictly protected sites classified in accordance with Article 4 of the EC Directive on the conservation of wild birds (79/409/EEC), also known as the Birds Directive, which came into force in April 1979. They are classified for rare and vulnerable birds, listed in Annex I to the Birds Directive, and for regularly occurring migratory species. The nearest such area to West Berkshire is the Thames Basin Heaths.
<b>Supplementary Planning Document</b>	<b>SPD</b>	A LDD which does not have DPD status but which is taken into account as a material consideration in the determination of planning applications
<b>Supplementary Planning Guidance</b>	<b>SPG</b>	Planning guidance produced under the previous planning system. They give additional guidance in support of policies in statutory planning documents
<b>Site of Specific Scientific Interest</b>	<b>SSSI</b>	Sites of Special Scientific Interest. Areas of national nature conservation or wildlife importance protected under the Wildlife and Countryside Act 1981, as amended by the Countryside and Rights of Way Act 2000. SSSIs are identified by Natural England
<b>Submission</b>		Stage at which a prepared DPD is presented to Secretary of State.

<sup>1</sup> Definition taken from NPPF, Annex 2

<b>Term</b>	<b>Acronym</b>	<b>Definition</b>
<b>Thames Valley Environmental Records Centre</b>	<b>TVERC</b>	A 'not for profit' operation run by a partnership of organisations that collect or need to use information about the natural environment
<b>Unitary Authority</b>	<b>UA</b>	Administrative unit of Great Britain. Since 1996 the two-tier structure of local government has ceased to exist in Scotland and Wales, and in some parts of England, and has been replaced by unitary authorities, responsible for all local government services.
<b>Village Design Statement</b>	<b>VDS</b>	Local design guidance produced by local community and adopted by the Council.
<b>West Berkshire Core Strategy</b>	<b>WBCS</b>	See Core Strategy
<b>West Berkshire Partnership</b>	<b>WBP</b>	The LSP for West Berkshire.

## Appendix 5

### SAD SA scoping report environmental bodies consultation responses (October 2013)

	Respondent	Comments	Council Response
1	English Heritage	<p>EH has published guidance on SEA / SAs</p> <p><b>Appendix 1</b> (Relevant plans and programmes) should include reference to The European Convention on the Protection of Archaeological Heritage, The Convention for the Monuments and Archaeological Areas Act 1979 and the Planning (Listed Buildings and Conservation Areas) Act 1990. PPGs 4, 15, 16, 21 have been superseded by NPPF. Reference should be made to Berkshire Historic Environment Character zoning Project and West Berkshire Historic Environment Action Plan.</p> <p><b>Appendix 2</b> (Baseline) should include reference to non-designated heritage assets. The Register specifically mentions the threat to the battlefield as being housing development around its fringes. SAD will increase / decrease this risk</p> <p>Sources of information should be identified and include Historic Environmental Record and the Heritage at Risk Register. The first identified sustainability issue should specifically refer to the historic environment and the heritage assets therein.</p> <p>Welcome and support Sustainability Objective 6 and identified sub-objectives. Sub-objectives could also include “provide for increased access to and enjoyment of the historic environment” Indicators could include</p> <ul style="list-style-type: none"> <li>- no and % of all designated heritage assets at risk</li> <li>- no of applications approved contrary to the advice of the Council’s conservation or archaeological advisor</li> <li>- % change in visits to historic sites</li> </ul>	<p>Guidance has been accessed and will be used to inform the SA Suggested documents have been added to the Policy section</p> <p>PPGs have been removed from policy section Reference made to these documents in the policy section.</p> <p>Reference to the battlefield At Risk has been included in baseline information.</p> <p>Sources of information have been added to the baseline The following has been added to the sustainability issues: <u>Protecting the historic environment and the heritage assets therein</u> The following has been added as 6.4 of the sustainability objectives: <u>6.4 Provide for increased access to and enjoyment of the historic environment</u> The following changes have been made to the indicators: Combined all heritage asset indicators into one – added <u>No. and % of all designated heritage assets at risk</u> and deleted <u>No. of Scheduled Monuments at Risk</u> <u>No. and % Listed Buildings indicated as “at risk”</u></p>

## Appendix 5 – Consultation responses

	Respondent	Comments	Council Response
			<p><u>by English Heritage and not rescued</u></p> <p>Added two new indicators</p> <p><u>No. of applications approved contrary to the advice of the Council's conservation officer and % change in visits to historic sites.</u></p>
2	Natural England	No comment to make at this time	No response required.
3	Environment Agency	<p>Recommend updating the council's level 1 SFRA and level 2 SFRA for specific sites.</p> <p>Generally satisfied with the framework set out</p> <p>Satisfied with the objective to adapt climate change and the sub objective to manage flood risk. Suggest the indicator should include the Lead Local Flood Authority and other relevant bodies as the EA are not wholly responsible for all sources of flooding.</p>	<p>Work has started on updating the SFRA.</p> <p>Added LLFA and other relevant bodies to the indicator for sub objective 10.2</p>

## SAD SA scoping report environmental bodies consultation responses (July 2014)

	Respondent	Comments	Council Response
1	English Heritage	<p>We welcome and support Housing Site Allocations DPD Objective E. We also welcome the recognition that the historic environment is “also of great value” to West Berkshire on page 8, but the historic environment comprises more than the designated heritage assets identified and monuments are “scheduled” not “listed”.</p> <p>We suggest saying “<i>The historic environment is also of great value to West Berkshire and consists of both designated heritage assets of national importance and non-designated features of local historic or architectural interest and value; buildings, other structures and features, archaeological remains, historic open spaces and the wide historic landscape/townscape</i>”.</p>	Paragraph amended as suggested to add clarity
		<p>We welcome the recognition of the historic environment as a sustainability issue for the Core Strategy, although we would prefer “Conserving and enhancing the historic environment.....” and “Conserving and enhancing the historical/ archaeological.....” as terminology more consistent with the National Planning Policy Framework. We consider that these should also be specific key issues for the Housing Sites Allocations DPD.</p>	Amended as suggested to ensure consistency with the NPPF
		<p>We welcome and support Sustainability Objective 5 and the identified sub-objectives and indicators (we are grateful for the inclusion of the sub-objective and indicators that we suggested previously). However, given the proposed indicator relating to Historic Landscape Characterisation types perhaps there should be a specific sub-objective to conserve and enhance the District’s historic landscape types, or perhaps sub-objective 4.2 could be amended to “.....local distinctiveness and time-depth of the character of the Landscape”.</p>	The sustainability objective has been taken from the Core Strategy and therefore it is not proposed to change the objective
		<p>Question 9 refers to the possibility of ranking. Perhaps weighting the objectives might be a better approach. Naturally, we consider that Objective 5 should have a high ranking or weighting, in accordance with the weight given to the conservation and enhancement of heritage assets in the National Planning Policy Framework.</p>	Comment noted. West Berkshire Council is not proposing to rank the objectives at this stage.

	Respondent	Comments	Council Response
		<p>In Appendix 1 we welcome the reference to the Berkshire Historic Environment Character Zoning Project and the West Berkshire Historic Environment Action Plan.</p> <p>There could also be a reference to the National Heritage Protection Plan 2011 – 2015, which seeks to ensure that England’s historic environment:</p> <ul style="list-style-type: none"> <li>• is not needlessly at risk of damage, erosion or loss;</li> <li>• is experienced, understood and enjoyed by local communities;</li> <li>• contributes to sustainable and distinctive places to live and work;</li> <li>• helps deliver positive and sustainable economic growth.</li> </ul>	<p>Appendix 1 has been updated to include the National Heritage Protection Plan 2011 – 2015.</p>
		<p>In the summary of “Key Emerging Local Level Objectives/Targets” there is no need to have “preserve” in respect of the historic environment – “conserve and enhance” is preferable. It would also be better to say “the historic environment, including both designated and non-designated heritage assets”.</p>	<p>Text amended as suggested</p>
		<p>In Appendix 2 we welcome the detailed information on West Berkshire’s historic environment, including the Historic Environment Character Zoning project. Paragraph 3.5 indicates that there is a list of buildings and structures of local interest for West Berkshire and perhaps a little more could be said about that e.g. how the list was compiled, is it regularly updated etc.</p>	<p>Suggestion noted and additional text added to provide more information on the Historic Environment Character Zoning project.</p> <p>The project was carried out because knowledge of West Berkshire's historic environment was incomplete and in some cases outdated. The list was compiled through a critical assessment of the Historic Environment Record, examining the archaeological data and analysing it against information on relief, drainage, geology, soils and patterns in Historic Landscape Characterisation Project.</p>
		<p>As both the 2012 and 2013 Heritage at Risk Registers are cited, the point could be made that there are five more assets at risk on the 2013 Register compared to the 2012 Register under “Future trends”.</p>	<p>Text amended as suggested</p>
		<p>It should also be noted that the Heritage at Risk Registers only concern the higher grade designated heritage assets and do not</p>	<p>Suggestion noted. There are not the resources available to undertake a survey as suggested.</p>

	Respondent	Comments	Council Response
		include grade II listed buildings or registered historic parks and gardens. For a more accurate understanding of the state of the historic environment in West Berkshire and as a baseline for future monitoring, a survey of the condition and position of the lower grade designated assets should be undertaken or, at least, the lack of such a survey should be recognised as a gap in the existing information.	Section 3.5 of Appendix 2 amended to highlight that there is a gap in the existing information.
2	Environment Agency	<p><b>4. Stage A2: Baseline data</b></p> <p>Further to our letter (WA/2006/000267/SL-01/IS1-L01), dated 29 August 2013, we recommended that West Berkshire Council should consider updating the level 1 SFRA and level 2 SFRA's and produce new documents for sites where the situation has changed. These documents should include any revised information from fluvial and surface water model outlines.</p> <p>This will ensure that the sequential test for the site allocations is based on the most up to date information for all sources of flooding.</p> <p><b>6. Stage A4: Developing the sustainability appraisal framework</b></p> <p>We understand that the Sustainability Objectives identified in the SA have been used but updated in respect to the updated background information and the aims of the Housing Site Allocations.</p> <p>We previously noted that SA sub objective 10.2 suggested indicators did not include the Lead Local Flood Authority and other relevant bodies. We note that SA objective 9.2 (previously 10.2) suggested indicators now includes reference to the Lead Local Flood Authority and other relevant bodies. We are satisfied that this reflects that other we are not wholly responsible for all sources of flooding.</p>	<p>West Berkshire Council is in the process of updating the level 1 SFRA. Further level 2 assessments will be carried out where required.</p> <p>Comment noted.</p>
3	Natural England	<b>Consultation question 1: Are there other relevant policies, plans, programmes, and sustainable development objectives that will affect or influence the Housing Site Allocations DPD?</b>	At the time of the preparation of and the consultation on the SA/SEA Scoping Report, the updated AONB Management Plan had not been

	Respondent	Comments	Council Response
		<p>We understand that the North Wessex Downs AONB management plan has been updated, and the referenced version is out of date. We also understand that Oxfordshire has had a revised housing number assessment (significantly increasing housing need), and we suggest this should be included.</p>	<p>adopted by the Council.</p> <p>The Strategic Housing Market Assessment for Oxfordshire has identified an increased housing need, and the figures identified in the SHMA do not in themselves constitute plan targets. Each Council will consider the numbers alongside other evidence to identify specific policies in development plans. Appendix 1 (Plans, Policies and Programmes) includes the most recent development plans for the Oxfordshire authorities that adjoin West Berkshire (South Oxfordshire and Vale of White Horse).</p>
		<p><b>Consultation question 2: Do you agree that the baseline data collected in Appendix 2 is appropriate to the DPD?</b> No comment.</p>	Response noted
		<p><b>Consultation question 3: Do you have, or know of, any additional baseline data which should be added to that already listed?</b> No.</p>	Response noted
		<p><b>Consultation question 4: As far as you are aware, are there any inaccuracies or anomalies in the data presented?</b> No.</p>	Response noted
		<p><b>Consultation question 5: Do you agree that these are the key sustainability issues for the Housing Site Allocations DPD?</b> We suggest that, given the proportion of the plan area covered by designated landscape is very high (74%), there may be significant issues in accommodating the planned housing without impacting on this designation. This may therefore be a key sustainability issue, even if, to date the AONB has not been significantly degraded by such development, and will depend on the level of growth and the availability of site options. Cumulative landscape impacts will need to be considered in this context.</p> <p><b>Consultation question 6: Are you aware of any issues which, in your opinion, should be added, or any that should be removed?</b> See 5 above.</p>	<p>The Housing Site Allocations DPD is being prepared within the context of the adopted Core Strategy DPD. Core Strategy policy ADPP5 (North Wessex Downs Area of Outstanding Natural Beauty) sets out specific guidelines to ensure growth is sustainable. For this reason, it is not proposed to change the sustainability issues.</p>

	Respondent	Comments	Council Response
		<p><b>Consultation question 7: Are the objectives suitable in the context of the DPD?</b>            Yes. However, they are broad, and very open to interpretation. Typically, the inclusion of decision aiding questions give a much better understanding of how these objectives will be assessed. We would be happy to advise on what these decision aiding questions might be (with respect to the natural environment).</p>	<p>The Core Strategy SA objectives have been used, albeit amended slightly, for the purposes of the Housing Site Allocations DPD.</p>
		<p><b>Consultation question 8: Are there any other additional objectives that should either be included or removed?</b>            No.</p>	<p>Comment noted.</p>
		<p><b>Consultation question 9: It may be necessary to rank the objectives to assess options. Do you have any comments on those which hold particular importance?</b>            This is not an approach that is usually adopted, at least explicitly, and in the abstract it is hard to advise. Natural England has no formal guidance on this matter, but in my judgement the Sustainability Appraisal should not rank objectives. Where it is not clear that one site outperforms another, a more detailed consideration of the merits of each site would give greater insight in the assessment, rather than relying on a crude, mechanistic ranking of objectives.</p>	<p>Comment noted. West Berkshire Council is not proposing to rank the objectives at this stage.</p>
		<p><b>Consultation question 10: Do the indicators provide a relevant measure for the associated objectives? If not, then please suggest additional indicators.</b>            We advise that SA indicators should be indicators of the effects of the plan concerned, and not be indicators of how the world is changing. A number of indicators chosen will give little, if any, indication as to whether the plan is delivering its SA objective. The extent of agri-environment agreement land, for example is almost entirely outside the scope of the plan to influence.            As many (most?) of the indicators are not closely related to the effects of the plan, we are reluctant to propose new indicators prior the Council agreeing in principle that this approach is correct, as bespoke monitoring will be required by the Council. However in general terms the indicators might take the form of:  <i>“Number/proportion of planning applications which are anticipated to [insert sub objective or more detailed parameter].”</i></p>	<p>The indicators used have been taken from the Core Strategy several are reported on in the Annual Monitoring Report.</p>

Appendix 5 – Consultation responses

	<b>Respondent</b>	<b>Comments</b>	<b>Council Response</b>

## Appendix 6A – Site Selection Criteria

The Criteria for the site selection process are listed below along with a justification as to why each criteria was chosen.

A) Automatic Exclusions		
Exclusion Criteria	Details	Justification
Less than 5 dwellings		Site is too small to be allocated, the majority of these sites will be considered as part of the settlement boundary review.
Planning Permission		These sites do not need to be allocated as they already have planning permission
Within flood zone 3 <sup>+</sup>		The NPPF states that residential development is not compatible or suitable in Flood Zone 3. Only sites completely in FZ3 have been excluded at this stage. Further details of the flood risk are taken into consideration at the next stage of assessment.
Within significant national or international habitat/environmental/historical protection <sup>+</sup>	SSSI, SAC, SPA, Registered Battlefield Grade 1 / II* Park and Gardens	NPPF states that SSSIs, SACs and SPAs should have the same level of protection as European Sites. Therefore sites within these areas have been excluded. The NPPF also states that great weight should be given to significant heritage assets and their settings, and substantial harm to or loss of designated heritage assets of the highest significance (eg. battlefield and Grade I and II* registered parks and gardens) should be wholly exceptional, therefore sites which these designations have also been excluded. The Registered Battlefield and Sandleford Priory historic park and gardens are included on the English Heritage 'At Risk' Register.
Landscape	Adverse impact on the character of the AONB (from LSA)	The NPPF states that great weight should be given to conserving landscape and scenic beauty in the AONB. Landscape Assessments have been carried out on the sites in the AONB, and where this indicates development would cause harm to the AONB the sites have been excluded.
SHLAA Assessment	Not currently developable	Sites assessed in the SHLAA as not currently developable imply that there are issues with the site that could not easily be resolved within the plan period, or would impact significantly on the deliverability or availability of the site.
Land Use	Protected Employment Land <sup>+</sup>	Areas within a Protected Employment Land designation are protected by policy and without a review of the employment policy it is not acceptable to release land for housing development.
AWE consultation zone	Inner <sup>+</sup>	Government policy limits development within inner Land Use planning consultation zones. This is regulated by ONR. Development within the inner zone is unlikely to receive approval from ONR.
Relationship to the surrounding area	Relative scale in relation to existing settlement	The focus for development is in the Settlement Hierarchy. Within in this each settlement has a role and function. Where the size of a site would be out of keeping with this the site has been excluded.

Within settlement boundary		Sites within the settlement boundary do not need to be allocated as there is a presumption in favour of development.
----------------------------	--	--

B) Considerations					
Criteria	Details	Justification	Response		
Land Use	Previously developed land	Sites on Brownfield land are considered more favourably than Greenfield sites.	<b>N</b> Greenfield	<b>Y</b> Brownfield	
	Racehorse Industry	Some sites are currently used in the horse racing industry. Core Strategy Policy CS12 Would need to be taken into account if considering allocating a site within the settlement boundary.	<b>Y</b> Site is currently used for Racehorse industry	<b>N</b> Site is not used for Racehorse industry	
Flood Risk <sup>+</sup>	Flood Zone 2	Residential development is allowed in FZ2 where there are no alternative suitable sites. Flood Risk assessments and mitigation would be required.	<b>Y</b> In FZ2	<b>A</b> Adjacent to FZ2	<b>N</b> In FZ1
	Groundwater flood risk	Sites within the groundwater emergence zone, or with a history of groundwater flooding are highlighted here	<b>Y</b> In GW emergence zone or history of GW flooding	<b>A</b> Adjacent to GW emergence zone or site with history of GW flooding	<b>N</b> No risk of groundwater flooding
	Surface water flood risk	Sites at risk from surface water flooding, or with a history of surface water flooding area highlighted here	<b>Y</b> In SW flood risk area or history of SW flooding	<b>A</b> Adjacent to SE flood risk area or site with history of SW flooding	<b>N</b> no risk of SW flooding
	Critical Drainage Area	Sites within a Critical drainage area are highlight here	<b>Y</b> In Critical Drainage Area	<b>A</b> Adjacent to Critical Drainage Area	<b>N</b> Outside Critical Drainage Area
Contamination /	Air Quality	Where sites could be at risk from poor air	<b>Y</b>	<b>U</b>	<b>N</b>

Pollution		quality (eg. site is adjacent to major road / railway line) this is highlighted	At risk from poor air quality	Potential for poor air quality	No air quality issues
	Contaminated Lane	Where sites have had a previous land use which could have resulted in contamination being present on the site this is highlighted here.	<b>Y</b> Contamination present on the site	<b>U</b> Potential for contamination on the site	<b>N</b> No contamination
	Other				
Highways / Transport	Access issues	Where there are actual or potential issues with access onto a site this is highlighted as this could affect deliverability.	<b>Y</b> Access to the site is an issue	<b>U</b> Potential access issue onto the site	<b>N</b> No access issues
	Highways network suitability	Comments from consultation with internal Highways consultees. Including details on traffic generation and the likely impact on the highway network	<b>Y</b> Significant impact on the highway network	<b>U</b> Unknown/uncertain impact on the highway network	<b>N</b> Limited or no impact on the highway network
	Public Transport Network	Details regarding the public transport opportunities at each site. This does not take into account potential improvements.	<b>N</b> No public transport options	<b>U</b> Limited / intermittent public transport options within a reasonable distance of the site	<b>Y</b> Good public transport options within a reasonable distance of the site.
	Footways / Pavements	Information about the footways / pavements around a site, as this could have an impact on the safety for walking to/from the site	<b>N</b> No pavements or footways near to the site	<b>U</b> Poor quality or intermittent footways / pavements near to the site	<b>Y</b> Pavements serve the site
Landscape	Located in AONB	Some sites within the AONB are suitable for some, sensitively designed, development.	<b>Y</b> Within the AONB	<b>N</b> Outside the AONB	
	Located within an area of High Landscape	Landscape sensitivity work was carried out for the Core Strategy. This section highlights	<b>Y</b> In area of High,	<b>N</b> In area of Medium,	

	Sensitivity (from Core Strategy LSS)	areas where the landscape is highly sensitive.	medium/high landscape sensitivity		Medium/low or low landscape sensitivity
	Other				
Green Infrastructure	Open Space / Playing fields / Amenity Space nearby	Access to open space, playing fields or amenity space is important for maintaining active healthy lifestyles. Facilities could be provided alongside some sites.	<b>N</b> No facilities within a reasonable distance of the site (800m). Or site would remove open space facilities	<b>U</b> Facilities are just within a reasonable distance of the site (800m). Or site could impact on open space facilities	<b>Y</b> Facilities are close to the site.
	Rights of Way affected <sup>+</sup>	Development could have a negative impact on the rights of way network. This highlights where care is required to ensure that this does not happen	<b>Y</b> Right of Way passes through the site	<b>U</b> Right of way passes along the site boundary	<b>N</b> No right of ways on or adjacent to the site.
	Play Areas nearby <sup>+</sup>	Access to play areas / facilities for children is important for maintaining active healthy lifestyles. Facilities could be provided alongside some sites.	<b>N</b> No facilities within a reasonable distance of the site (800m).	<b>U</b> Facilities are just within a reasonable distance of the site (800m).	<b>Y</b> Facilities are close to the site.
Ecology / Environmental / Geological	Protected Species	Certain species are protected by national policy and required certain habitats / areas to be maintained.	<b>Y</b> Protected species on the site	<b>U</b> Potential for protected species on the site	<b>N</b> No protected species on the site
	Ancient Woodland <sup>+</sup>		<b>Y</b> Within ancient woodland	<b>U</b> Adjacent to Ancient woodland	<b>N</b> Not near to ancient woodland
	Tree Preservation Orders <sup>+</sup>		<b>Y</b> TPOs on the	<b>U</b> TPOs adjacent	<b>N</b> No TPOs

			site	to the site	
	Local Wildlife Site <sup>+</sup>		<b>Y</b> LWS on the site	<b>U</b> LWS adjacent to the site	<b>N</b> No LWS
	Nature Reserve <sup>+</sup>		<b>Y</b> Nature Reserve on the site	<b>U</b> Nature Reserve adjacent to the site	<b>N</b> No Nature reserve
	Other (eg. BOA)				
Relationship to surrounding area	Relationship to settlement		<b>N</b> Poorly related to the settlement	<b>Y</b> Well related to the settlement	
	Incompatible adjacent land uses	Any land use that may not be compatible with residential development adjacent to it (due to pollution, noise generation etc)	<b>Y</b> Incompatible adjacent land use	<b>U</b> Potentially incompatible land use	<b>N</b> Compatible adjacent land uses
Heritage Impact	Archaeology	Protection of heritage assets is a requirement of the NPPF.	<b>Y</b> Significant archaeological material on the site	<b>U</b> Archaeological material on the site, or unknown potential	<b>N</b> No archaeological potential
	Conservation Area <sup>+</sup>		<b>Y</b> Within conservation area	<b>A</b> Adjacent to conservation area	<b>N</b> No conservation area
	Listed Buildings <sup>+</sup>		<b>Y</b> Listed building on the site	<b>A</b> Adjacent to listed building	<b>N</b> No listed building
	Scheduled Monument <sup>+</sup>		<b>Y</b> Scheduled monument on the site	<b>A</b> Adjacent to scheduled monument	<b>N</b> No scheduled monument
Utility Services	Presence of over head	Overhead cables or underground pipelines	<b>Y</b>	<b>A</b>	<b>N</b>

	cables / underground pipes	could limit the development potential on a site.	Overhead cables / underground pipes on the site	Overhead cables / underground pipes adjacent to the site	No overhead cables or underground pipes
	Water supply	Comments from Thames Water. Could impact on the viability of a site where significant improvements are required.	<b>N</b> Concern over water supply infrastructure	<b>U</b> Unknown as TW not consulted on the site	<b>Y</b> No concerns over water supply infrastructure
	Wastewater	Comments from Thames Water. Could impact on the viability of a site where significant improvements are required.	<b>N</b> Concern over wastewater infrastructure	<b>U</b> Unknown as TW not consulted on the site	<b>Y</b> No concerns over wastewater infrastructure
	Groundwater source protection zone (SPZ) <sup>+</sup>	Comments from Environment Agency. SPZ are areas around water extraction boreholes and indicate the amount of time taken for groundwater to reach the extraction point (Zone 1 is closest to the borehole, 3 furthest way). The zones can highlight where there is potential for groundwater sources to become contaminated.	<b>Y</b> In SPZ (including which zone, 1, 2 or 3)	<b>N</b> Not in an SPZ	
AWE consultation zone <sup>+</sup>	Middle	Development near to AWE is restricted in the interest of public safety. Development within the consultation zones needs to be consulted on with ONR in accordance with Core Strategy Policy CS8.	<b>Y</b> Middle zone	<b>N</b> Not within zone	
	Outer		<b>Y</b> Outer zone	<b>N</b> Not within zone	
Proximity to railway line		Network Rail. Need to be consulted on sites adjacent to railway lines.	<b>Y</b> Adjacent to railway line	<b>A</b> Close to railway line	<b>N</b> No railway line
Minerals and Waste	Minerals preferred area <sup>+</sup>		<b>Y</b> Within minerals preferred area	<b>A</b> Adjacent to minerals	<b>N</b> No minerals preferred area

				preferred area	
	Mineral consultation area <sup>+</sup>		<b>Y</b> Within mineral consultation area		<b>N</b> Outside mineral consultation area
	Minerals/Waste Site	Minerals and waste sites could be an incompatible adjacent land use. Some sites are underlain by mineral deposits which could have potential for future extraction.	<b>Y</b> Within minerals / waste site	<b>A</b> Close to minerals / waste site. Site underlain by deposits with potential for future extraction.	<b>N</b> No minerals / waste site
	Other				
Relationship to / in combination effect of other sites	List of neighbouring sites.	The impact of several sites together could be different to an individual site.			
Other (anything else to be considered)					

<sup>+</sup> Data taken from the Council's GIS system using the most up to date data. The original snapshot of data was taken in February 2014, with specific site details checked prior to publication of proposed submission DPD.

**Appendix 6B – Site Selection Criteria for Gypsy, Traveller and Travelling Showpeople sites as set out in Policy CS7 of the Core Strategy**

<b>Policy CS7 Criteria</b>	<b>Key considerations</b>
Safe and easy access to major roads and public transport services	<ul style="list-style-type: none"> <li>• Whether access is of, or can be made to, an appropriate standard, including consideration of its adequacy, the character, width, alignment and speed of the road</li> <li>• Potential for pedestrian /vehicle conflict on either the access or roads in close proximity to the site – whether there are footways or cycleways, width, visual splays, lighting</li> <li>• Access to public transport and the frequency of the service</li> <li>• Any other highway issues or concerns</li> </ul>
Easy access to local services including a bus route, shops, schools and health services	<ul style="list-style-type: none"> <li>• Whether local services, including a bus route, shops, schools and health services are located in a nearby settlement</li> <li>• Distance to key local services (as above) and whether they are accessible by walking and/or cycling or accessible by public transport</li> </ul>
Located outside areas of high flooding risk	<ul style="list-style-type: none"> <li>• Whether the site is located within Flood Zone 2 and/or 3</li> <li>• Whether the site is vulnerable to other sources of flood risk, such as surface water or ground water flooding</li> <li>• Whether evidence suggests there are flood risk issues affecting the site and/or its immediate surroundings</li> </ul>
Provision for adequate on site facilities for parking, storage, play and residential amenity	<ul style="list-style-type: none"> <li>• Size of the site</li> <li>• Any existing facilities/structures on the site</li> <li>• Potential number and density of pitches</li> </ul>
The possibility of the integrated co-existence between the site and the settled community, including adequate levels of privacy and residential amenity both within the site and with neighbouring occupiers	<ul style="list-style-type: none"> <li>• Distance from the site to nearest residential properties / settled community</li> <li>• Whether the amenity of neighbouring uses would be unacceptably affected by Gypsies and Travellers (noise, light, visual impact, general disturbance etc) and vice versa</li> </ul>
Opportunities for an element of authorised mixed uses	<ul style="list-style-type: none"> <li>• Whether a mix of uses and/or alternative uses have been proposed on the site.</li> <li>• Whether the site and its surrounding uses would lend itself to an element of authorised mixed uses.</li> </ul>
The compatibility of the use with the surrounding land use, including potential disturbance from vehicular movements, and on site business activities	<ul style="list-style-type: none"> <li>• Type and scale of surrounding uses</li> <li>• Whether the amenity of neighbouring uses would be unacceptably affected by Gypsies and Travellers (noise, vehicular movement etc)</li> <li>• Number of expected vehicle movements from site depending on proposed number of pitches and/or on site business activities</li> </ul>
Will not materially harm the physical and visual character of the area	<ul style="list-style-type: none"> <li>• Visual prominence and visual impact of the site</li> <li>• Impact on the character and appearance of the area with regard to the built and natural environment (including local and statutory designations) of the immediate locality and nearest settlement</li> </ul>
Where applicable have regard for the character and policies affecting the North Wessex Downs	<ul style="list-style-type: none"> <li>• Whether the site is located within the North Wessex Downs AONB</li> <li>• Whether there is likely to be any impact on features that contribute to the landscape character</li> <li>• Whether development of the site will contribute to the conservation</li> </ul>

AONB	and enhancement of the natural beauty of the landscape
Other issues to consider	<ul style="list-style-type: none"><li>• Any site specific or local issues to be considered</li></ul>

Appendix 7- List of sites eliminated from consideration at sifting stage (updates since Preferred Options shown in blue and underlined)

Housing Sites

Site	SHLAA assessment	Automatic exclusion through site selection process?	Reason
<b>Aldermaston</b>			
<b>ALD001</b> White Town Nursery	Not currently developable	Yes	Site is within AWE inner consultation zone.
<b>ALD002</b> Land at Foresters Farm	Not currently developable	Yes	Site is within AWE inner consultation zone.
<b>ALD003</b> Land at Fisherman's Lane	Deliverable	Yes	Planning permission granted in 2007. Site is within AWE inner consultation zone and within settlement boundary.
<b>Bradfield Southend</b>			
<b>BRS001</b> Land south of Southend Road	Potentially developable	Yes	Adverse impact on the character of the AONB. Landscape assessment indicates that the site is not suitable for development.
<b>BRS002</b> Corner of Cock Lane and South End Road	Potentially developable	Yes	Site has potential for less than 5 dwellings making it too small for allocation, <del>however there is potential for it to be considered as part of the settlement boundary review.</del> <u>Site to be included within the settlement boundary.</u>
<b>Burghfield Common</b>			
<b>BUR003</b> Clayhill Copse	Not currently developable	No	The whole site is covered by Ancient Woodland and Tree Preservation Orders.
<b>BUR009</b> Land at Clayhill	Not currently developable	No	Poor relationship to the settlement, site is not adjacent to the settlement boundary.
<b>BUR017</b> Land at Hunters Hill	Deliverable	Yes	Site is within settlement boundary and has planning permission.
<b><u>BUR019</u></b> <u>Haycroft, Reading Road</u>	<u>Potentially developable</u>	<u>Yes</u>	<u>Site has potential for less than 5 dwellings making it too small for allocation. Site to be included within the settlement boundary. Site previously formed part of BUR002, but at preferred options a request was received from the site promoter to consider the site separately.</u>
<b>Chieveley</b>			
<b><u>CHI001</u></b> <u>The Cold House, Green Lane</u>	<u>Potentially developable</u>	<u>Yes</u>	<u>Site has potential for less than 5 dwellings making it too small for allocation. Site to be included within the settlement boundary.</u>
<b>CHI008</b> Land adjacent to Oxford Road	Not currently developable	Yes	Development potential of the site (91 dwellings) is greater than required for a Service Village such as Chieveley. Adverse impact on the character of the AONB. Landscape assessment indicates that the site is not suitable for development.
<b>CHI009</b> Land south of Graces Lane	Not currently developable	Yes	Adverse impact on the character of the AONB. Landscape assessment indicates that the site is not suitable for development.
<b><u>CHI010</u></b> <u>Land adjacent to Coombe Cottage, High Street</u>	<u>Potentially developable</u>	<u>Yes</u>	<u>Site has potential for less than 5 dwellings making it too small for allocation. Site to be included within the settlement boundary.</u>

<b>CHI011</b> Chieveley Glebe, East Land	Not currently developable	Yes	Adverse impact on the character of the AONB. Landscape assessment indicates that the site is not suitable for development. Site is very large compared to the village making it inappropriate in scale to the role and function of Chieveley.
<b>CHI013</b> Land at Graces Lane	Not currently developable	Yes	Adverse impact on the character of the AONB. Landscape assessment indicates the site is not suitable for development.
<b>CHI015</b> Land at School Lane	Potentially developable	Yes	Adverse impact on the character of the AONB. Landscape assessment indicates development of this site would not be appropriate.
<b>CHI016</b> Land at Morphetts Lane, Downend	Potentially developable	Yes	Site has potential for less than 5 dwellings making it too small for allocation. <del>Therefore the site is more suitable to be considered as part of the settlement boundary review.</del> <a href="#">Site to be included within the settlement boundary.</a>
<a href="#">CHI017</a> <a href="#">The Old Stables, Green Lane</a>	<a href="#">Potentially developable</a>	<a href="#">Yes</a>	<a href="#">Site has potential for less than 5 dwellings making it too small for allocation. Site to be included within the settlement boundary.</a>
<b>CHI018</b> Land at Tudor Avenue	Not currently developable	No	Poor relationship to the settlement as it is not adjacent to the settlement boundary.
<b>CHI019</b> The Bakery, Church Lane	Developable	Yes	Site is within settlement boundary, therefore there is a presumption in favour of development.
<b>CHI020</b> Lychgate, Church Lane	Developable	Yes	Site is within settlement boundary, therefore there is a presumption in favour of development.
<b>Cold Ash</b>			
<b>COL007</b> St Gabriel's Convent, The Ridge	Deliverable	Yes	Site has planning permission.
<b>COL008</b> Land at St Gabriel's Convent, The Ridge	Not currently developable	No	Poor relationship to the settlement.
<b>COL009</b> Beggars Folly, The Ridge	Not currently developable	No	Located opposite junction, undulating site with trees and adjacent to ancient woodland.
<b>COL010</b> Land at Westrop	Potentially developable	<del>No</del> <a href="#">Yes</a>	Adverse impact on the character of the AONB. Landscape assessment indicates development here would not be acceptable.
<a href="#">COL011</a>	<a href="#">Potentially developable</a>	<a href="#">Yes</a>	<a href="#">Adverse impact on the character of the AONB. Landscape assessment indicates that the site is not suitable for development.</a>
<b>Compton</b>			
<b>COM02</b> Land to the south east of Compton	Not currently developable	Yes	Site is within Flood Zone 3. In landscape terms, development would only be considered appropriate on part of the site.
<b>COM005</b> Fairfield	Deliverable	Yes	Site has planning permission and is within the settlement boundary.
<b>COM006</b> Mayfield Farm, Cheseridge	Not currently developable	No	Poor relationship to settlement, not adjacent to the settlement boundary.
<b>COM007</b> Land between Cheseridge Road and Ilsley Road	Potentially developable	Yes	Site is within Flood Zone 3.
<b>COM008</b> Rear of Mayfield Cottages, Ilsley Road	Potentially developable	Yes	Site is within Flood Zone 3

<b>COM009</b> Land between Ilsley Road and Churn Road	Potentially developable	Yes	Adverse impact on the character of the AONB. Landscape assessment indicates that the site is not suitable for development.
<b>COM011</b> <a href="#">Land to the north of Ilsley Road</a>	<a href="#">Potentially developable</a>	<a href="#">Yes</a>	<a href="#">Adverse impact on the character of the AONB. Landscape assessment indicates that the site is not suitable for development.</a>
<b>COM012</b> <a href="#">The Paddocks east of Roden House, Wallingford Raod</a>	<a href="#">Potentially developable</a>	<a href="#">Yes</a>	<a href="#">Adverse impact on the character of the AONB. Landscape assessment indicates that the site is not suitable for development.</a>
<b>Eastern Urban Area</b>			
<b>EUA001</b> Dacre, New Lane Hill, Tilehurst	Developable	Yes	Site is within settlement boundary, therefore there is a presumption in favour of development.
<b>EUA004</b> Land at Pincents Lane, Calcot	Not currently developable	No	Poor relationship to settlement. Located within the AONB.
<b>EUA005</b> Land at Calcot Golf Course, Calcot Park, Tilehurst	Potentially developable	Yes	Site is within settlement boundary, therefore there is a presumption in favour of development.
<b>EUA010</b> Land between Oxford Road and Theobold Drive, Tilehurst	Not currently developable	Yes	Site is within settlement boundary. Lack of space on the site to allow sufficient set back from the road.
<b>EUA011</b> Land north east of Calcot Park Golf Club	Potentially developable	Yes	Site is within settlement boundary, therefore there is a presumption in favour of development.
<b>EUA011A</b> <del>Land north east of Calcot Park Golf Club</del>	<del>Potentially developable</del>	<del>Yes</del>	<del>Site is within settlement boundary, therefore there is a presumption in favour of development.</del>
<b>EUA013</b> Turnhams House, Pincents lane, Tilehurst	Not currently developable	No	Site is located within the AONB and is out of keeping with existing development.
<b>EUA016</b> Murdochs Diner, Bath Road, Calcot	Developable	Yes	Site is within settlement boundary, therefore there is a presumption in favour of development.
<b>EUA019</b> The Barn, Low Lane, Calcot	Deliverable	Yes	Site has planning permission and is located within the settlement boundary.
<b>EUA024</b> The Colonade, Overdown Road, Tilehurst	Developable	Yes	Site is within settlement boundary, therefore there is a presumption in favour of development.
<b>EUA027</b> Land north of Pincents Lane, Calcot	Not currently developable	Yes	Adverse impact on the character of the AONB. Landscape assessment indicates this site is not suitable for development. Site has a poor relationship to the settlement.
<b>EUA029</b> Land at Kiln Cottage, Kiln Lane, Tilehurst	Not currently developable	Yes	Site has potential for less than 5 dwellings making it too small for allocation., <del>therefore the site is more suitable to be considered as part of the settlement boundary review.</del> Site is within the AONB. <a href="#">Poor relationship to the existing settlement means that the site does not meet the settlement boundary review criteria and so cannot included within the settlement boundary.</a>
<b>EUA030</b> Land north of Purley Village, Purley-on-Thames	Not currently developable	Yes	Located within Flood Zone 3. Site has a history of significant flooding.

<b>EUA034</b> 1053-1057 Oxford Road, Purley-on-Thames	Deliverable	Yes	Site has planning permission and is located within settlement boundary.
<b>EUA036</b> Land at Little Heath Road, Tilehurst	Not currently developable	No	Site is within the AONB and poor relationship to the existing settlement.
<b>EUA037</b> Former Horncastle Ford Site, Bath Road, Calcot	Developable	Yes	Site is within settlement boundary, therefore there is a presumption in favour of development.
<b><u>EUA038</u></b> <u>Land to the west of New Lane Hill</u>	<u>Potentially developable</u>	<u>Yes</u>	<u>Site is within settlement boundary, therefore, there is a presumption in favour of development. Formerly EUA011A</u>
<b><u>EUA039</u></b>	<u>Potentially developable</u>	<u>Yes</u>	<u>Site is within settlement boundary, therefore, there is a presumption in favour of development.</u>
<b>Great Shefford</b>			
<b>GSH002</b> Land south of Wantage Road	Not currently developable	Yes	Part of the site is within Flood Zone 3. Adverse impact on the character of the AONB. Landscape assessment indicates that development here would not be acceptable.
<b>Hermitage</b>			
<b>HER003</b> Land at Pinewood Crescent (Former Cementation site)	Deliverable	Yes	Site has planning permission and is located within the settlement boundary.
<b>HER007</b> Land at Doctor's Row, Doctor's Lane	Not currently developable	Yes	Site has potential for less than 5 dwellings making it too small for allocation, therefore the site is more suitable to be considered as part of the settlement boundary review.
<b>HER010</b> South of Manor Lane	Not currently developable	Yes	Site is inappropriate in scale to both Hermitage and Oare.
<b>HER012</b> Land opposite St Bartholomew's Church, Manor Lane, Oare	Not currently developable	Yes	Development of the site would lead to significant changes to the character of Oare as the village is not seen as part of Hermitage. The development potential is above what is required in this location.
<b>HER013</b> Land adjacent to Hermitage Farm, Manor Lane	Not currently developable	Yes	Development of the site would lead to significant changes to the character of Oare as the village is not seen as part of Hermitage. The development potential is above what is required in this location.
<b>HER014</b> Land at Kiln Estate, Manor Lane, Oare	Not currently developable	Yes	Development of the site would lead to significant changes to the character of Oare as the village is not seen as part of Hermitage. The development potential is above what is required in this location.
<b>Hungerford</b>			
<b>HUN002</b> The Paddock, Marsh Lane	Not currently developable	No	Poor access to the site. Landscape issues as the site is in an area of high landscape sensitivity, potential for impact on the AONB. Rural nature of area.
<b>HUN004</b> Former Eddington allotments, Chilton Estate, Eddington Lane	Not currently developable	No	Poor relationship to Hungerford, poor access and potential impact on landscape.
<b>HUN008</b> Hungerford Trading Estate	Potentially developable	Yes	Site is a Protected Employment Area. Adjacent to Flood Zone 3.

<b>HUN011</b> Land off Marsh Lane	Not currently developable	No	Site is adjacent to Flood Zone 3, Flood Zone 2, groundwater emergence zone and SSSI. Rural nature of area and poor relation to settlement. Poor access.
<b>HUN012</b> Land at Smitham Bridge	Not currently developable	Yes	Approximately half of the site is in Flood Zone 3. Evidence of flooding Jan/Feb 2014. Poor access. Rural nature of area and poor relation to settlement.
<b>HUN013</b> Charnham Park	Potentially developable	Yes	Site is within a protected employment area and within the settlement boundary.
<b>HUN014</b> Charnham Park	Not currently developable	Yes	Site is within a protected employment area and within the settlement boundary.
<b>HUN016</b> The Priory and Platt Court	Deliverable	Yes	Site has planning permission and is located within the settlement boundary.
<b>HUN017</b> Fairfields	Potentially developable	Yes	Site is located within the settlement boundary.
<b>HUN018</b> North View Heights	Potentially developable	Yes	Site is located within the settlement boundary.
<b>HUN023</b> The Oakes and St Johns Ambulance, Off Station Road	Potentially developable	Yes	Site is within a protected employment area and within the settlement boundary.
<b>HUN024</b> The Three Swans Hotel, High Street	Deliverable	Yes	Site has planning permission and is located within the settlement boundary.
<b>HUN025</b> Our Lady of Lourdes	Deliverable	Yes	Site has planning permission and is located within the settlement boundary.
<b>HUN026</b> Land at north Standen Road	Potentially developable	Yes	Adverse impact on the character of the AONB. Landscape assessment indicates that the site is not suitable for development.
<b>HUN027</b> The Triangle Field, Adjoining the former Priory, Priory Road	Not currently developable	No	Site is subject to a long term lease preventing the site coming forward in this plan period.
<b>Kintbury</b>			
<b>KIN001</b> Kintbury Park Farm, Irish Hill Road	Not currently developable	Yes	Adverse impact on the character of the AONB. Landscape assessment indicates development here would not be acceptable.
<b>KIN002</b> Kintbury Park Farm, Irish Hill Road	Not currently developable	Yes	Poorly related to existing residential development.
<b>KIN005</b> Kintbury Park Farm, Irish Hill Road	Not currently developable	Yes	Adverse impact on the character of the AONB. Landscape assessment indicates the site is not suitable for development.
<b>KIN010</b> Land to the east of Layland Green	Not currently developable	No	Poor relationship to settlement. Site is not adjacent to the settlement without other sites being developed.
<b>KIN014</b> Land to the west of Kintbury, Hungerford Road	Not currently developable	Yes	Site is within Flood Zone 3. Poor relationship to settlement.
<b>Lambourn</b>			
<b>LAM002B</b> Land at Meridian House and Stud, Greenways	Not currently developable	No	Poor relationship to the settlement, not adjacent to the settlement boundary.

<b>LAM003</b> Land between River Lambourn and Bockhampton Road	Not currently developable	Yes	Adverse impact on the character of the AONB. Landscape assessment states development here would not be acceptable.
<b>LAM004</b> Land off Bockhampton Road	Not currently developable	Yes	Adverse impact on the character of the AONB. Landscape assessment states development here would not be acceptable.
<b>LAM006</b> Land at Wantage Road and Northfields	Not currently developable	Yes	Adverse impact on the character of the AONB. Landscape assessment states development here would not be acceptable.
<b>LAM010</b> Land to the read of The Classics, Bockhampton Road	Deliverable	Yes	Site has planning permission and is within the settlement boundary.
<b>LAM014</b> Upshire Stables, Hungerford Hill	Not currently developable	No	Poor relationship to the settlement, not adjacent to the settlement boundary.
<b>Mortimer</b>			
<b>MOR002</b> Land adjacent to College Piece	Not currently developable	No	Whole site is wooded and covered by Tree Preservation Orders.
<b>MOR004</b> Squirrels Lodge	Deliverable	Yes	Site has planning permission and is within the settlement boundary. <del>Site is for less than 5 dwellings making it too small for allocation.</del>
<b>MOR007</b> Land behind Six Acre Cottage, Drury Lane	Not currently developable	No	Poor relationship to the settlement, not adjacent to the settlement boundary.
<b>Newbury</b>			
<b>NEW007</b> Unit D Mandarin Court, Hambridge Road	Not currently developable	Yes	Site is within a protected employment area and within the settlement boundary.
<b>NEW008</b> <a href="#">Land adjoining Mencap Respite Centre, Pinchington Lane</a>	<a href="#">Potentially developable</a>	<a href="#">Yes</a>	<a href="#">Site has potential for less than 5 dwellings making it too small for allocation. A large part of the site contains a breeding pond for Great Crested Newts and therefore, is not considered appropriate for inclusion within the settlement boundary.</a>
<b>NEW009</b> Enborne Gate Farm, Enborne Road	Not currently developable	Yes	Site is within a Registered Battlefield.
<b>NEW018</b> Land at Bonemill Lane	Not currently developable	Yes	Site is adjacent to Flood Zone 3. Site is within a Registered Battlefield.
<b>NEW020</b> Land adjacent to Thames Water Reservoir	Not currently developable	Yes	Site is within a Registered Battlefield.
<b>NEW020B</b> Land adjacent to Enborne Lodge	Not currently developable	Yes	Site is within a Registered Battlefield.

SA/SEA tables for the  
Approach options tested

## Option Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Option One:** Prepare Site Allocations and Delivery DPD that accords with current Core Strategy, undertake Strategic Housing Market Assessment (SHMA) and follow with a new Local Plan.

**Key: Effects of option on SA objectives**

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment: -	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
1. To secure provision of sufficient good quality housing to meet objectively assessed needs	Will it maximise the provision of affordable housing to meet identified need?	<b>++</b>	Makes provision for housing sites to meet requirements of Core Strategy. Contains affordable housing policy.  New Local Plan based on SHMA with increased housing provision to long term. Meets planning requirements in full.	Enhancement possible with increased resources leading to early preparation of plan.	Plan prepared in accordance with CS focus on Social, Economic and Environmental sustainability requirements
	Will it enable the provision of good quality market housing required to meet identified need?	<b>++</b>	Makes provision for housing sites to meet requirements of Core Strategy.  New Local Plan based on SHMA with increased housing provision to long term. Meets planning requirements in full.	Enhancement possible with increased resources leading to early preparation of plan.	Plan prepared in accordance with CS focus on Social, Economic and Environmental sustainability requirements
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>0</b>	Unlikely to have an impact		Unlikely to have an impact on any element of sustainability.
	Will it increase opportunities for access to sports facilities?	<b>0</b>	Potential to increase opportunities through requirement for open spaces in new development but increase in resident population might put pressure on existing facilities leading to reduction in access.		Unlikely to have an impact on any element of sustainability.
	Will it reduce levels and fear of crime and anti-social behaviour?	<b>0</b>	Plan will have no direct impact but will contain safe by design policies and guidance		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	Potential to increase green space through planning conditions on proposals		

## Option Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>+</b>	Plan will include policies relating to access, employment services and facilities	CIL will provide additional funding	Development of the plan would have a positive impact on all elements of sustainability, in particular economic sustainability.
	Will it support the development of access to IT facilities including Broadband particularly in rural areas?	<b>0</b>	Unlikely to have an impact		Unlikely to have an impact on any element of sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>+</b>	New development should be focused on accessible locations, giving good opportunities for walking, cycling and use of public transport.	CIL will provide additional funding to improve travel choices	Development will be directed towards sustainable locations, where walking, cycling and public transport opportunities are available with a positive impact on all elements of sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	<b>0</b>	Unlikely to have an impact		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	<b>+</b>	Planning policies will seek to ensure protection		Protection of the AONB is seen as critical in the Core Strategy, therefore, development will only take place if there would be no impact on the AONB, giving a positive impact on environmental sustainability.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	<b>+</b>	Planning policies will ensure protection for high quality landscape in AONB	The Core Strategy puts a limit on the amount of development in the AONB.	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	<b>+</b>	Planning policies will seek to ensure protection		Policies set out in the DPD, and through the Core Strategy would have a positive impact on all elements of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	<b>+</b>	Planning policies will seek to ensure protection		
	Will it promote, conserve and enhance the District's cultural assets?	<b>0</b>	No impact	NA	
	Will it provide for increased	<b>0</b>	No impact	NA	

## Option Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	access to and enjoyment of the historic environment?				
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the option impact on air quality?	?	Could be a reduction in air quality due to more people and more vehicles. Impossible to quantify	Setting of more stringent air quality standards would enhance protection	Development could have a mixed impact on all element of sustainability. Mitigation measures would reduce any potential negative impact.
	Will the option impact on noise levels?	?	Could be an increase in noise due to more people and more vehicles. Impossible to quantify	Greater use of sound deadening structures and noise barriers	
	Will there be an impact on soil quality?	0	No impact on quality but some agricultural land will be lost.	Increased productivity of agricultural land through more efficient farming practices	
	Will there be an impact on water quality?	0	Not on quality but definitely on supply		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	+	Planning policies will be developed to secure this approach		Policies will steer development towards Brownfield land over Greenfield sites, with a positive impact on all elements of sustainability.
9. To reduce consumption of natural resources and manage their use efficiently	Will it reduce energy use and promote the use of sustainable / renewable energy technologies?	0	Potential increase in energy usage but plan may promote new energy forms		New development will increase demand for resources, and subsequently could have a negative impact on sustainability. Mitigation measures and specific policies could help to reduce this impact
	Will it promote the adoption of sustainable design and construction practices?	+	Planning policies and guidance will promote and require better standards		
	Will it reduce waste generation and disposal in line with the waste hierarchy and reuse of materials?	-	Will increase demand for waste disposal	Move towards environmentally friendly waste disposal, use of waste to generate energy,, greater recycling.	
	Will it reduce water consumption and promote reuse?	-	Will increase demand for water supply	Water meters to be a requirement of all new housing schemes	
	Will it reduce the consumption of minerals and promote reuse of secondary materials?	-	Will increase demand for materials for construction	Greater use of recycled materials	
10. To reduce emissions contributing to climate change and ensure	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development

## Option Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
adaptation measures are in place to respond to climate change			-		could have a negative impact on environmental sustainability.
	Will the option increase risk from flooding	?	Potential for new housing to reduce ground absorption of water in heavy rain events leading to localised flooding	Higher standards for new development in terms of treatment of surface water with water retained on site and released in a controlled manner. Sequential approach will be taken for all development, and FRAs and SUDs would need to be provided.	Development could have a impact on flood risk, with a negative impact on all elements of sustainability, however, mitigation measures and the use of the sequential approach should direct development away from flood risk areas.
11. To ensure a strong, diverse and sustainable economic base which meets objectively assessed economic needs	Will it enable the provision of high quality economic development which response to business needs and delivers a range of employment opportunities?	+	Local Plan will contain enabling policies for new employment, land allocations.	Increased support through planning policies supporting existing and new enterprises	The option would have a positive impact on economic sustainability.
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	+	Local Plan will contain enabling policies for new employment, land allocations.	Increased support through planning policies supporting existing and new enterprises	
	Will it promote and support the vitality and viability of the District's commercial centres?	0	Indirectly through increased resident population.	Increased population base provides greater 'spend' available.	

### Summary

This option has a number of positive sustainability impacts. Policies included within the plan would aim to focus development in sustainable locations where walking, cycling and public transport options are available and where there are a range of local services and facilities easy accessible. Policies included within the plan would aim to reduce or neutralise any negative or uncertain sustainability impacts. This option does have a significantly positive effect on delivery of new homes, as it looks to allocation sites for development in the short time, and following the SHMA develop a Local Plan to allocated additional sites for development to meet the identified objectively assessed need.

#### Summary of effects:

**Effect:** Predominantly positive

**Likelihood:** High.

**Scale:** District Wide

**Duration:** Permanent

**Timing:** Short Term with longer term plan for new Local Plan.

## Option Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Option Two:** Prepare Housing Site Allocations, under take SHMA, followed by new Local Plan.

**Key: Effects of option on SA objectives**

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
1. To secure provision of sufficient good quality housing to meet objectively assessed needs	Will it maximise the provision of affordable housing to meet identified need?	<b>++</b>	Makes provision for housing sites in the short term to aid delivery and ensure the Council has an up to date 5 year housing land supply. The SHMA would identify the objectively assessed need, with the new Local Plan allocating sites to meet the medium and longer term housing requirements.	Option provides for housing sites in short term with mitigation that SHMA and new plan will be prepared in subsequent years	Plan prepared in accordance with CS focus on Social, Economic and Environmental sustainability requirements
	Will it enable the provision of good quality market housing required to meet identified need?	<b>++</b>	Makes provision for housing sites in the short term to aid delivery and ensure the Council has an up to date 5 year housing land supply. The SHMA would identify the objectively assessed need, with the new Local Plan allocating sites to meet the medium and longer term housing requirements.	Option provides for housing sites in short term with mitigation that SHMA and new plan will be prepared in subsequent years	Plan prepared in accordance with CS focus on Social, Economic and Environmental sustainability requirements
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>0</b>	Unlikely to have an impact		Unlikely to have an impact on any element of sustainability.
	Will it increase opportunities for access to sports facilities?	<b>0</b>	Potential to increase opportunities through requirement for open spaces in new development but increase in resident population might put pressure on existing facilities leading to reduction in access.		Unlikely to have an impact on any element of sustainability.
	Will it reduce levels and fear of crime and anti-social behaviour?	<b>0</b>	Plan will have no impact		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	Potential to increase green space through planning conditions on proposals		

## Option Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>0</b>	Plan only concerned with housing in the short term. Sites would be located where there is existing access to services and facilities, but no new facilities would be provided.	CIL will provide additional funding from 2015	Unlikely to have an impact on sustainability.
	Will it support the development of access to IT facilities including Broadband particularly in rural areas?	<b>0</b>	Unlikely to have an impact		Unlikely to have an impact on any element of sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>+</b>	New development should be focused on accessible locations, giving good opportunities for walking, cycling and use of public transport.	CIL will provide additional funding to improve travel choices	Development will be directed towards sustainable locations, where walking, cycling and public transport opportunities are available with a positive impact on all elements of sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	<b>0</b>	Unlikely to have an impact		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	<b>0</b>	No new policies, dependent on CS policies until new plan prepared		Protection of the AONB is seen as critical in the Core Strategy, therefore, development will only take place if there would be no impact on the AONB, giving a positive impact on environmental sustainability.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	<b>+</b>	Housing Site allocations will be based on an assessment of the impact of each site on conserving and enhancing the landscape. The Core Strategy sets out that the AONB should have the highest protection.	The Core Strategy puts a limit on the amount of development in the AONB.	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	<b>0</b>	No new policies, dependent on CS policies until new plan prepared		Unlikely to have an impact on sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	<b>0</b>	No new policies, dependent on CS policies until new plan prepared		
	Will it promote, conserve and enhance the District's cultural assets?	<b>0</b>	Unlikely to have an impact		

## Option Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will it provide for increased access to and enjoyment of the historic environment?	<b>0</b>	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the option impact on air quality?	<b>?</b>	Could be a reduction in air quality due to more people and more vehicles. Impossible to quantify	Setting of more stringent air quality standards would enhance protection	Development could have a mixed impact on all element of sustainability. Mitigation measures would reduce any potential negative impact.
	Will the option impact on noise levels?	<b>?</b>	Could be an increase in noise due to more people and more vehicles. Impossible to quantify	Greater use of sound deadening structures and noise barriers	
	Will there be an impact on soil quality?	<b>0</b>	No impact on quality but some agricultural land will be lost.		
	Will there be an impact on water quality?	<b>0</b>	Not on quality but definitely on supply		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>0</b>	Site assessments will include consideration of previously developed land but only as identified through the SHLAA process. No new survey.		Unlikely to have an impact on sustainability
9. To reduce consumption of natural resources and manage their use efficiently	Will it reduce energy use and promote the use of sustainable / renewable energy technologies?	<b>0</b>	Potential increase in energy usage.		New development will increase demand for resources, and subsequently could have a negative impact on sustainability.
	Will it promote the adoption of sustainable design and construction practices?	<b>0</b>	No new policies, dependent on CS policies until new plan prepared		
	Will it reduce waste generation and disposal in line with the waste hierarchy and reuse of materials?	<b>-</b>	Will increase demand for waste disposal		
	Will it reduce water consumption and promote reuse?	<b>-</b>	Will increase demand for water supply		
	Will it reduce the consumption of minerals and promote reuse of secondary materials?	<b>-</b>	Will increase demand for materials for construction		
10. To reduce emissions contributing to climate change and ensure adaptation measures are in	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	<b>?</b>	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative

## Option Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
place to respond to climate change					impact on environmental sustainability.
	Will the option increase risk from flooding	?	Potential for new housing to reduce ground absorption of water in heavy rain events leading to localised flooding	Higher standards for new development in terms of treatment of surface water with water retained on site and released in a controlled manner. Sequential approach will be taken for all development, and FRAs and SUDs would need to be provided.	Development could have a impact on flood risk, with a negative impact on all elements of sustainability, however, mitigation measures and the use of the sequential approach should direct development away from flood risk areas.
11. 	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	0	No new policies, dependent on CS policies until new plan prepared		
	Will it promote and support the vitality and viability of the District's commercial centres?	0	Only through increased population		

### Summary

This option aims to allocate sites in the short term under the Core Strategy, with a medium term plan to produce a new Local Plan following the SHMA. This option gives a significantly positive impact on sustainability due to the provision of allocated sites for housing (affordable and market) in the short term. Over the medium and long term the new Local Plan will do this and ensure that policies provide for good quality affordable and market housing, with a knock-on effect on all elements of sustainability. This option does not look into new policies, or consider development other than Housing. While this does not have a negative impact on sustainability it is also not positive, as everything would still be considered under the Core Strategy.

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** District Wide – Initial focus on settlement hierarchy settlements.

**Duration:** Permanent

**Timing:** Short term with longer term plan for new Local Plan.

## Option Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Option Three:** Prepare Housing Site Allocations, plus selected housing development management policies and guidance, undertake SHMA, followed by new Local Plan.

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
1. To secure provision of sufficient good quality housing to meet objectively assessed needs	Will it maximise the provision of affordable housing to meet identified need?	<b>++</b>	Makes provision for housing sites in the short term to aid delivery and ensure the Council has an up to date 5 year housing land supply. The SHMA would identify the objectively assessed need, with the new Local Plan allocating sites to meet the medium and longer term housing requirements.	Option provides for housing sites in short term with mitigation that SHMA and new plan will be prepared in subsequent years	Plan prepared in accordance with CS focus on Social, Economic and Environmental sustainability requirements
	Will it enable the provision of good quality market housing required to meet identified need?	<b>++</b>	Makes provision for housing sites in the short term to aid delivery and ensure the Council has an up to date 5 year housing land supply. The SHMA would identify the objectively assessed need, with the new Local Plan allocating sites to meet the medium and longer term housing requirements.	Option provides for housing sites in short term with mitigation that SHMA and new plan will be prepared in subsequent years	Plan prepared in accordance with CS focus on Social, Economic and Environmental sustainability requirements
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>0</b>	Unlikely to have an impact		Unlikely to have an impact on any element of sustainability.
	Will it increase opportunities for access to sports facilities?	<b>0</b>	Potential to increase opportunities through requirement for open spaces in new development but increase in resident population might put pressure on existing facilities leading to reduction in access. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>0</b>	Site assessments will include consideration of previously developed land but only as identified through the SHLAA process. No new survey.		Unlikely to have an impact on sustainability.
9. To reduce consumption of natural resources and manage their use efficiently	Will it reduce energy use and promote the use of sustainable / renewable energy technologies?	<b>0</b>	Potential increase in energy usage.		New development will increase demand for resources, and subsequently could have a negative impact on sustainability.
	Will it promote the adoption of sustainable design and construction practices?	<b>+</b>	New guidance on residential development could include this provision		
	Will it reduce waste generation and disposal in line with the waste hierarchy and reuse of materials?	<b>-</b>	Will increase demand for waste disposal		
	Will it reduce water consumption and promote reuse?	<b>-</b>	Will increase demand for water supply		
	Will it reduce the consumption of minerals and promote reuse of secondary materials?	<b>-</b>	Will increase demand for materials for construction		
10. To reduce emissions contributing to climate change and ensure adaptation measures are in	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	<b>?</b>	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative

## Option Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment: -	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
place to respond to climate change					impact on environmental sustainability.
	Will the option increase risk from flooding	?	Potential for new housing to reduce ground absorption of water in heavy rain events leading to localised flooding	Higher standards for new development in terms of treatment of surface water with water retained on site and released in a controlled manner. Sequential approach will be taken for all development, and FRAs and SUDs would need to be provided.	Development could have a impact on flood risk, with a negative impact on all elements of sustainability, however, mitigation measures and the use of the sequential approach should direct development away from flood risk areas.
11. To ensure a strong, diverse and sustainable economic base which meets objectively assessed economic needs	Will it enable the provision of high quality economic development which response to business needs and delivers a range of employment opportunities?	0	No new policies, dependent on CS policies until new plan prepared		Unlikely to have an impact on any element of sustainability.
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	0	No new policies, dependent on CS policies until new plan prepared		
	Will it promote and support the vitality and viability of the District's commercial centres?	0	Only through increased population		

### Summary

This option aims to allocate sites in the short term under the Core Strategy, with a medium term plan to produce a new Local Plan following the SHMA. This option gives a significantly positive impact on sustainability due to the provision of allocated sites for housing (affordable and market) in the short term. Over the medium and long term the new Local Plan will do this and ensure that policies provide for good quality affordable and market housing, with a knock-on effect on all elements of sustainability. This option does not look into new policies, or consider development other than Housing. While this does not have a negative impact on sustainability it is also not positive, as everything would still be considered under the Core Strategy. The option includes some updates to policies, specifically countryside policies which would have a positive impact on environmental sustainability.

### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** District Wide – initial focus on settlement hierarchy settlements

**Duration:** Permanent

**Timing:** Short term with longer term plan for new Local Plan.

## Option Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Option Four:** Prepare new Local Plan following SHMA

**Key: Effects of option on SA objectives**

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
1. To secure provision of sufficient good quality housing to meet objectively assessed needs	Will it maximise the provision of affordable housing to meet identified need?	<b>+</b>	Makes provision for housing sites to based on SHMA with increased housing provision. Does not comply with the approved Core Strategy. Would involve waiting for the SHMA, which would delay the allocation of sites.	Only possible with increased resources leading to early preparation of plan.	Development of new homes has a positive impact on all elements of sustainability.
	Will it enable the provision of good quality market housing required to meet identified need?	<b>+</b>	Makes provision for housing sites to based on SHMA with increased housing provision. Does not comply with the approved Core Strategy. Would involve waiting for the SHMA, which would delay the allocation of sites.	Only possible with increased resources leading to early preparation of plan.	Development of new homes has a positive impact on all elements of sustainability.
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	The plan would aim to focus development in locations where healthy, active lifestyles could be supported and encouraged.		The new Local Plan would be likely o have a positive impact on all elements of sustainability.
	Will it increase opportunities for access to sports facilities?	<b>+</b>	Potential to increase opportunities through requirement for open spaces in new development but increase in resident population might put pressure on existing facilities leading to reduction in access.		The new Local Plan would be likely o have a positive impact on all elements of sustainability.
	Will it reduce levels and fear of crime and anti-social behaviour?	<b>0</b>	Plan will have no direct impact but will contain safe by design policies and guidance	NA	
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	Potential to increase green space through planning conditions on proposals	NA	

## Option Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>+</b>	Plan will include policies relating to access, employment services and facilities	CIL will provide additional funding	The new Local Plan would be likely to have a positive impact on all elements of sustainability.
	Will it support the development of access to IT facilities including Broadband particularly in rural areas?	<b>0</b>	Unlikely to have an impact		Unlikely to have an impact on sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>+</b>	New development should be focused on accessible locations, giving good opportunities for walking, cycling and use of public transport.	CIL will provide additional funding to improve travel choices	Development will be directed towards sustainable locations, where walking, cycling and public transport opportunities are available with a positive impact on all elements of sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	<b>0</b>	Unlikely to have an impact		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	<b>+</b>	Planning policies will seek to ensure protection		The Local Plan would be likely to have a positive impact on environmental sustainability,
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	<b>+</b>	Planning policies will ensure protection for high quality landscape in AONB		
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	<b>+</b>	Planning policies will seek to ensure protection		The Local Plan would be likely to have a positive impact on environmental sustainability,
	Will it conserve and enhance the significance of the District's heritage assets?	<b>+</b>	Planning policies will seek to ensure protection		
	Will it promote, conserve and enhance the District's cultural assets?	<b>0</b>	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	<b>0</b>	Unlikely to have an impact		

## Option Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the option impact on air quality?	?	Could be a reduction in air quality due to more people and more vehicles. Impossible to quantify	Setting of more stringent air quality standards would enhance protection	Development could have a mixed impact on all element of sustainability. Mitigation measures would reduce any potential negative impact.
	Will the option impact on noise levels?	?	Could be an increase in noise due to more people and more vehicles. Impossible to quantify	Greater use of sound deadening structures and noise barriers	
	Will there be an impact on soil quality?	0	No impact on quality but some agricultural land will be lost.	Increased productivity of agricultural land through more efficient farming practices	
	Will there be an impact on water quality?	0	Not on quality but definitely on supply		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	+	Planning policies will be developed to secure this approach		Policies will steer development towards Brownfield land over Greenfield sites, with a positive impact on all elements of sustainability.
9. To reduce consumption of natural resources and manage their use efficiently	Will it reduce energy use and promote the use of sustainable / renewable energy technologies?	0	Potential increase in energy usage but plan may promote new energy forms		New development will increase demand for resources, and subsequently could have a negative impact on sustainability. Mitigation measures and specific policies could help to reduce this impact
	Will it promote the adoption of sustainable design and construction practices?	+	Planning policies and guidance will promote and require better standards		
	Will it reduce waste generation and disposal in line with the waste hierarchy and reuse of materials?	-	Will increase demand for waste disposal	Move towards environmentally friendly waste disposal, use of waste to generate energy,, greater recycling.	
	Will it reduce water consumption and promote reuse?	-	Will increase demand for water supply	Water meters to be a requirement of all new housing schemes	
	Will it reduce the consumption of minerals and promote reuse of secondary materials?	-	Will increase demand for materials for construction	Greater use of recycled materials	
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental

## Option Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
change					sustainability.
	Will the option increase risk from flooding	?	Potential for new housing to reduce ground absorption of water in heavy rain events leading to localised flooding	Higher standards for new development in terms of treatment of surface water with water retained on site and released in a controlled manner. Sequential approach will be taken for all development, and FRAs and SUDs would need to be provided.	Development could have a impact on flood risk, with a negative impact on all elements of sustainability, however, mitigation measures and the use of the sequential approach should direct development away from flood risk areas.
11. To ensure a strong, diverse and sustainable economic base which meets objectively assessed economic needs	Will it enable the provision of high quality economic development which response to business needs and delivers a range of employment opportunities?	+	Local Plan will contain enabling policies for new employment, land allocations.	Increased support through planning policies supporting existing and new enterprises	The option would have a positive impact on economic sustainability.
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	+	Local Plan will contain enabling policies for new employment, land allocations.	Increased support through planning policies supporting existing and new enterprises	
	Will it promote and support the vitality and viability of the District's commercial centres?	0	Indirectly through increased resident population.	Increased population base provides greater 'spend' available.	

### Summary

This option has a predominantly positive effect on sustainability. A new Local Plan would allow for all policies in the Core Strategy and Local Plan Saved Policies to be updated, giving the greatest opportunities for positive impacts on sustainability. Where there are potential negative, or uncertain sustainability effects the policies within the plan, or mitigation provided by individual developments outlined in the plan would reduce or neutralise this effect, and in some cases could lead to a positive effect on sustainability.

#### Summary of effects:

**Effect:** Predominantly positive

**Likelihood:** High

**Scale:** District Wide

**Duration:** Permanent

**Timing:** Long Term

## Appendix 9A

Newbury and Thatcham (inc. Cold Ash)

# Newbury Site Assessments

# Site Selection – Site Assessment

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Newbury	<b>Parish:</b>	Cold Ash

-------------------------------	----------------------------------	--------------------------	-------------------------

## Summary of Site Assessment

### Key Issues:

- Greenfield
- Ground water and surface water flood risk. Evidence of flooding Jan/Feb 2014.
- Distance from play facilities for children
- Electricity pylons cross the site
- Potential second battle of Newbury site.

## Site Assessment

<b>Parish Council consultation response:</b>	<p>The parish councils felt that this site needed to be considered as one site with NEW010. The site is within the 2<sup>nd</sup> battle of Newbury site (although this is not a registered Battlefield). Potential for traffic issues along the B4009 and Love Lane. Flooding is also an issue. The local schools are full. Concerned about the potential to impact on the character of Shaw-cum-Donnington. The site is adjacent to Shaw cemetery which has about 25 years worth of space left, the site could be an extension to the cemetery. Flooding takes place from the site into Shaw Cemetery and Cromwell Road. Significant levels of flooding occurred during Jan/Feb 2014.</p> <p><a href="#">At preferred options the Parish Council did not comment on this site.</a></p>

**Key: Effects of option on SA objectives**

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	Site is close to local services and facilities, as well as open countryside.		The site's location to the north of Newbury gives opportunities for walking and cycling and gives easy access to local services and facilities. Therefore, in terms of environmental and social sustainability, development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	<b>?</b>	The site is close to facilities at Trinity School, some of which are open to the public.		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	ROW passes east of the site and the site is close to local amenity space.	The right of way would need to be preserved	
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>+</b>	The site is close to areas of protected employment, and within easy access of a number of employment sites and education facilities.		The site is located close to areas of employment and education as well as other services and facilities within Newbury, as well as giving easy access to the strategic road network and public transport opportunities. This means that the site could have a positive impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>+</b>	The site is located within Newbury. There are a number of public transport options, including a bus route past the site and Newbury station is approximately 2.5km from the site. There are a number of opportunities for walking and cycling to local services and facilities.		The site is close to local services and facilities which encourage walking or cycling, and therefore have a positive impact on environmental and social sustainability.
	Will it reduce the number of road traffic accidents and	<b>?</b>	Additional traffic could result in road safety concerns, but any		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	improve safety?		development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	0	Unlikely to have an impact on biodiversity or geodiversity		The site is open and rural in nature, therefore development could have a negative impact on this element of environmental sustainability.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	0	The site is in open countryside, adjacent to cemetery. The site is within an area of low landscape sensitivity.		
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	-	Development on this site would change the approach to Newbury as the site is not adjacent to existing residential development.		The site is close to local heritage and cultural facilities within Newbury, and is likely to be within the 2 <sup>nd</sup> battle of Newbury site. Development could have an impact on the character of the built environment in this area. It is unlikely that overall development of this site would have a significant impact on any aspect of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	-	The site is likely to be within the 2 <sup>nd</sup> battle of Newbury site.	Further archaeological assessment required	
	Will it promote, conserve and enhance the District's cultural assets?	0	The site is close to cultural facilities in Newbury, but unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	The site is close to historical features, but unlikely to have an impact.		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will there be an impact on air quality?	?	The site is adjacent to the B4009. There is potential for the part of the site adjacent to the road to experience issues with air quality.	Mitigation would need to be provided as part of any proposed scheme on the site	The location of the site on the B4009 could lead to air quality and noise pollution issues on the site, especially on any development adjacent to the road. Therefore, there is potential for a negative impact on social sustainability if appropriate mitigation was not included.
	Will there be an impact noise levels?	?	The site is adjacent to the B4009. There is potential for the part of the site adjacent to the road to experience issues of noise.	Mitigation would need to be provided as part of any proposed scheme on the site	
	Will there be an impact on soil quality?	-	Loss of grade 2 agricultural land		
	Will there be an impact on water quality?	0	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Greenfield site		The site could have a negative impact on environmental sustainability as it is a Greenfield site.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	- -	Site is within an area of groundwater and surface water flood risk. The site flooded in Jan/Feb 2014, leading to flooding of the cemetery and properties to the south of the site.	An FRA would be required. Significant mitigation, including SUDs and flood retention measures, would need to be provided.	The flood risk on the site means that there will be a negative impact on all aspects of sustainability. It is unlikely that mitigation measures would be able to completely mitigate the impact of flooding.
11. <a href="#">To ensure a strong, diverse and sustainable economic base</a>	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

Flood risk gives a significant negative impact on sustainability on this site. While mitigation measures could be considered it is unlikely that these could fully mitigate the flood risk. The site is close to local services and facilities within Newbury, which would have a positive impact on sustainability by encouraging walking, cycling and the use of public transport. There are a number of negative impacts on sustainability from development on this site. Development would change the character of the landscape and built environment as development is not adjacent to existing residential development. Development would also lead to the loss of grade 2 agricultural land, which would have a negative impact on environmental sustainability. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Newbury	<b>Parish:</b>	Cold Ash
<b>Site ID:</b>	NEW001	<b>Site Address:</b>	Land at Long Lane, Newbury	<b>Development Potential:</b>	1402 dwellings (4.72ha at 30dph)

### Recommendation:

The site is not recommended for allocation

### Justification:

The site is at significant risk from surface water flooding, with a history of flooding impacting on the adjacent road, cemetery and properties to the south.

### Discussion:

#### Site Description:

The site is located to the north of Newbury, to the north of Shaw cemetery. The cemetery means that the site is not physically adjacent to existing development although it is adjacent to the settlement boundary. There is good access into Newbury and the local service and facilities it provides, and good access to the countryside.

A right of way passes along the southern and eastern boundaries of the site. This would need to be protected should development take place.

#### Landscape:

The site is in area of low landscape sensitivity.

Development would lead to the loss of grade 2 agricultural land

#### Flood Risk:

The site is in FZ1, within an area at risk from surface and groundwater flooding. There is a history of flooding on the site and on land to the north, with flood water travelling through the site flooding the cemetery and properties to the south. [Significant local flooding of this nature occurred in Jan/Feb 2014.](#)

#### Highways /Transport:

No comments have been received ~~made~~ on this site. The site is close to Newbury with a number of public transport options. An hourly bus service passes near to the site.

#### Ecology:

No known ecological issues.

#### Archaeology:

The site possibly lies within the 2<sup>nd</sup> Battle of Newbury site. [Other finds in the local area suggest there is potential on the site.](#) ~~There is high potential for archaeology on the site.~~ Further [investigation](#) information would be required.

#### Education:

~~The local primary school is at capacity and other primary schools within Newbury are close to or at capacity.~~ [Consultation with the Local Education Authority has confirmed that existing education capacity issues will be dealt with through the provision of a new primary school on the Newbury College Site.](#)

No comments made about secondary school provision.

#### Environmental Health:

No known air quality, noise or contamination issues. The proximity to the B4009 means that air and noise surveys should be carried out.

#### Minerals and Waste:

No known mineral or waste issues

#### Land use planning consultation zone:

Site is not within an AWE consultation zone

#### Environment Agency:

## Site Selection – Site Commentary

No specific comments on this site. The site is within SPZ3. [Although the EA have not raised any objections to development within SPZs, care would need to be taken to ensure no opportunities for contamination of groundwater occurred.](#)

### Thames Water:

TW not consulted on this site

### Parish Council:

The Parish Council feel that this site should be considered alongside NEW010. There are concerns relating to traffic and school places should the site be developed. Flooding is also a major concern with this site.

[At preferred options the Parish Council did not comment on this site.](#)

### Preferred Options Consultation key issues:

- [Support for rejection of the site](#)
- [Flood risk](#)
- [Traffic impact](#)

[Possible area of 2<sup>nd</sup> battle of Newbury](#)

[For full consultation responses and Council response please see the Statement of Consultation.](#)

### SA/SEA:

The SA/SEA highlights that flooding would have a significant negative impact on sustainability. While mitigation measures could be considered it is unlikely that these could fully mitigate the flood risk. The site is close to local services and facilities within Newbury, which would have a positive impact on sustainability by encouraging walking, cycling and the use of public transport. There are a number of negative impacts on sustainability from development on this site. Development would change the character of the landscape and built environment as development is not adjacent to existing residential development. Development would also lead to the loss of grade 2 agricultural land, which would have a negative impact on environmental sustainability. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### Proposed development (from SHLAA submission):

The site is proposed for 183 dwellings, including affordable housing [and could be developed alongside NEW010.](#)

## Summary of Site Assessment

### Key Issues:

- Greenfield
- Ground and surface water flood risk. Evidence of flooding Jan/Feb 2014.
- Distance from play facilities for children
- Potential second battle of Newbury site
- Oil pipeline runs through the site

## Site Assessment

<b>Parish Council consultation response:</b>	<p>The parish councils felt that this site needed to be considered as one site with NEW010. The site is within the 2<sup>nd</sup> battle of Newbury site (although this is not a registered Battlefield). Potential for traffic issues along the B4009 and Love Lane. Flooding is also an issue. The local schools are full. Concerned about the potential to impact on the character of Shaw-cum-Donnington.</p> <p>Flooding takes place from the site into Shaw Cemetery and Cromwell Road. Significant levels of flooding occurred during Jan/Feb 2014, development on this site could exacerbate this.</p> <p><a href="#">At preferred options the Parish Council raised concern regarding the amount of potential development in the parish if this site and NEW031 was to be developed, and the negative impact this would have on the identity of the parish. There is also concern regarding the traffic impact on Love Lane and concern regarding flooding in the area.</a></p>

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	Site is close to local services and facilities, as well as open countryside.		The site's location to the north of Newbury gives opportunities for walking and cycling and gives easy access to local services and facilities. Therefore, in terms of environmental and social sustainability, development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	?	The site is close to facilities at Trinity School, some of which are open to the public.		
	Will it protect and enhance green infrastructure across the district?	0	ROW passes east of the site and the site is close to local amenity space.	<a href="#">Right of way would need to be retained or diverted.</a>	
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The site is close to areas of protected employment, and within easy access of a number of employment sites and education facilities.		The site is located close to areas of employment and education and other services and facilities within Newbury, as well as giving easy access to the strategic road network and public transport opportunities. This means that the site could have a positive impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	The site is located within Newbury. There are a number of public transport options, including a bus route pass the site and Newbury station is approximately 2.5km from the site. There are a number of opportunities for walking and cycling to local services and facilities.		The site is close to local services and facilities which encourage walking or cycling, and therefore have a positive impact on environmental and social sustainability.
	Will it reduce the number of road traffic accidents and	?	Additional traffic could result in road safety concerns, but any		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	improve safety?		development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	0	Unlikely to have an impact on biodiversity or geodiversity		The site is open and rural in nature; therefore development could have a negative impact on this element of environmental sustainability.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	0	Open countryside, adjacent to cemetery. The site is within an area of low landscape sensitivity		
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	?	Development on this site would change the approach to Newbury as this area is outside the built area of Newbury		The site is close to local heritage and cultural facilities within Newbury, and is likely to be within the 2 <sup>nd</sup> battle of Newbury site. Development could have an impact on the character of the built environment in this area. It is unlikely that overall development of this site would have a significant impact on any aspect of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	-	The site is likely to be within the 2 <sup>nd</sup> battle of Newbury site.	Further archaeological assessment required	
	Will it promote, conserve and enhance the District's cultural assets?	0	The site is close to Cultural facilities in Newbury, but unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	The site is close to historical features, but unlikely to have an impact.		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	?	The site is adjacent to the B4009. There is potential for the part of the site adjacent to the road to experience issues with air quality.	<a href="#">Air quality surveys would need to be carried out to assess any potential impacts</a>	The location of the site on the B4009 could lead to air quality and noise pollution issues on the site, especially on any development adjacent to the road. Therefore, there is potential for a negative impact on social sustainability if appropriate mitigation was not included.
	Will the site be at risk from, or impact on, noise levels?	?	The site is adjacent to the B4009. There is potential for the part of the site adjacent to the road to experience issues of noise.	<a href="#">Noise surveys would need to be carried out to assess any potential impacts</a>	
	Will there be an impact on soil quality?	-	Loss of grade 2 agricultural land		
	Will there be an impact on water quality?	0	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Greenfield site		The site could have a negative impact on environmental sustainability as it is a Greenfield site.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	--	Site is within an area of groundwater and surface water flood risk. The site flooded in Jan/Feb 2014, leading to flooding of NEW001, the cemetery and properties to the south of the NEW001.	An FRA would be required Mitigation including SUDs would need to be provided.	The flood risk on the site means that there will be a negative impact on all aspects of sustainability. It is unlikely that mitigation measures would be able to completely mitigate the impact of flooding.
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a> <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

Flood risk gives a significant negative impact on sustainability on this site. While mitigation measures could be considered it is unlikely that these could fully mitigate the flood risk. The site is close to local services and facilities within Newbury, which would have a positive impact on sustainability by encouraging walking, cycling and the use of public transport. There are a number of negative impacts on sustainability from development on this site. Development would change the character of the landscape and built environment as development would extend into the rural approach to Newbury. Development would also lead to the loss of grade 2 agricultural land, which would have a negative impact on environmental sustainability. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

**Summary of effects:**

**Effect:** Predominantly neutral / Uncertain

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Newbury	<b>Parish:</b>	Cold Ash
----------------------	-----	--------------------	---------	----------------	----------

<b>Site ID:</b>	NEW010	<b>Site Address:</b>	Land at Long Lane, Newbury	<b>Development Potential:</b>	85 dwellings (2.8ha at 30dph)
-----------------	--------	----------------------	-------------------------------	-------------------------------	----------------------------------

### Recommendation:

The site is not recommended for allocation

### Justification:

There is a significant risk of and history of flooding on the site, impacting on the road, NEW001 and properties to the south of NEW001.

### Discussion:

#### Site Description:

The site is located to the north of Newbury, to the west of Shaw Cemetery. There is good access into Newbury and the local services and facilities it provides. There is good access to the countryside.

A right of way passes along the western boundary of the site and would need to be preserved should the site be developed.

#### Landscape:

The site is in an area of low landscape sensitivity.

Development would lead to the loss of grade 2 agricultural land.

#### Flood Risk:

The site is in FZ1, within an area at risk from surface and groundwater flooding. There is a history of flooding on the site and on land to the east, with flood water travelling through the site, across the road into NEW001, flooding the cemetery and properties to the south. An FRA would be required, with SUDs provided.

[The site promoter is suggesting that additional land to the north of the site could be made available to assist with incorporating flood alleviation measures into the design of the development.](#)

#### Highways /Transport:

No comments have been received on this site. The site is close to Newbury with a number of public transport options. An hourly bus service passes near to the site.

#### Ecology:

No known ecological issues

#### Archaeology:

The site possibly lies within the 2<sup>nd</sup> Battle of Newbury site. [Other finds in the local area indicate there is archaeological potential on the site.](#) ~~There is high potential for archaeology on the site.~~ Further information [investigation](#) would be required.

#### Education:

~~The local primary school is at capacity and other primary schools within Newbury are close to or at capacity.~~ [Consultation with the Local Education Authority has confirmed that existing education capacity issues will be dealt with through the provision of a new primary school on the Newbury College Site.](#) No comments made about secondary school provision.

#### Environmental Health:

No known air quality, noise or contamination issues. The proximity to the B4009 means that air and noise surveys should be carried out.

#### Minerals and Waste:

No known mineral or waste issues

#### Land use planning consultation zone:

Site is not within an AWE consultation zone

## Site Selection – Site Commentary

### **Environment Agency:**

No specific comments on this site. The site is within SPZ3. ~~there is a high risk of contamination to groundwater from development of this site.~~ [Although the EA has not raised any objections to development within SPZs, a case would need to be taken to ensure no opportunities for contamination of groundwater occurred.](#)

### **Thames Water:**

TW not consulted on this site.

### **Parish Council:**

The Parish Council feel that this site should be considered alongside NEW010. There are concerns relating to traffic and school places should the site be developed. Flooding is also a major concern. [At preferred options the Parish Council raised concern regarding the amount of potential development in the parish if this site and NEW031 was to be developed, and the negative impact this would have on the identity of the parish. There is also concern regarding the traffic impact on Love Lane and concern regarding flooding in the area.](#)

### **Preferred Options Consultation Key Issues:**

- [Support for rejection of the site](#)
- [Flood risk](#)
- [Possible area of 2<sup>nd</sup> battle of Newbury](#)

[Detailed comments received from the site promoter objecting to the rejection of the site for allocation.](#)

[For full consultation responses and the Council response please see the Statement of Consultation](#)

### **SA/SEA:**

The SA/SEA highlights that flooding would have a significant negative impact on sustainability. While mitigation measures could be considered it is unlikely that these could fully mitigate the flood risk. The site is close to local services and facilities within Newbury, which would have a positive impact on sustainability by encouraging walking, cycling and the use of public transport. There are a number of negative impacts on sustainability from development on this site. Development would change the character of the landscape and built environment. Development would also lead to the loss of grade 2 agricultural land, which would have a negative impact on environmental sustainability. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The site is proposed for 127 dwellings, including affordable housing. [The site promoter has suggested additional land to the north of the site could be incorporated into the site to allow for flood alleviation works to take place.](#)

**Key: Effects of option on SA objectives**

++	+	?	0	-	--
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site is close to open countryside and a number of services and facilities that could support and encourage healthy, active lifestyles		The site's location to the north of Newbury gives opportunities for walking and cycling and gives easy access to local services and facilities. Therefore, in terms of environmental and social sustainability, development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	+	The site is close sports facilities at Trinity school which are available to the public.		
	Will it protect and enhance green infrastructure across the district?	0	Unlikely to have an impact on GI		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The site is close to areas of protected employment, and within easy access of a number of employment sites and education facilities.		The site is located close to areas of employment and education as well as other services and facilities within Newbury, as well as giving easy access to the strategic road network and public transport opportunities. This means that the site could have a positive impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	The site is located within Newbury. There are a number of public transport options within the town centre. Newbury station is approximately 2km from the site. There are a number of opportunities for walking and cycling to local services and facilities within Newbury.		The site is close to local services and facilities which encourage walking or cycling, and therefore have a positive impact on environmental and social sustainability.
	Will it reduce the number of	?	Additional traffic could result in road		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	road traffic accidents and improve safety?		safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	-	The site is within a BOA and LWS and adjacent to trees with TPOs. The site is also adjacent to SAC and SSSI. The site is very sensitive in terms of biodiversity.	An extended Phase 1 Habitat survey would be required to show why the LWS designation can be removed.	It is likely that this site would have a negative impact on environmental sustainability due to its location with a LWS and proximity to SSSI and SAC.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	0	Unlikely to have an impact on the landscape.		
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	-	Development of the site would impact on the integrity of Donnington.		The site is close to local heritage and cultural facilities within Newbury, and is likely to be within the 2 <sup>nd</sup> battle of Newbury site. Development could have an impact on the character of the built environment in this area. There is potential for this site to have a negative impact on environmental and social sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	?	The site is likely to have been part of the 2 <sup>nd</sup> battle of Newbury site.		
	Will it promote, conserve and enhance the District's cultural assets?	0	The site is close to Newbury and the cultural facilities within the town centre.		
	Will it provide for increased access to and enjoyment of the historic environment?	0	The site is close to <del>Donnington</del> <a href="#">Donnington</a> Castle.		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact on air quality		It is unlikely that the site would have an impact on any aspect of sustainability.
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact on noise		
	Will there be an impact on soil quality?	0	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Site is Greenfield		The site could have a negative impact on environmental sustainability as it is a Greenfield site.
10. To reduce emissions contributing to climate	Will it reduce West Berkshire's contribution to	-	Development is likely to increase greenhouse gas emissions. The level	Mitigation could include Travel Plans to reduce car traffic and	Without appropriate mitigation development

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<a href="#">0</a>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<a href="#">0</a>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

Flood risk gives a significant negative impact on the sustainability of the site. While mitigation measures could be considered it is unlikely that these could fully mitigate the flood risk. The site is close to local services and facilities within Newbury, which would have a positive impact on sustainability by encouraging walking, cycling and the use of public transport. There are a number of negative sustainability impacts from development on this site. The site is adjacent to a SSSI and SAC, while being within a LWS, making the site very sensitive in terms of biodiversity. Significant mitigation would be required to reduce this impact. Development of the site would have the potential to link Newbury and Donnington, impacting on the integrity of Donnington. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	NEW011	<b>Settlement:</b>	Newbury	<b>Parish:</b>	Newbury
<b>Site ID:</b>	NEW011	<b>Site Address:</b>	Land adjacent to Oxford Road, Newbury	<b>Development Potential:</b>	253 dwellings (0.75ha at 30dph)

**Recommendation:**

The site is not recommended for allocation

**Justification:**

There is a significant risk of and history of flooding on the site. The site is also sensitive in terms of ecology, within a Local Wildlife Site and adjacent to a SAC and SSSI.

In line with the NPPF, where there are other suitable sites with a lower risk of flooding these will be considered first.

**Discussion:**

**Site Description:**

The site is located to the north west of Newbury adjacent to the River Lambourn. The site is well related to existing residential development, with development on two sides.

**Landscape:**

The site is in an area of medium landscape sensitivity

**Flood Risk:**

The site is adjacent to the River Lambourn. There is a significant risk of flooding on the site, with 65% of the site in flood zone 3 and the majority of the site in flood zone 2 (an additional 30%), and at risk from surface and groundwater flooding. There is evidence that the site was flooded in Jan/Feb 2014. An FRA and appropriate [significant](#) flood mitigation would be required should the site be developed.

**Highways /Transport:**

No comments have been made on this site.

There are good public transport links close to the site, with a bus route passing close to the site and Newbury railway station in the Town Centre.

There are a good range of walking and cycling routes within Newbury itself.

**Ecology:**

The site is considered sensitive in terms of biodiversity as it is located within a Local Wildlife site and adjacent to the River Lambourn SAC and SSSI. ~~An extended phase 1 habitat survey would be required to show why the LWS can be destroyed.~~ [An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected](#)

**Archaeology:**

No known archaeological issues

**Education:**

~~Local primary school provision is at capacity.~~ [Consultation with the Local Education Authority has confirmed that existing education capacity issues will be dealt with through the provision of a new primary school on the Newbury College Site.](#) No comments have been made about secondary school provision.

**Environmental Health:**

No known air quality, noise or contamination issues.

**Minerals and Waste:**

No known mineral or waste issues.

**Land use planning consultation zone:**

Site is not within an AWE consultation zone

## Site Selection – Site Commentary

### **Environment Agency:**

Strong recommendation that the site is not allocated due to location within flood zone 3 and 2. The site is within SPZ2. ~~with a high risk to groundwater.~~ [Although the EA have not raised any objections to development within SPZs, case would need to be taken to ensure no opportunities for contamination of groundwater occurred.](#)

### **Thames Water:**

TW not consulted on this site

### **Parish Council:**

The ~~Parish~~ [Town](#) ~~Council~~ indicated that the site suffered from flooding during Jan/Feb 2014.

[At preferred options the Town Council did not comment on this site.](#)

### **Preferred Options Consultation Key Issues:**

[No comments received on this site.](#)

### **SA/SEA:**

The SA/SEA indicates a significant impact on sustainability from flooding. While mitigation measures could be considered it is unlikely that these could fully mitigate the flood risk. The site is close to local services and facilities within Newbury, which would have a positive impact on sustainability by encouraging walking, cycling and the use of public transport. There are a number of negative sustainability impacts from development on this site. The site is adjacent to a SSSI and SAC, while being within a LWS, making the site very sensitive in terms of biodiversity. Significant mitigation would be required to reduce this impact. Development of the site would have the potential to link Newbury and Donnington, impacting on the integrity of Donnington. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The site is being promoted as a whole, for approximately 90 dwellings.

	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

There are no significant impacts from this site. The site is close to local services and facilities giving opportunities for walking, cycling and the use of public transport all of which will help to promote active healthy lifestyles. The location of the site close to the A339 means that the impact of air quality on the site would need to be considered. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Newbury	<b>Parish:</b>	Greenham
----------------------	-----	--------------------	---------	----------------	----------

<b>Site ID:</b>	NEW012	<b>Site Address:</b>	Land north of Newbury College, Monks Lane	<b>Development Potential:</b>	23 dwellings (0.78ha at 30dph) <a href="#">15 dwellings</a>
-----------------	--------	----------------------	---	-------------------------------	---

**Recommendation:**

The site is recommended for allocation

**Justification:**

The site is well related to the existing settlement, close to local services and facilities with good links (walking, cycling and public transport) into Newbury town centre.

**Discussion:**

**Site Description:**

The site is located to the south of Newbury adjacent to the north eastern area of Sandleford Park and north of Newbury College. The site is close to local services and facilities, including the College and Newbury Retail Park, with good links into the town centre.

[The eastern part of the site has been granted planning permission for a pub, which is now complete; therefore, the development potential of the site has been reduced.](#)

**Landscape:**

The site is in an area of medium landscape sensitivity

**Flood Risk:**

Site is in Flood Zone 1. Adjacent to an area of surface water flood risk. SUDs would be required.

**Highways /Transport:**

Traffic generated from the site is considered to have a limited impact on the highway network.

The site is well placed for all modes of travel and many facilities.

**Ecology:**

No known ecology issues.

**Archaeology:**

Some evidence of [Romano-British](#) activity in the area. Further assessment required.

**Education:**

~~Local primary school provision is at capacity.~~ [Consultation with the Local Education Authority has confirmed that existing education capacity issues will be dealt with through the provision of a new primary school on the Newbury College Site.](#) There is capacity at the local secondary school.

**Environmental Health:**

No known air quality, noise or contamination issues. The site is close to the A339, so an air quality survey would need to be carried out.

[The site is close to an Air Quality Management Area. It is likely that traffic generated from the site will pass through the AQMA. Mitigation measures, in the form of travel planning will be required to encourage residents to consider alternatives modes of travel to the private car.](#)

**Minerals and Waste:**

The site is partially underlain by gravel. Consideration of Policy 1 & 2 of the RMLP would be needed.

**Land use planning consultation zone:**

The site is not in an AWE consultation zone

**Environment Agency:**

No specific comments on this site. Site is in SPZ2.

## Site Selection – Site Commentary

### **Thames Water:**

~~Significant concern regarding Water Supply capability, specifically water resource. Current water supply network in this area is highly unlikely to be able to support the demand from this site. Significant water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of any development.~~

~~A detailed water supply strategy would be required.~~

No [water supply or](#) wastewater infrastructure issues envisaged.

### **Parish Council:**

The parish council noted that in some ways this site is seen as an ideal location for development, although it is a green gateway into Newbury. The [Newbury](#) Town Council would like to see allotments on the site. Concern was raised regarding the cumulative impact of development on the road network and infrastructure provider.

[At preferred options the Parish Council did not comment on this site.](#)

### **Preferred Options Consultation Key Issues:**

- [Principle of development and impact on Greenham.](#)
- [Site should have a smaller quantum of development.](#)
- [Concern over the impact of local development.](#)
- [Highways and transport issues.](#)
- [Landscape and setting – changing character of the surrounding area.](#)
- [Ecology – impact on biodiversity and impact on the Greenham and Crookham Common SSSI.](#)
- [Some impact on the historic environment.](#)
- [Inadequate consultation.](#)

[For full consultation response and the Council's response please see the Statement of Consultation](#)

### **SA/SEA:**

The SA/SEA indicates a predominantly neutral sustainability impact. There are no significant impacts from this site. The site is close to local services and facilities giving opportunities for walking, cycling and the use of public transport all of which will help to promote active healthy lifestyles. The location of the site close to the A339 means that the impact of air quality on the site would need to be considered. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

~~The site is being promoted for 23 dwellings.~~ [The site area has been reduced to take into account the new pub built on part of the site. The site is now being promoted for 10 – 15 dwellings.](#)

-----------------	--------	----------------------	--	-------------------------------	--------------------------------

**Key: Effects of option on SA objectives**

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	?	Site will be close to facilities provided at Sandford, but the site itself is unlikely to support and encourage healthy, active lifestyles.		Development of the site is unlikely to have an impact on any aspect of sustainability.
	Will it increase opportunities for access to sports facilities?	?	The site is approximately 2km from facilities at Newbury Rugby Club.		
	Will it protect and enhance green infrastructure across the district?	0	Unlikely to have an impact on GI		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	?	The site is some distance from employment opportunities within the town centre. Other sites have better opportunities for access to employment.		Development of the site is unlikely to have an impact on any aspect of sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	?	An intermittent bus route passes the site. There are opportunities for walking and cycling, which could be improved through the development of Sandford.	Development at Sandford Park would be likely to improve opportunities for walking and cycling.	Development of the site is unlikely to have an impact on any aspect of sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	?	The site is adjacent to a BOA, in an area designated as UKBAP Woodland and Grassland	Mitigation measures would need to be provided.	Development of the site could have a negative impact on biodiversity within the UKBAP woodland and grassland.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	0	The site is in an area of medium / high landscape sensitivity.		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	-	The site feels outside of Newbury's built up area. There would be an impact on the identity of Wash Water.		Development of the site is unlikely to have an impact on any aspect of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	0	Unlikely to have an impact on heritage assets		
	Will it promote, conserve and enhance the District's cultural assets?	0	The site is close to Newbury and the cultural facilities within the town centre.		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact on access to or enjoyment of the historic environment.		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact on air quality		Development of the site is unlikely to have an impact on any aspect of sustainability.
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact on noise		
	Will there be an impact on soil quality?	0	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	Unlikely to have an impact on water quality		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Greenfield		The site could have a negative impact on environmental sustainability as it is a Greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	-	Part of the site is within FZ2 and the whole site is within a surface water flood risk area.	An FRA and appropriate mitigation including SUDs would need to be provided.	The flood risk, especially on the southern part of the site could have an impact on all aspects of sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significant impacts on sustainability from the development of this site. The site is some distance from facilities within Newbury Town Centre, although there are local facilities within Wash Common. Opportunities for use of public transport are currently limited, although there is potential for improvements alongside the development at Sandford. Flooding is an issue on the southern part of the site, and could impact on sustainability without appropriate mitigation measures. The site is within an area designated as a UKBAP Woodland and Grassland and mitigation measures would need to be provided to limit the negative impact on environmental sustainability. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Newbury	<b>Parish:</b>	Newbury
<b>Site ID:</b>	NEW019	<b>Site Address:</b>	Land at Sandpit Hill / Andover Road, Newbury	<b>Development Potential:</b>	195 dwellings (6.5ha at 30dph)

**Recommendation:**

The site is not recommended for allocation

**Justification:**

The site is close to the strategic site allocation of Sandford Park, and therefore, it is considered that this part of Newbury should not have further development of this scale in the short to medium term.

The site is some distance from services and facilities within Newbury Town Centre, with limited public transport opportunities.

**Discussion:**

**Site Description:**

The site is located to the south of Newbury on the boundary with Hampshire. The site is some distance from facilities within the town centre, although there are a number of facilities within Wash Common, approximately 2km from the site.

**Landscape:**

The site is in an area of medium / high landscape sensitivity.

**Flood Risk:**

The southern part of the site is adjacent to the River Enborne. 4% of the site is within FZ3, with a further 5% in FZ2. 91% of the site is in FZ1. The site is also within an area at risk from surface water flooding. There is a history of flooding along the river in this area. Should development take place there should be an 8m buffer between the river bank and development.

An FRA and appropriate flood mitigation, including SUDs would need to be provided should development go ahead.

**Highways /Transport:**

No highways comments have been received for this site.

An intermittent bus service links the site to Newbury town centre where there are a wide range of public transport options.

**Ecology:**

The site is adjacent to a BOA and is designated as a UK BAP woodland and Grassland Habitat.

**Archaeology:**

No known archaeological issues

**Education:**

~~Local primary school provision is at capacity.~~ [Consultation with the Local Education Authority has confirmed that existing education capacity issues will be dealt with through the provision of a new primary school on the Newbury College Site.](#)

No comments made regarding secondary school provision.

**Environmental Health:**

No known air, noise or contamination issues.

**Minerals and Waste:**

No comments made on this site

**Land use planning consultation zone:**

The site is not within an AWE consultation zone

**Environment Agency:**

## Site Selection – Site Commentary

The EA have strongly recommended that this site is not allocated due to the proximity to the River Enborne and associated flood risk.

The site is in SPZ2.

### **Thames Water:**

TW not consulted on this site

### **Parish Council:**

The Parish and Town council had different views on this site. Greenham Parish Council suggested that the site, along with NEW108, could be used to provide strategic access to Andover Road from Sandleford Park. Newbury Town Council was concerned about the distance to the town centre and the impact on views from the southern part of Sandleford Park. Gradient and drainage issues were also raised.

[At preferred options the Town Council did not comment on this site.](#)

### **Preferred Options Consultation Key Issues:**

[No comments made on this site](#)

### **SA/SEA:**

There are no significant impacts on sustainability from the development of this site. Development would have a predominantly neutral impact on sustainability. The site is some distance from facilities within Newbury Town Centre, although there are local facilities within Wash Common. Opportunities for use of public transport are currently limited, although there is potential for improvements alongside the development at Sandleford. Flooding is an issue on the southern part of the site, and could impact on sustainability without appropriate mitigation measures. The site is within an area designated as a UKBAP Woodland and Grassland and mitigation measures would need to be provided to limit the negative impact on environmental sustainability. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The site is being promoted for a mix of dwellings types and sizes, including affordable housing.

## Summary of Site Assessment

### Key Issues:

- Scale of development
- Greenfield
- Ground and surface water flood risk. Evidence of part of the site being flooding Jan/Feb 2014.
- Right of way passes through the site
- Oil pipeline runs through the site
- Impact on Snelsmore Common and the River Lambourn

## Site Assessment

<b>Parish Council consultation response:</b>	<p>Parish council concerned that a development of this size would double the size of Shaw cum Donnington and destroy the character of the village. General agreement that this site should be considered at a more strategic level post 2026 as there would be significant infrastructure requirements which should be an integral part of the development. Phased development as currently proposed would not achieve this. Flooding, impact on traffic, access, and pressure on schools are also of concern. Concern regarding the sole access to the site being from the Vodafone Roundabout. Site has had standing water on it in a number of places during Jan / Feb 2014.</p> <p><a href="#">At preferred options the Parish Council raised concerns over the impact of the site on the identity of the Parish. The sites on either side of the A339 are poorly connected to each other, and have no real integration with the existing parish, although local services and amenities would be shared across the new development and existing parish. Potential impact on traffic levels on Love Lane. Flood risk is also a concern as the site is prone to flooding.</a></p>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Newbury	<b>Parish:</b>	Shaw-cum-Donnington
----------------------	-----	--------------------	---------	----------------	---------------------

<b>Site ID:</b>	NEW031	<b>Site Address:</b>	Land at Shaw, West and East of the A339	<b>Development Potential:</b>	55049 dwellings (18.3ha at 30dph)
-----------------	--------	----------------------	---	-------------------------------	-----------------------------------

**Key: Effects of option on SA objectives**

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site is close to open countryside and a number of services and facilities that could support and encourage healthy, active lifestyles		The site's location to the north of Newbury gives opportunities for walking and cycling and gives easy access to local services and facilities. Therefore, in terms of environmental and social sustainability, development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	+	The site is close sports facilities at Trinity school which are available to the public.		
	Will it protect and enhance green infrastructure across the district?	?	The site is close to local amenity space and a right of way passes through the site	The right of way would need to be preserved through any development.	
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The site is close to areas of protected employment, and within easy access of a number of employment sites and education facilities.		The site is located close to areas of employment and education as well as other services and facilities within Newbury, as well as giving easy access to the strategic road network, and public transport opportunities. This means that the site could have a positive impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	?	The site is located within Newbury. There are a number of public transport options within the town centre. Newbury station is approximately 2.75 km from the site. There are a number of opportunities for walking and cycling to local services and facilities within Newbury. The site is adjacent to the A339 which could limit opportunities	Suitable provision would need to be made for walking and cycling access from the site. Development on the site could improve public transport services in the area.	The site is close to local services and facilities but walking and cycling routes into the Town Centre would need to be significantly improved for the site to have a positive impact on all aspects of sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			for walking and cycling from the site itself.		
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.	Mitigation will be required to ensure that road safety would not be compromised.	
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	-	The site is adjacent to Ancient woodland, TPOs, LWS and BOA relating to Snelsmore Common and the River Lambourn. The scale of the site has potential to impact negatively on these areas.	Appropriate buffers and landscaping would be required.	The location of a range of environmental designations on and around the site means that development could have a negative impact on environmental sustainability.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	-	The scale of the development would impact on the character of the landscape. The site is exposed, within open countryside and does not feel part of Newbury. The site is in an area of low / medium landscape sensitivity		
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	-	Development of the site would impact on the identity of Shaw-cum-Donnington and Newbury due to the size of the proposed development. The proposed site is separated by the A339, which could have an impact on the character of any development that takes place on the site.		Development of the site could have a negative impact on the local character and therefore, could have a negative impact on environmental and social aspects of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	-	Development of the site would have an impact on nearby heritage assets. The site is within the second battle of Newbury site, with potential for archaeological finds on the site.		
	Will it promote, conserve and enhance the District's cultural assets?	?	The site is close to Newbury and the cultural facilities within the town centre.		
	Will it provide for increased access to and enjoyment of the historic environment?	?	The site is close to Donnington Castle and 2 <sup>nd</sup> battle of Newbury site. Development of the site would open up access to these sites, but greater access could also lead to harm.		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	-	The site is separated by the A339, there is potential for poor air quality on the site, especially adjacent to the road	Mitigation would be required to prevent air quality becoming an issue on the site.	The location of the site adjacent to the A339 could have negative impacts on environmental and social sustainability.
	Will the site be at risk from, or impact on, noise levels?	-	The site is separated by the A339, there is potential for noise issues on the site, especially adjacent to the road	Mitigation would be required to prevent noise becoming an issue on the site.	
	Will there be an impact on soil quality?	0	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	The site is Greenfield		The site could have a negative impact on environmental sustainability as it is a Greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	-	The site is in an area of groundwater and surface water flood risk. There was evidence of standing water on the site in Jan/Feb 2014.	An FRA would be required and appropriate mitigation, including SUDs would need to be provided.	The current size of the site means that there could be an impact on environmental sustainability. The flood risk on the site would further impact on environmental sustainability.
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<a href="#">0</a>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<a href="#">0</a>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		<a href="#">the longer term.</a>
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significant sustainability impacts from this site. The site scores positively in terms of access to services and facilities and potential opportunities for public transport and active travel. However, there are a number of negative sustainability impacts in terms of ecology and environmental impacts, air quality and noise and potential impacts on the historic environment and landscape character of the area. There are limited mitigation measures that would be able to significantly reduce this impact. The site also has a risk of flooding and evidence of standing water during Jan/Feb 2014 which would also have an impact on sustainability. Flood mitigation could be provided which would reduce this impact. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly negative

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Newbury	<b>Parish:</b>	Shaw-cum-Donnington
<b>Site ID:</b>	NEW031	<b>Site Address:</b>	Land at Shaw, west and east of the A339	<b>Development Potential:</b>	55049 dwellings (18.3ha at 30dph)

### Recommendation:

The site is not recommended for allocation

### Justification:

The site needs to be considered as a strategic site, which is outside the scope of the Housing Site Allocations DPD.

[There are a number of issues relating to highways and access that would need to be overcome in order for development on the site to be acceptable.](#)

[The relationship between the two areas of the site is of concern, given the only link between the sites is via an underpass under the A339, which suffers from flooding.](#)

### Discussion:

#### Site Description:

The site is located to the north of Newbury, separated into two areas by the A339. Development of the site would link Newbury and Donnington village into one urban area, changing the character and significantly altering the identity of Donnington as a village.

A right of way runs through the site, which would need to be protected.

An oil pipeline runs through the site.

#### Landscape:

The site is in an area of low/medium landscape sensitivity. Development of the site would be highly visible on the approach to and exit from Newbury on the A339.

Development of the site would have a potentially negative impact on the heritage assets of Donnington Castle.

#### Flood Risk:

The site is within FZ1 although an ordinary water course runs through the site. There is a risk from surface and ground water flooding. The subway between the two parts of the site has a history of flooding and was flooded during Jan/Feb 2014.

An FRA would be required and flood mitigation would be required, including SUDs.

#### Highways /Transport:

Access is likely to come from the Vodafone Roundabout from the A339. No specific highways comments have been made, but there is significant concern regarding the traffic generation from the site and the impact on the highway network. [Detailed highway comments have been made regarding the planning application received for the site.](#)

There are a number of public transport routes in Newbury, although none of these currently pass the site. [It is unclear whether the site would be served by a bus service itself.](#)

There are foot and cycle ways throughout Newbury. Good quality links between the site and the town centre for pedestrians and cyclists would be critical.

#### Ecology:

The site is adjacent to Ancient woodland, a local wildlife site and a BOA. Development would have an impact on the habitat and integrity of Snelsmore Common and the River Lambourn.

#### Archaeology:

The site is within the 2<sup>nd</sup> battle of Newbury site. Archaeology could be a significant constraint on the site. Further investigation would be required.

## Site Selection – Site Commentary

### Education:

Local primary provision is at capacity. [Consultation with the Local Education Authority has confirmed that existing education capacity issues will be dealt with through the provision of a new primary school on the Newbury College Site.](#)

No comments have been made regarding secondary school provision.

### Environmental Health:

The site is adjacent to the A339, with potential for noise and air quality issues. Noise and air surveys would be required and appropriate mitigation introduced.

Potential for contamination due to a former land fill site adjacent to the site.

### Minerals and Waste:

The site is partly underlain by grave deposits. Consideration of Policy 1 & 2 of the RMLP would be required.

A former landfill site is located adjacent to area B, with potential for contamination.

### Land use planning consultation zone:

The site is not within an AWE consultation zone

### Environment Agency:

The site is located in an SPZ (3). High risk of contamination to groundwater. Investigation of sites adjacent to this one would be required due to potential water contamination from adjacent land fill site.

### Thames Water:

TW not consulted on this site

### Parish Council:

The Parish council are concerned that development on this site would double the size of Shaw-Cum-Donnington and destroy the character of the village. There was general agreement that the site should be considered at a more strategic level post 2026 as there would be significant infrastructure requirements which need to form an integral part of the development. Concern that the current phased approach would not achieve the infrastructure improvements required. Access to the site from the Vodafone roundabout is also a concern, as is impact on traffic, flooding and pressure on local schools. [At preferred options the Parish Council raised concerns over the impact of the site on the identity of the Parish. The sites on either side of the A339 are poorly connected to each other, and have no real integration with the existing parish, although local services and amenities would be shared across the new development and existing parish. Potential impact on traffic levels on Love Lane. Flood risk is also a concern as the site is prone to flooding.](#)

### Preferred Options Consultation Key Issues:

- [Likely to be phase 1 of a larger development](#)
- [Precedent for further infilling up to the M4](#)
- [Split community by A339](#)
- [Major impact on existing local community of Donnington](#)
- [Smaller sites have less of an impact of facilities](#)
- [Significant transport impact](#)
- [Access concerns](#)
- [Impact on the landscape and gateway to Newbury](#)
- [No facilities](#)
- [Flood risk](#)
- [Impact on Vodafone](#)
- [Loss of historical significance](#)

[Detailed response from site promoter received objecting to rejection of the site for allocation and lack of consideration of information submitted as part of the planning application.](#)

[For full consultation response and Council response please see statement of consultation.](#)

### SA/SEA:

There are no significant sustainability impacts from this site, although there is a predominantly negative

## Site Selection – Site Commentary

impact on sustainability. The site scores positively in terms of access to services and facilities and potential opportunities for public transport and active travel. However, there are a number of negative sustainability impacts in terms of ecology and environmental impacts, air quality and noise and potential impacts on the historic environment and landscape character of the area. There are limited mitigation measures that would be able to significantly reduce this impact. The site also has a risk of flooding and evidence of standing water during Jan/Feb 2014 which would also have an impact on sustainability. Flood mitigation could be provided which would reduce this impact. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The site is being promoted for approximately 500 dwellings, with potential for up to 800 in a future phase. There is potential for mixed use development on the site including employment, a hotel and primary school. The site was previously promoted as a strategic site through the Core Strategy.

[Planning application 14/02480/OUTMAJ for 401 dwellings, a local centre, 1 form entry primary school, public open space, landscaping and associated highway works. Pending consideration \(Sept 15\).](#)

### Summary

There are no significant sustainability impacts from this site. The site is close to local services and facilities and local public transport services, with opportunities for walking and cycling which will have a positive impact on sustainability. There are a number of unknown impacts, including potential for protected species on the site, which is found, could lead to a negative impact on environmental sustainability. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Newbury	<b>Parish:</b>	Shaw-cum-Donnington
<b>Site ID:</b>	NEW032	<b>Site Address:</b>	The Bungalow, Shaw Farm Road	<b>Development Potential:</b>	8 dwellings (0.25ha at 30dph) <a href="#">&lt;5 dwellings</a>

### Recommendation:

The site is not recommended for allocation, but will be ~~considered~~ [included within the settlement boundary](#) as part of the settlement boundary review.

### Justification:

The small size of the site and existing development on the site means that it is not suitable to be considered for allocation, but ~~could~~ [will](#) be included within the settlement boundary.

### Discussion:

#### Site Description:

The site is located to the north of Newbury. Much of the site is already developed; the remaining area is residential garden.

An oil pipeline runs through the site.

#### Landscape:

The site is in an area of medium landscape sensitivity.

#### Flood Risk:

The site is in FZ1. SUDs would be required.

#### Highways /Transport:

No specific comments have been made on this site.

The site is close to a number of public transport links, with good opportunities for walking and cycling.

#### Ecology:

Potential for birds and reptiles on the site. An extended phase 1 habitat survey would be required.

#### Archaeology:

No known archaeological issues.

#### Education:

~~Local primary school provision is at capacity.~~ [Consultation with the Local Education Authority has confirmed that existing education capacity issues will be dealt with through the provision of a new primary school on the Newbury College Site.](#)

No comments have been made about secondary school provision.

#### Environmental Health:

No known air, noise or contamination issues.

#### Minerals and Waste:

No known mineral or waste issues.

A historic land fill site lies 30m from the western boundary.

#### Land use planning consultation zone:

The site is not within an AWE consultation zone

#### Environment Agency:

No specific comments on this site. The site is within SPZ3. [Although the EA have not raised any objections to development within SPZs, case would need to be taken to ensure no opportunities for contamination of groundwater occurred.](#)

#### Thames Water:

## Site Selection – Site Commentary

No water supply or wastewater infrastructure issues envisaged.

### **Parish Council:**

There was general agreement that the principle of development on the site was acceptable, however, concerns were raised in relation to access to the site.

[At preferred options the Parish Council did not comment on the site.](#)

### **Preferred Options Consultation Key Issues:**

[No comments received on this site.](#)

### **SA/SEA:**

The SA/SEA indicates a predominantly neutral sustainability impact. There are no significant sustainability impacts from this site. The site is close to local services and facilities and local public transport services, with opportunities for walking and cycling which will have a positive impact on sustainability. There are a number of unknown impacts, including potential for protected species on the site, which if found, could lead to a negative impact on environmental sustainability. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The site is proposed for 18 dwellings with a new access road off Kingsley Close.

Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site is close to open countryside and a number of services and facilities that could support and encourage healthy, active lifestyles		The site's location to the north of Newbury gives opportunities for walking and cycling and gives easy access to local services and facilities. Therefore, in terms of environmental and social sustainability, development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	+	Site is close to Northcroft Leisure Centre.		
	Will it protect and enhance green infrastructure across the district?	0	Unlikely to have an impact on GI		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The site is close to areas of protected employment, and within easy access of a number of employment sites and education facilities.		The site is located close to areas of employment and education as well as other services and facilities within Newbury, as well as giving easy access to the strategic road network, and public transport opportunities. This means that the site could have a positive impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	The site is located within Newbury. There are a number of public transport options within the town centre. Newbury station is approximately 3km from the site. There are a number of opportunities for walking and cycling to local services and facilities within Newbury.		The site is close to local services and facilities which encourage walking or cycling, and therefore have a positive impact on environmental and social sustainability.
	Will it reduce the number of	?	Additional traffic could result in road		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	road traffic accidents and improve safety?		safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	-	Site is within a LWS.	Extended Phase 1 Habitat Survey required to show why LWS can be destroyed.	The site's location within a LWS means that there would be a negative impact on environmental sustainability.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	-	The site is in an area of medium / high landscape sensitivity.	Landscaping mitigation measures could be introduced to reduce the impact.	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	0	The site is adjacent to a conservation area but development it unlikely to have an impact on the character of the built environment.		Unlikely to have an impact on any aspect of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	-	Saxon / medieval material has been found on the site. Potential impact on listed building (church) and conservation area.		
	Will it promote, conserve and enhance the District's cultural assets?	0	The site is close to Newbury and the cultural facilities within the town centre.		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact on access to or enjoyment of the historic environment.		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact on air quality		Unlikely to have an impact on any aspect of sustainability.
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact on noise		
	Will there be an impact on soil quality?	0	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	Unlikely to have an impact on water quality		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	The site is greenfield		The site could have a negative impact on environmental sustainability as it is a greenfield site.
10. To reduce emissions contributing to climate change and ensure	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development

adaptation measures are in place to respond to climate change					could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	<b>0</b>	The site is not at risk from flooding	SUDs would need to be provided.	Unlikely to have an impact on sustainability.
<a href="#">11. To ensure a strong, diverse and sustainable economic base</a>	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<b>0</b>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<b>0</b>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significant sustainability issues with this site. The site is easily accessible by public transport, walking and cycling and in close proximity to open countryside and local sports facilities to help promote a health active lifestyle, all of which have a positive impact on sustainability. There would be a negative impact on the character of the landscape as the site is in an area of medium / high landscape sensitivity and in a Local Wildlife Site, which would be a negative impact on environmental sustainability. Some mitigation measures could be introduced to reduce the impact on the landscape and information would need to be provided as to why the LWS could be destroyed. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### Summary of effects:

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Newbury	<b>Parish:</b>	Speen
<b>Site ID:</b>	NEW040	<b>Site Address:</b>	Land south of Kimbers Drive, Speen	<b>Development Potential:</b>	10 dwellings (0.33ha at 30dph)

**Recommendation:**

The site is not recommended for allocation.

**Justification:**

The site is sensitive in terms of biodiversity and impact on the landscape character of the area means that the site is not considered suitable for allocation.

Availability of the site could not ~~has not been~~ be confirmed, therefore, the site is not considered deliverable.

**Discussion:**

**Site Description:**

The site is located to the north west of Newbury adjacent to the Speen conservation area. The site is close to local services and facilities, including open space and countryside.

**Landscape:**

The site is in an area of medium / high landscape sensitivity and it steeply sloping. Development would have a significant impact on the character of the landscape.

**Flood Risk:**

The site is in FZ1. SUDs would need to be provided should development take place.

**Highways /Transport:**

No specific comments have been received from Highways.

There are a number of public transport options in Newbury, including bus services which run close to the site. There are good opportunities for walking and cycling within the town.

**Ecology:**

The site is sensitive in terms of biodiversity within a LWS. An extended phase 1 habitat survey would be required to show why the LWS can be destroyed.

**Archaeology:**

There is archaeological potential on the site. Further assessment would be required.

**Education:**

~~Local primary school provision is at capacity.~~ Consultation with the Local Education Authority has confirmed that existing education capacity issues will be dealt with through the provision of a new primary school on the Newbury College Site. No comments have been made regarding secondary school provision.

**Environmental Health:**

No known air quality, noise or contamination issues

**Minerals and Waste:**

No known mineral or waste issues

**Land use planning consultation zone:**

The site is not within an AWE consultation zone

**Environment Agency:**

No specific comments made on this site. The site is within SPZ3.

**Thames Water:**

TW not consulted on this site

**Parish Council:**

The parish council consider this site inappropriate for development as it is high quality green space. The

## Site Selection – Site Commentary

steepness of the slope is also a concern.

[At preferred options the Parish Council did not comment on this site.](#)

### **Preferred Options Consultation Key Issues:**

[No comments received on this site.](#)

### **SA/SEA:**

The SA/SEA indicates a predominantly neutral impact on sustainability. There are no significant sustainability issues with this site. The site is easily accessible by public transport, walking and cycling and with close proximity to open countryside and local sports facilities to help promote a health active lifestyle all of which have a positive impact on sustainability. There would be a negative impact on the character of the landscape as the site is in an area of medium / high landscape sensitivity and in a Local Wildlife Site, which would be a negative impact on environmental sustainability. Some mitigation measures could be introduced to reduce the impact on the landscape and information would need to be provided as to why the LWS could be destroyed. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The site was proposed for between 15 and 20 dwellings, with a mix of types and sizes including affordable housing. [The Council have been unable to confirm the availability of the site.](#)

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Newbury	<b>Parish:</b>	Speen
----------------------	-----	--------------------	---------	----------------	-------

<b>Site ID:</b>	NEW042	<b>Site Address:</b>	Land at Bath Road, Speen	<b>Development Potential:</b>	104100 dwellings (3.45ha at 30dph)
-----------------	--------	----------------------	--------------------------	-------------------------------	------------------------------------

**Key: Effects of option on SA objectives**

++	+	?	0	-	--
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site is close to open countryside and a number of services and facilities that could support and encourage healthy, active lifestyles		The site's location to the north of Newbury gives opportunities for walking and cycling and gives easy access to local services and facilities. However, overall, in terms of environmental and social sustainability, development of the site would have a positive impact. If the allotments were not retained or re-provided ROW were not protected there could be a negative impact on <b>environmental</b> social sustainability.
	Will it increase opportunities for access to sports facilities?	+	Site is close to Northcroft Leisure Centre.		
	Will it protect and enhance green infrastructure across the district?	-	<u>Part of the site is currently allotments. The site previously encompassed allotment areas; however in line with the new scheme the allotments would no longer be developed.</u> Two rights of way cross the site <u>and there are TPO'd trees on the northern boundary of the southern proposed area.</u>	<u>Allotments would need to be maintained or provided elsewhere on the site. The new scheme no longer includes the development of the allotments; however,</u> the ROW would need to be protected.	
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The site is close to areas of protected employment, and within easy access of a number of employment sites and education facilities.		The site is located close to areas of employment and education as well as other services and facilities within Newbury, as well as giving easy access to the strategic road network, and public transport opportunities. This means that the site could have a positive impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking,	+	The site is located within Newbury. There are a number of public transport options within the town		The site is close to local services and facilities which encourage walking or

			<a href="#">housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significant sustainability issues with this site. The site is easily accessible by public transport, walking and cycling and with close proximity to open countryside and local sports facilities to help promote a healthy active lifestyle all of which will have a positive impact on sustainability. [Part of the site is currently used as allotments which would need to be retained or relocated should the site be developed, or there would be a negative impact on environmental sustainability. The site previously encompassed allotment areas; however in line with the new scheme the allotments would no longer be developed. Two rights of way cross the site, and if they were not protected there could be a negative impact on social sustainability.](#) The site's proximity to the A34 means that there could be issues of air or noise pollution, with a consequential impact on sustainability unless suitable mitigation measures are provided. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Newbury	<b>Parish:</b>	Speen
----------------------	-----	--------------------	---------	----------------	-------

<b>Site ID:</b>	NEW042	<b>Site Address:</b>	Land at Bath Road, Speen	<b>Development Potential:</b>	100-4 dwellings (3.45ha at 30dph)
-----------------	--------	----------------------	--------------------------	-------------------------------	-----------------------------------

### Recommendation:

The site is recommended for allocation

### Justification:

The site is well related to Newbury, close to local services and facilities. There are no significant issues with the site.

### Discussion:

#### Site Description:

The site is located to the north west of Newbury close to the junction with the A34 and A4. The site is close to local services and facilities, including open space and countryside.

Two rights of way pass through the site. These would need to be preserved should the site be developed.

~~The allotments on the site would need to be retained or replaced with equal or better facilities elsewhere on the site should development take place.~~ [The site promoter has confirmed that the allotments will be retained in their current location. The allotments are within the Speen Conservation Area.](#)

#### Landscape:

The site is in an area of medium / high landscape sensitivity, adjacent to a conservation area.

#### Flood Risk:

The site is in FZ1. An FRA would be required considering surface water flooding. SUDs would need to be provided to ensure development would not have a risk on flooding downstream of the site.

#### Highways /Transport:

The impact of traffic generated by the site would need to be assessed through a Transport Assessment. It is likely there would be a 50:50 split between traffic distributing towards Newbury and the A34.

Access can be obtained onto the A4, and could also be considered from Station Road to ensure permeability through the site. The impact on station road and the A4/Station Road junction would need to be considered.

There are footways in the vicinity. A regular bus service passes the site.

#### Ecology:

The site is adjacent to a conservation area. An extended phase 1 habitat assessment would be required.

#### Archaeology:

The site is within the 2<sup>nd</sup> battle of Newbury battlefield area. There is archaeological potential on the site. Further assessment would be required.

#### Education:

Local primary school provision is at capacity. No comments have been made regarding secondary school provision.

#### Environmental Health:

Noise and air quality surveys would be required due to the proximity to the A34.

No known contamination issues.

#### Minerals and Waste:

Part of the site is underlain by ~~gravel deposits construction aggregates; there is significant potential for extraction on the site.~~ Consideration of policies 1 & 2 of the RMLP would be required.

No known waste issues.

## Site Selection – Site Commentary

**Land use planning consultation zone:**

The site is not within an AWE consultation zone

**Environment Agency:**

The site is within an SPZ2, with a major aquifer (20%). There is a high risk of contamination to groundwater.

**Thames Water:**

Significant concern regarding Water Supply capability, specifically water resources capability. Current water supply network in this area is highly unlikely to be able to support the demand from this site. Water supply infrastructure is highly likely to be required to ensure sufficient capacity is brought forward ahead of any development.

A detailed water supply strategy would be required.

Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A drainage strategy would be required.

There are serious concerns with Speen Water Treatment Works which serves Wickham DMA.

**Parish Council:**

The parish council agreed that the principle of development on the site may be acceptable, although local residents are against development here. The allotments are the main concern as they would not want to be lost or damaged by development.

**SA/SEA:**

The SA/SEA indicates a predominantly neutral impact on sustainability. There are no significant sustainability issues with this site. The site is easily accessible by public transport, walking and cycling and with close proximity to open countryside and local sports facilities to help promote a healthy active lifestyle all of which will have a positive impact on sustainability. ~~Part of the site is currently used as allotments which would need to be retained or relocated should the site be developed, or there would be a negative impact on environmental sustainability. The site previously encompassed allotment areas, however in line with the new scheme the allotments would no longer be developed. Two rights of way cross the site, and if they were not protected there could be a negative impact on social sustainability.~~ The site's proximity to the A34 means that there could be issues of air or noise pollution, with a consequential impact on sustainability unless suitable mitigation measures are provided. The development of the site for housing will have a neutral effect on economic sustainability.

**Proposed development (from SHLAA submission):**

The site is being promoted for 125 dwellings, including affordable housing, public open space and relocation and extension of the allotments. Development would include infilling of a reservoir.

<b>Development Potential:</b>	75 dwellings (2.5ha at 30dph)	<b>SHLAA Assessment:</b>	Potentially Developable
-------------------------------	-------------------------------	--------------------------	-------------------------

## Summary of Site Assessment

### Key Issues:

- Greenfield
- Groundwater flood risk. Evidence of neighbouring properties flooding in 2007.
- Distance from play facilities for children

## Site Assessment

<b>Parish Council consultation response:</b>	This area is already densely populated and there was general agreement concerning the implications for existing infrastructure (in particular surgeries and highways). Stoney Lane would need widening which the parish council would be against. Traffic in Turnpike Road would be an issue. Flooding issues were also highlighted. There was general concern about the loss of visual amenity as the area is one of the gateways into Ashmore Green. There was an appeal on the site about 5 years ago, and the Inspector determined a height over which development shouldn't go due to landscape implications. The site is very steep in places. The area is an important resource for birdwatchers, walkers and horse riders. Flooding of Manor Park, Waller Drive, Creswell Close and Turnpike Industrial Estate in 2007.

### Summary

There are no significant, sustainability impacts from this site. The site is close to local services and facilities, with opportunities for walking and cycling and good access to the countryside. All of these aspects have a positive impact on sustainability. There are potential negative impacts on environmental sustainability due to the rural location of the site and potential impact on the landscape. Mitigation measures would reduce this impact, by providing appropriate landscaping. [It is likely that with regard to biodiversity on the site, appropriate measures would mitigate any negative impact.](#) [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### Recommendation:

The site is recommended for allocation

### Justification:

The site is well related to existing residential development in Newbury, close to local services and facilities. The site is not at risk from flooding.

### Discussion:

#### Site Description:

The site is located to the north of Newbury. Close to local services and facilities.

#### Landscape:

The site is in an area of medium landscape sensitivity. Development would need to be accompanied by landscaping to reduce the impact of development on the character of the landscape.

#### Flood Risk:

The site is in FZ1, although it is adjacent to a surface water flood risk area. An FRA would be required taking into account surface water. SUDs would need to be provided to ensure that development does not adversely affect flood risk downstream of the site.

#### Highways /Transport:

This site has been assessed alongside part of NEW105, [although now NEW105 is not being recommended for allocation.](#)

The impact of additional traffic would need to be assessed through a Transport Assessment. Traffic is likely to distribute via a number of routes, many of which are already congested during peak travel periods.

Access can be obtained via Stoney Lane, which would need to be widened with footways provided to connect the site to existing footways along Stoney Lane. Other, secondary accesses could be provided via Wansley Gardens, Laud Close and Fleetwood Close.

If this site was to be developed alongside part of NEW105 access to this site could be provided through NEW105.

#### Ecology:

Potential for birds and reptiles. An extended phase 1 habitat survey would be required.

#### Archaeology:

No known archaeological issues.

#### Education:

Local primary school provision is at capacity. No comments made regarding secondary school provision.

#### Environmental Health:

No known air, noise or contamination issues

#### Minerals and Waste:

[No known minerals or waste issues. The site is partially underlain by construction aggregates. Therefore RMLP Policies 1 and 2 are relevant.](#)

#### Land use planning consultation zone:

Site is not within an AWE consultation zone

#### Environment Agency:

No specific comments made on this site. Site is within SPZ23.

## Site Selection – Site Commentary

### **Thames Water:**

No water supply infrastructure issues envisaged.

Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A drainage strategy would be required

### **Parish Council:**

This area is already densely populated and there was general agreement concerning the implications for existing infrastructure (in particular surgeries and highways). Stoney Lane would need widening which the parish council would be against. Traffic in Turnpike Road would be an issue. Flooding issues were also highlighted. There was general concern about the loss of visual amenity as the area in one of the gateways into Ashmore Green. There was an appeal on the site about 5 years ago, and the Inspector determined a height over which development shouldn't go due to landscape implications. The site is very steep in places. The area is an important resource for birdwatchers, walkers and horse riders. Flooding of Manor Park, Waller Drive, Creswell Close and Turnpike Industrial Estate in 2007.

### **SA/SEA:**

The SA/SEA indicates that there would be predominantly neutral impact on sustainability. There are no significant, sustainability impacts from this site. The site is well located for local services and facilities including opportunities for walking, cycling and use of public transport. All of these have a positive impact on sustainability. The rural nature of the site means that development could have a negative impact on environmental sustainability; mitigation in terms of landscaping could help to reduce this impact.

### **Proposed development (from SHLAA submission):**

The site is proposed for approximately 100 dwellings, with a mix of types and sizes. Affordable housing would be provided as part of the scheme. Site promoters confirm that the existing access to the site could be retained and upgraded and that the principle of widening Stoney Lane has been previously agreed. Various assessments have been submitted alongside the Call for Sites form, including a Landscape Assessment, Visual Impact Assessment, Habitat Survey, Bat Survey and SFRA.

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site is close to local services and facilities and open space at Greenham Common and the proposed country parkland at Sandleford Park.		The site's location to the south of Newbury gives opportunities for walking and cycling and gives easy access to local services and facilities. Therefore, in terms of environmental and social sustainability, development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	+	The site is close to sports facilities at Newbury Rugby Club.		
	Will it protect and enhance green infrastructure across the district?	?	<del>A right of way runs along the northern boundary of part of the site.</del> The site is used as local amenity space by the local community	Design of the site could protect and enhance aspects of the GI.	
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The site is close to services and facilities at Newbury Retail Park and Newbury College.		The site is located close to areas of employment and education as well as other services and facilities within Newbury, as well as giving easy access to the strategic road network, and public transport opportunities. This means that the site could have a positive impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	A regular bus service passes the site. There are opportunities for walking and cycling into Newbury town centre.		The site is close to local services and facilities which encourage walking or cycling, and therefore have a positive impact on environmental and social sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	-	The site is within a BOA and adjacent <u>close</u> to Ancient woodland. Potential for reptiles, amphibians and badgers on the site. <u>In addition the site is in close proximity to the area covered by the West Berkshire Living Landscape Project.</u>	<del>Appropriate buffers would be required. Protection of the Ancient Woodland would need to be ensured through transfer of ownership to approved body.</del> Hydrological surveys to protect spring <u>within ancient woodland would be required.</u> Reptile, amphibian and badger surveys would be required. Green link from the site to the Racecourse required. <u>Development will be expected to support and make a positive contribution to the Living Landscape Project.</u>	Without careful design development of this site could have a negative impact on environmental sustainability, however, there is the opportunity to have a positive impact on environmental sustainability with careful design.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	-	Area of Medium/High landscape sensitivity. Views from the north west of the site over the whole of Newbury.	Design and development of part of the site would reduce the impact of the site on the landscape	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	+ / ?	The site is well related to existing settlement in Greenham. Development of the <u>a larger area than proposed</u> <del>whole site</del> could lead to coalescence of Newbury and Greenham.	<del>Only the northern part of the site is proposed for development which will ensure Newbury and Greenham do not coalesce.</del> <u>Site area reduced to ensure maintenance of gap between settlements.</u>	Unlikely to have an impact on any aspect of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	0	Unlikely to have an impact on heritage assets.		
	Will it promote, conserve and enhance the District's cultural assets?	0	The site is close to cultural facilities in Newbury, but unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	The site is close to historical features, but unlikely to have an impact.		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0-	<del>Unlikely to have an impact on air quality.</del> <u>Traffic generated from the site is likely to use the A339 and pass through the area covered by an Air Quality Management Area</u>	<u>Travel planning techniques will be required to encourage residents to consider alternative modes of travel to the private car. Improving</u>	<del>Unlikely to have an impact on any aspect of sustainability.</del> <u>The proximity of the site to the AQMA means that there could be</u>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
				<a href="#">vehicle emissions standards over time will also help to reduce the impact.</a>	<a href="#">a negative impact on environmental sustainability. Mitigation measures will help to reduce this impact.</a>
	Will the site be at risk from, or impact on, noise levels?	<b>0</b>	Unlikely to have an impact on noise		
	Will there be an impact on soil quality?	<b>0</b>	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	<b>0</b>	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Greenfield		The site could have a negative impact on environmental sustainability as it is a greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	<b>0</b>	There is no flood risk on the site.	SUDs would need to be provided.	Unlikely to have an impact on any element of sustainability.
<a href="#">11. To ensure a strong, diverse and sustainable economic base</a>	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u><b>0</b></u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u><b>0</b></u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u><b>0</b></u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significant issues with this site. The site is well related to existing development both to the north, close to local services and facilities, with good opportunities for walking, cycling and public transport. All of this means that there would be a positive impact on sustainability. The site is in an area of medium/high landscape sensitivity and so there could be a negative impact on environmental sustainability should development take place. Careful design and landscaping mitigation measures could reduce this impact. The site is adjacent to ancient woodland and may have protected species on the site, both of which could be negatively affected by development, impacting negatively on sustainability. Appropriate mitigation measures, including buffers and maintenance of a green corridor between the site and Newbury racecourse would help to mitigate the impact. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Newbury	<b>Parish:</b>	Greenham
----------------------	-----	--------------------	---------	----------------	----------

<b>Site ID:</b>	NEW047B	<b>Site Address:</b>	South East Newbury	<b>Development Potential:</b>	69 30 dwellings (2.29ha at 30dph)
-----------------	---------	----------------------	--------------------	-------------------------------	--------------------------------------

### Recommendation:

[The site is recommended for allocation.](#)

[At preferred options](#) the site [was](#) is not recommended for allocation.

### Justification:

[A smaller site area was submitted as part of the preferred options consultation. There are no significant issues relating to this site. Significant areas of public open space would be provided and protected in perpetuity as a result of development in this area.](#)

~~Development of the site would have an impact on the character of the landscape. Is less well related to Newbury than other sites in this group.~~

### Discussion:

#### Site Description:

The site is located to the south of Newbury between Newbury and Greenham. It is well related to existing development with access to Newbury Retail Park, Newbury College and in to the town centre. Development here would reduce the gap between Newbury and Greenham.

#### Landscape:

The site is in an area of medium/high landscape sensitivity, with views over the whole of Newbury. Development here would change the character of the landscape.

#### Flood Risk:

The site is in FZ1. An ordinary water course is present on the site. An FRA would be required taking into account surface water flooding. SUDs would need to be provided.

#### Highways /Transport:

~~No specific comments have been made on this site.~~

[Any development in this area would need to have the traffic impact assessed by a Transport Statement/Assessment. Traffic would use Greenham Road and Pinchington Lane, both of which are congested during peak travel periods.](#)

[Acceptable access can be obtained onto New Road. Secondary access could be provided via Draytons View and Spa Meadow Close if additional land could be acquired.](#)

#### Ecology:

The site is adjacent [close](#) to ancient woodland within a BOA. ~~Appropriate buffers would need to be provided.~~ [The site is in close proximity to the area covered by the West Berkshire Living Landscape Project. Development will need to support and make a positive contribution to this project.](#) Hydrological surveys would be required to protect the springs on the [larger](#) site and within the ancient woodland. There is potential for reptiles, amphibians and badgers on the site and appropriate surveys would be required. A green link to the Racecourse would need to be provided.

#### Archaeology:

No known archaeology issues.

#### Education:

~~Local primary school provision is at capacity.~~ [Consultation with the Local Education Authority has confirmed that existing education capacity issues will be dealt with through the provision of a new primary school on the Newbury College Site.](#) No comments have been received regarding secondary school provision.

#### Environmental Health:

No known air, noise issues.

Potential for contamination due to previous use of adjacent site as landfill. [Further investigation of the site](#)

## Site Selection – Site Commentary

[would be required.](#)

[The site is close to an Air Quality Management Area. It is likely that traffic generated from the site will pass through the AQMA. Mitigation measures, in the form of travel planning will be required to encourage residents to consider alternatives modes of travel to the private car.](#)

### **Minerals and Waste:**

The site is underlain by mineral deposits and adjacent to former minerals workings, which suggests there would be potential for extraction. Consideration of policies 1 & 2 of the RMLP would be required.

No known waste issues.

### **Land use planning consultation zone:**

Site is not within an AWE consultation zone

### **Environment Agency:**

Site is within a SPZ. [Although the EA has not raised any objections to development within SPZs, care would need to be taken to ensure no opportunities for contamination of groundwater occurred.](#)

### **Thames Water:**

Comments made in relation to area B, C and D [prior to the preferred options consultation.](#)

Significant concern regarding Water Supply capability, specifically water resources capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is highly likely to be required to ensure sufficient capacity is brought forward ahead of any development.

A water supply strategy would be required.

Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A drainage strategy would be required

[No revised comments were received for this site, although comments for NEW047D were submitted which stated that Thames Water no longer had concerns regarding Water Supply capability.](#)

### **Parish Council:**

Comments made regarding NEW047 as a whole.

Town Council would like to see the whole of NEW047 to be retained as green space. This view is also held by the parish council. The sites forming NEW047 are ecologically sensitive and development could have an impact on the landscape as development in this location would be visually prominent.

The gap between Greenham and Newbury should be retained. Would like to see areas for allotments, community growing or formal recreation space.

This is very popular for dog-walking and well used by the local community. Such green spaces are a very valuable resources as they take pressure off Greenham Common.

[At preferred options the Parish Council did not comment on this site.](#)

### **Preferred Options Consultation Key Issues:**

[Response received from site promoter. Reasons for rejection can be overcome and site capacity reduced to 33 dwellings.](#)

[For full consultation response and Council response please see Statement of Consultation.](#)

### **SA/SEA:**

The SA/SEA indicates a predominantly neutral impact on sustainability. There are no significant issues with this site. The site is well related to existing development both to the north, close to local services and facilities, with good opportunities for walking, cycling and public transport. All of this means that there would be a positive impact on sustainability. The site is in an area of medium/high landscape sensitivity and so there could be a negative impact on environmental sustainability should development take place. Careful

## Site Selection – Site Commentary

design and landscaping mitigation measures could reduce this impact. The site is adjacent to ancient woodland and may have protected species on the site, both of which could be negatively affected by development, impacting negatively on sustainability. Appropriate mitigation measures, including buffers and maintenance of a green corridor between the site and Newbury Racecourse would help to mitigate the impact. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The site is being promoted as one of a number of sites in South East Newbury with a Master Plan to deliver new areas of public open space, wildlife habitats, footpaths and cycleways, together with approximately 400 dwellings. Eight individual sites have been submitted as part of the master plan.

[At preferred options the site promoter stated that the site area and capacity has been reduced to approximately 33 dwellings.](#)

			<a href="#">development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		<a href="#">business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significant issues with this site. The site is well related to existing development to the north, close to local services and facilities, with good opportunities for walking, cycling and public transport. All of this means that there would be a positive impact on sustainability. The site is in an area of medium/high landscape sensitivity and so there could be a negative impact on environmental sustainability should development take place. Careful design and landscaping mitigation measures could reduce this impact. The site contains is adjacent to ancient woodland, and may have protected species on the site, both of which could be negatively affected by development, impacting negatively on sustainability. Appropriate mitigation measures, including buffers and maintenance of a green corridor between the site and Newbury racecourse would help to mitigate the impact. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Newbury	<b>Parish:</b>	Greenham
<b>Site ID:</b>	NEW047C	<b>Site Address:</b>	South East Newbury	<b>Development Potential:</b>	<a href="#">65 dwellings</a> <del>69 dwellings</del> (2.29ha at 30dph)

### Recommendation:

[The site is recommended for allocation](#)

[At preferred options 1](#) The site was not recommended for allocation.

### Justification:

[A reduced development potential was submitted as part of the preferred options consultation. There are no significant issues relating to this site. Significant areas of public open space would be provided and protected in perpetuity as a result of development in this area.](#)

~~Development of the site would have an impact on the character of the landscape. The site has views over the whole of Newbury. Other sites in Newbury are considered more appropriate for development.~~

### Discussion:

#### Site Description:

The site is located to the south of Newbury between Newbury and Greenham. It is well related to existing development with access to Newbury Retail Park, Newbury College and in to the town centre. Development here would reduce the gap between Newbury and Greenham.

#### Landscape:

The site is in an area of medium/high landscape sensitivity. [Sensitive design and restricting development to the lower portion of the site would be required to limit the impact of development on the character of the landscape, and limit the impact on the views over Newbury to Donnington Castle from the site.](#) ~~With views over the whole of Newbury. Development here would change the character of the landscape.~~

#### Flood Risk:

The site is in FZ1. An ordinary water course runs through the site. An FRA would be required taking into account surface water. SUDs would need to be provided.

#### Highways /Transport:

No specific comments have been made on this site, [however, comments made for NEW047B and NEW047D are considered appropriate for this site.](#)

[Any development in this area would need to have the traffic impact assessed by a Transport Statement/Assessment. Traffic would use Greenham Road and Pinchington Lane, both of which are congested during peak travel periods.](#)

#### Ecology:

The site is adjacent to ancient woodland within a BOA. [The site is in close proximity to the area covered by the West Berkshire Living Landscape Project. Development will need to support and make a positive contribution to this project.](#)

Appropriate buffers would need to be provided. Hydrological surveys would be required to protect the springs on the site and within the ancient woodland. There is potential for reptiles, amphibians and badgers on the site and appropriate surveys would be required. A green link to the Racecourse would need to be provided.

#### Archaeology:

No known archaeology issues.

#### Education:

~~Local primary school provision is at capacity.~~ [Consultation with the Local Education Authority has confirmed that existing education capacity issues will be dealt with through the provision of a new primary school on the Newbury College Site.](#) No comments have been received regarding secondary school provision.

#### Environmental Health:

## Site Selection – Site Commentary

No known air, noise issues.

Potential for contamination due to previous use of adjacent site as landfill. [Further investigation of the site would be required.](#)

[The site is close to an Air Quality Management Area. It is likely that traffic generated from the site will pass through the AQMA. Mitigation measures, in the form of travel planning will be required to encourage residents to consider alternatives modes of travel to the private car.](#)

### **Minerals and Waste:**

The site is underlain by mineral deposits and adjacent to former minerals workings, which suggests there would be potential for extraction. Consideration of policies 1 & 2 of the RMLP would be required.

No known waste issues.

### **Land use planning consultation zone:**

Site is not within an AWE consultation zone

### **Environment Agency:**

No specific comments made on this site. Site is within a SPZ2. [Although the EA have not raised any objections to development within SPZs, care would need to be taken to ensure no opportunities for contamination of groundwater occurred.](#) Investigation into potential contamination on adjacent site would be required.

### **Thames Water:**

Comments made in relation to area B, C and D [prior to the preferred options. No further comments made on this site at preferred options.](#)

Significant concern regarding Water Supply capability, specifically water resources capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is highly likely to be required to ensure sufficient capacity is brought forward ahead of any development.

A water supply strategy would be required.

Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A drainage strategy would be required

[Comments made on NEW047D at preferred options stated that there was no concern regarding water supply capability.](#)

### **Parish Council:**

Comments made regarding NEW047 as a whole.

Town Council would like to see the whole of NEW047 to be retained as green space. This view is also held by the parish council. The sites forming NEW047 are ecologically sensitive and development could have an impact on the landscape as development in this location would be visually prominent.

The gap between Greenham and Newbury should be retained. Would like to see areas for allotments, community growing or formal recreation space.

This is very popular for dog-walking and well used by the local community. Such green spaces are very valuable resources as they take pressure off Greenham Common.

[The Town/Parish Councils did not comment on this site at preferred options](#)

### **Preferred Options Consultation Key Issues:**

[Response received from site promoter. Reasons for rejection can be overcome and site capacity reduced to 65 dwellings.](#)

[For full consultation response and Council response please see Statement of Consultation.](#)

## Site Selection – Site Commentary

### **SA/SEA:**

The SA/SEA indicates a predominantly neutral impact on sustainability. There are no significant issues with this site. The site is well related to existing development both to the north, close to local services and facilities, with good opportunities for walking, cycling and public transport. All of this means that there would be a positive impact on sustainability. The site is in an area of medium/high landscape sensitivity and so there could be a negative impact on environmental sustainability should development take place. Careful design and landscaping mitigation measures could reduce this impact. The site is adjacent to ancient woodland and may have protected species on the site, both of which could be negatively affected by development, impacting negatively on sustainability. Appropriate mitigation measures, including buffers and maintenance of a green corridor between the site and Newbury racecourse would help to reduce the impact. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The site is being promoted as one of a number of sites in South East Newbury with a Master Plan to deliver new areas of public open space, wildlife habitats, footpaths and cycleways, together with approximately 400 dwellings. Eight individual sites have been submitted as part of the master plan.

[At preferred options the site promoter suggested the site be promoted for 65 dwellings. Development of the site, alongside area B would provide opportunities for a continuous network of public open space, foot and cycle ways in the area.](#)

	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>		<a href="#">economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significant issues with this site. The site is well related to existing development both to the north, close to local services and facilities, with good opportunities for walking, cycling and public transport. All of this means that there would be a positive impact on sustainability. The site is in an area of low/medium landscape sensitivity and so it is unlikely that there would be an impact on sustainability, especially with mitigation measures introduced. There are great crested newts on the site, which without adequate protection and green corridors would mean development would have a negative impact on sustainability. [The site is a former landfill site, therefore, there is potential for contamination. Appropriate mitigation and decontamination works would be required to ensure there is no negative impact on sustainability.](#) A small area of the site is at risk from surface water flooding, but with appropriate mitigation the potential negative impact should be mitigated. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Newbury	<b>Parish:</b>	Greenham
<b>Site ID:</b>	NEW047D	<b>Site Address:</b>	South East Newbury	<b>Development Potential:</b>	69 dwellings (2.29ha at 30dph) <a href="#">140 - 160 dwellings</a>

### Recommendation:

The site is recommended for allocation

### Justification:

The site is well related to existing development in Newbury and close to local services and facilities. Two [separate](#) areas of the site are promoted for development, which leave a wildlife corridor and maintains [a the](#) gap between Newbury and Greenham.

### Discussion:

#### Site Description:

The site is located to the south of Newbury between Newbury and Greenham. It is well related to existing development with access to Newbury Retail Park, Newbury College and in to the town centre. Development here would reduce the gap between Newbury and Greenham.

#### Landscape:

The site is in an area of [low/medium/high](#) landscape sensitivity. ~~With views over the whole of Newbury. Development here [w](#)ould change the character of the landscape.~~

#### Flood Risk:

The site is in FZ1. An FRA would be required taking into account surface water flooding. SUDs would need to be provided.

#### Highways /Transport:

~~No specific comments have been made on this site.~~

[Transport Assessment work carried out indicates that development of this site would be unlikely to have a significant impact on traffic. It is noted that there is congestion along Greenham Road and Pinchington Lane during peak travel periods. The specific local impact would need to be determined via a Transport Assessment.](#)

#### Ecology:

~~The site is adjacent to ancient woodland within a BOA. Appropriate buffers would need to be provided. Hydrological surveys would be required to protect the springs on the site and within the ancient woodland.~~

[There is potential for reptiles, amphibians and badgers on the site. An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected, and appropriate surveys would be required. Land would need to be retained for Great Crested Newts and managed in perpetuity, with a link provided under Greenham Road to link with NEW047C.](#)

[The site is adjacent to the area covered by the West Berkshire Living Landscape Project. Development will be expected to support and make a positive contribution to the project.](#)

~~A green link to the Racecourse would need to be provided.~~

#### Archaeology:

No known archaeology issues.

#### Education:

~~Local primary school provision is at capacity. A new primary school is to be provided on the Newbury College Site, to meet demographic growth, including development of new sites. Development at Sandford Park will provide two new primary schools to meet the demand of the strategic site.~~

No comments have been received regarding secondary school provision.

#### Environmental Health:

## Site Selection – Site Commentary

No known air, noise issues.

[The site is close to an Air Quality Management Area. It is likely that traffic generated from the site will pass through the AQMA. Mitigation measures, in the form of travel planning will be required to encourage residents to consider alternatives modes of travel to the private car.](#)

Potential for contamination due to previous use of adjacent site as landfill. [A contamination report has been carried out by the site promoter. Further work would be required to accompany any planning application on the site.](#)

### **Minerals and Waste:**

~~The site is a former landfill site, having previously been an extraction site. It is understood that waste was deposited in such a way that contamination and remediation may be a significant issue.~~

### **Land use planning consultation zone:**

Site is not within an AWE consultation zone

### **Environment Agency:**

No specific comments have been made on this site. The site is within a SPZ2. Investigation in to adjacent site would be required [due to potential contamination due to use of sites as landfill.](#)

### **Thames Water:**

~~Comments made in relation to area B, C and D.~~

~~Significant concern regarding water supply capability, specifically water resources capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is highly likely to be required to ensure sufficient capacity is brought forward ahead of any development.~~

~~A water supply strategy would be required.~~

[No concern raised regarding water supply capability in relation to the site.](#)

Concern regarding wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A drainage strategy would be required

### **Parish Council:**

Comments made regarding NEW047 as a whole.

Town Council would like to see the whole of NEW047 to be retained as green space. This view is also held by the parish council. The sites forming NEW047 are ecologically sensitive and development could have an impact on the landscape as development in this location would be visually prominent.

The gap between Greenham and Newbury should be retained. Would like to see areas for allotments, community growing or formal recreation space.

This is very popular for dog-walking and well used by the local community. Such green spaces are a very valuable resources as they take pressure off Greenham Common.

[At preferred options the Town Council stated that they would want assurance that the green lung between Newbury and Greenham, which extends beyond the site and across the area would be conserved in perpetuity.](#)

### **Preferred Options Consultation Key Points:**

- Development potential – loss of character and setting a precedent to further develop the adjacent fields. Concern over the ‘gap’ between Newbury and Greenham. Impact on Greenham which has received 2 strategic allocations through the Core Strategy. Housing should be put in other parts of Newbury or on Brownfield sites.
- Highways and transport issues - - the traffic is bad now, where will it all go? Lack of road maintenance. Access and parking concerns. Public transport is seen as acceptable in this part of Newbury with aspirations to improve it.
- Infrastructure – it is already insufficient and won’t cope with more development. Utilities, schools,

## Site Selection – Site Commentary

doctors etc mentioned.

- Landscape/setting.
- Ecology – GCNs are on the site requiring appropriate mitigation. Concern over impact of development on Greenham Common.
- Flood risk – surface water runoff after heavy rain.
- Pollution. Noise, air and contamination (the site is a former landfill site).
- Personal – impact on quality of life.
- Complaints about the consultation.

*[For the consultation responses and Council's response, please see the Statement of Consultation.](#)*

### **SA/SEA:**

There are no significant issues with this site. The site is well related to existing development both to the north, close to local services and facilities, with good opportunities for walking, cycling and public transport. All of this means that there would be a positive impact on sustainability. The site is in an area of low/medium landscape sensitivity and so it is unlikely that there would be an impact on sustainability, especially with mitigation measures introduced. There are great crested newts on the site, which without adequate protection and green corridors would mean development would have a negative impact on sustainability. [The site is a former landfill site, therefore, there is potential for contamination. Appropriate mitigation and decontamination works would be required to ensure there is no negative impact on sustainability.](#) A small area of the site is at risk from surface water flooding, but with appropriate mitigation the potential negative impact should be reduced. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The site is being promoted as one of a number of sites in South East Newbury with a Master Plan to deliver new areas of public open space, wildlife habitats, footpaths and cycleways, together with approximately 400 dwellings. Eight individual sites have been submitted as part of the master plan.

[Development of predominantly small 1 and 2 bed dwellings is proposed for this site, with a significant amount of public open space/habitat creation between the two area of the site promoted for development.](#)

**Key: Effects of option on SA objectives**

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site is close to open countryside and a number of services and facilities that could support and encourage healthy, active lifestyles		The site's location to the north of Newbury gives opportunities for walking and cycling and gives easy access to local services and facilities. Any loss of the allotments could have an impact on environmental sustainability. However, overall, in terms of environmental and social sustainability, development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	+	The site is close to sports facilities at Trinity school which are available to the public.		
	Will it protect and enhance green infrastructure across the district?	-	Part of the site is currently used for allotments.	The allotments are proposed to be kept and improved on the existing site.	
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The site is close to areas of protected employment, and within easy access of a number of employment sites and education facilities.		The site is located close to areas of employment and education as well as other services and facilities within Newbury, as well as giving easy access to the strategic road network, and public transport opportunities. This means that the site could have a positive impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	The site is located within Newbury. There are a number of public transport options within the town centre. Newbury station is approximately 2.5 km from the site. There are a number of opportunities		The site is close to local services and facilities which encourage walking or cycling, and therefore have a positive impact on environmental and social

The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

There are no significant issues relating to sustainability on this site. There are a number of positive impacts on sustainability as the site is close to local services and facilities, with good opportunities for walking, cycling and public transport. Part of the site is allotments, which if developed would have a negative impact on sustainability. The proposals indicate that the allotments will be retained, meaning that the impact on sustainability should be neutralised. The site is within a groundwater emergence zone, although there is no history of flooding on the site. Flooding can impact negatively on sustainability, but with appropriate mitigation measures this impact can be reduced. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Newbury	<b>Parish:</b>	Shaw-cum-Donnington
<b>Site ID:</b>	NEW051	<b>Site Address:</b>	Foxglove House, Love Lane, Donnington	<b>Development Potential:</b>	10 dwellings (0.32ha at 30dph) <a href="#">&lt;5 dwellings</a>

### Recommendation:

The site is recommended to be included in the settlement boundary review.

### Justification:

The site is well related to existing residential development in Newbury. The size of the site means that it could be included in the settlement boundary, rather than allocated as a site for development.

### Discussion:

#### Site Description:

The site is located to the north of Newbury, adjacent to existing development on two sides. The site is close to local services and facilities.

Part of the site is currently allotments, which would need to be retained as part of any scheme proposed.

#### Landscape:

The site is in an area of medium landscape sensitivity.

#### Flood Risk:

The site is in FZ1 but is at risk from groundwater flooding, although there is no history of flooding on the site. An FRA and appropriate mitigation, including SUDs, would need to be provided.

#### Highways /Transport:

No specific comments have been made on this site.

There are a number of public transport options in Newbury, with opportunities for walking and cycling from the site into the Town Centre.

#### Ecology:

The site contains allotments. An extended phase 1 habitat survey would be required [An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected.](#) ~~for this site.~~

#### Archaeology:

There is a listed building adjacent to the site. No other known issues.

#### Education:

~~Local primary school provision is at capacity.~~ [Consultation with the Local Education Authority has confirmed that existing education capacity issues will be dealt with through the provision of a new primary school on the Newbury College Site.](#) No comments have been made regarding secondary school provision.

#### Environmental Health:

No known air, noise or contamination issues.

#### Minerals and Waste:

No known minerals or waste issues.

#### Land use planning consultation zone:

The site is not within an AWE consultation zone

#### Environment Agency:

No specific comments made on this site. The site is in an SPZ3. There is a high risk of contamination to groundwater. [Although the EA have not raised any objections to development within SPZs, a case would need to be taken to ensure no opportunities for contamination of groundwater occurred.](#)

## Site Selection – Site Commentary

### **Thames Water:**

No water supply or wastewater infrastructure issues envisaged.

### **Parish Council:**

The Parish Council do not have an issue with the principle of development on this site, but are concerned about implementation. Maintaining the allotments is seen as important.

[At preferred options the Parish Council did not comment on this site.](#)

### **Preferred Options Consultation Key Issues raised:**

[At preferred options no comments were made on this site.](#)

### **SA/SEA:**

The SA/SEA indicates a predominantly neutral sustainability impact. There are no significant issues relating to sustainability on this site. There are a number of positive impacts on sustainability as the site is close to local services and facilities, with good opportunities for walking, cycling and public transport. Part of the site is allotments, which if developed would have a negative impact on sustainability. The proposals indicate that the allotments will be retained, meaning that the impact on sustainability should be neutralised. The site is within a groundwater emergence zone, although there is no history of flooding on the site. Flooding can impact negatively on sustainability, but with appropriate mitigation measures this impact can be reduced. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The site promoter proposed detached/semi-detached properties on the site, with the potential to demolish the existing house. Improvements to the village hall car park access and or the allotments could also be made as part of the development.

<b>Development Potential:</b>	20-18 dwellings (0.6ha at 30dph)	<b>SHLAA Assessment:</b>	Not currently developable
-------------------------------	----------------------------------	--------------------------	---------------------------

## Summary of Site Assessment

Key Issues:

- Greenfield
- TPOs cover majority of site
- Setting of listed building

## Site Assessment

<b>Parish Council consultation response:</b>	The parish council would be supportive of development on this site. It is close to other development and bus stops so low density well designed housing on this site would mean another site could be spared. Although there are TPOs on the site these were not seen as a constraint.

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	The site is close to local services and facilities and open space at Greenham Common and the proposed country parkland at Sandford Park.		The site's location to the south of Newbury gives opportunities for walking and cycling and gives easy access to local services and facilities. Therefore, in terms of environmental and social sustainability, development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	<b>+</b>	The site is close to sports facilities at Newbury Rugby Club.		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	Unlikely to have an impact on GI		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>+</b>	The site is close to services and facilities at Newbury Retail Park and Newbury College.		The site is located close to areas of employment and education as well as other services and facilities within Newbury, as well as giving easy access to the strategic road network, and public transport opportunities. This means that the site could have a positive impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>+</b>	A regular bus service passes the site. There are opportunities for walking and cycling into Newbury town centre.		The site is close to local services and facilities which encourage walking or cycling, and therefore have a positive impact on environmental and social sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	<b>?</b>	Additional traffic could result in road safety concerns but, development would also have the potential to improve road safety.		
5. To protect and enhance	Will it conserve and	<b>0</b>	Unlikely to have an impact on		Without some consideration

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
the natural environment	enhance the biodiversity and geodiversity assets across West Berkshire?		biodiversity		to mitigation measures there could be a negative impact on environmental sustainability.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	?	Site is in an area of medium/high landscape sensitivity.	Landscaping would be required.	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	0	The site is adjacent to the settlement boundary, but is not adjacent to any existing residential development.		Development would have a significant negative impact on the district's heritage assets. It is unlikely that any mitigation measures would reduce this impact to an acceptable level.
	Will it conserve and enhance the significance of the District's heritage assets?	--	Medieval chapel and possible medieval settlement on the site with post medieval farmstead. Archaeology would be a major constraint to development.		
	Will it promote, conserve and enhance the District's cultural assets?	0	The site is close to cultural facilities in Newbury, but unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	The site is close to historical features, but unlikely to have an impact on enjoyment of, or access to them.		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from or impact on air quality?	0	Unlikely to have an impact on air quality		
	Will the site be at risk from or impact on noise levels?	0	Unlikely to have an impact on noise		
	Will there be an impact on soil quality?	0	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Greenfield		The site could have a negative impact on environmental sustainability as it is a greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
change		0	-		sustainability.
	Will the site be subject to / at risk from flooding	<b>0</b>	The site is not at risk from flooding	Sustainable drainage (SUDs) techniques would be required.	Unlikely to have an impact any element of sustainability.
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There would be a significant negative impact on environmental sustainability due to the impact on heritage assets of development on this site. The site is well related to local services and facilities, with opportunities for walking and cycling, giving a positive impact on all elements of sustainability. There are uncertain effects on the character of the landscape, as without landscaping mitigation there could be a negative impact. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

### Recommendation:

The site is not recommended for allocation

### Justification:

Archaeology on the site is a major constraint to development. Impact on the adjacent listed building and archaeology would be significant.

### Discussion:

#### Site Description:

The site is located to the south of Newbury, adjacent to the Greenham settlement boundary. There is good access to local service and facilities including Newbury Retail Park, Newbury College and into the town centre.

#### Landscape:

The site is in an area of medium/high landscape sensitivity.

#### Flood Risk:

The site is in flood zone 1. SUDs would be required should the site be developed.

#### Highways /Transport:

Highways & Transport have not been consulted on this site.

#### Ecology:

Ecology have [has](#) not been consulted on this site.

#### Archaeology:

Archaeology on the site is a major constraint to development. There is a medieval chapel on the site, with a possible medieval settlement and post medieval farmstead.

#### Education:

~~Local primary school provision is at capacity.~~ [Consultation with the Local Education Authority has confirmed that existing education capacity issues will be dealt with through the provision of a new primary school on the Newbury College Site.](#) No comments have been received regarding secondary school provision.

#### Environmental Health:

No know air, noise or contamination issues

#### Minerals and Waste:

Minerals and Waste not consulted on this site.

#### Land use planning consultation zone:

The site is not within an AWE consultation zone

#### Environment Agency:

EA not consulted on this site

#### Thames Water:

TW not consulted on this site

#### Parish Council:

Concern raised about the impact on the listed church and Audrey Meadows. The site is well used by local residents and the community. Development on the site would be visually prominent.

[At preferred options the Parish Council did not comment on this site.](#)

#### SA/SEA:

## Site Selection – Site Commentary

There would be a significant negative impact on environmental sustainability due to the impact on heritage assets of development on this site. The site is well related to local services and facilities, with opportunities for walking and cycling, giving a positive impact on all elements of sustainability. There are uncertain effects on the character of the landscape, as without landscaping mitigation there could be a negative impact on the character of the landscape. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

**Proposed development (from SHLAA submission):**

The north eastern part of the site is being proposed for a couple of houses.

## Summary of Site Assessment

Key Issues:

- [Planning Permission](#)
- Within the settlement boundary
- Loss of leisure facilities
- Surface water flood risk
- Medium/high landscape sensitivity
- TPOs

## Site Assessment

<b>Parish Council consultation response:</b>	Greenacres is seen as a very important facility within the community. Replacement facilities would need to be provided should the site be developed. In principle there is not an issue with development of the site, but the leisure facilities would need to be provided elsewhere.

<b>Development Potential:</b>	20 dwellings (0.33ha at 60dph)	<b>SHLAA Assessment:</b>	Potentially Developable
-------------------------------	--------------------------------	--------------------------	-------------------------

## Summary of Site Assessment

- Key Issues:
- Flood zone 2
  - Uncertain availability

## Site Assessment

<b>Parish Council consultation response:</b>	The Town Council would be happy to see the BT building replaced, and have no objection in principle to the redevelopment of the site. However, given its central position, high-quality mixed use development appropriate to its location in the town would be essential.

<b>Development Potential:</b>	145 3 dwellings (4.76ha at 30dph)	<b>SHLAA Assessment:</b>	Not currently developable
-------------------------------	-----------------------------------	--------------------------	---------------------------

### Summary of Site Assessment

Key Issues:	- Poor relationship to settlement. Not adjacent to the settlement boundary.
-------------	---

### Site Assessment

<b>Parish Council consultation response:</b>	This area is already densely populated and there was general agreement concerning the implications for existing infrastructure (in particular surgeries and highways). Stoney Lane would need widening which the parish council would be against. Traffic in Turnpike Road would be an issue. Flooding issues were also highlighted. There was general concern about the loss of visual amenity as the area in one of the gateways into Ashmore Green. There was an appeal on the site about 5 years ago, and the Inspector determined a height over which development shouldn't go due to landscape implications. The site is very steep in places. The area is an important resource for birdwatchers, walkers and horse riders. Flooding of Manor Park, Waller Drive, Creswell Close and Turnpike Industrial Estate in 2007.

**Key: Effects of option on SA objectives**

++	+	?	0	-	--
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	Site is close to local facilities and services which could support and encourage health, active lifestyles.	Development of country parkland at Sandleford Park will further encourage opportunities for active, healthy lifestyles.	The site's location close to local services and facilities gives opportunities for walking and cycling, meaning that there could be a positive impact on environmental and social sustainability.
	Will it increase opportunities for access to sports facilities?	+	The site is close to sports facilities at Newbury Rugby Club.		
	Will it protect and enhance green infrastructure across the district?	0	Unlikely to have an impact on GI.		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The site is close to local services and facilities, and within easy travelling distance of a number of employment areas.		The site is located close to areas of employment and education as well as other services and facilities within Newbury, and public transport opportunities. This means that the site could have a positive impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	There are a number of public transport options within Newbury. Although an intermittent bus service passes the site, there are opportunities for walking and cycling in the immediate area.	Development at Sandleford Park will improve public transport opportunities within the local area.	The site is close to local services and facilities which encourage walking or cycling, and therefore have a positive impact on environmental and social sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance	Will it conserve and	+	The site is within a BOA providing	TPOs need to be protected	The site is unlikely to have

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
the natural environment	enhance the biodiversity and geodiversity assets across West Berkshire?		opportunities to improve the area for Biodiversity. The site is also adjacent to TPOs	with appropriate buffers. Extended Phase 1 Habitat survey required	an impact on any aspect of sustainability. The location within a BOA, could lead to a positive impact on environmental sustainability.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	?	The site is currently rural in character enclosed by trees.	Development of Sandleford Park will change the character of the area, making it less rural in nature.	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	?	The site is currently rural in character enclosed by trees, adjacent to a road of large detached dwellings.	Development of Sandleford Park will change the character of the area, making it less rural in nature.	Unlikely to have an impact on any aspect of sustainability
	Will it conserve and enhance the significance of the District's heritage assets?	?	The site is on the Wash Common Plateau near to the Battlefield sites.		
	Will it promote, conserve and enhance the District's cultural assets?	0	The site is close to cultural facilities in Newbury, but unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	The site is close to historical features, but unlikely to have an impact.		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will there be an impact on air quality?	0	Unlikely to have an impact on air quality		Unlikely to have an impact on any aspect of sustainability
	Will there be an impact noise levels?	0	Unlikely to have an impact on noise		
	Will there be an impact on soil quality?	0	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Greenfield		The site could have a negative impact on environmental sustainability as it is a Greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will the site be subject to / at risk from flooding	-	The site is within a surface water flood risk area.	An FRA would be required and appropriate mitigation measures, including SUDs provided. There has been no history of flooding on the site.	Flooding can have a negative impact on sustainability. Mitigation measures can reduce this impact and in many cases neutralise it.
11. <a href="#">To ensure a strong, diverse and sustainable economic base</a>	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a> <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significant impacts from developing this site. The site will have positive impacts on sustainability as it is close to local services and facilities with opportunities for walking, cycling and public transport. There are a number of unknown impacts on sustainability due to the site's location adjacent to the Sandleford Park site. There is a risk of surface water flooding on the site, but with mitigation measures the potential negative impact on sustainability should be neutralise. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### Summary of effects:

**Effect:** Predominantly neutral

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Newbury	<b>Parish:</b>	Newbury
<b>Site ID:</b>	NEW103	<b>Site Address:</b>	Sanfoin Cottage, Garden Close Lane, Newbury	<b>Development Potential:</b>	50 – 90 dwellings <5 dwellings

**Recommendation:**

[The site is recommended for inclusion within the settlement boundary.](#)

[At preferred Options the site was not recommended for allocation.](#)

~~The site is not recommended for allocation~~

**Justification:**

[Development potential for the site has been reduced to 5 dwellings to allow the site to be accessed via the existing private driveway.](#)

[Access is a significant concern should the site come forward for a larger number of dwellings.](#)

~~The site is adjacent to the Sandleford Park strategic site. Significant development has already been allocated to this area. Access to the site is a concern as, unless the site was an extension to Sandleford Park, additional land from third parties would be required to provide a suitable access, which could impact on deliverability.~~

**Discussion:**

**Site Description:**

The site is located to the south of Newbury, to the west of Sandleford Park strategic site. The site is adjacent to Garden Close Lane, a rural road in Wash Common.

**Landscape:**

The site is located in an area of medium / high landscape sensitivity.

**Flood Risk:**

The site is in FZ1, in a surface water flood risk area. There is no history of flooding on the site. An FRA would be required, and appropriate mitigation provided.

**Highways /Transport:**

[The development potential of the site has been reduced to allow the site to be accessed via a private drive.](#)

~~The traffic impact of the development would need to be assessed by a Transport Assessment.~~

~~Unless the site was to be an extension to Sandleford Park, access to the site is via Garden Close Lane, which is a narrow rural lane. The lane is public highway, but is a private street maintained at private expense. The only feasible way the site could be connected to the public highway is via the northern section of Garden Close Lane, although parcels of land would need to be obtained from three or four houses to widen the road.~~

Intermittent bus services pass near to the site, although there are opportunities for walking and cycling within Wash Common. Development at Sandleford Park would help to improve public transport services near to the site.

**Ecology:**

The site is within a BOA. An extended phase 1 habitat survey would be required [together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected.](#)

**Archaeology:**

The site is situated on the edge of the Wash Common plateau, but the site is unlikely to have formed part of the battlefield site.

Additional information is needed on the large 20<sup>th</sup> Century country house.

**Education:**

~~Local primary school provision is at capacity.~~ [Consultation with the Local Education Authority has confirmed](#)

## Site Selection – Site Commentary

[that existing education capacity issues will be dealt with through the provision of a new primary school on the Newbury College Site.](#) No comments made regarding secondary school capacity.

### **Environmental Health:**

No known air, noise or contamination issues.

### **Minerals and Waste:**

The site is partly underlain by gravel deposits. Consideration of policy 1 & 2 of the RMLP would be required.

No known waste issues.

### **Land use planning consultation zone:**

The site is not within an AWE consultation zone

### **Environment Agency:**

No specific comments have been made on this site. The site is within SPZ2. [Although the EA has not raised any objections to development within SPZs, care would need to be taken to ensure no opportunities for contamination of groundwater occurred.](#)

### **Thames Water:**

[Comments made prior to the reduced developable area:](#)

Significant concern regarding Water Supply capability, specifically water resources capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is highly likely to be required to ensure sufficient capacity is brought forward ahead of any development.

A water supply strategy would be required.

Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A drainage strategy would be required

### **Parish Council:**

Concern raised regarding access to the site. General agreement that the site should be left as green space.

[At preferred options the Town Council did not comment on this site.](#)

### **Preferred Options Consultation Key Issues:**

[Comments received from site promoter requesting the site is considered for 5 dwellings to overcome the access constraint on the site.](#)

[For the consultation responses and Council's response, please see the Statement of Consultation.](#)

### **SA/SEA:**

The SA/SEA indicates a predominantly neutral sustainability impact. There are no significant impacts from developing this site. The site will have positive impacts on sustainability as it is close to local services and facilities with opportunities for walking, cycling and public transport. There are a number of unknown impacts on sustainability due to the location adjacent to the Sandleford Park site. There is a risk of surface water flooding on the site, but with mitigation measures the potential negative impact on sustainability should be neutralised. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

~~The site is proposed for approximately 130 dwellings and is considered to be an unconstrained site that could form an extension to Sandleford Park.~~ [Site is promoted for 5 dwellings, to overcome the access constraint, as up to 5 dwellings can be accessed via a private driveway.](#)

### Key: Effects of option on SA objectives

++	+	?	0	-	--
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site is close to local services and facilities as well as open countryside to support and encourage healthy, active lifestyles.	Development of country parkland at Sandleford Park will further encourage opportunities for active, healthy lifestyles.	The site's location close to local services and facilities gives opportunities for walking and cycling, meaning that there could be a positive impact on environmental and social sustainability.
	Will it increase opportunities for access to sports facilities?	+	The site is close to sports facilities at Newbury rugby club.		
	Will it protect and enhance green infrastructure across the district?	0	Unlikely to impact on GI		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The site is close to local services and facilities within Wash Common and near to Newbury town centre.		The site is located close to areas of Employment and education as well as other services and facilities within Newbury, and public transport opportunities. This means that the site could have a positive impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	There are opportunities for walking and cycling in the immediate vicinity of the site. An intermittent bus service passes the site	Development at Sandleford park will improve bus services past the site.	The site is close to local services and facilities which encourage walking or cycling, and therefore have a positive impact on environmental and social sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity	0	The site is within a BOA, so while there are opportunity to improve		The site is unlikely to have an impact on any aspect of

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

	and geodiversity assets across West Berkshire?		biodiversity the site is unlikely to have a significant impact.		sustainability.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	0	The site is within an area of medium landscape sensitivity.		
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	+	The site is well related to existing residential development.	The site is adjacent to Sandeiford Park.	Unlikely to have an impact on any aspect of sustainability
	Will it conserve and enhance the significance of the District's heritage assets?	?	The site is on the Wash Common Plateau near to the Battlefield sites.		
	Will it promote, conserve and enhance the District's cultural assets?	0	The site is close to Cultural facilities in Newbury, but unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	The site is close to historical features, but unlikely to have an impact.		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact on air quality		Unlikely to have an impact on any aspect of sustainability
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact on noise		
	Will there be an impact on soil quality?	0	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Greenfield, residential garden		The site could have a negative impact on environmental sustainability as it is a Greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will the site be subject to / at risk from flooding	<b>0</b>	There is no flood risk on the site.	SUDs would need to be provided.	Unlikely to have an impact on any element of sustainability.
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<b>0</b>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<b>0</b>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significant sustainability impacts from this site. It is close to local services and facilities within Wash Common and would benefit from the neighbouring development at Sandford Park all of which have a positive impact on sustainability. The site is greenfield could have a negative impact on environmental sustainability. Mitigation measures should be able to reduce the impact on the environment. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Newbury	<b>Parish:</b>	Newbury
<b>Site ID:</b>	NEW104	<b>Site Address:</b>	Land at Warren Road, Newbury	<b>Development Potential:</b>	10 dwellings (0.32ha at 30dph) <a href="#">&lt;5 dwellings</a>

### Recommendation:

[The site is recommended for inclusion within the settlement boundary. At preferred options the site was recommended for allocation.](#)

~~The site is recommended for allocation, and to be included within the settlement boundary review.~~

### Justification:

The site is well related to existing development and is a small site adjacent to Sandleford Park. [The settlement boundary review process, will includes the Sandleford Park development within the settlement boundary, which will mean that the site is included within the Settlement boundary and does not need to be allocated.](#)

### Discussion:

#### Site Description:

The site is located to the south of Newbury, east of Wash Common adjacent to Sandleford Park [and the Newbury settlement boundary](#). It is well related to existing residential development with good access to local services and facilities at Wash Common. [The site is currently used as an orchard and vegetable plot.](#)

#### Landscape:

The site is in an area of medium / high landscape sensitivity.

#### Flood Risk:

The site is in FZ1. SUDs would need to be provided.

#### Highways /Transport:

The traffic impact from this site is expected to be limited.

There are public transport links from Wash Common into Newbury, with good opportunities for walking and cycling.

#### Ecology:

No known issues.

#### Archaeology:

The site is on the edge of the Wash Common plateau, but is unlikely to have been within the Newbury battlefield.

#### Education:

~~Local primary school provision is at capacity.~~ [Consultation with the Local Education Authority has confirmed that existing education capacity issues will be dealt with through the provision of a new primary school on the Newbury College Site.](#) No comments made regarding secondary school capacity.

#### Environmental Health:

No known air quality, noise or contamination issues.

#### Minerals and Waste:

No known mineral or waste issues.

#### Land use planning consultation zone:

Site is not within an AWE consultation zone

#### Environment Agency:

No specific comments made on this site. Site in SPZ2.

#### Thames Water:

~~Significant concern regarding Water Supply capability, specifically water resources capability. Current water~~

## Site Selection – Site Commentary

~~supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is highly likely to be required to ensure sufficient capacity is brought forward ahead of any development.~~

~~A water supply strategy would be required.~~

No [water supply or](#) wastewater infrastructure issues envisaged.

### **Parish Council:**

The ~~Parish~~ [Town](#) Council had mixed views on the site, some wishing it to remain as green space other as a small extension to Sandleford Park.

[At Preferred Options the Town Council had no further comments to add regarding this site.](#)

### **SA/SEA:**

The SA/SEA indicates a predominantly neutral sustainability impact. There are no significant sustainability impacts from this site. It is close to local services and facilities within Wash Common and would benefit from the neighbouring development at Sandleford Park all of which have a positive impact on sustainability. The site is greenfield could have a negative impact on environmental sustainability. Mitigation measures should be able to reduce the impact on the environment. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The site is proposed for 2 storey 4-5 bedroom houses in keeping with adjoining development.

## Site Selection – Site Assessment

### Summary of Site Assessment

Key Issues:	<ul style="list-style-type: none"> <li>- Greenfield</li> <li>- Surface water flood risk</li> <li>- <a href="#">Proximity to ancient woodland</a></li> </ul>
-------------	---

### Site Assessment

<b>Parish Council consultation response:</b>	<p>This area is already densely populated and there was general agreement concerning the implications for existing infrastructure (in particular surgeries and highways). Stoney Lane would need widening which the parish council would be against. Traffic in Turnpike Road would be an issue. Flooding issues were also highlighted. There was general concern about the loss of visual amenity as the area in one of the gateways into Ashmore Green. There was an appeal on the site about 5 years ago, and the Inspector determined a height over which development shouldn't go due to landscape implications. The site is very steep in places. The area is an important resource for birdwatchers, walkers and horse riders. <a href="#">Concern over the impact on the adjacent ancient woodland.</a> Flooding of Manor Park, Waller Drive, Creswell Close and Turnpike Industrial Estate in 2007.</p> <p><a href="#">At preferred options the parish council raised concerns regarding the loss of valued views across the rural valley, the impact of the proposed access in relation to the adjacent ancient woodland (Yates Copse), surface water flood risk to neighbouring properties, and significant car dependency due to a lack of public transport options in the area.</a></p>

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	Site is close to local services and facilities as well as open countryside and a local recreation ground.		The site's location to the north of Newbury gives opportunities for walking and cycling and gives easy access to local services and facilities. There are limited opportunities for access to sports facilities and little impact on GI, therefore overall this site is unlikely to have an impact on any aspect of sustainability.
	Will it increase opportunities for access to sports facilities?	<b>?</b>	The site is not very close to formal sports facilities, although there is a recreation ground within walking distance of the site.		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	The site is close to local amenity space, but it is unlikely that the development would impact on GI		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>+</b>	The site is close to areas of protected employment, and within easy access of a number of employment sites and education facilities.		The site is located close to areas of employment and education as well as other services and facilities within Newbury, as well giving each access to the strategic road network. And public transport opportunities. This means that the site could have a positive impact on the district's economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>+</b>	The site is located within Newbury. There are a number of public transport options, including a bus <del>service route pass the</del> <a href="#">passing close to the site</a> and a railway station (Newbury Racecourse) approximately 3km from the site.		The site is close to local services and facilities which encourage walking or cycling, and therefore have a positive impact on environmental and social sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			Newbury station is just over 3km from the site. There are a number of opportunities for walking and cycling to local services and facilities.		
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	-	The site is adjacent to ancient woodland and a LWS. Badger Setts are present adjacent to the site.	Appropriate buffers would be required and an extended phase 1 Habitat Survey.	The site is open and rural in nature, therefore development could have a negative impact on this element of environmental sustainability. Mitigation works, including appropriate landscaping could help to reduce this impact.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	?	The site is rural in nature, especially to the north. In an area of medium landscape sensitivity.	Landscape work may be required. Potential to only develop the southern part of the site.	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	0	Development is adjacent to existing residential development, although would extend the building line to the north.		The site is unlikely to have an impact on any aspect of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	0	No previous work on archaeology has been done on the site.	Archaeological assessment would be required.	
	Will it promote, conserve and enhance the District's cultural assets?	0	The site is close to cultural facilities in Newbury, but unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	The site is close to historical features, but unlikely to have an impact.		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact on air quality		The site is unlikely to have an impact on any aspect of sustainability.
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact on noise		
	Will there be an impact on soil quality?	0	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	Unlikely to have an impact on water quality.		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Site is Greenfield		The site could have a negative impact on environmental sustainability as it is a greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	-	The site is within a surface water flood risk area adjacent to a critical drainage area.	An FRA would be required with appropriate mitigation measures, including SUDs. All water generated on/from the site will need to be managed on the site.	Flooding can have a negative impact on all elements of sustainability. Mitigation measures help to reduce this impact.
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

### Summary

There are no significant, sustainability impacts from this site. The site is close to local services and facilities, with opportunities for walking and cycling and good access to the countryside. All of these aspects have a positive impact on sustainability. There are potential negative impacts on environmental sustainability due to the rural location of the site and potential impact on the landscape, and as a result of flood risk on the site. Mitigation measures would help to mitigate this impact, by providing appropriate landscaping and flood mitigation. [Significant flood mitigation and management would be required given the site's proximity to the critical drainage area, through SUDs. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Newbury	<b>Parish:</b>	Cold Ash
----------------------	-----	--------------------	---------	----------------	----------

<b>Site ID:</b>	NEW105	<b>Site Address:</b>	Land at Yates Copse, Newbury	<b>Development Potential:</b>	45 dwellings (1.5ha at 30dph)
-----------------	--------	----------------------	------------------------------	-------------------------------	-------------------------------

**Recommendation:**

The site is not recommended for allocation

**Justification:**

Development of this site in addition to NEW045 is considered overdevelopment of the area. NEW045 was considered to be better related to the existing settlement than this site. The potential impact on Yates Copse area of ancient woodland.

[At preferred options the site area promoted was reduced to Area A only \(the southernmost part of the site\). This area of the site is within the existing settlement boundary, although there are concerns regarding the developability of the site due to the requirement for buffers to the ancient woodland.](#)

**Discussion:**

**Site Description:**

The site is located to the north of Newbury, close to local services and facilities. [Area A is within the current settlement boundary.](#)

**Landscape:**

The site is in an area of medium landscape sensitivity. Development would need to be accompanied by landscaping to reduce the impact of development on the character of the landscape.

**Flood Risk:**

The site is in FZ1. An area of surface water flood risk runs through the centre of the northern part of the site and down the eastern boundary of the southern part of the site. The site is also adjacent to a critical drainage area to the south. An FRA, taking into account surface water flood risk would be required. Appropriate mitigation measures including SUDs would need to be provided. [Any water generated on the site would need to be managed on site.](#)

**Highways /Transport:**

This site has been assessed along site part of NEW045.

The impact of additional traffic would need to be assessed through a Transport Assessment. Traffic is likely to distribute via a number of routes, many of which are already congested during peak travel periods.

Access can be obtained via Waller Drive, or if developed as part of NEW045 access could be via Stoney Lane, but would need to be widened with footways provided to connect the site to existing footways along Stoney Lane. Other, secondary accesses could be provided via Wansley Gardens, Laud Close and Fleetwood Close.

**Ecology:**

The site is adjacent to ancient woodland (Yates Copse) and a Local Wildlife Site. Appropriate buffers would be required. The site is adjacent to an area containing badger setts. An extended phase 1 habitat survey would be required [together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected.](#)

**Archaeology:**

No previous work has been carried out on the site.

**Education:**

~~Local primary school provision is at capacity.~~ [Consultation with the Local Education Authority has confirmed that existing education capacity issues will be dealt with through the provision of a new primary school on the Newbury College Site.](#) No comments made regarding secondary school provision.

**Environmental Health:**

No known air, noise or contamination issues. [Yates Copse is close to a number of industrial uses, therefore, some consideration of potential for contamination would be required.](#)

## Site Selection – Site Commentary

### **Minerals and Waste:**

No known minerals or waste issues.

### **Land use planning consultation zone:**

Site is not within an AWE consultation zone

### **Environment Agency:**

No specific comments made on this site. The site is within SPZ2. [Although the EA have not raised any objections to development within SPZs, case would need to be taken to ensure no opportunities for contamination of groundwater occurred.](#)

### **Thames Water:**

No water supply infrastructure issues envisaged.

Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A drainage strategy would be required

### **Parish Council:**

This area is already densely populated and there was general agreement concerning the implications for existing infrastructure (in particular surgeries and highways). Stoney Lane would need widening which the parish council would be against. Traffic in Turnpike Road would be an issue. Flooding issues were also highlighted. There was general concern about the loss of visual amenity as the area in one of the gateways into Ashmore Green. There was an appeal on the site about 5 years ago, and the Inspector determined a height over which development shouldn't go due to landscape implications. The site is very steep in places. The area is an important resource for birdwatchers, walkers and horse riders. [Concern over the impact on the adjacent ancient woodland.](#) Flooding of Manor Park, Waller Drive, Creswell Close and Turnpike Industrial Estate in 2007.

[At preferred options the parish council raised concerns regarding the loss of valued views across the rural valley, the impact of the proposed access in relation to the adjacent ancient woodland \(Yates Copse\), surface water flood risk to neighbouring properties, and significant car dependency due to a lack of public transport options in the area.](#)

### **Preferred Options Consultation Key Issues:**

- [Concern regarding access, flooding, sloping site, traffic issues and proximity to ancient woodland](#)

[The site promoter submitted comments, reducing the site area proposed for development to areas A and B, for 10 dwellings with access, which would provide additional access to NEW045, to be in line with the proposed development at NEW045.](#)

[For full consultation responses and the Council's response please see the Statement of Consultation.](#)

### **SA/SEA:**

The SA/SEA indicates a predominantly neutral sustainability effect. There are no significant, sustainability impacts from this site. The site is close to local services and facilities, with opportunities for walking and cycling and good access to the countryside. All of these aspects have a positive impact on sustainability. There are potential negative impacts on environmental sustainability due to the rural location of the site and potential impact on the landscape, and as a result of flood risk on the site. Mitigation measures would help to mitigate this impact, by providing appropriate landscaping and flood mitigation. [Significant flood mitigation and management would be required given the site's proximity to the critical drainage area, through SUDs. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The site submitted is split into a number of areas. Area A is recognised as the part of the site least likely to affect the character and appearance of the surrounding area. ~~No specific proposals have been submitted.~~

## Site Selection – Site Commentary

At preferred options Area A only promoted for 10 dwellings, with potential for access to be provided through Area B to NEW045.

## Site Selection – Site Assessment

<b>Spatial Area</b>	Newbury & Thatcham	<b>Settlement:</b>	Newbury	<b>Parish:</b>	Newbury
---------------------	--------------------	--------------------	---------	----------------	---------

<b>Site ID:</b>	NEW106	<b>Site Address:</b>	Land at Moor Lane Depot, Hill Road, Moor Lane, Speen
-----------------	--------	----------------------	--

<b>Development Potential:</b>	40-42 dwellings (1.04ha at 40dph)	<b>SHLAA Assessment:</b>	Potentially Developable
-------------------------------	-----------------------------------	--------------------------	-------------------------

### Summary of Site Assessment

Key Issues: - Greenfield - Ground and surface water flood risk - Medium/high landscape sensitivity
---

### Site Assessment

<b>Parish Council consultation response:</b>	The Town Council were concerned about the access to the site.
--	---

A) Automatic exclusion			
Criteria	Yes/No*	Comments	
Less than 5 dwellings	N		
Planning Permission	N		
Within flood zone 3	N		
Within significant national or international habitat / environmental / historical protection	SSSI	N	
	SAC	N	
	SPA	N	
	Registered Battlefield	N	
	Grade 1 / II* Park and Gardens	N	
Landscape	Adverse impact on the character of AONB (from LSA)	N	
SHLAA Assessment	Not Currently developable	N	
Land Use	Protected Employment Land	N	
AWE consultation zone	Inner	N	
Relative scale in relation to settlement role and function	Inappropriate scale in relation to role and function of settlement within the settlement hierarchy	N	
Within settlement boundary		N	Adjacent to the settlement boundary

\* Any 'yes' response will rule the site out

B) Considerations			
Criteria	Yes / No / Adjacent / Unknown	Comments	
Land use	Previously Developed Land	N	Greenfield
	Racehorse Industry	N	
Flood risk	Flood Zone 2	N	
	Groundwater flood risk	Y	
	Surface water flood risk	Y	Groundwater emergence zone
	Critical Drainage Area	N	
	Air Quality	N	
Contamination / pollution	Contaminated Land	N	
	Other	Y	<a href="#">The site lies within the EA's groundwater vulnerability zone.</a>
Highways / Transport	Access issues	U	Access <del>would could</del> be obtained via Hill Road, that would need to be widened and adopted as public highway. Concern over sight lines onto Speen Lane, however Hill Road would need to be widened and adopted as a public highway. A footway would also be required to connect the site to existing footways along Speen Lane. Sight lines onto Speen Lane are limited and are therefore a concern, as is the gradient up to Speen Lane.
	Highway network suitability	U	Development would generate approximately 252 daily vehicle movements, including about 25 during the 08:00 to 09:00 AM peak. There is some concern over the additional impact on Speen Lane and the gradient of Hill Road to reach Speen Lane.
	Public Transport network	U	There are a number of public transport options in Newbury. 2 bus routes pass near to the site with an hourly service.
	Footways/Pavements	U	There are footways throughout Newbury. A footway would need to be provided along Hill Road.

	Will it conserve and enhance the local distinctiveness of the character of the landscape?	0	Unlikely to have an impact on the character of the landscape		
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	+	The site is well related to existing development.		Unlikely to have an impact on any aspect of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	0	<a href="#">There is no previous archaeological work done on the site, therefore, the impact on the district's heritage assets is unknown.</a> <a href="#">No previous work on archaeology has been done on the site, however it is considered unlikely that there would be archaeological interest on the site. It is unlikely that an archaeological assessment would be</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">required as part of a planning application.</a>		
	Will it promote, conserve and enhance the District's cultural assets?	<b>0</b>	The site is close to Newbury and the cultural facilities within the town centre.		
	Will it provide for increased access to and enjoyment of the historic environment?	<b>0</b>	Unlikely to have an impact on access to or enjoyment of the historic environment.		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	<b>0</b>	Unlikely to have an impact on air quality		Unlikely to have an impact on any aspect of sustainability.
	Will the site be at risk from, or impact on, noise levels?	<b>0</b>	Unlikely to have an impact on noise		
	Will there be an impact on soil quality?	<b>0</b>	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	<b>0?</b>	<del>Unlikely to have an impact on water quality</del>  <a href="#">The site lies within the EA's groundwater vulnerability zone and 10% of the site is underlain by a major aquifer. It is also within a Source Protection Zone (SPZ3) although the EA has no in principle objections to development in SPZs.</a>		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>-</b>	Greenfield		The site could have a negative impact on environmental sustainability as it is a greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	<b>?</b>	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	<b>-</b>	Groundwater and surface water flood risk.	No evidence of flooding on the site. An FRA would be required and appropriate mitigation, including SUDs provided.	Flood risk can have a negative impact on sustainability. Mitigation measures including SUDs will help to mitigate this impact.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

The site's location very close to Newbury town centre means that it scores significantly positive in terms of opportunities for sustainable modes of travel and therefore, on sustainability. The site is close to local services and facilities, with easy access to the countryside for supporting active healthy lifestyles, all of which impact positively on sustainability. The area is at risk from ground and surface water flooding, which without appropriate mitigation could have a negative impact on sustainability. [Unless the required highway improvements can be made there could potentially be a negative impact on social sustainability due to safety concerns. It is likely that with regard to biodiversity on the site, appropriate measures would mitigate any negative impact.](#) The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## **Site Selection – Sustainability Appraisal / Strategic Environmental Assessment**

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Newbury	<b>Parish:</b>	Newbury
<b>Site ID:</b>	NEW106	<b>Site Address:</b>	Land at Moor Lane Depot, Hill Road, Moor Lane, Speen	<b>Development Potential:</b>	40-42 dwellings (1.04ha at 40dph)

### Recommendation:

The site is **not** recommended for allocation

[At preferred options the site was recommended as an option for allocation.](#)

### Justification:

The site is well related to Newbury Town Centre, close to local services and facilities, with good opportunities for walking and cycling as well as public transport. [However, the site promoter has been unable to demonstrate the ability to achieve suitable sightlines and the construction of a pedestrian route. For these reasons the site is not being proposed to be taken forward for allocation.](#)

### Discussion:

#### Site Description:

The site is located to the west of Newbury, with residential development on two sides of the site. The site is very close to Goldwell Park and Northcroft Leisure Centre.

#### Landscape:

The site is an area of medium / high landscape sensitivity.

#### Flood Risk:

The site is in FZ1, within an area of groundwater and surface water flood risk; although there is no evidence that the site has flooded. An FRA would be required and appropriate mitigation, including SUDs provided.

#### Highways /Transport:

There are some concerns about additional traffic on Speen Lane. Access via Hill Road would need to be widened and adopted as public highway. A Footway would also need to be provided along Hill Road.

The site well related to Newbury for walking, cycling and public transport.

#### Ecology:

An extended phase 1 habitat survey would be required.

#### Archaeology:

No previous work carried out on the site.

#### Education:

Local primary school provision is at capacity. No comments made about secondary school provision.

#### Environmental Health:

No known air, noise or contamination issues.

#### Minerals and Waste:

~~No known mineral or waste issues.~~

[The site is partially underlain by construction aggregates. Policies 1 and 2 of the RMLP are therefore relevant.](#)

#### Land use planning consultation zone:

Site is not within an AWE consultation zone

#### Environment Agency:

No specific comments made on this site. The site is within SPZ3, major aquifer (10%). There is a high risk of contamination of groundwater.

#### Thames Water:

No water supply or wastewater infrastructure issues envisaged.

## Site Selection – Site Commentary

### **Parish Council:**

In principle the Parish Council do not object to this site, there are some concerns over access to the site.

### **SA/SEA:**

The SA/SEA indicates a predominantly neutral sustainability effect. The site's location very close to Newbury town centre means that it scores significantly positive in terms of opportunities for sustainable modes of travel and therefore, on sustainability. The site is close to local services and facilities, with easy access to the countryside for supporting active healthy lifestyles, all of which impact positively on sustainability. The area is at risk from ground and surface water flooding, which without appropriate mitigation could have a negative impact on sustainability. [Unless the required highway improvements can be made there could potentially be a negative impact on social sustainability due to safety concerns. It is likely that with regard to biodiversity on the site, appropriate measures would mitigate any negative impact. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The site is being promoted for 42 dwellings in a mix of dwellings types and sizes. The site was previously promoted in relation to the Newbury Local Plan and recommended by the Inspector in his December 1999 report. That site was not allocated as there was sufficient land allocated at the time.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Newbury	<b>Parish:</b>	Newbury
----------------------	-----	--------------------	---------	----------------	---------

<b>Site ID:</b>	NEW108	<b>Site Address:</b>	Land at Wildwoods, Kendrick Road, Wash Common	<b>Development Potential:</b>	69 <del>70</del> dwellings (2.3ha at 30dph)
-----------------	--------	----------------------	---	-------------------------------	---

**Key: Effects of option on SA objectives**

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	0	Site will be close to facilities provided at Sandford, but the site itself is unlikely to support and encourage healthy, active lifestyles.		The site is unlikely to have an impact on any aspect of sustainability.
	Will it increase opportunities for access to sports facilities?	0	The site is approximately 2km from facilities at Newbury Rugby Club.		
	Will it protect and enhance green infrastructure across the district?	0	Unlikely to have an impact on GI		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	?	The site is some distance from employment opportunities within the town centre. Other sites have better opportunities for access to employment.		The site is unlikely to have an impact on any aspect of sustainability
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	?	An intermittent bus route passes the site. There are opportunities for walking and cycling, which could be improved through the development of Sandford.	Development at Sandford Park would be likely to improve opportunities for walking and cycling.	The site itself could lead to a negative impact on environmental and social sustainability without careful planning and design due to the location of the site and limited range of facilities without the Sandford development.
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	-	The site is within a BOA and Local Wildlife Site with TPOs adjacent to the site. Site is within an area designated as UKBAP woodland.	Extended Phase 1 Habitat survey would be required.	Potential for the site to have a negative impact on environmental sustainability.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	-	The site is in an area of medium / high landscape sensitivity, with steep slopes. There are TPOs on many of the trees on the site.	The developable area could be reduced to protect the trees.	

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	-	The site is detached from the existing settlement, although is adjacent to part of the proposed development area at Sandleford.	Development at Sandleford Park would be required to link this site into the existing built environment.	Unlikely to have an impact on any aspect of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	0	The site is in a sensitive HLC, and is the site of a previous isolation hospital. Development would be unlikely to have an impact		
	Will it promote, conserve and enhance the District's cultural assets?	0	The site is close to Newbury and the cultural facilities within the town centre.		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact on access to or enjoyment of the historic environment.		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact on air quality		Unlikely to have an impact on any aspect of sustainability.
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact on noise		
	Will there be an impact on soil quality?	0	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	Unlikely to have an impact on water quality		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Greenfield, residential garden		The site could have a negative impact on environmental sustainability as it is a greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	-	The site is adjacent to FZ2, within a surface water flood risk area.	An FRA would be required and appropriate mitigation measures, including SUDs provided.	Flooding has a negative impact on all elements of sustainability. Mitigation measures can reduce this impact.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significant sustainability issues with this site. There are no positive impacts from this site as it is some distance from local services and facilities, with limited opportunities for walking, cycling and using public transport. There are a number of uncertain impacts as the site is poorly related to existing residential development. Development could have a negative impact on environmental sustainability without appropriate mitigation and buffers. The site is within a surface water flood risk area, which could have a negative impact on sustainability without appropriate mitigation measures. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## **Site Selection – Sustainability Appraisal / Strategic Environmental Assessment**

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Newbury	<b>Parish:</b>	Newbury
<b>Site ID:</b>	NEW108	<b>Site Address:</b>	Land at Wildwoods, Kendrick Road, Wash Common	<b>Development Potential:</b>	69 <del>70</del> dwellings (2.3ha at 30dph)

**Recommendation:**

The site is not recommended for allocation

**Justification:**

The site is poorly related to the existing settlement boundary and would require development at Sandford Park to take place before it was adjacent to residential development. The site is largely wooded with many of the trees being protected by TPOs.

**Discussion:**

**Site Description:**

The site is located to the south of Newbury adjacent to the southern part of Sandford Park.

**Landscape:**

The site is in an area of medium / high landscape sensitivity. The site is sloping in places.

**Flood Risk:**

5% of the site is within FZ2 as the site is adjacent to the River Enborne and an ordinary water course. The site is at risk from a surface water flooding. An FRA would be required and appropriate mitigation including SUDs provided. Any development would need to be at least 8m from the river bank.

**Highways /Transport:**

No specific comments have been received on this site.

Access to the site would require land from other sites, either from Sandford Park or from ~~New~~[NEW](#)103.

**Ecology:**

The site is within a BOA and Local Wildlife site. The woodland is designated as UKBAP woodland and many of the trees are protected by TPOS. An extended phase 1 habitat survey would be required [together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected.](#)

**Archaeology:**

The site is a sensitive HLC type and located on the site of a former isolation hospital. Further assessment would be required.

**Education:**

A local primary school provision is at capacity. [Consultation with the Local Education Authority has confirmed that existing education capacity issues will be dealt with through the provision of a new primary school on the Newbury College Site.](#) No comments made regarding secondary school provision.

**Environmental Health:**

No known air, noise or contamination issues.

**Minerals and Waste:**

The site is partly underlain by gravel deposits. Therefore policy 1 & 2 of the RMLP would need to be considered.

**Land use planning consultation zone:**

The site is not within an AWE consultation zone

**Environment Agency:**

The EA recommend that this site is not allocated as it is partially in FZ2, adjacent to the River Enborne and an ordinary water course. The site is within SPZ2. [Although the EA have not raised any objections to development within SPZs, care would need to be taken to ensure no opportunities for contamination of groundwater occurred.](#)

## Site Selection – Site Commentary

### **Thames Water:**

Significant concern regarding Water Supply capability, specifically water resources. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is highly likely to be required to ensure sufficient capacity is brought forward ahead of any development.

A detailed water supply strategy would be required.

Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A drainage strategy would be required

### **Parish Council:**

The [Greenham](#) Parish Council would like to see this site left as green space. Newbury Town Council did suggest that the site could be used for wind turbines to provide energy to Sandleford Park.

[At Preferred Option neither the Town or Parish Council comments on this site.](#)

### **Preferred Options Consultation Key Issues:**

[No comments received on this site.](#)

### **SA/SEA:**

The SA/SEA indicates a predominantly neutral sustainability impact. There are no significant sustainability issues with this site. There are no positive impacts from this site as it is some distance from local services and facilities, with limited opportunities for walking, cycling and using public transport. There are a number of uncertain impacts as the site is poorly related to existing residential development. Development could have a negative impact on environmental sustainability without appropriate mitigation and buffers. The site is within a surface water flood risk area, which could have a negative impact on sustainability without appropriate mitigation measures. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The site is being promoted as an extension of Sandleford Park for approximately 46 dwellings, including an element of affordable housing.

# Thatcham Site Assessments

## Site Selection – Site Assessment

<b>Spatial Area</b>	Newbury / Thatcham	<b>Settlement:</b>	Thatcham	<b>Parish:</b>	Thatcham
---------------------	--------------------	--------------------	----------	----------------	----------

<b>Site ID:</b>	THA004	<b>Site Address:</b>	Rainsford Farm, Crookham Hill, Thatcham
-----------------	--------	----------------------	---

<b>Development Potential:</b>	764 dwellings (36.4-25ha at 30dph)	<b>SHLAA Assessment:</b>	Not currently developable
-------------------------------	------------------------------------	--------------------------	---------------------------

### Summary of Site Assessment

Key Issues:

- [Recommended within SHLAA as Not Currently Developable](#)
- The site falls within Flood Zone 3, which automatically rules the site out
- [Scale of site too large for allocation through the HSA DPD](#)

### Site Assessment

<b>Parish Council consultation response:</b>	Flooding is a major issue. Marina idea is one of interest. Development here could not take place unless improvements were made to the Thatcham Level crossing. Potential to open up another crossing of the Kennet through the site. May not be practical now, but should be considered for longer term.

To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-/+	<a href="#">The site is partly brownfield and partly greenfield land therefore there is the potential for both positive and negative effects on sustainability.</a>		<a href="#">The site is partly brownfield and partly greenfield land therefore there is the potential for both positive and negative effects on sustainability.</a>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	<a href="#">The level of impact depends on location, building materials / construction, transport / design</a>	<a href="#">Mitigation could include Transport Assessment / Travel Plans, and ensure compliance with policy CS15 of the Core Strategy.</a>	<a href="#">Without consideration of sustainability construction techniques, and the promotion of alternative modes of transport, development could have a negative impact on environmental sustainability.</a>
	Will the site be subject to / at risk from flooding	?	<a href="#">Flood risk on the site is low, however there is an area of surface water flood risk adjacent to the site</a>	<a href="#">An FRA would be required and SUDs would need to be provided.</a>	<a href="#">Flooding can have a negative impact on all elements of sustainability. Mitigation measures should reduce this impact.</a>
11. To ensure a strong, diverse and sustainable economic base	Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a> <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	Will it promote and support the vitality and viability of the District's commercial centres?	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

### Summary

Overall the effect on sustainability will be predominantly neutral and the SA/SEA does not highlight any significant sustainability effects.

The site is close to local services and facilities with opportunities for walking, cycling and use of public transport, which could have a positive effect in terms of sustainability.

The site is adjacent to the sewage treatments works, which could negatively impact upon the air quality. There is also the potential for an impact on noise levels, as well as soil and water quality given the close proximity to the treatment works.

The majority of development on the site would take place on greenfield land which could negatively impact on the environmental sustainability of the site, and the sites proximity to the SSSI, SAC and Local Nature Reserve mean development on the site could have a negative impact on environmental sustainability. The site could also negatively impact upon the landscape character and built environment as the area provides an important open area which physically and visually separates Newbury from Thatcham.

Flooding can have a negative impact on all elements of sustainability. Mitigation measures should reduce this impact.

#### **Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	<a href="#">N&amp;T</a>	<b>Settlement:</b>	<a href="#">Thatcham</a>	<b>Parish:</b>	<a href="#">Thatcham</a>
<b>Site ID:</b>	<a href="#">THA006</a>	<b>Site Address:</b>	<a href="#">Lower Way Farm, Thatcham</a>	<b>Development Potential:</b>	<a href="#">50 dwellings</a>

### Recommendation:

[The site is not recommended for allocation](#)

### Justification:

[Flood Zones 2 and 3 are located on the southern part of the site, and as the EA have advised that development must be avoided in Flood Zones 2 and 3 this reduces the development capacity on the site. Development is constrained further by the presence of a rising main which runs along the northern part of the site. With a reduced development capacity it is considered that development \(see concept plan submitted at Preferred Options stage\) fails to reflect the existing settlement pattern and would not relate well to existing development on Lower Way.](#)

[The Thatcham Landscape Sensitivity Study \(LSS, 2009\) identifies the site as being located within an area \(Thatcham Lakes\) which provides an important open area which physically and visually separates Newbury from Thatcham and it is considered that the development of this site would fail to reflect this principle and detract from the separate identities of the two settlements.](#)

[In addition, the site is adjacent to sewage treatment works which is known to release a foul smell, especially in the summer months. It is considered that the location of the site, adjacent to the sewage treatment works would impact on the quality of life for future residents.](#)

[The Core Strategy sets out the Spatial Strategy for the District and provides an overall framework to guide development over the plan period. The Core Strategy is clear that Thatcham is to receive a lower allocation than other urban areas given the rapid expansion of the town in recent years. This is to allow Thatcham a period of consolidation, ensuring the infrastructure and town centre facilities can be upgraded and meet the demands of the existing population. This will enable Thatcham to become more self-contained, encouraging residents to shop and socialise locally. In accordance with the Core Strategy, Thatcham will not accommodate large scale development at this stage and, whilst this site is not large scale, it is considered that there are other sites within the town which are more suitable for allocation.](#)

### Discussion:

#### Site Description:

[The site is located to the south of Thatcham, close to Thatcham town centre and local service and facilities. To the east of the site lies the sewage treatment works, and to the west Newbury Leisure Park.](#)

#### Landscape:

[The Landscape Sensitivity Study \(LSS\) carried out for Thatcham in 2009, identifies the site as being located within an area of medium landscape sensitivity. The LSS identifies this site as being located within the Thatcham Lakes area – an important landscape buffer between Newbury and Thatcham, but is visually marred by some development on its edges. Thatcham Lakes is an important setting to the south of Thatcham and east of Newbury. The sharp contrast with the built form is of significant value. It provides an important open area which physically and visually separates Newbury from Thatcham.](#)

#### Flood Risk:

[The southern part of the site is within flood zones 2 and 3, with the northern part in flood zone 1. The site also adjacent to areas of surface water flood risk. Development will not take place within flood zones 2 and 3. An FRA would be required and appropriate SUDs provided.](#)

#### Highways /Transport:

[The traffic generated from the site is considered to have a limited impact on the highway network.](#)

[There are good public transport opportunities close to the site.](#)

#### Ecology:

[The site is adjacent to a SSSI, SAC and Local Nature Reserve. The site is also within a Biodiversity](#)

## Site Selection – Site Commentary

### Opportunity Area.

#### **Archaeology:**

No known issues – further investigations may be required.

#### **Education:**

Primary and secondary school provision is at capacity.

#### **Environmental Health:**

Potential contamination due to proximity of contaminated sites. Further investigation required. Site is adjacent to sewage treatment works which could impact on quality of life, especially on air quality. An odour impact assessment would be required.

#### **Minerals and Waste:**

The site is partially underlain by gravel deposits. Consideration of policies 1 & 2 of the RMLP required.

#### **Land use planning consultation zone:**

The site is not within an AWE consultation zone

#### **Environment Agency:**

No specific comments made on this site.

#### **Thames Water:**

No specific comments made on this site. An odour impact assessment would be required for the site given its proximity to the sewage treatment works.

#### **Parish Council:**

Parish Council not consulted on this site as it was re-submitted as part of the Preferred Options Consultation.

#### **Preferred Options Consultation key issues:**

One response received regarding this site from the site promoter.

For the consultation responses and Council's response, please see the Statement of Consultation.

#### **SA/SEA:**

Overall the effect on sustainability will be predominantly neutral and the SA/SEA does not highlight any significant sustainability effects.

The site is close to local services and facilities with opportunities for walking, cycling and use of public transport, which could have a positive effect in terms of sustainability.

The site is adjacent to the sewage treatments works, which could negatively impact upon the air quality. There is also the potential for an impact on noise levels, as well as soil and water quality given the close proximity to the treatment works.

The majority of development on the site would take place on greenfield land which could negatively impact on the environmental sustainability of the site, and the sites proximity to the SSSI, SAC and Local Nature Reserve mean development on the site could have a negative impact on environmental sustainability through the impact on the landscape character and built environment as the area provides an important open area which physically and visually separates Newbury from Thatcham.

Flooding can have a negative impact on all elements of sustainability. Mitigation measures should reduce this impact.

#### **Proposed development (from SHLAA submission):**

The site is being promoted for residential development with an open space buffer to the countryside to the south.

Site promoter responded to the Preferred Options consultation, with layout plan for 50 dwellings. The site assessment has taken this into account.

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	Site is close to local facilities and <a href="#">offers good access to</a> the open countryside		The site's location to the east of Thatcham gives opportunities for walking and cycling and gives easy access to local services and facilities. Therefore, in terms of environmental and social sustainability, development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	+	The site is close to facilities at Kennet leisure centre. <a href="#">The site is also in close proximity to local amenity space and play areas.</a>		
	Will it protect and enhance green infrastructure across the district?	? 0	<a href="#">Development is unlikely to have an impact on GI</a> A Public Right of Way runs to the east of the site	<del>The right of way would need to be retained</del>	
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The site is close to areas of protected employment, and within easy access of a number of employment sites and education facilities.		The site is located close to areas of employment and education as well as other services and facilities within Thatcham. <del>as well giving each</del> <a href="#">The site also has good access to the strategic road network and public transport opportunities, although the railway station is some distance away.</a> This means that <a href="#">development of</a> the site <del>c</del> would have a positive impact on <del>the district's</del> economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	<del>The site is located within Thatcham.</del> There are a number of public transport options, including a frequent bus route that runs along the A4, which is <del>close</del> <a href="#">to the south of</a>		The site is close to local services and facilities which encourages walking and cycling. <a href="#">The site also has good access to public</a>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			to the site.  Thatcham station is approximately 2.4km from the site.  There are a number of opportunities for walking and cycling to local services and facilities.		<del>transport.</del> <u>There is therefore Development of the site could have a positive impact on environmental and social sustainability.</u>
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	? -	There is ancient woodland and a Local Wildlife Site adjacent to the site.  The north and eastern part of the site is identified as a Biodiversity Opportunity Area.	A 10 metre stand off is required between development and the ancient woodland.  <u>An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected.</u> <del>An Extended Phase 1 Habitat Survey will be required</del>	The site is open and rural in nature; therefore development could have a negative impact on this element of environmental sustainability. <u>Appropriate mitigation measures could reduce the impact.</u> <del>, without appropriate mitigation and buffers.</del>
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	0 -	The site is in an area of medium landscape sensitivity.  <u>The Landscape Sensitivity Study (2009) states that this area to the east of Thatcham provides a strong contrast to the more immediate urban form, providing an important setting to Thatcham and rural transition zone between the urban area and the AONB.</u>  <u>It is considered the scale of the</u>	Landscaping <u>and sensitive design</u> could reduce the impact of development on the landscape.  <u>A Landscape and Visual Impact Assessment (LVIA) would be required.</u>	

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">proposed development would have a negative impact on the landscape character</a>		
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	-	<p>Development on this site would change the rural nature and feel of this area <del>because this area is outside of the built area of Thatcham.</del> <a href="#">Floral Way is a defining feature, acting as a boundary between the built up area and the countryside.</a></p> <p>The <a href="#">Landscape Sensitivity Study (2009)</a> states that this area to the east of Thatcham provides a strong contrast to the more immediate urban form, providing an important setting to Thatcham and rural transition zone between the urban area and the AONB.</p> <p><a href="#">It is considered the scale of the proposed development would have a negative impact on the built environment.</a></p>	<p><a href="#">Landscaping and sensitive design could reduce the impact of development on the landscape.</a></p> <p><a href="#">A Landscape and Visual Impact Assessment (LVIA) would be required.</a></p>	<p>Development could have a negative impact on sustainability by changing the character of the built environment in this area.</p> <p><a href="#">Mitigation measures could reduce the impact on environmental sustainability.</a></p>
	Will it conserve and enhance the significance of the District's heritage assets?	?	The site is within an area of high archaeological potential	Further archaeological assessment required	
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact on air quality		It is unlikely that the site would have an impact on any aspect of sustainability.
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact on noise levels		
	Will there be an impact on soil quality?	0	Unlikely to have an impact on soil quality		
	Will there be an impact on	0	Unlikely to have an impact on water		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	water quality?		quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	The site is greenfield land		The site could have a negative impact on environmental sustainability as it is a greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans <a href="#">to reduce car traffic and ensure compliance with policy CS15 of the Core Strategy.</a>	Without consideration of sustainability construction techniques <a href="#">and the promotion of alternative modes of transport</a> , development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	0 =	<del>The site itself is not at risk from flooding</del> <a href="#">is within Flood Zone 1 and therefore has a low risk of flooding. However, although a surface water flow runs through the site and areas of surface water flood risk lie adjacent to the site, it is adjacent to an area at risk from surface water flooding.</a>	<del>A FRA and appropriate flood mitigation measures including SUDs would need to be provided.</del> SUDs would need to be provided.	<del>Unlikely to have an impact on any element of sustainability.</del> <a href="#">Flooding can have a negative impact on all elements of sustainability. Mitigation measures should reduce this impact.</a>
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	0	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	0	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial</a>	0	<a href="#">Housing development provides additional workforce and customers which has the potential to support</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	<a href="#">centres?</a>		<a href="#">commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a [predominantly](#) neutral effect on sustainability and the SA/SEA does not highlight any significant sustainability effects.

The site is easily accessible by public transport, walking and cycling and within close proximity of open countryside and local sports facilities to help promote a health active lifestyle, all of which have a positive impact on sustainability. [The site is also in close proximity to employment opportunities and local services and facilities which will have a positive impact on economic and social sustainability.](#)

[Potential negative impacts could occur in relation to the environmental sustainability due to the greenfield nature of the site, the impact on biodiversity and geodiversity and the impact on the character of both landscape and the built environment.](#)

[Flood risk on the site would have a negative impact on all elements of sustainability, as the site is at risk from surface water flooding. Mitigation measures could reduce the impact of flooding and reduce the impact on sustainability.](#)

~~Development could have an impact on the landscape and change the character of the built environment, which could have a negative impact on sustainability.~~

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Thatcham	<b>Parish:</b>	Thatcham
<b>Site ID:</b>	THA007	<b>Site Address:</b>	Land at Hart's Hill, Thatcham	<b>Development Potential:</b>	450 dwellings (15ha at 30dph)

### Recommendation:

The site is not recommended for allocation

### Justification:

The Core Strategy sets out the Spatial Strategy for the District and provides an overall framework to guide development over the plan period. The Core Strategy is clear that Thatcham is to receive a lower allocation than other urban areas given the rapid expansion of the town in recent years. This is to allow Thatcham a period of consolidation, ensuring the infrastructure and town centre facilities can be upgraded and meet the demands of the existing population. This will enable Thatcham to become more self-contained, encouraging residents to shop and socialise locally. In accordance with the Core Strategy, Thatcham will not accommodate large scale development at this stage and it is considered that there are other sites within the town which are more suitable for allocation.

It is considered that the principle of developing north of Floral Way is not acceptable at this stage and would be contrary to the Core Strategy. The Landscape Sensitivity Study (2009) is clear that the area to the east of Thatcham provides a strong contrast to the more immediate urban form, providing an important setting to Thatcham and rural transition zone between the urban area and the AONB. The area is characterised by its open farmland with major blocks of woodland and undulating escarpment slopes. Settlement is sparse but the area is an important setting to north Thatcham.

It is the Council's preferred approach, in accordance with the Core Strategy, to consider this area as a whole as part of a revised Local Plan, when the area can be holistically planned for ensuring infrastructure requirements can be delivered to meet the demand from new development, rather than large scale development occurring in a piecemeal manner.

~~The Core Strategy sets out that Thatcham only needs a small amount of development over the plan period. The potential on this site is much larger than required, and there are other smaller sites, that are considered more suited to development at this stage. Development on this side of Floral Way would change the character of the built environment, but moving residential development to the east of Floral Way.~~

~~Availability of the site has not been confirmed.~~

### Discussion:

#### Site Description:

The site is located to the east of Thatcham, separated from the existing building pattern by Floral Way. The site has good access to local services and facilities, including employment and education. There is also good access to the open countryside.

#### Landscape:

The site is within an area of medium landscape sensitivity and is rural in character. The Landscape Sensitivity Study (2009) outlines that the area provides a strong contrast to the more immediate urban form, providing an important setting to Thatcham and rural transition zone between the urban area and the AONB. The area is characterised by its open farmland with major blocks of woodland and undulating escarpment slopes. Settlement is sparse but the area is an important setting to north Thatcham.

#### Flood Risk:

The site is in Flood Zone 1. Surface water flow runs through the site, with areas of surface water flood risk adjacent to the north eastern boundary and to the south where the site joins Floral Way. ~~adjacent to an area at risk from surface water flooding.~~ A FRA would be required and SUDs provided.

An ordinary water course runs through the site.

#### Highways /Transport:

No specific comments have been made on this site.

## Site Selection – Site Commentary

The site is close to a number of public transport options, with a ~~regular~~ bus service running past the site [and a regular service running along the A4 to the south of the site. Thatcham also has a railway station which is approximately 1.5 - 2km from the site.](#)

### **Ecology:**

The site is within a BOA and adjacent to a Local Wildlife Site. There is ancient woodland adjacent to the site and appropriate buffers would need to be provided. [An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected](#)

### **Archaeology:**

The site is within an area of high archaeological potential. Further investigation would be required.

### **Education:**

Local primary school provision is at capacity, as is local secondary school provision.

### **Environmental Health:**

No known air, noise or contamination issues.

### **Minerals and Waste:**

No known mineral or waste issues.

### **Land use planning consultation zone:**

The site is not within an AWE consultation zone

### **Environment Agency:**

No specific comments made on this site. The site is in SPZ3.

### **Thames Water:**

Significant concern regarding water supply capability, especially water resource capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is highly likely to be required to ensure sufficient capacity is brought forward ahead of any development.

A detailed water supply strategy would be required.

Significant concern regarding wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is highly likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A detailed drainage strategy would be required.

### **Parish Council:**

Thatcham Town Council's comment related to THA007, 008 and 028.

Development would contribute to flood risk in Thatcham. The development would impact on the road network in north Thatcham and Cold Ash, especially at peak times as there are limited alternatives (eg. infrequent bus services).

There are capacity issues at Kennet School, more so than at primary schools.

### **Preferred Options Consultation key issues:**

[Two responses were received regarding this site.](#)

- [General comments](#)
- [Site Selection](#)
- [Housing numbers and distribution](#)

[For the consultation responses and Council's response, please see the Statement of Consultation.](#)

### **SA/SEA:**

[Overall the site is likely to have a predominantly neutral effect on sustainability and the SA/SEA does not highlight any significant sustainability effects.](#)

## Site Selection – Site Commentary

The site is easily accessible by public transport, walking and cycling and within close proximity of open countryside and local sports facilities to help promote a health active lifestyle, all of which have a positive impact on sustainability. The site is also in close proximity to employment opportunities and local services and facilities which will have a positive impact on economic and social sustainability.

Potential negative impacts could occur in relation to the environmental sustainability due to the greenfield nature of the site, the impact on biodiversity and geodiversity and the impact on the character of both landscape and the built environment.

Flood risk on the site would have a negative impact on all elements of sustainability, as the site is at risk from surface water flooding. Mitigation measures could reduce the impact of flooding and reduce the impact on sustainability.

~~The SA/SEA indicates a predominantly neutral effect, with no significant impacts from this site. The site is easily accessible by public transport, walking and cycling. It is also within close proximity of open countryside and local sports facilities to help promote a healthy active lifestyle, all of which have a positive impact on sustainability. Development could have an impact on the landscape and change the character of the built environment, which could have a negative impact on sustainability.~~

### **Proposed development (from SHLAA submission):**

The site is proposed for approximately 640 dwellings, with appropriate infrastructure and open space.

The site promoter responded to the Preferred Options consultation, which would indicate the site is available for development. See Statement of Consultation for responses.

~~Availability of the site has not been confirmed.~~

			<a href="#">negative impact on the character of the landscape.</a>		
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	-	<p>Development on this site would change the rural nature and feel of this area <del>as this area is outside the built area of Thatcham.</del> <a href="#">Floral Way is a defining feature, acting a boundary between the built up area and the countryside.</a></p> <p><a href="#">The Landscape Sensitivity Study (2009) states that this area to the east of Thatcham provides a strong contrast to the more immediate urban form, providing an important setting to Thatcham and rural transition zone between the urban area and the AONB.</a></p> <p><a href="#">It is considered the scale of the proposed development would have a negative impact on the built environment.</a></p>	<p><a href="#">Landscaping and sensitive design could reduce the impact of development on the landscape.</a></p> <p><a href="#">A Landscape and Visual Impact Assessment (LVIA) would be required.</a></p>	Development could have a negative impact on sustainability by changing the character of the built environment in this area. <a href="#">Mitigation measures could reduce the impact on environmental sustainability.</a>
	Will it conserve and enhance the significance of the District's heritage assets?	?	The site is within an area of high archaeological potential with many discoveries in the area	Further archaeological assessment required	
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact on air quality		It is unlikely that the site would have an impact on any aspect of sustainability.
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact on noise levels		
	Will there be an impact on soil quality?	0	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	Unlikely to have an impact on water quality.		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	The site is greenfield land		The site could have a negative impact on environmental sustainability as it is a greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans <a href="#">to reduce car traffic and ensure compliance with policy CS15 of the Core Strategy.</a>	Without consideration of sustainability construction techniques <a href="#">and the promotion of alternative modes of transport</a> , development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	0 ?	The site itself is <a href="#">within Flood Zone 1 and therefore has a low risk of flooding</a> . However, areas of surface water flood risk lie adjacent to the <del>site. not at risk from flooding,</del> although it is adjacent to an area at risk from surface water flooding.	<a href="#">A FRA and appropriate flood mitigation measures including SUDs would need to be provided.</a> <del>SUDs would need to be provided.</del>	<del>Unlikely to have an impact on any element of sustainability.</del> <a href="#">Flooding can have a negative impact on all elements of sustainability. Mitigation measures should reduce this impact.</a>
11. <a href="#">To ensure a strong, diverse and sustainable economic base</a>	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a [predominantly](#) neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

~~There are no significant impacts from this site.~~ The site is easily accessible by public transport, walking and cycling and within close proximity of open countryside and local sports facilities to help promote a health active lifestyle, all of which have a positive impact on sustainability. [The site is also in close proximity to employment opportunities and local services and facilities which will have a positive impact on economic and social sustainability.](#)

[Potential negative impacts could occur in relation to the environmental sustainability due to the greenfield nature of the site, the impact on biodiversity and geodiversity and the impact on the character of both landscape and the built environment.](#) ~~In addition,~~ there are protected species on the site, without appropriate mitigation measures development could have a negative impact on environmental sustainability.

[Flood risk on the site would have a negative impact on all elements of sustainability, as the site is at risk from surface water flooding. Mitigation measures could reduce the impact of flooding and reduce the impact on sustainability.](#)

~~Development could have an impact on the landscape and change the character of the built environment, which could have a negative impact on sustainability.~~

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Thatcham	<b>Parish:</b>	Thatcham
<b>Site ID:</b>	THE008	<b>Site Address:</b>	Land at Siege Cross	<b>Development Potential:</b>	353 dwellings (11.76ha at 30dph)

### Recommendation:

The site is not recommended for allocation

### Justification:

The Core Strategy sets out the Spatial Strategy for the District and provides an overall framework to guide development over the plan period. The Core Strategy is clear that Thatcham is to receive a lower allocation than other urban areas given the rapid expansion of the town in recent years. This is to allow Thatcham a period of consolidation, ensuring the infrastructure and town centre facilities can be upgraded and meet the demands of the existing population. This will enable Thatcham to become more self-contained, encouraging residents to shop and socialise locally. In accordance with the Core Strategy, Thatcham will not accommodate large scale development at this stage and it is considered that there are other sites within the town which are more suitable for allocation.

It is considered that the principle of developing north of Floral Way is not acceptable at this stage and would be contrary to the Core Strategy. The Landscape Sensitivity Study (2009) is clear that the area to the east of Thatcham provides a strong contrast to the more immediate urban form, providing an important setting to Thatcham and rural transition zone between the urban area and the AONB. The area is characterised by its open farmland with major blocks of woodland and undulating escarpment slopes. Settlement is sparse but the area is an important setting to north Thatcham.

It is the Council's preferred approach, in accordance with the Core Strategy, to consider this area as a whole as part of a revised Local Plan, when the area can be holistically planned for ensuring infrastructure requirements can be delivered to meet the demand from new development, rather than large scale development occurring in a piecemeal manner.

Only a small amount of development is required in Thatcham under the Core Strategy framework, development of this site would be out of keeping with this principle. This site should be considered as a strategic site. Development on this side of Floral Way would change the character of the built environment, by moving residential development to the east of Floral Way.

### Discussion:

#### Site Description:

The site is located to the east of Thatcham, separated from the existing residential development by Floral Way. There is good access to [employment](#), local services and facilities, and the open countryside.

Overhead power lines and telegraph poles are present on the site.

#### Landscape:

The site is in an area of medium landscape sensitivity and rural in character. The Landscape Sensitivity Study (2009) outlines that the area provides a strong contrast to the more immediate urban form, providing an important setting to Thatcham and rural transition zone between the urban area and the AONB. The area is characterised by its open farmland with major blocks of woodland and undulating escarpment slopes. Settlement is sparse but the area is an important setting to north Thatcham.

#### Flood Risk:

The site is in flood zone 1, [and](#) adjacent to [areas](#) of surface water flood risk. A FRA would be required and SUDs would need to be provided.

An ordinary water course runs through the site.

The Thatcham Surface Water Management Plan identifies that surface water overland flow travels through the site.

#### Highways /Transport:

No specific comments have been made on this site.

## Site Selection – Site Commentary

There are a range of public transport options, with a regular bus service passing the site and Thatcham railway station within [approximately 1.5 mile of from](#) the site.

### **Ecology:**

There is [are protected species on the site, along with](#) a badger sett. ~~on the site and ancient woodland adjacent to the site.~~ [The site is adjacent to ancient woodland.](#) Appropriate buffers and mitigation measure would need to be provided. [An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected](#)

### **Archaeology:**

The site is in an area of high archaeological potential. Further investigation would be required.

### **Education:**

Local primary school provision is at capacity, as is local secondary school provision.

### **Environmental Health:**

No known air, noise or contamination issues.

### **Minerals and Waste:**

The site is partly underlain by gravel deposits. Consideration of Policy 1 & 2 of the RMLP would be required.

### **Land use planning consultation zone:**

The site is not within an AWE consultation zone.

### **Environment Agency:**

No specific comments made on this site. The site is in SPZ3.

### **Thames Water:**

Significant concern regarding water supply capability, especially water resource capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is highly likely to be required to ensure sufficient capacity is brought forward ahead of any development.

A detailed water supply strategy would be required.

Significant concern regarding wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is highly likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A detailed drainage strategy would be required.

### **Parish Council:**

Thatcham Town Council's comment related to THA007, 008 and 028.

Development would contribute to flood risk in Thatcham. The development would impact on the road network in north Thatcham and Cold Ash, especially at peak times as there are limited alternatives (Eg. Infrequent bus services).

A gully runs through the site that would increase flood risk.

There are capacity issues at Kennet School, more so than at primary schools.

### **Preferred Options Consultation key issues:**

[Two responses were received regarding this site.](#)

- [General comments](#)
- [Site Selection/assessment](#)
- [SA/SEA](#)
- [Housing numbers and distribution](#)

[For the consultation responses and Council's response, please see the Statement of Consultation.](#)

## Site Selection – Site Commentary

### **SA/SEA:**

Overall the site is likely to have a predominantly neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

The site is easily accessible by public transport, walking and cycling and within close proximity of open countryside and local sports facilities to help promote a health active lifestyle, all of which have a positive impact on sustainability. The site is also in close proximity to employment opportunities and local services and facilities which will have a positive impact on economic and social sustainability.

Potential negative impacts could occur in relation to the environmental sustainability due to the greenfield nature of the site, the impact on biodiversity and geodiversity and the impact on the character of the built environment. In addition, there are protected species on the site, without appropriate mitigation measures development could have a negative impact on environmental sustainability.

Flood risk on the site would have a negative impact on all elements of sustainability, as the site is at risk from surface water flooding. Mitigation measures could reduce the impact of flooding and reduce the impact on sustainability.

~~The SA/SEA indicates a predominantly neutral effect, with no significant impacts from this site. The site is easily accessible by public transport, walking and cycling and within close proximity of open countryside and local sports facilities to help promote a health active lifestyle, all of which have a positive impact on sustainability. There are protected species on the site, without appropriate mitigation measures development could have a negative impact on environmental sustainability. Development could have an impact on the landscape and change the character of the built environment, which could have a negative impact on sustainability.~~

### **Proposed development (from SHLAA submission):**

The site is being promoted for 300 - 500 dwellings with provision for a primary school.

-------------------------------	--------------	--------------------------	---------------------------

### Summary of Site Assessment

Key Issues:

- [Recommended within the SHLAA as Not Currently Developable](#)
- Relationship to settlement (not adjacent to Thatcham settlement boundary)

### Site Assessment

<b>Parish Council consultation response:</b>	<p>The parish councils (Thatcham and Cold Ash) agree with the Council's assessment of this site. The site is on high gradient and development would destroy the Ashmore Green Area. Surface and groundwater flooding area an issue, and runoff from the hills to the north of Thatcham lead to flooding in 2007. Some flood alleviation works (balancing ponds) are going on, but this is to cope with the existing problem not future issues. Sewage systems would need to be upgraded. Traffic along Heath Lane and the surrounding roads is bad and much of the road network cannot take more traffic. Visually development of these sites would detract from the entrance into and out of Thatcham.</p> <p>The Thatcham vision refresh consultation indicates that residents would like to keep the gap between settlements. There is a fear amongst local resident that should one site go for housing it will set a precedent for further development in the future further outside Thatcham.</p>

-------------------------------	--------------------------------	--------------------------	-------------------------

### Summary of Site Assessment

Key Issues:	<ul style="list-style-type: none"> <li>- Greenfield</li> <li>- Surface water flood risk – <a href="#">surface water flows run through and adjacent to the site. A Critical Drainage Area is located adjacent to the site.</a></li> <li>- Local wildlife site <a href="#">adjacent to north western boundary</a></li> <li>- <a href="#">Landscape Capacity Assessment (2015) concludes that development on the whole site would result in harm to the natural beauty and special qualities of the AONB</a></li> <li>- <a href="#">Under the Core Strategy, Thatcham is due a period of consolidation. Development of this site would be out of keeping with this principle.</a></li> <li>- <a href="#">Coalescence of settlements</a></li> </ul>
-------------	---

### Site Assessment

<b>Parish Council consultation response:</b>	<p>Comments on this site made by both Cold Ash Parish Council and Thatcham Town Council. There is concern over the impact of additional traffic on the existing road network, in particular along Bowling Green Road. Poor public transport opportunities in the area would make residents reliant on cars.</p> <p>Flooding is a key concern following the floods in 2007. New balancing ponds are being put in, but there is concern that these only mitigate the existing issue, not any future problems. Visually development would detract from the rural approach to Cold Ash. Consultation on the Thatcham Vision indicates that people want to maintain the gap between the settlements. The site is traditional agricultural land with ancient woodlands and pre enclosure hedgerows.</p> <p>The site is not considered to be close to local services and facilities.</p> <p><a href="#">Advise that the Northfield Road sewer is capacity and has had historical discharge events.</a></p>

and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, noise levels?	<b>0</b>	Unlikely to have an impact on noise levels		any aspect of sustainability.
	Will there be an impact on soil quality?	<b>0</b>	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	<b>0</b>	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>-</b>	The site is greenfield		The site could have a negative impact on environmental sustainability as it is a greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	<b>?</b>	The level of impact depends on location, building materials / construction, transport / design	Mitigation could <del>also</del> include Transport Assessment / Travel Plans <a href="#">to reduce car traffic and ensure compliance with policy CS15 of the Core Strategy.</a>	Without consideration of sustainability construction techniques, <a href="#">and the promotion of alternative modes of travel</a> , development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	<b>? -</b>	The site itself is not within a flood zone, although it is adjacent to a critical drainage area <a href="#">and surface water flow runs through and adjacent to the site.</a>  The Thatcham Surface Water Management Plan identifies past surface water flooding events on the site.	A FRA would be required and appropriate mitigation measures, including SUDs provided.	Flooding can have a negative impact on all elements of sustainability. Mitigation measures should reduce this impact.
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<b>0</b>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<b>0</b>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		<a href="#">the longer term.</a>
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a [predominantly](#) neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

The site is ~~well located for access~~ [close](#) to [some](#) local services and facilities, although is some distance from the centre of Thatcham. , with [There are](#) opportunities for walking and cycling, all of which have a positive impact on sustainability, [although car dependency is likely to be high given the limited public transport options and level of local services and facilities.](#)

[Potential negative impacts could occur in relation to the environmental sustainability due to the greenfield nature of the site, impact on biodiversity and geodiversity and the impact on the character of both landscape and the built environment.](#)

[Flooding can have a negative impact on all elements of sustainability. Mitigation measures should reduce this impact.](#)

~~Development of the site would alter the character of the built environment as development would be taking place on the opposite side of the road to existing residential development. This could have a negative impact on sustainability. There are a number of unknown impacts, relating to the impact on ecology and flood risk. Impacts on ecology and subsequent environmental sustainability should be able to be mitigated against with appropriate buffers and wildlife protections. The site is not officially within a flood zone, although it is on the edge of a critical drainage area. Surface water runoff caused significant flooding in Thatcham in 2007, therefore, there is a possibility that without appropriate mitigation measures flooding could occur impacting negatively on all elements of sustainability.~~

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Thatcham	<b>Parish:</b>	Cold Ash
----------------------	-----	--------------------	----------	----------------	----------

<b>Site ID:</b>	THA011	<b>Site Address:</b>	Land to the north of Bowling Green Road	<b>Development Potential:</b>	255 dwellings (8.5ha at 30dph)
-----------------	--------	----------------------	---	-------------------------------	--------------------------------

### Recommendation:

The site is not recommended for allocation

### Justification:

The Core Strategy sets out the Spatial Strategy for the District and provides an overall framework to guide development over the plan period. The Core Strategy is clear that Thatcham is to receive a lower allocation than other urban areas given the rapid expansion of the town in recent years. This is to allow Thatcham a period of consolidation, ensuring the infrastructure and town centre facilities can be upgraded and meet the demands of the existing population. This will enable Thatcham to become more self-contained, encouraging residents to shop and socialise locally. In accordance with the Core Strategy, Thatcham will not accommodate large scale development at this stage and it is considered that there are other sites within the town which are more suitable for allocation.

One of the strategic objectives for the Core Strategy is to ensure that development is planned in a way that ensures the protection and enhancement of the local distinctive character and identity of the built, historic and natural environment across the District. The Core Strategy notes that a key feature of even the larger settlements in West Berkshire is the way in which few have coalesced in recent times and so the blurring of the physical distinction between places has largely been avoided. New development therefore needs to be appropriate in terms of location, scale and design in the context of the existing settlement form, pattern and context. Any scheme for a particular site would therefore need to be in accordance with policies CS14 and CS19 of the Core Strategy and the Quality Design SPD.

Conserving and enhancing the distinctive landscape character of the AONB is given considerable weight when assessing sites for development. The Council has therefore ensured that sites within or within the setting of the AONB have been subject to a Landscape Sensitivity/Capacity Assessment (LSA/LCA). This is a consistent assessment carried out by the Council's landscape consultant to determine whether a site could be developed without causing harm to the natural beauty and special qualities of the AONB. The LCA (2015) for this site has concluded that development on the whole of this site would result in harm to the natural beauty and special qualities of the AONB. Cold Ash is an AONB settlement and although it has expanded southwards out of the AONB and down the slope towards Thatcham, it retains a distinctive separate identity. The development of the whole of this site would lead to the perception of a merging of the two settlements and would therefore have an adverse impact on the AONB settlement pattern.

It is considered that the principle of developing north of Bowling Green Road, for a large scale development is not acceptable at this stage and would be contrary to the Core Strategy. It would lead to the perception of merging Cold Ash and Thatcham and would have adverse impact on the settlement pattern.

It is the Council's preferred approach, in accordance with the Core Strategy, to consider this area as a whole as part of a revised Local Plan, when the area can be holistically planned for ensuring infrastructure requirements can be delivered to meet the demand from new development, rather than large scale development occurring in a piecemeal manner.

Only a small amount of development is required in Thatcham under the Core Strategy framework, development of this site would be out of keeping with this principle.

Development of the site would be out of keeping with the existing development pattern, as there is currently no residential development to the north of Tull Way

## Site Selection – Site Commentary

### **Discussion:**

#### **Site Description:**

The site is located to the north of Thatcham, separated from the existing residential development by Tull Way, [Bowling Green Road](#), Heath Lane and Cold Ash Hill. The site is some distance to the centre of Thatcham and public transport options are limited.

#### **Landscape:**

[The site sits within the Ashmore Green and Lower Cold Ash Plateau Edge \(LLCA14A\) as identified by the Thatcham Landscape Sensitivity Study \(2009\). This is in an area of medium landscape sensitivity, characterised by a mix of small and complex field pattern and modern linear settlement. There are good landscape links with the adjacent parts of the escarpment and there is a well defined edge to Thatcham.](#) ~~The site is in an area of low/medium landscape sensitivity, and is rural in character.~~

[The Landscape Capacity Assessment \(2015\) recommended that development on the whole site would result in harm to the natural beauty and special qualities of the AONB. Only part of the site could be pursued as a potential housing site subject to mitigation measures set out within the LCA \(2015\).](#)

[Development of this site is dependent on a wider scheme to include THA014 and THA027. Development in isolation of surrounding sites, in accordance with the LCA, would result in unacceptable level of expansion of Thatcham north and the well defined settlement boundary along Bowling Green Road and Heath Lane.](#)

#### **Flood Risk:**

The site is in flood zone 1, [with surface water flows running through and adjacent to the site. A Critical Drainage Area is located adjacent to the site.](#) ~~although it is on the edge of a critical drainage area.~~ Significant flooding occurred in Thatcham during 2007.

The Thatcham Surface Water Management plan identifies surface water flow patterns through the site. An ordinary watercourse flows through the site.

A FRA and appropriate mitigation, including SuDS would need to be provided.

#### **Highways /Transport:**

No specific comments have been made on this site.

Public transport options past the site are limited. There are opportunities for walking and cycling.

#### **Ecology:**

~~The site is adjacent to ancient woodland and the north west corner of the site is within a local wildlife site. Appropriate buffers would need to be provided.~~ [An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected.](#)

#### **Archaeology:**

There is some archaeological potential on the site. [Further](#) investigations would be required.

#### **Education:**

Local primary school provision is at capacity, and is local secondary school provision.

#### **Environmental Health:**

No known air, noise or contamination issues.

#### **Minerals and Waste:**

No known mineral or waste issues.

#### **Land use planning consultation zone:**

The site is not within an AWE consultation zone.

#### **Environment Agency:**

No specific comments made on this site. The site is within SPZ3.

#### **Thames Water:**

[Thames Water](#) not consulted on this site

## Site Selection – Site Commentary

### **Parish Council:**

Comments on this site made by both Cold Ash Parish Council and Thatcham Town Council. There is concern over the impact of additional traffic on the existing road network, in particular along Bowling Green Road. Poor public transport opportunities in the area would make residents reliant on cars. Flooding is a key concern following the floods in 2007. New balancing ponds are being put in, but there is concern that these only mitigate the existing issue, not any future problems.

Visually development would detract from the rural approach to Cold Ash. Consultation on the Thatcham Vision indicates that people want to maintain the gap between the settlements. The site is traditional agricultural land with ancient woodlands and pre enclosure hedgerows.

The site is not considered to be close to local services and facilities.

[Advise that the Northfield Road sewer is capacity and has had historical discharge events.](#)

### **Preferred Options Consultation key issues:**

[Two responses were received regarding this site.](#)

- [General comments](#)
- [Housing numbers and distribution](#)
- [Character](#)
- [Flood risk](#)

[For the consultation responses and Council's response, please see the Statement of Consultation.](#)

### **SA/SEA:**

[Overall the site is likely to have a predominantly neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.](#)

[The site is close to some local services and facilities, although is some distance from the centre of Thatcham. There are opportunities for walking and cycling, all of which have a positive impact on sustainability, although car dependency is likely to be high given the limited public transport options and level of local services and facilities.](#)

[Potential negative impacts could occur in relation to the environmental sustainability due to the greenfield nature of the site, impact on biodiversity and geodiversity and the impact on the character of both landscape and the built environment.](#)

[Flooding can have a negative impact on all elements of sustainability. Mitigation measures should reduce this impact.](#)

The SA/SEA gives a predominantly neutral sustainability impact. There are no significant sustainability effects. The site is well located for access to local services and facilities with opportunities for walking and cycling, all of which have a positive impact on sustainability. Development of the site would alter the character of the built environment as development would be taking place on the opposite side of the road to existing residential development. This could have a negative impact on sustainability. There are a number of unknown impacts, relating to the impact on ecology and flood risk. Impacts on ecology and subsequent environmental sustainability should be able to be mitigated against with appropriate buffers and wildlife protections. The site is not officially within a flood zone, although it is on the edge of a critical drainage area. Surface water run off caused significant flooding in Thatcham in 2007, therefore, there is a possibility that without appropriate mitigation measures flooding could occur impacting negatively on all elements of sustainability.

### **Proposed development (from SHLAA submission):**

The site is being promoted for 300 dwellings and community facilities.

					<del>reduce this impact.</del>
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a [predominantly](#) neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

[Whilst the site is close to some local services and facilities, it is some distance from the centre of Thatcham and relates poorly to the existing settlement. This has the potential to have a negative impact upon environmental sustainability. There are opportunities for walking and cycling and whilst public transport options are available these are limited and it is likely will lead to a high level of car dependency.](#)

~~The site is well located for access to local services and facilities, although is some distance from the centre of Thatcham, with opportunities for walking and cycling, all of which have a positive impact on sustainability.~~

[The site is brownfield land which will have a positive impact on environmental sustainability.](#)

[Potential negative impacts could occur in relation to the environmental sustainability due to the greenfield nature of the site and the impact on the character of both landscape and the built environment.](#)

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

There are a number of unknown impacts, relating to the impact on ecology and archaeology. Impacts on ecology and subsequent environmental sustainability should be able to be mitigated against with appropriate buffers and wildlife protections.

Development of the site would alter the character of the built environment as development would be taking place on the opposite side of the road to existing residential development. This could have a negative impact on sustainability. The site is within a surface water flood area, surface water runoff caused significant flooding in Thatcham in 2007, and therefore, there is a possibility that without appropriate mitigation measures flooding could occur impacting negatively on all elements of sustainability.

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Thatcham	<b>Parish:</b>	Cold Ash
<b>Site ID:</b>	THA014	<b>Site Address:</b>	Land at Regency Park Hotel, Tull Way	<b>Development Potential:</b>	42 dwellings (1.4ha at 30dph)

### Recommendation:

The site is not recommended for allocation

### Justification:

The Core Strategy sets out the Spatial Strategy for the District and provides an overall framework to guide development over the plan period. The Core Strategy is clear that Thatcham is to receive a lower allocation than other urban areas given the rapid expansion of the town in recent years. This is to allow Thatcham a period of consolidation, ensuring the infrastructure and town centre facilities can be upgraded and meet the demands of the existing population. This will enable Thatcham to become more self-contained, encouraging residents to shop and socialise locally. In accordance with the Core Strategy, Thatcham will not accommodate large scale development at this stage and it is considered that there are other sites within the town which are more suitable for allocation.

Conserving and enhancing the distinctive landscape character of the AONB is given considerable weight when assessing sites for development. The Council has therefore ensured that sites within or within the setting of the AONB have been subject to a Landscape Sensitivity/Capacity Assessment (LSA/LCA). This is a consistent assessment carried out by the Council's landscape consultant to determine whether a site could be developed without causing harm to the natural beauty and special qualities of the AONB. The LCA has recommended that this site is not developed in isolation but as part of a larger scheme in conjunction with THA011 and THA027, creating a large scale development to the north of Thatcham.

One of the strategic objectives for the Core Strategy is to ensure that development is planned in a way that ensures the protection and enhancement of the local distinctive character and identity of the built, historic and natural environment across the District. The Core Strategy notes that a key feature of even the larger settlements in West Berkshire is the way in which few have coalesced in recent times and so the blurring of the physical distinction between places has largely been avoided.

It is considered that the principle of developing north of Bowling Green Road, for a large scale development is not acceptable at this stage and would be contrary to the Core Strategy. It would lead to the perception of merging Cold Ash and Thatcham and would have adverse impact on the settlement pattern.

It is the Council's preferred approach, in accordance with the Core Strategy, to consider this area as a whole as part of a revised Local Plan, when the area can be holistically planned for ensuring infrastructure requirements can be delivered to meet the demand from new development, rather than large scale development occurring in a piecemeal manner.

The site is separated from the existing settlement pattern by Tull Way and is some distance from the centre of Thatcham. The site is at risk from flooding.

### Discussion:

#### Site Description:

The site is located to the north of Thatcham, separated from the existing settlement by Tull Way/Bowling Green Road. The site is some distance from the centre of Thatcham and public transport options are limited.

#### Landscape:

The site sits within the Ashmore Green and Lower Cold Ash Plateau Edge (LLCA14A) as identified by the Thatcham Landscape Sensitivity Study (2009). This is in an area of medium landscape sensitivity, characterised by a mix of small and complex field pattern and modern linear settlement. There are good landscape links with the adjacent parts of the escarpment and there is a well defined edge to Thatcham. The site is in an area of low/medium landscape sensitivity, although rural in character.

The Landscape Capacity Assessment (2015) recommended that development of the site would not result in harm to the natural beauty and special qualities of the AONB. However, the site could be considered further in conjunction with THA011 and THA027, subject to a series of mitigation measures.

Development of this site is dependent on a wider scheme to include THA011 and THA027. Development in isolation of surrounding sites in accordance with the LCA, would result in unacceptable level of expansion

## Site Selection – Site Commentary

[of Thatcham north and the well defined settlement boundary along Bowling Green Road and Heath Lane.](#)

### **Flood Risk:**

The site is in Flood Zone 1. [A FRA would be required to take account of surrounding surface water flooding. Thatcham suffered from significant flooding in July 2007.](#)

~~although it is also in an area of surface water flood risk and a critical drainage area is identified in the Thatcham Surface Water Management Plan as having overland flow paths. A FRA would be required and appropriate mitigation measures, including SUDs provided.~~

### **Highways /Transport:**

No specific comments made on this site.

Public transport options past the site are limited. There are opportunities for walking and cycling.

### **Ecology:**

No known ecological issues, although [an extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected.](#) ~~an extended phase 1 habitat survey would be required.~~

### **Archaeology:**

The site is in an area of high archaeological potential. Further investigation required.

### **Education:**

Local primary school provision is at capacity, and is local secondary school provision.

### **Environmental Health:**

No known air, noise or contamination issues

### **Minerals and Waste:**

No known mineral or waste issues

### **Land use planning consultation zone:**

The site is not within an AWE consultation zone

### **Environment Agency:**

No specific comments made on this site. The site is within SPZ3.

### **Thames Water:**

[Thames Water](#) not consulted on this site

### **Parish Council:**

Comments on this site made by both Cold Ash Parish Council and Thatcham Town Council. There is concern over the impact of additional traffic on the existing road network, in particular along Bowling Green Road. Poor public transport opportunities in the area would make residents reliant on cars. Flooding is a key concern following the floods in 2007. New balancing ponds are being put in, but there is concern that these only mitigate the existing issue, not any future problems.

Visually development would detract from the rural approach to Cold Ash. Consultation on the Thatcham Vision indicates that people want to maintain the gap between the settlements. The site is traditional agricultural land with ancient woodlands and pre enclosure hedgerows.

The site is not considered to be close to local services and facilities.

[Advise that the Northfield Road sewer is capacity and has had historical discharge events.](#)

### **[Preferred Options Consultation key issues:](#)**

[1 response was received regarding this site.](#)

- [General comments](#)

[For the consultation responses and Council's response, please see the Statement of Consultation.](#)

## Site Selection – Site Commentary

### **SA/SEA:**

Overall the site is likely to have a predominantly neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

Whilst the site is close to some local services and facilities, it is some distance from the centre of Thatcham and relates poorly to the existing settlement. This has the potential to have a negative impact upon environmental sustainability. There are opportunities for walking and cycling and whilst public transport options are available these are limited and it is likely will lead to a high level of car dependency.

The site is brownfield land which will have a positive impact on environmental sustainability.

Potential negative impacts could occur in relation to the environmental sustainability due to the greenfield nature of the site and the impact on the character of both landscape and the built environment.

~~Overall the site is likely to have a neutral effect on sustainability, and there are no significant sustainability effects. The site is well located for access to local services and facilities, although is some distance from the centre of Thatcham, with opportunities for walking and cycling, all of which have a positive impact on sustainability.~~

~~There are a number of unknown impacts, relating to the impact on ecology and archaeology. Impacts on ecology and subsequent environmental sustainability should be able to be mitigated against with appropriate buffers and wildlife protections.~~

~~Development of the site would alter the character of the built environment as development would be taking place on the opposite side of the road to existing residential development. This could have a negative impact on sustainability. The site is within a surface water flood area, surface water runoff caused significant flooding in Thatcham in 2007, and therefore, there is a possibility that without appropriate mitigation measures flooding could occur impacting negatively on all elements of sustainability.~~

### **Proposed development (from SHLAA submission):**

The site is being promoted for 70 dwellings.

<b>Spatial Area</b>	Newbury & Thatcham	<b>Settlement:</b>	Thatcham	<b>Parish:</b>	Cold Ash
---------------------	--------------------	--------------------	----------	----------------	----------

<b>Site ID:</b>	THA016	<b>Site Address:</b>	Land to the north of Ashmore Green, Ashmore Green, Thatcham
-----------------	--------	----------------------	---

<b>Development Potential:</b>	42 dwellings (1.4ha at 30dph)	<b>SHLAA Assessment:</b>	Not currently developable
-------------------------------	-------------------------------	--------------------------	---------------------------

### Summary of Site Assessment

Key Issues: - <a href="#">Recommended within the SHLAA as Not Currently Developable</a> - Relationship to settlement (not adjacent to Thatcham settlement boundary)
---

### Site Assessment

<b>Parish Council consultation response:</b>	<p>The parish councils (Thatcham and Cold Ash) agree with the Council's assessment of this site. The site is on high gradient and development would destroy the Ashmore Green Area. Surface and groundwater flooding are an issue, and runoff from the hills to the north of Thatcham lead to flooding in 2007. Some flood alleviation works (balancing ponds) are going on, but this is to cope with the existing problem not future issues. Sewage systems would need to be upgraded. Traffic along Heath Lane and the surrounding roads is bad and much of the road network cannot take more traffic. Visually development of these sites would detract from the entrance into and out of Thatcham.</p> <p>The Thatcham vision refresh consultation indicates that residents would like to keep the gap between settlements. There is a fear amongst local resident that should one site go for housing it will set a precedent for further development in the future further outside Thatcham.</p>

10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans <a href="#">to reduce car traffic and ensure compliance with policy CS15 of the Core Strategy.</a>	Without consideration of sustainability construction techniques <a href="#">and the promotion of alternative modes of transport</a> , development could have a negative impact on environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will the site be subject to / at risk from flooding	-	<u>Part of t</u> The site is at risk from surface water flooding <u>and the site is adjacent to a Critical Drainage Area</u> and also forms part of a flood alleviation scheme.	A FRA and appropriate mitigation, including SUDs would be required. <u>Development would not be appropriate on the area of land required for the flood alleviation scheme.</u>	Flooding can have a negative impact on all elements of sustainability. Mitigation measures should reduce this impact.
11. To ensure a strong, diverse and sustainable economic base	<u>Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</u>	<u>0</u>	<u>Not considered relevant</u>		<u>The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</u>
	<u>Will it promote and support key business sectors and utilise employment land effectively and efficiently?</u>	<u>0</u>	<u>The site is greenfield and there will be no loss of employment land through the development of the site for housing, No employment use development is proposed for the site.</u>  <u>The development of the site for housing will have an overall neutral effect on economic sustainability.</u>		
	<u>Will it promote and support the vitality and viability of the District's commercial centres?</u>	<u>0</u>	<u>Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</u>		

### Summary

Overall the site is likely to have a predominantly neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

Whilst tThe site is well located for access close to some local services and facilities, although it is some distance from the centre of Thatcham and relates poorly to the existing settlement. This has the potential to have a negative impact upon environmental and social sustainability. There are with opportunities for walking and cycling and whilst public transport options are available these are limited and it is likely will lead to a high level of car dependency.

The impact of development upon ecology is unknown, however appropriate mitigation, including buffers, would be needed on the site to ensure any potential impact is reduced.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

Development of the site would have a negative impact on both the landscape character and the character of the built environment. There would also be an impact on the identity of settlements as development would expand Thatcham to the north, encroaching upon Cold Ash. Development is likely to negatively impact on the environmental sustainability as the site is adjacent to a Local Wildlife Site.

The site is poorly related to the existing settlement pattern of Thatcham, and this has the potential to have a negative impact upon environmental sustainability.

Flood risk on the site would have a negative impact on all elements of sustainability, as the site is at risk from surface water flooding. Part of the site is required as part of the Thatcham flood alleviation works, meaning development on this part of the site would not be appropriate. Mitigation measures could reduce the impact of flooding and reduce the impact on sustainability.

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	<a href="#">Newbury &amp; Thatcham</a>	<b>Settlement:</b>	Thatcham	<b>Parish:</b>	Cold Ash
<b>Site ID:</b>	THA019	<b>Site Address:</b>	Land at Little Copse, off Cold Ash Hill and Lawrences Lane	<b>Development Potential:</b>	72 dwellings (2.4ha at 30dph)  <a href="#">A new proposal was submitted for 25 dwellings (approx. 1.4ha) at Preferred Options stage</a>

### Recommendation:

The site is not recommended for allocation

### Justification:

~~Half of the site is required for flood alleviation works as part of the Thatcham flood alleviation scheme. The site, although close to some local services and facilities, is poorly related to the existing settlement and would result in the encroachment of development towards Cold Ash.~~

[One of the strategic objectives of the Core Strategy is to ensure that development is planned in a way that ensures the protection and enhancement of the local distinctive character and identity of the built, historic and natural environment across the District. The Core Strategy notes that a key feature of even the larger settlements in West Berkshire is the way in which few have coalesced in recent times and so the blurring of the physical distinction between places has largely been avoided. The development of this site would lead to the perception of a merging of the two settlements and would therefore have an adverse impact on the settlement pattern.](#)

[The Core Strategy sets out the Spatial Strategy for the District and provides an overall framework to guide development over the plan period. The Core Strategy is clear that Thatcham is to receive a lower allocation than other urban areas given the rapid expansion of the town in recent years. This is to allow Thatcham a period of consolidation, ensuring the infrastructure and town centre facilities can be upgraded and meet the demands of the existing population. This will enable Thatcham to become more self-contained, encouraging residents to shop and socialise locally.](#)

[In accordance with the Core Strategy, Thatcham will not accommodate large scale development at this stage and, although this site is not large scale, it is considered that there are other sites within the town which are more suitable for allocation.](#)

~~The remainder of the site is poorly related to the existing settlement pattern of Thatcham. Flood risk on the site is high.~~

~~Only a small amount of development is required in Thatcham under the Core Strategy framework, other sites within the town are considered more appropriate for development.~~

### Discussion:

#### Site Description:

The site is located to the north of Thatcham [and sits to the east of Little Copse.](#)

The site is some distance from the centre of Thatcham and public transport options are limited.

#### Landscape:

The site [sits within the Colthrop Manor Plateau Edge \(LLCA14F\) as identified within the Thatcham Landscape Sensitivity Study \(2009\). This](#) is in an area of medium landscape sensitivity, ~~and is rural in character.~~ [characterised by its open farmland with major blocks of woodland, and undulating escarpment slopes. Settlement in the area is sparse but the area is an important setting to north Thatcham and a rural transition zone between the urban area and the AONB.](#)

#### Flood Risk:

The site is in Flood Zone 1, although it is within a surface water flood risk area [and adjacent to a Critical Drainage Area.](#) An ordinary water course runs across the site. ~~Part of the site is required for the Thatcham flood alleviation work as part of the Thatcham Surface Water Management Plan.~~

## Site Selection – Site Commentary

A FRA and appropriate mitigation, including SUDs would be required.

### Highways /Transport:

No specific comments have been made on this site [from the Highways Department](#).

~~There are concerns over access to the site as an access road would need to pass through the area of the site being used for the flood alleviation works.~~

### Ecology:

The site is adjacent to ancient [semi-natural](#) woodland [and a Local Wildlife Site](#). Appropriate buffers would be required (10m).

[An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected](#)

### Archaeology:

The site is within a HLC sensitivity area. Further investigation would be required

### Education:

Primary school provision [in the area](#) is at capacity, as is secondary school provision.

### Environmental Health:

No known air, noise or contamination issues.

### Minerals and Waste:

No known mineral or waste issues

### Land use planning consultation zone:

The site is not within an AWE consultation zone

### Environment Agency:

No specific comments made on this site. The site is within SPZ3

### Thames Water:

TW not consulted on this site

### Parish Council:

Comments made by both Cold Ash parish council and Thatcham town council.

Concern over the impact on Little Copse ancient woodland. There is potential for dormice and newts on the site. Access to the site is also a concern.

The site offers good visual amenity to area south of the site, development would affect the gateway to Thatcham.

Development would be likely to increase the risk of flooding in north Thatcham.

[Advise that Northfield Road sewer is at capacity and has had historical discharge events.](#)

### Preferred Options Consultation key issues:

[Two responses were received regarding this site.](#)

- [General comments](#)
- [Flood Risk](#)
- [Distance from centre](#)
- [Character/Landscape sensitivity](#)
- [Ecology](#)
- [Access](#)

[For the consultation responses and Council's response, please see the Statement of Consultation.](#)

### SA/SEA:

[Overall the site is likely to have a predominantly neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.](#)

[Whilst the site is close to some local services and facilities, it is some distance from the centre of Thatcham and relates poorly to the existing settlement. This has the potential to have a negative impact upon](#)

## Site Selection – Site Commentary

environmental and social sustainability. There are opportunities for walking and cycling and whilst public transport options are available these are limited and it is likely will lead to a high level of car dependency. Development of the site would have a negative impact on both the landscape character and the character of the built environment. There would also be an impact on the identity of settlements as development would expand Thatcham to the north, encroaching upon Cold Ash. Development is likely to negatively impact on the environmental sustainability as the site is adjacent to a Local Wildlife Site.

Flood risk on the site would have a negative impact on all elements of sustainability, as the site is at risk from surface water flooding. Mitigation measures could reduce the impact of flooding and reduce the impact on sustainability.

~~The SA/SEA gives a predominantly neutral impact, with no significant sustainability effects. The site is well located for access to local services and facilities, although is some distance from the centre of Thatcham, with opportunities for walking and cycling,~~

~~Appropriate mitigation, including buffers would be needed on the site to ensure there was not a negative impact on ecology and environmental sustainability.~~

~~The site is poorly related to the existing settlement pattern of Thatcham, and this could have a negative impact on sustainability. Flood risk on the site would have a negative impact on all elements of sustainability. Part of the site is required as part of the Thatcham flood alleviation works, meaning development on this part of the site would not be appropriate. Mitigation measures could reduce the impact of flooding and reduce the impact on sustainability.~~

### **Proposed development (from SHLAA submission):**

No specific proposals have been submitted for this site. [New development site and proposed layout plan \(25 dwellings\)](#) submitted at Preferred Options consultation. It is proposed to have a primary access run along the north of the new compensation pond leading to built development to the east of Little Copse. It is proposed to have a secondary access onto Lawrences Lane. These proposals have been taken into account in updating the site assessments.

Appropriate mitigation may be required</del></p>	There is potential for development to have a negative impact on environmental sustainability. <del>Mitigation measures would help to reduce this impact.</del> <a href="#">Appropriate mitigation measures could reduce the impact</a>
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	0-	<p>The site is in an area of medium landscape sensitivity.</p> <p><a href="#">The Landscape Sensitivity Study (2009) states that this area to the east of Thatcham provides a strong contrast to the more immediate urban form, providing an important setting to Thatcham and rural transition zone between the urban</a></p>	<p><a href="#">Landscaping and sensitive design could reduce the impact of development on the landscape.</a></p> <p><a href="#">A Landscape and Visual Impact Assessment (LVIA) would be required.</a></p>	

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">area and the AONB.</a>  <a href="#">It is considered the scale of the proposed development would have a negative impact on the landscape character</a>		
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	-	<p>Development on this site would change the rural nature and feel of this area <del>because this area is outside of the built area of Thatcham.</del> <a href="#">Floral Way is a defining feature, acting as a boundary between the built up area and the countryside.</a></p> <p><a href="#">The Landscape Sensitivity Study (2009) states that this area to the east of Thatcham provides a strong contrast to the more immediate urban form, providing an important setting to Thatcham and rural transition zone between the urban area and the AONB.</a></p> <p><a href="#">It is considered the scale of the proposed development would have a negative impact on the built environment.</a></p>	<p><a href="#">Landscaping and sensitive design could reduce the impact of development on the landscape.</a></p> <p><a href="#">A Landscape and Visual Impact Assessment (LVIA) would be required.</a></p>	Development could have a negative impact on sustainability by changing the character of the built environment in this area.
	Will it conserve and enhance the significance of the District's heritage assets?	?	There is high potential for finds on the site.	Further archaeological assessment required	
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact on air quality		It is unlikely that the site would have an impact on any aspect of sustainability.
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact on noise levels		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will there be an impact on soil quality?	<b>0</b>	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	<b>0</b>	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	The site is greenfield		The site could have a negative impact on environmental sustainability as it is a greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could <del>also</del> include Transport Assessment / Travel Plans <a href="#">to reduce car traffic and ensure compliance with policy CS15 of the Core Strategy.</a>	Without consideration of sustainability construction techniques <a href="#">and promotion of alternative modes of transport</a> development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	-	The site is at risk from surface water flooding. Two water courses flow through the site in addition to an overland flow route (as identified in the Thatcham Surface Water Management Plan). A pond is also located within the site.	<a href="#">A FRA and appropriate flood mitigation measures including SUDs would need to be provided.</a> A FRA and SUDs would be required	<a href="#">Flooding can have a negative impact on all elements of sustainability. Mitigation measures should reduce this impact.</a> <del>Surface water flooding could be an issue on the site, but with appropriate SuDS this could be mitigated meaning the site should not have an impact on any aspects of sustainability.</del>
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<b>0</b>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<b>0</b>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		<a href="#">the longer term.</a>
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a [predominantly](#) neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

The site is well located for access to local services and facilities, although is some distance from the centre of Thatcham, with opportunities for walking and cycling, all of which have a positive impact on sustainability. [The site is also in close proximity to employment opportunities and local services and facilities which will have a positive impact on economic and social sustainability.](#)

There are protected species on the site, and without appropriate mitigation there would be negative impact on sustainability. [Potential negative impacts could occur in relation to the environmental sustainability due to the greenfield nature of the site, the impact on biodiversity and geodiversity and the impact on the character of both landscape and the built environment.](#)

[Flood risk on the site would have a negative impact on all elements of sustainability, as the site is at risk from surface water flooding. Mitigation measures could reduce the impact of flooding and reduce the impact on sustainability.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	<a href="#">Newbury &amp; Thatcham</a>	<b>Settlement:</b>	Thatcham	<b>Parish:</b>	Thatcham
<b>Site ID:</b>	THA024	<b>Site Address:</b>	Land at Hart's Hill Farm, <a href="#">Thatcham</a>	<b>Development Potential:</b>	138 dwellings (4.6ha at 30dph) <sup>252</sup> <a href="#">dwellings (8.4ha at 30dph)</a>

### Recommendation:

The site is not recommended for allocation

### Justification:

[The Core Strategy sets out the Spatial Strategy for the District and provides an overall framework to guide development over the plan period. The Core Strategy is clear that Thatcham is to receive a lower allocation than other urban areas given the rapid expansion of the town in recent years. This is to allow Thatcham a period of consolidation, ensuring the infrastructure and town centre facilities can be upgraded and meet the demands of the existing population. This will enable Thatcham to become more self-contained, encouraging residents to shop and socialise locally. In accordance with the Core Strategy, Thatcham will not accommodate large scale development at this stage and it is considered that there are other sites within the town which are more suitable for allocation.](#)

[It is considered that the principle of developing north of Floral Way is not acceptable at this stage and would be contrary to the Core Strategy. The Landscape Sensitivity Study \(2009\) is clear that the area to the east of Thatcham provides a strong contrast to the more immediate urban form, providing an important setting to Thatcham and rural transition zone between the urban area and the AONB. The area is characterised by its open farmland with major blocks of woodland and undulating escarpment slopes. Settlement is sparse but the area is an important setting to north Thatcham.](#)

[It is the Council's preferred approach, in accordance with the Core Strategy, to consider this area as a whole as part of a revised Local Plan, when the area can be holistically planned for ensuring infrastructure requirements can be delivered to meet the demand from new development, rather than large scale development occurring in a piecemeal manner.](#)

~~The Core Strategy sets out that Thatcham only needs a small amount of development over the plan period. The potential on this site is much larger than required, and there are other smaller sites that are considered more suited to development at this stage.~~

~~Development on this site of Floral Way would change the character of the built environment, by moving a significant amount of residential development to the north east of Floral Way.~~

### Discussion:

#### Site Description:

The site is located to the north east of Thatcham, separated from the existing residential development by Floral Way. There is a small residential development to the south east of the site. The site is quite close to local services and facilities, and the open countryside.

#### Landscape:

The site is in an area of medium landscape sensitivity, and is rural in character. [The Landscape Sensitivity Study \(2009\) outlines that the area provides a strong contrast to the more immediate urban form, providing an important setting to Thatcham and rural transition zone between the urban area and the AONB. The area is characterised by its open farmland with major blocks of woodland and undulating escarpment slopes. Settlement is sparse but the area is an important setting to north Thatcham.](#)

#### Flood Risk:

The site is in Flood Zone 1, but at risk from surface water flooding. Two water courses flow through the site, which has been identified as an overland flow route in the Thatcham Surface Water Management Plan. A FRA would be required and SuDS would need to be provided.

#### Highways /Transport:

No specific comments have been made on this site.

## Site Selection – Site Commentary

[The site is close to a number of public transport options, with a bus service running past the site and a regular service running along the A4 to the south of the site. Thatcham also has a railway station which is approximately 2.5 - 3km from the site.](#)

There are limited public transport options passing the site, but several buses pass along the A4, and there is a railway station to the south east of Thatcham.

### **Ecology:**

There are great crested newts and bats on the site and the western boundary of the site is adjacent to a Local Wildlife Site. [An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected. In addition buffers will be required from the ancient woodland and Local Wildlife Site](#)

~~An Extended Phase 1 Habitat Assessment would be required.~~

### **Archaeology:**

The site has high archaeological potential with evidence of prehistoric and RB activity. Potential to be a significant constraint. [Further investigation will be required.](#)

### **Education:**

Local primary and secondary school provision is at capacity.

### **Environmental Health:**

No known air, noise or contamination issues.

### **Minerals and Waste:**

No known mineral or waste issues.

### **Land use planning consultation zone:**

The site is not within an AWE consultation zone

### **Environment Agency:**

No specific comments made on this site. The site is within SPZ3

### **Thames Water:**

Concern regarding Water Supply capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of any development.

A water supply strategy would be required.

Concern regarding wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A drainage strategy would be required

### **Parish Council:**

No comments were made on this site.

### **Preferred Options Consultation key issues:**

[Two responses were received regarding this site.](#)

- [General comments](#)
- [SA/SEA](#)

[For the consultation responses and Council's response, please see the Statement of Consultation.](#)

### **SA/SEA:**

[Overall the site is likely to have a predominantly neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.](#)

[The site is well located for access to local services and facilities, although is some distance from the centre of Thatcham, with opportunities for walking and cycling, all of which have a positive impact on](#)

## Site Selection – Site Commentary

sustainability. The site is also in close proximity to employment opportunities and local services and facilities which will have a positive impact on economic and social sustainability.

There are protected species on the site, and without appropriate mitigation there would be negative impact on sustainability. Potential negative impacts could occur in relation to the environmental sustainability due to the greenfield nature of the site, the impact on biodiversity and geodiversity and the impact on the character of both landscape and the built environment.

Flood risk on the site would have a negative impact on all elements of sustainability, as the site is at risk from surface water flooding. Mitigation measures could reduce the impact of flooding and reduce the impact on sustainability.

~~Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.~~

~~The site is well located for access to local services and facilities, although is some distance from the centre of Thatcham, with opportunities for walking and cycling, all of which have a positive impact on sustainability.~~

~~There are protected species on the site, and without appropriate mitigation there would be negative impact on sustainability. Development would change the character of the built environment in this part of Thatcham, with a potential negative impact on social and environmental sustainability. The site is at risk from surface water flooding, with two water courses flowing through the site. Without flood mitigation and SuDS there is potential for a negative impact on all elements of sustainability.~~

### **Proposed development (from SHLAA submission):**

The site is being promoted for between 150 and 200 dwellings.

- [Archaeological potential – further investigations required](#)
- [Two foul sewers underneath the site](#)

## Site Assessment

<b>Parish Council consultation response:</b>	<p><a href="#">At the SHLAA consultation event held on 5 February 2014, Thatcham Town Council commented that A site to be considered further. the site is within the Thatcham Moors Nature Reserve. The site does seem like a logical place for development.</a></p> <p><a href="#">At preferred options the parish council responded that it is not accepted that the proposal to release this significant and sensitive area to accommodate what is likely to be more than 87 dwellings has been properly assessed. Identification of the site is not sound and should be withdrawn.</a></p>

Flooding can have a negative impact on all elements of sustainability unless appropriate mitigation measures can be put in place.</a></p>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
11. To ensure a strong, diverse and sustainable economic base	Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	Will it promote and support the vitality and viability of the District's commercial centres?	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a [predominantly](#) neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

The site is well related to the existing settlement, close to local services and facilities with [a number of public transport options and](#) opportunities for walking and cycling, which ~~give~~ [result in](#) a positive effect in terms of sustainability.

[Potential negative impacts could occur in relation to environmental sustainability due to the site being greenfield, however the adopted Core Strategy DPD is clear that for the district's housing requirement to be met, development on greenfield sites on the edge of settlements is necessary.](#)

[Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.](#)

[Further potential negative impacts on environmental sustainability could occur due the proximity of the site to areas with ecological designations \(SSSI, SAC and a Local Nature Reserve\). The site could also negatively impact upon the landscape character and the character of the built environment as the area provides an important open area which physically and visually separates Newbury from Thatcham \(LSS, 2009\). As long as appropriate mitigation measures are introduced then these negative impacts could be reduced and positive effects on sustainability will be delivered.](#)

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

The site is close to the sewage treatments works, and the impact that this would have on development is unknown, however appropriate mitigation measures will reduce any possible effects on social sustainability.

~~The site is not at risk from flooding, which has a positive impact on sustainability; SuDS would be required to ensure that development did not have a negative impact on flooding elsewhere.~~

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	<a href="#">Newbury &amp; Thatcham</a>	<b>Settlement:</b>	Thatcham	<b>Parish:</b>	Thatcham
<b>Site ID:</b>	THA025	<b>Site Address:</b>	Land at Lower Way, Thatcham	<b>Development Potential:</b>	<a href="#">Approximately 875 dwellings (2.9ha at 30dph)</a>

### Recommendation:

The site is recommended for allocation

### Justification:

[The Core Strategy Development Plan Document \(DPD\) sets out the Spatial Strategy for the District and provides an overall framework to guide development over the plan period. The Core Strategy DPD is clear that Thatcham is to receive a lower allocation than other urban areas given the rapid expansion of the town in recent years. This is to allow Thatcham a period of consolidation, ensuring the infrastructure and town centre facilities can be upgraded and meet the demands of the existing population. This will enable Thatcham to become more self-contained, encouraging residents to shop and socialise locally. In accordance with the Core Strategy DPD, Thatcham will not accommodate large scale development at this stage.](#)

[It is considered that the principle of developing north of Thatcham \(north of Floral Way and Bowling Green Road\) is not acceptable at this stage and would be contrary to the Core Strategy DPD. The Landscape Sensitivity Study \(2009\) is clear that the areas to the north of Thatcham provide an important setting to Thatcham and a rural transition zone between the urban area and the AONB. It is the Council's preferred approach, in accordance with the Core Strategy DPD, to consider this area as a whole as part of a revised Local Plan, when the area can be holistically planned for.](#)

[This site \(THA025\) to the south of Thatcham offers a site which is well related to the existing settlement and is of a scale appropriate to the level of growth required for the town. In addition, whilst the Landscape Sensitivity Study \(2009\) outlines that the site is in an important area \(Thatcham Lakes\) which physically and visually separates Newbury from Thatcham it is not considered that development on this site, given its particular location, would detract from the principle of maintaining the separate identity of the two settlements.](#)

[Provided the necessary information and assessments are provided, along with the implementation of appropriate avoidance and mitigation measures, to ensure the legally protected habitats and species present in the Special Area of Conservation \(SAC\) and Site of Special Scientific Interest \(SSSI\) are not adversely affected, it is considered this site is suitable for allocation.](#)

~~The site is well related to the existing settlement, close to local services and facilities with public transport opportunities and walking and cycling routes into Thatcham Town Centre.~~

### Discussion:

#### Site Description:

The site is located to the south of Thatcham, north of the Nature Discovery Centre. ~~It is~~ [close to Thatcham town centre and local services](#) and facilities.

#### Landscape:

The site is [identified as being within](#) an area of medium landscape sensitivity, [in the Landscape Sensitivity Study \(LSS\) \(2009\) for Thatcham. It identified this site as being located within the Thatcham Lakes area – an important landscape buffer between Newbury and Thatcham, but the area is visually marred by some development on its edges. Thatcham Lakes is an important setting to the south of Thatcham and east of Newbury. The sharp contrast with the built form is of significant value. It provides an important open area which physically and visually separates Newbury from Thatcham. Should development take place on this site a Landscape and Visual Impact Assessment \(LVIA\) would be required.](#)

#### Flood Risk:

The site is in flood zone 1; [however a small area on the southern part of the site is susceptible to surface water flooding. The site is close to a critical drainage area, although it is adjacent to an area of surface water flood risk.](#) An ordinary water course runs through the site. An FRA would be required [alongside the submission of any planning application, and appropriate SUDs provided. Sustainable Drainage Systems](#)

## Site Selection – Site Commentary

[and/or appropriate mitigation measures would be required as part of any development on the site.](#)

### Highways /Transport:

The traffic generated from the site is considered to have a limited impact on the highway network-, [however a Transport Assessment would be required at the planning application stage.](#)

There are good public transport opportunities close to the site.

### Ecology:

~~The site is adjacent to the Thatcham Moors Nature Reserve and a SSSI, although this is not seen as an issue for deliverability of the site. Previously negotiation of additional land to be provided adjacent to the SSSI and River Kennet should this site be developed. Appropriate buffers would need to be provided.~~

[There is a Biodiversity Opportunity Area adjacent to the site. In addition, part of the site is adjacent to the area covered by the West Berkshire Living Landscape Project. Development will need to support and make a positive contribution to this Project.](#)

[The site is in close proximity to a Local Nature Reserve, the Kennet and Lambourn Floodplain SAC, and Thatcham Reedbeds SSSI. An Extended Phase 1 Habitat Survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected.](#)

[Development on the site will not adversely affect the adjacent SSSI and SAC to the south of the site. Habitat Regulation Assessment screening will need to be undertaken at the planning application stage to ascertain the impact of development upon the SAC.](#)

### Archaeology:

Potential archaeology on the site. ~~Further investigation required.~~ [A full archaeological desk based assessment would be required at the planning application stage, with mitigation strategies identified if required.](#)

### Education:

Primary and secondary school provision is at capacity.

### Environmental Health:

No known air or noise issues. [The site is located close to sewage treatment works. An odour impact assessment would be required.](#)

~~The site is close to a previous land fill site.~~ [Opposite 53 Lower Way there is suspected contamination, and there is also suspected contamination on land north of the Thatcham Nature Discovery Centre. A contamination assessment would be required as part of any planning application.](#)

### Minerals and Waste:

The site is partially underlain by gravel deposits. Consideration of policies 1 & [and 2 of the RMLP Replacement Minerals Local Plan](#) ~~required.~~ [relevant. However, the site is near the edge of the deposit and there might be limited possibility for the option to use minerals on site as part of construction or prior extraction \(depending on depth and deposit quality\).](#)

[There are no known waste issues nearby.](#)

### Land use planning consultation zone:

The site is not within an AWE consultation zone

### Environment Agency:

No specific comments made on this site. The site is in ~~SPZ3~~ [groundwater source protection zone \(SPZ\)3.](#) ~~and~~ [The Environment Agency has no principle objections to development within SPZs. The Environment Agency also advised that the site is](#) close to a former landfill site. Investigation of potential contamination would be required.

### Thames Water:

No water supply infrastructure issues envisaged.

## Site Selection – Site Commentary

Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development. An integrated strategy for water and wastewater would be required at planning application stage if the site is allocated which should cover flood risk, water quality and conservation. The strategy would need to be clear how a solution would be delivered to any concerns identified as the development came forward.

~~A drainage strategy would be required~~

There are a number of sewers on the site, and of concern to Thames Water are the two foul sewers which cross the site from east to west. These will need diverting if the need arose or easements will need to be held around them.

### Parish Council:

At the SHLAA consultation event held on 5 February 2014, Thatcham Parish Council commented that the site is within the Thatcham Moors Nature Reserve. They also commented that it was A a site to be considered further. The site and does seem like logical place for development.

At preferred options the parish council responded that it is not accepted that the proposal to release this significant and sensitive area to accommodate what is likely to be more than 87 dwellings has been properly assessed. Identification of the site is not sound and should be withdrawn.

### Preferred options consultation key issues:

- General comments – impact on house prices, existing residents not considered, loss of views, overcrowding.
- Consultation process – timing, complicated process to submit comments, 100m consultation zone insufficient, underhand process.
- Contamination – refuse tip in part of field in 1950s.
- Crime – increase in anti-social behaviour, recent closure of police station.
- Density – excessive, more houses will be completed than stated.
- Impact on ecology – proximity to SSSI, SAC and nature reserve; part of the nature reserve, impact on wildlife, site a buffer zone between existing residential development and the nature reserve.
- Flood risk – history of flooding on the site, surface water flood risk, development will worsen flooding, FRA not carried out.
- Heritage assets – archaeological potential on the site.
- Highways and transport – increase in congestion, previous applications on Lower Way refused on access/road safety grounds, issue of speeding, increased road safety risk, limited car parking.
- Walking – network of footpaths across the site. No public rights of way across the site. Site in private ownership. Application made to Council to record footpaths – not yet determined.
- Infrastructure at capacity and could not support increased population – education, GP surgeries, sewage network. Potential issues with primary provision. Thames Water has issues with wastewater network.
- Sewage pipes underneath site.
- Impact on landscape/setting – within AONB, sensitive landscape, one of Thatcham's last rural areas, site forms clear boundary to settlement.
- Loss of open/recreation space – site has accommodated car boot sales, fairs and circuses over the years.
- Pollution – air and noise.
- Principle of development – no need for additional housing, alternative sites (PDL, north Thatcham, vacant offices), precedent.
- Settlement boundaries.
- Site selection process – inconsistent as other sites ruled out for reasons that apply to this site, alternative sites not considered.
- Statement of consultation – statements made at 2014 SHLAA consultation events questioned, eg. should Cold Ash Parish Council have commented about Thatcham sites, accuracy.
- Sustainability.

### SA/SEA:

Overall the site is likely to have a predominantly neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

## Site Selection – Site Commentary

The site is well related to the existing settlement, close to local services and facilities with [a number of public transport options and](#) opportunities for walking and cycling, which [give result in](#) a positive effect in terms of sustainability.

[Potential negative impacts could occur in relation to environmental sustainability due to the site being greenfield, however the adopted Core Strategy Development Plan Document is clear that for the district's housing requirement to be met, development on greenfield sites on the edge of settlements is necessary.](#)

[Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.](#)

[Further potential negative impacts on environmental sustainability could occur due the proximity of the site to areas with ecological designations \(SSSI, SAC and a Local Nature Reserve\). The site could also negatively impact upon the landscape character and the character of the built environment as the area provides an important open area which physically and visually separates Newbury from Thatcham \(LSS, 2009\). As long as appropriate mitigation measures are introduced then these negative impacts could be reduced and positive effects on sustainability will be delivered.](#)

The site is close to the sewage treatments works, and the impact that this would have on development is unknown, however appropriate mitigation measures will reduce any possible effects on social sustainability.

~~The site is not at risk from flooding, which has a positive impact on sustainability; SuDS would be required to ensure that development did not have a negative impact on flooding elsewhere.~~

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

The site is being promoted for residential development with an open space buffer to the countryside to the south.

## Summary of Site Assessment

### Key Issues:

- Relationship to settlement - not adjacent to settlement boundary. [The site is surrounded by site THA011.](#)
- [Development should not take place in isolation of THA011 and THA014](#)

## Site Assessment

<b>Parish Council consultation response:</b>	<p>Comments on this site made by both Cold Ash Parish Council and Thatcham Town Council. There is concern over the impact of additional traffic on the existing road network, in particular along Bowling Green Road. Poor public transport opportunities in the area would make residents reliant on cars.</p> <p>Flooding is a key concern following the floods in 2007. New balancing ponds are being put in, but there is concern that these only mitigate the existing issue, not any future problems.</p> <p>Visually development would detract from the rural approach to Cold Ash. Consultation on the Thatcham Vision indicates that people want to maintain the gap between the settlements. The site is traditional agricultural land with ancient woodlands and pre enclosure hedgerows.</p> <p>The site is not considered to be close to local services and facilities.</p> <p><a href="#">Advise that the Northfield Road sewer is capacity and has had historical discharge events.</a></p>

	distinctiveness of the character of the landscape?		<p>impact of development upon the character of the environment is likely to be reduced.</p> <p><a href="#">The Landscape Capacity Assessment (2015) recommended that development of the site would not result in harm to the natural beauty and special qualities of the AONB. The site could be considered further in conjunction with THA011 and THA014, subject to a series of mitigation measures.</a></p> <p><a href="#">Development of this site is dependent on a wider scheme. Development in isolation of surrounding sites would result in unacceptable level of expansion of Thatcham north and the well defined settlement boundary along Bowling Green Road and Heath Lane.</a></p>	<p><a href="#">would be necessary to conserve and enhance the AONB:</a></p> <ul style="list-style-type: none"> <li>- <a href="#">The potential development area would be below the 95m AOD contour and form the northern limit of development off Bowling Green Road as shown in the LCA.</a></li> <li>- <a href="#">Most of the site would be suitable for development subject to a narrow belt of GI along the southern edge as shown in the LCA, to retain the character of the Bowling Green Road at this point.</a></li> <li>- <a href="#">Tree belts to be provided to the boundaries with open countryside or to the adjacent THA011</a></li> <li>- <a href="#">GI to break up the built form</a></li> <li>- <a href="#">Preferred access from either the existing access point or from THA011.</a></li> </ul>	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	0-	<p>The site contains an existing dwelling and garden. <a href="#">The site is poorly related to the existing built form, separated by the road and part of THA011 and THA014.</a></p> <p><del>Development would lead to a change in the character of the built environment, if developed alongside other adjacent sites.</del></p>	<p><a href="#">Mitigation measures as set out in the LCA (2015).</a></p> <p><a href="#">A Landscape and Visual Impact Assessment (LVIA) will be required.</a></p>	<p><del>Development of the site in isolation is unlikely to have an impact on any elements of sustainability. is likely to have a negative impact on sustainability.</del></p> <p><a href="#">Further assessment is required regarding archaeological potential.</a></p>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">Development of this site is dependent on a wider scheme. Development in isolation of surrounding sites would result in unacceptable level of expansion of Thatcham north and the well defined settlement boundary along Bowling Green Road and Heath Lane.</a>		
	Will it conserve and enhance the significance of the District's heritage assets?	?	The site is within a wider area of archaeological potential.  There is a late nineteenth century house and outbuildings within the site.	Further archaeological assessment required	
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact on air quality		It is unlikely that the site would have an impact on any aspect of sustainability.
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact on noise levels		
	Will there be an impact on soil quality?	0	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-/+	The site is <del>greenfield land</del> <a href="#">a mixture of brownfield and greenfield land, however the majority of the site is residential garden (greenfield).</a>		<del>Because the site is previously developed, the site is environmentally sustainable.</del> <a href="#">The site is partly brownfield and partly greenfield land therefore there is the potential for both positive and negative effects on sustainability.</a>
10. To reduce emissions contributing to climate change and ensure	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could <del>also</del> include Transport Assessment / Travel Plans <a href="#">to reduce car traffic and</a>	Without consideration of sustainability construction techniques <a href="#">and the</a>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
adaptation measures are in place to respond to climate change				<a href="#">ensure compliance with policy CS15 of the Core Strategy.</a>	<a href="#">promotion of alternative modes of travel</a> development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	<b>0</b>	There is no official flood risk on the site.	SUDs would be required.	Unlikely to have an impact on any element of sustainability. <del>Cold Ash Parish Council have commented that the site is required to accommodate flood retention basins to complete flood protection, however the Thatcham Surface Water Management Plan does not indicate that this site would form part of a basin.</del>
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<b>0</b>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<b>0</b>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a> <a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a [predominantly](#) neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

[Whilst the site is close to some local services and facilities, it is some distance from the centre of Thatcham and relates poorly to the existing settlement. This has the potential to have a negative impact upon environmental sustainability. There are opportunities for walking and cycling and whilst public transport options are available these are limited and it is likely will lead to a high level of car dependency.](#)

~~The site is well located for access to local services and facilities (although it is some distance from the centre of Thatcham) with opportunities for walking and cycling, all of which have a positive impact on sustainability.~~

The site [majority of the site](#) is greenfield [land](#) as it is [comprising](#) residential garden, ~~meaning there could be~~ [and as a result could have](#) a negative impact on environmental sustainability.

[Additional potential negative impacts could occur in relation to the environmental sustainability due to the greenfield nature of the site and the impact on the character of both landscape and the built environment.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	<a href="#">Newbury &amp; Thatcham</a>	<b>Settlement:</b>	Thatcham	<b>Parish:</b>	Cold Ash
----------------------	--	--------------------	----------	----------------	----------

<b>Site ID:</b>	THA027	<b>Site Address:</b>	The Creek, Heath Lane, Thatcham	<b>Development Potential:</b>	41 dwellings (1.36ha at 30dph)
-----------------	--------	----------------------	---------------------------------	-------------------------------	--------------------------------

### Recommendation:

The site is not recommended for allocation

### Justification:

The Core Strategy sets out the Spatial Strategy for the District and provides an overall framework to guide development over the plan period. The Core Strategy is clear that Thatcham is to receive a lower allocation than other urban areas given the rapid expansion of the town in recent years. This is to allow Thatcham a period of consolidation, ensuring the infrastructure and town centre facilities can be upgraded and meet the demands of the existing population. This will enable Thatcham to become more self-contained, encouraging residents to shop and socialise locally. In accordance with the Core Strategy, Thatcham will not accommodate large scale development at this stage and it is considered that there are other sites within the town which are more suitable for allocation.

Conserving and enhancing the distinctive landscape character of the AONB is given considerable weight when assessing sites for development. The Council has therefore ensured that sites within or within the setting of the AONB have been subject to a Landscape Sensitivity/Capacity Assessment (LSA/LCA). This is a consistent assessment carried out by the Council's landscape consultant to determine whether a site could be developed without causing harm to the natural beauty and special qualities of the AONB. The LCA has recommended that this site is not developed in isolation but as part of a larger scheme in conjunction with THA011 and THA014, creating a large scale development to the north of Thatcham.

One of the strategic objectives for the Core Strategy is to ensure that development is planned in a way that ensures the protection and enhancement of the local distinctive character and identity of the built, historic and natural environment across the District. The Core Strategy notes that a key feature of even the larger settlements in West Berkshire is the way in which few have coalesced in recent times and so the blurring of the physical distinction between places has largely been avoided.

It is considered that the principle of developing north of Bowling Green Road, for a large scale development is not acceptable at this stage and would be contrary to the Core Strategy. It would lead to the perception of merging Cold Ash and Thatcham and would have adverse impact on the settlement pattern.

It is the Council's preferred approach, in accordance with the Core Strategy, to consider this area as a whole as part of a revised Local Plan, when the area can be holistically planned for ensuring infrastructure requirements can be delivered to meet the demand from new development, rather than large scale development occurring in a piecemeal manner.

~~The site is poorly related to Thatcham without adjacent sites being developed. This would lead to a much larger area being developed. The Core Strategy sets out that Thatcham only needs a small amount of development over the plan period, so development of this site, with other adjacent sites is not required at this stage.~~

### Discussion:

#### Site Description:

The site is located to the north of Thatcham, and lies to the north of Bowling Green Road/Heath Lane. The site is not adjacent to the settlement boundary, although it is close to it, but is surrounded completely by site THA011 and effectively land-locked The site is therefore separated from the existing residential development by ~~Full Way~~ the road and part of THA011.  
The site is some distance to the centre of Thatcham and public transport options are limited.

#### Landscape:

The site sits within the Ashmore Green and Lower Cold Ash Plateau Edge (LLCA14A) as identified by the Thatcham Landscape Sensitivity Study (2009). This is in an area of low/medium landscape sensitivity, characterised by a mix of small and complex field pattern and modern linear settlement. There are good landscape links with the adjacent parts of the escarpment and there is a well defined edge to Thatcham.~~and is rural in character.~~

## Site Selection – Site Commentary

[The Landscape Capacity Assessment \(2015\)](#) recommended that development of the site would not result in harm to the natural beauty and special qualities of the AONB. However, the site could be considered further in conjunction with THA011 and THA014, subject to a series of mitigation measures.

[Development of this site is dependent on a wider scheme to include THA011 and THA014. Development in isolation of surrounding sites, in accordance with the LCA, would result in unacceptable level of expansion of Thatcham north and the well defined settlement boundary along Bowling Green Road and Heath Lane.](#)

### **Flood Risk:**

The site is in Flood Zone 1. A FRA would be required to take account of [surrounding](#) surface water flooding. Thatcham suffered from significant flooding in July 2007.

### **Highways /Transport:**

No specific comments given on this site [from the Highways Department](#).

Public transport options past the site are limited. There are opportunities for walking and cycling.

### **Ecology:**

There is potential for bats on the site. [An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected.](#) ~~An extended phase 1 habitat survey and bat survey would be required.~~

### **Archaeology:**

The site is within a wider area of archaeological potential. Further investigation is required.

### **Education:**

Primary and Secondary school provision is at capacity.

### **Environmental Health:**

No known air, noise or contamination issues.

### **Minerals and Waste:**

No known mineral or waste issues

### **Land use planning consultation zone:**

The site is not within an AWE consultation zone

### **Environment Agency:**

No specific comments made on this site. The site is within SPZ3.

### **Thames Water:**

[Thames Water](#) not consulted on this site

### **Parish Council:**

Comments on this site made by both Cold Ash Parish Council and Thatcham Town Council. There is concern over the impact of additional traffic on the existing road network, in particular along Bowling Green Road. Poor public transport opportunities in the area would make residents reliant on cars.

Flooding is a key concern following the floods in 2007. New balancing ponds are being put in, but there is concern that these only mitigate the existing issue, not any future problems.

Visually development would detract from the rural approach to Cold Ash. Consultation on the Thatcham Vision indicates that people want to maintain the gap between the settlements. The site is traditional agricultural land with ancient woodlands and pre enclosure hedgerows.

The site is not considered to be close to local services and facilities.

[Advise that the Northfield Road sewer is capacity and has had historical discharge events.](#)

### **[Preferred Options Consultation key issues:](#)**

## Site Selection – Site Commentary

[1 response was received regarding this site.](#)

- [General comments](#)

[For the consultation responses and Council's response, please see the Statement of Consultation.](#)

### **SA/SEA:**

[Overall the site is likely to have a predominantly neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.](#)

[Whilst the site is close to some local services and facilities, it is some distance from the centre of Thatcham and relates poorly to the existing settlement. This has the potential to have a negative impact upon environmental sustainability. There are opportunities for walking and cycling and whilst public transport options are available these are limited and it is likely will lead to a high level of car dependency.](#)

[The site majority of the site is greenfield land comprising residential garden, and as a result could have a negative impact on environmental sustainability.](#)

[Additional potential negative impacts could occur in relation to the environmental sustainability due to the greenfield nature of the site and the impact on the character of both landscape and the built environment.](#)

~~The SA/SEA indicates a predominantly neutral sustainability impact. There are no significant sustainability effects. The site is well located for access to local services and facilities (although it is some distance from the centre of Thatcham), with opportunities for walking and cycling, all of which have a positive impact on sustainability. The site is greenfield as it is residential garden, meaning there could be a negative impact on environmental sustainability.~~

### **Proposed development (from SHLAA submission):**

No specific proposals have been submitted for this site.

# Site Selection – Site Assessment

<b>Spatial Area:</b>	<a href="#">Newbury &amp; Thatcham</a>	<b>Settlement:</b>	Thatcham	<b>Parish:</b>	Thatcham
----------------------	--	--------------------	----------	----------------	----------

<b>Site ID:</b>	THA028	<b>Site Address:</b>	Land north of Floral Way and east of Harts Hill Road, Thatcham
-----------------	--------	----------------------	--

<b>Development Potential:</b>	103-90 dwellings ( <a href="#">3ha at 30dph</a> )	<b>SHLAA Assessment:</b>	Potentially developable
-------------------------------	---	--------------------------	-------------------------

## Summary of Site Assessment

Key Issues:	<ul style="list-style-type: none"> <li>- Greenfield</li> <li>- <a href="#">Site is separated from the existing building line by Floral Way</a></li> <li>- Potential surface water flood risk – <a href="#">surface water flows run adjacent to the site.</a></li> </ul>
-------------	---

## Site Assessment

<b>Parish Council consultation response:</b>	<p>Comments were made on this site by Thatcham Town Council and Cold Ash Parish Council. Development would contribute to flood risk in Thatcham. Traffic would have an impact on the road network in north Thatcham and Cold Ash, especially at peak times, as there are limited alternatives (infrequent bus services). There are capacity issues at Kennet School. Residents are concerned that development would set a precedent for further development on the other site of Floral Way. General feeling that this site could be more acceptable than THA007 or THA008 as there is already development on the other side of Harts Hill Road.</p>

Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	Site is close to local facilities and <a href="#">offers good access to</a> the open countryside		The site's location to the east of Thatcham gives opportunities for walking and cycling and gives easy access to local services and facilities. Therefore, in terms of environmental and social sustainability, development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	+	The site is close to facilities at Kennet leisure centre. <a href="#">The site is also in close proximity to local amenity space and play areas.</a>		
	Will it protect and enhance green infrastructure across the district?	? 0	A Public Right of Way runs to the east of the site	The right of way would need to be retained <a href="#">and protected.</a>	
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The site is close to areas of protected employment, and within easy access of a number of employment sites and education facilities.		The site is located close to areas of employment and education as well as other services and facilities within Thatcham. <a href="#">The site also has good</a> , as well giving <del>each</del> access to the strategic road network and public transport opportunities, <a href="#">although the railway station is some distance from the site.</a> This means that the <a href="#">development of site</a> could have a positive impact on <del>the district's</del> economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	<del>The site is located within Thatcham.</del> There are a number of public transport options, including a frequent bus route that runs along the A4, <del>which is close to</del> <a href="#">the south of</a>		The site is close to local services and facilities which encourage walking or cycling. <a href="#">The site also has good access to public</a>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<p>the site.</p> <p>Thatcham station is approximately 2.35 - 3km from the site.</p> <p>There are a number of opportunities for walking and cycling to local services and facilities.</p>		<p><a href="#">transport. Development of the site would</a>, and therefore have a positive impact on environmental and social sustainability.</p>
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	0	There are no known biodiversity and geodiversity assets on the site		<p><a href="#">There is potential for development to have a negative impact on environmental sustainability. Appropriate mitigation measures could reduce the impact</a> It is unlikely that the site would have an impact on any aspect of sustainability.</p>
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	0 =	<p>The site is in an area of medium landscape sensitivity.</p> <p><a href="#">The Landscape Sensitivity Study (2009) states that this area to the east of Thatcham provides a strong contrast to the more immediate urban form, providing an important setting to Thatcham and rural transition zone between the urban area and the AONB.</a></p>	<p>Landscaping could reduce the impact of development on the landscape.</p> <p><a href="#">A Landscape and Visual Impact Assessment (LVIA) will be required.</a></p>	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	-	<p>Development on this site would change the rural nature and feel of this area. <del>as this area is outside the built area of Thatcham</del> <a href="#">Floral Way is a defining feature, acting as a boundary between the built up area and the countryside.</a></p> <p><a href="#">The Landscape Sensitivity Study (2009) states that this area to the east of Thatcham provides a strong contrast to the more immediate urban form, providing an important setting to Thatcham and rural</a></p>	<p><a href="#">Landscaping and sensitive design could reduce the impact of development on the landscape.</a></p> <p><a href="#">A Landscape and Visual Impact Assessment (LVIA) will be required.</a></p>	<p>Development would have a <u>negative</u> impact on the character of the built environment in this area.</p> <p>Further assessment is required on any potential heritage assets on the site</p>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">transition zone between the urban area and the AONB.</a>		
	Will it conserve and enhance the significance of the District's heritage assets?	?	No known archaeology but potential due to adjacent site have high archaeological potential	Further archaeological assessment required	
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact on air quality		It is unlikely that the site would have an impact on any aspect of sustainability.
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact on noise levels		
	Will there be an impact on soil quality?	0	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	The site is greenfield land		The site could have a negative impact on environmental sustainability as it is a greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could <b>also</b> include Transport Assessment / Travel Plans <a href="#">to reduce car traffic and ensure compliance with policy CS15 of the Core Strategy.</a>	Without consideration of sustainability construction techniques, <a href="#">and promotion of alternative modes of transport</a> , development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	?	The site is not in an area of flood risk; however Cold Ash Parish Council reported a surface water flow route through the site.  The TSWMP identifies surface water flows along the north western boundary of the site.	A FRA and appropriate mitigation, including SuDS required.	Flooding <del>has</del> <a href="#">could have</a> a negative impact on <a href="#">all aspects of</a> sustainability. Mitigation measures can help to reduce this impact.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

Overall the site is likely to have a [predominantly](#) neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.

The site is easily accessible by public transport, walking and cycling and within close proximity of open countryside and local sports facilities to help promote a healthy active lifestyle, all of which have a positive impact on sustainability. [The site is also in close proximity to employment opportunities and local services and facilities which will have a positive impact on economic and social sustainability.](#)

[Potential negative impacts could occur in relation to the environmental sustainability due to the greenfield nature of the site and the impact on the character of both landscape and the built environment.](#)

[Flood risk on the site could have a negative impact on all elements of sustainability, as the site is at risk from surface water flooding. Mitigation measures could reduce the impact of flooding and reduce the impact on sustainability.](#) Development could change the character of the built environment, which could have a negative impact on sustainability. While the site is not within an official flood risk area, there is evidence of surface water flows along the boundary of the site, which could lead to flooding and a negative impact on sustainability unless suitable mitigation measures were considered.

### Summary of effects:

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

-----------------	--------	----------------------	--	-------------------------------	---------------------------------

### Recommendation:

The site is not recommended for allocation

### Justification:

[The Core Strategy sets out the Spatial Strategy for the District and provides an overall framework to guide development over the plan period. The Core Strategy is clear that Thatcham is to receive a lower allocation than other urban areas given the rapid expansion of the town in recent years. This is to allow Thatcham a period of consolidation, ensuring the infrastructure and town centre facilities can be upgraded and meet the demands of the existing population. This will enable Thatcham to become more self-contained, encouraging residents to shop and socialise locally. In accordance with the Core Strategy, Thatcham will not accommodate large scale development at this stage and although this site is not considered large scale in terms of allocations for Thatcham, it is considered that there are other sites within the town which are more suitable for allocation.](#)

[It is considered that the principle of developing north of Floral Way is not acceptable at this stage and would be contrary to the Core Strategy. The Landscape Sensitivity Study \(2009\) is clear that the area to the east of Thatcham provides a strong contrast to the more immediate urban form, providing an important setting to Thatcham and rural transition zone between the urban area and the AONB. The area is characterised by its open farmland with major blocks of woodland and undulating escarpment slopes. Settlement is sparse but the area is an important setting to north Thatcham.](#)

[It is the Council's preferred approach, in accordance with the Core Strategy, to consider this area as a whole as part of a revised Local Plan, when the area can be holistically planned for ensuring infrastructure requirements can be delivered to meet the demand from new development, rather than development occurring in a piecemeal manner.](#)

~~The Core Strategy sets out that Thatcham only needs a small amount of development over the plan period. The potential on this site is larger than required, and there are other smaller sites that are considered more suited to development at this stage.~~

~~Development would change the character of the built environment, by developing to the north of Floral Way.~~

### Discussion:

#### Site Description:

The site is located to the east of Thatcham, separated from the existing building pattern by Floral Way. The site has good access to local services and facilities as well as good access to the open countryside.

#### Landscape:

The site is in an area of medium landscape sensitivity and is rural in character. [The Landscape Sensitivity Study \(2009\) outlines that the area provides a strong contrast to the more immediate urban form, providing an important setting to Thatcham and rural transition zone between the urban area and the AONB. The area is characterised by its open farmland with major blocks of woodland and undulating escarpment slopes. Settlement is sparse but the area is an important setting to north Thatcham.](#)

#### Flood Risk:

The site is in Flood Zone 1. The site suffered from surface water flooding in 2007 [and surface water flows run adjacent to the site](#). A FRA and SuDS would be required.

#### Highways /Transport:

No specific comments have been made on this site.

The site is close to a number of public transport options, with a bus service running past the site. [and a regular service running along the A4 to the south of the site. Thatcham also has a railway station which is](#)

## Site Selection – Site Commentary

[approximately 2.5 - 3km from the site.](#) ~~Thatcham also has a railway station.~~

### **Ecology:**

There are no known ecological issues.

### **Archaeology:**

No known archaeological issues, but investigation would be required.

### **Education:**

Local primary school provision is at capacity, as is local secondary school provision.

### **Environmental Health:**

No known air, noise or contamination issues.

### **Minerals and Waste:**

No known mineral or waste issues

### **Land use planning consultation zone:**

The site is not in an AWE consultation zone.

### **Environment Agency:**

No specific comments on this site. The site is in SPZ3.

### **Thames Water:**

Concern regarding Water Supply capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of any development.

A water supply strategy would be required.

Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A drainage strategy would be required

### **Parish Council:**

Comments were made on this site by Thatcham Town Council and Cold Ash Parish Council. Development would contribute to flood risk in Thatcham. Traffic would have an impact on the road network in north Thatcham and Cold Ash, especially at peak times, as there are limited alternatives (infrequent bus services). There are capacity issues at Kennet School. Residents are concerned that development would set a precedent for further development on the other site of Floral Way. General feeling that this site could be more acceptable than THA007 or THA008 as there is already development on the other side of Harts Hill Road.

### **Preferred Options Consultation key issues:**

[Four responses were received regarding this site.](#)

- [Flood Risk](#)
- [Transport and highways](#)
- [Ecology](#)
- [Character of the area](#)

[For the consultation responses and Council's response, please see the Statement of Consultation.](#)

### **SA/SEA:**

[Overall the site is likely to have a predominantly neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.](#)

## Site Selection – Site Commentary

The site is easily accessible by public transport, walking and cycling and within close proximity of open countryside and local sports facilities to help promote a health active lifestyle, all of which have a positive impact on sustainability. The site is also in close proximity to employment opportunities and local services and facilities which will have a positive impact on economic and social sustainability.

Potential negative impacts could occur in relation to the environmental sustainability due to the greenfield nature of the site and the impact on the character of both landscape and the built environment.

Flood risk on the site could have a negative impact on all elements of sustainability, as the site is at risk from surface water flooding. Mitigation measures could reduce the impact of flooding and reduce the impact on sustainability.

~~There are no significant sustainability impacts from this site. There are no significant sustainability impacts from this site. The site is easily accessible by public transport, walking and cycling and within close proximity of open countryside and local sports facilities to help promote a health active lifestyle, all of which have a positive impact on sustainability. Development could change the character of the built environment, which could have a negative impact on sustainability. While the site is not within an official flood risk area, there is evidence of surface water flows along the boundary of the site, which could lead to flooding and a negative impact on sustainability unless suitable mitigation measures were considered.~~

### **Proposed development (from SHLAA submission):**

The site is proposed for up to 100 dwellings, including affordable housing. There would be potential for the site to be developed alongside THA024.

**Key: Effects of option on SA objectives**

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	<a href="#">The site is close to the Regency Park Hotel which has sports facilities (private members only). There are further facilities in Thatcham.</a>		<a href="#">The site's location gives opportunities for walking and cycling and provides access to local services and facilities. Therefore, in terms of environmental and social sustainability development of the site would have a positive impact.</a>
	Will it increase opportunities for access to sports facilities?	+	<a href="#">The site is close to facilities at Regency Park Hotel (private members only) Public facilities are available at Kennet Leisure Centre.</a>		
	Will it protect and enhance green infrastructure across the district?	0	<a href="#">Unlikely to have an impact on green infrastructure</a>		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	<a href="#">Site close to local facilities and services and accessible to a number of employment sites and education facilities.</a>		<a href="#">The site is close to local services and facilities, as well as employment areas however it is likely that many of these will be accessed by car. Therefore, development of the site could have a positive impact on economic sustainability.</a>
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	0	<a href="#">There are a number of opportunities for walking and cycling to local services and facilities. There is a rail station in Thatcham although this is some distance from the site. A number of bus services pass the entrance to the site along Cold Ash Hill. The same bus also travels along</a>		<a href="#">The site is close to local services and facilities which encourage walking or cycling, and therefore have a positive impact on environmental and social sustainability. However public transport options are</a>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">Floral Way, south of the site. Although alternative transport modes are available there is likely to be a high level of car dependency.</a>		<a href="#">limited and car dependency is likely to be high, resulting in an overall neutral effect on sustainability</a>
	Will it reduce the number of road traffic accidents and improve safety?	?	<a href="#">Increased traffic in Thatcham from development on the site could have an impact on Road Safety.</a>		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	0	<a href="#">Development is unlikely to have an impact on sustainability</a>		<a href="#">The impact of development is likely to have a negative effect on environmental sustainability, however mitigation measures may help to reduce any potential impacts.</a>
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	-	<a href="#">The site is within an area of medium landscape sensitivity. The surrounding area is rural in nature. Development of this site would expand Thatcham towards Cold Ash, encroaching upon the existing green space and impacting on the identity of the two settlements.</a>	<a href="#">A Landscape and Visual Impact Assessment (LVIA) will be required.</a>	
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	-	<a href="#">The site is poorly related to the existing settlement and development on this site would change the rural nature and feel of this area, expanding the built form further up the hill towards Cold Ash.</a>		<a href="#">Development could have a negative impact on the character of the built environment in this area.</a>  <a href="#">Further assessment is required on any potential heritage assets on the site</a>
	Will it conserve and enhance the significance of the District's heritage assets?	?	<a href="#">Unlikely to have an impact on sustainability</a>	<a href="#">Further investigations may be required</a>	
	Will it promote, conserve and enhance the District's cultural assets?	0	<a href="#">Unlikely to have an impact</a>		
	Will it provide for increased access to and enjoyment of the historic environment?	0	<a href="#">Unlikely to have an impact</a>		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	<a href="#">Unlikely to have an impact on air quality</a>		<a href="#">It is unlikely that the site would have an impact on any aspect of sustainability.</a>
	Will the site be at risk from, or impact on, noise levels?	0	<a href="#">Unlikely to have an impact on noise levels</a>		
	Will there be an impact on soil quality?	0	<a href="#">Unlikely to have an impact on soil quality</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will there be an impact on water quality?	<u>0</u>	<a href="#">Unlikely to have an impact on water quality.</a>		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	<a href="#">The site is greenfield</a>		<a href="#">The site could have a negative impact on environmental sustainability as it is a greenfield site.</a>
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	<a href="#">The level of impact depends on location, building materials / construction, transport / design</a>	<a href="#">Mitigation could include Transport Assessment / Travel Plans to reduce car traffic and ensure compliance with policy CS15 of the Core Strategy.</a>	<a href="#">Without consideration of sustainability construction techniques and the promotion of alternative modes of transport, development could have a negative impact on environmental sustainability.</a>
	Will the site be subject to / at risk from flooding	<u>0</u>	<a href="#">Unlikely to have an impact on any element of sustainability</a>		<a href="#">It is unlikely that the site would have an impact on any aspect of sustainability</a>
11. To ensure a strong, diverse and sustainable economic base	Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a>  <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	Will it promote and support the vitality and viability of the District's commercial centres?	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for</a>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">housing only will have a neutral effect on economic sustainability.</a>		

### Summary

[Overall the site is likely to have a predominantly neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.](#)

[Whilst the site is close to some local services and facilities, it is some distance from the centre of Thatcham and relates poorly to the existing settlement. This has the potential to have a negative impact upon environmental and social sustainability. There are opportunities for walking and cycling and whilst public transport options are available these are limited and it is likely will lead to a high level of car dependency.](#)

[Development of the site would have a negative impact on both the landscape character and the character of the built environment. There would also be an impact on the identity of settlements as development would expand Thatcham to the north encroaching upon Cold Ash.](#)

#### Summary of effects:

**Effect:** [Predominantly neutral](#)

**Likelihood:** [High](#)

**Scale:** [Newbury and Thatcham spatial area](#)

**Duration:** [Permanent](#)

**Timing:** [Short to Long term](#)

## Site Selection – Site Commentary

<b>Spatial Area:</b>	<a href="#">Newbury &amp; Thatcham</a>	<b>Settlement:</b>	<a href="#">Thatcham</a>	<b>Parish:</b>	<a href="#">Cold Ash</a>
----------------------	--	--------------------	--------------------------	----------------	--------------------------

<b>Site ID:</b>	<a href="#">THA037</a>	<b>Site Address:</b>	<a href="#">Land at Lawrences Lane</a>	<b>Development Potential:</b>	<a href="#">Approximately 15 dwellings</a>
-----------------	------------------------	----------------------	--	-------------------------------	--

### Recommendation:

[The site is not recommended for allocation](#)

### Justification:

[The site, although close to some local services and facilities, is poorly related to the existing settlement and would result in the encroachment of development towards Cold Ash.](#)

[One of the strategic objectives of the Core Strategy is to ensure that development is planned in a way that ensures the protection and enhancement of the local distinctive character and identity of the built, historic and natural environment across the District. The Core Strategy notes that a key feature of even the larger settlements in West Berkshire is the way in which few have coalesced in recent times and so the blurring of the physical distinction between places has largely been avoided. The development of this site would lead to the perception of a merging of the two settlements and would therefore have an adverse impact on the settlement pattern.](#)

[The Core Strategy sets out the Spatial Strategy for the District and provides an overall framework to guide development over the plan period. The Core Strategy is clear that Thatcham is to receive a lower allocation than other urban areas given the rapid expansion of the town in recent years. This is to allow Thatcham a period of consolidation, ensuring the infrastructure and town centre facilities can be upgraded and meet the demands of the existing population. This will enable Thatcham to become more self-contained, encouraging residents to shop and socialise locally.](#)

[In accordance with the Core Strategy, Thatcham will not accommodate large scale development at this stage and, although this site is not large scale, it is considered that there are other sites within the town which are more suitable for allocation.](#)

### Discussion:

#### Site Description:

[The site is located to the north of Thatcham and sits to the east of Little Copse.  
The site is some distance from the centre of Thatcham and public transport options are limited.](#)

#### Landscape:

[The site sits within the Colthrop Manor Plateau Edge \(LLCA14F\) as identified within the Thatcham Landscape Sensitivity Study \(2009\). This is in an area of medium landscape sensitivity, characterised by its open farmland with major blocks of woodland, and undulating escarpment slopes. Settlement in the area is sparse but the area is an important setting to north Thatcham and a rural transition zone between the urban area and the AONB.](#)

#### Flood Risk:

[The site is in Flood Zone 1 and at low risk of flooding](#)

#### Highways /Transport:

[No specific comments have been made on this site from the Highways Department, however an access off Lawrences Lane raises concern given the rural nature of the lane.](#)

#### Ecology:

[No specific issues](#)

#### Archaeology:

[No known issues - further investigation would be required](#)

#### Education:

[Primary school provision in the area is at capacity, as is secondary school provision.](#)

## Site Selection – Site Commentary

**Environmental Health:**

[No known air, noise or contamination issues.](#)

**Minerals and Waste:**

[No known mineral or waste issues](#)

**Land use planning consultation zone:**

[The site is not within an AWE consultation zone](#)

**Environment Agency:**

[No specific comments made on this site. The site is within SPZ3](#)

**Thames Water:**

[TW not consulted on this site](#)

**Parish Council:**

[No comments from the Parish Council as this is a new site submitted for consideration at the Preferred Options stage.](#)

**Preferred Options Consultation key issues:**

[This is a new site submitted for consideration at the Preferred Options stage.](#)

[For the consultation responses and Council's response, please see the Statement of Consultation.](#)

**SA/SEA:**

[Overall the site is likely to have a predominantly neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.](#)

[Whilst the site is close to some local services and facilities, it is some distance from the centre of Thatcham and relates poorly to the existing settlement. This has the potential to have a negative impact upon environmental and social sustainability. There are opportunities for walking and cycling and whilst public transport options are available these are limited and it is likely will lead to a high level of car dependency.](#)

[Development of the site would have a negative impact on both the landscape character and the character of the built environment. There would also be an impact on the identity of settlements as development would expand Thatcham to the north encroaching upon Cold Ash.](#)

**Proposed development (from SHLAA submission):**

[Site was not assessed as part of the SHLAA as this is a new submission to the Council at the Preferred Options stage.](#)

# Cold Ash Site Assessments

# Site Selection – Site Assessment

Spatial Area:	N&T	Settlement:	Cold Ash	Parish:	Cold Ash
---------------	-----	-------------	----------	---------	----------

Site ID:	COL002	Site Address:	Land at Poplar Farm, Cold Ash
----------	--------	---------------	-------------------------------

<b>Development Potential:</b>	<a href="#">Approx 10 to 20</a> dwellings (0.7ha at 30dph) <a href="#">Dependent on outcome of FRA and flood mitigation measures required</a>	<b>SHLAA Assessment:</b>	Potentially Developable
-------------------------------	--	--------------------------	-------------------------

## Summary of Site Assessment

### Key Issues:

- Greenfield
- Surface water flood risk. Evidence of flooding Jan/Feb 2014 [The site and adjacent properties to the east and south along Cold Ash Hill are susceptible to surface water flooding \(surface water flow path from the north - flooding occurred in 2007 and Jan/ Feb 14\) so safe flow routes would have to be provided through the site.](#)
- [A detention pond to accommodate development drainage would be required in the southern part of the site.](#)
- [Development should be contained on the lower ground in the north east of the site and only extend up the valley side in the area already containing the barns.](#)
- [Setting of listed building](#)
- [Poplar Farmhouse is a Grade II listed building on the site and is part of a historic farmstead. A heritage impact assessment would be required](#)
- [The existing access serving Poplar Farm is limited with regard to width and possible sight lines too unless additional land can be acquired. Land south of Orchard End may be more appropriate to obtain access onto Cold Ash Hill](#)

## Site Assessment

<b>Parish Council consultation response:</b>	<p>Listed building and flood risk will limit development potential on the site</p> <p><a href="#">There are limits to development of this site because of a listed building and the site being in a line of flooding. This site lies directly in the path of surface water run off from further up the escarpment. Any building would be situated on a drift geological formation that exacerbates flooding further downhill. There is an existing Grade 2 listed building on the site. The site forms a significant part of the open views from the village over the surrounding open slopes and farmland.</a></p> <p><a href="#">At the Preferred Options stage the parish council restated its objection to the site. In summary, the main issues are:</a></p> <ul style="list-style-type: none"> <li>• <a href="#">The development would reduce the rural gap between Ashmore Green and Cold Ash. The building of a second line of housing, further extending the building line up hill, is out of character with the built environment.</a></li> <li>• <a href="#">The presence of Grade 2 listed, historic farmstead, in the centre of the site.</a></li> <li>• <a href="#">The site is in the line of downhill surface water flows which has lead to the land and houses in and around the site being badly flooded in the past (see photo below). Building here will cause greater run-off from the site, endangering surrounding houses.</a></li> <li>• <a href="#">The farm access road is not suitable as a site entrance which indicates that any building will necessitate the construction of a further access road to be built in the fields adjoining. The volume and excess speed of traffic on Cold Ash Hill means that egress onto the main road will be both difficult and dangerous.</a></li> </ul> <p><a href="#">It said that consideration should be given to a small number of starter homes along the entrance track to Poplar Farm. This would not detract from the rural gap between Ashmore Green and Cold Ash. Also it would not cause the flooding issues with the existing proposal.</a></p> <p><a href="#">The parish council also submitted detailed comments on the site selection work – Site Commentary, Site Assessment and Sustainability Appraisal/Strategic Environmental Assessment.</a></p>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
			<a href="#">housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are no significant sustainability impacts from this site. [Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.](#) The site is located within a village setting, with good access to local services and facilities within the village, which will have a positive impact on sustainability. However, there will be a degree of car dependency for travel to employment and wider higher level services and facilities, which could have a negative impact on sustainability, [without the promotion of alternative modes of transport](#) through the increase of greenhouse gas emissions. There is potential for protected species on the site, and should this be confirmed appropriate mitigation would be required to ensure that development does not have a negative effect on environmental sustainability. The site is at risk from surface water flooding, without appropriate mitigation flooding can have a negative impact on all elements of sustainability.

[There would be potential for a negative impact on environmental sustainability unless the site was developed in line with the Landscape Assessment and ensured the conservation and enhancement of the Grade II listed Poplar Farmhouse and its setting. Appropriate avoidance and mitigation measures may also need to be implemented so that any protected species were not adversely affected.](#)

[The site is susceptible to surface water flooding. Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.](#)

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Cold Ash	<b>Parish:</b>	Cold Ash
----------------------	-----	--------------------	----------	----------------	----------

<b>Site ID:</b>	COL002	<b>Site Address:</b>	Land at Poplar Farm, Cold Ash	<b>Development Potential:</b>	<a href="#">Approx 10 to 20+ dwellings (0.7ha at 30dph) Dependent on outcome of FRA and flood mitigation measures required</a>
-----------------	--------	----------------------	-------------------------------	-------------------------------	--

**Recommendation:**

The site is recommended for allocation

**Justification:**

~~The site is well related to Cold Ash and sits within an area of low/medium landscape sensitivity. A Landscape Capacity Assessment (LCA) (2015) has been undertaken which indicates that development on part of the site would be considered acceptable subject to certain protection and enhancement measures. Development should be contained on the lower ground in the north east of the site and only extend up the valley side in the area already containing the barns. This would avoid affecting the linear, valley bottom settlement pattern and open landscape at the southern end of the village.~~

~~The site and adjacent properties to the east and south along Cold Ash Hill are susceptible to surface water flooding (surface water flow path from the north) so safe flow routes would have to be provided through the site. A FRA and appropriate flood mitigation measures, including SuDS would be required. As part of this, a detention pond to accommodate development drainage would be required in the southern part of the site.~~

~~A heritage impact assessment would be required to assess the impact of development on the Grade II listed Poplar Farmhouse and its setting~~

~~The existing access to Poplar Farm is limited regarding width and sight lines. Additional means of access via Orchard End and Strouds Meadow would need to be provided if required.~~

~~An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. There is potential for birds, reptiles and bats on the site. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected~~

**Discussion:**

**Site Description:**

The site is located to the west of Cold Ash, [set behind the ribbon of residential built form along the west side of Cold Ash Hill. It forms part of the rural approach to the village from the south, and is well related to the existing building line.](#) The site is close to some local services and facilities within the village and open countryside.

**Landscape:**

~~The Landscape Capacity Assessment (2015) indicates that development of the whole site would extend the settlement off the valley floor up the slope to the west and would widen the linear nature of the built form to the south. Development should therefore be contained on the lower ground in the north east of the site and only extend up the valley side in the area already containing the barns. This would avoid affecting the linear, valley bottom settlement pattern and open landscape at the southern end of the village.~~

~~Development should be subject to the provision of:~~

- ~~• [a tree belt and hedgerow along the western and southern boundaries;](#)~~
- ~~• [woodland block in the north western corner to mitigate effects on views from the PRow to the north west;](#)~~
- ~~• [woodland block along the southern edge to mitigate effects on views from the PRow to the south;](#)~~
- ~~• [a hedgerow and trees along the eastern edge](#)~~
- ~~• [The preferred access is from Cold Ash Hill, via the existing farm track access;](#)~~

~~A full detailed landscape and visual impact assessment will be required to inform the final capacity of the site site is in an area of low/medium landscape sensitivity.~~

## Site Selection – Site Commentary

### **Flood Risk:**

The site is in flood zone 1, but within an area at risk from surface water flooding. Anecdotal evidence indicates flooding on the site during Jan/Feb 2014. [The site and adjacent properties to the east and south along Cold Ash Hill are susceptible to surface water flooding \(surface water flow path from the north\) so safe flow routes would have to be provided through the site.](#)

[The site lies within the EA's groundwater vulnerability zone although there is no record of groundwater flooding on the site.](#)

A FRA and appropriate [flood](#) mitigation [measures](#), including SuDS would be required.

A culverted ordinary watercourse runs through the site.

### **Highways /Transport:**

~~The traffic impact from the site is expected to be limited. Access to the site from Cold Ash Hill could be an issue without additional land acquisition. Access could be considered onto Orchard End.~~

[This site can accommodate up to 20 houses that will generate circa 120 daily vehicle movements including circa 12 during the 08.00 to 09.00 AM peak. It is considered that the impact of additional traffic generation may be limited due to the size of the development.](#)

[There is no obvious point of access onto Cold Ash Hill. The existing access serving Poplar Farm is limited with regards to width and possible sight lines too unless additional land can be acquired here. Land south of Orchard End may be more appropriate to obtain access onto Cold Ash Hill.](#)

[Footways and bus stops are near the site however services to and from Cold Ash are limited.](#)

### **Ecology:**

~~An extended Phase 1 Habitat Survey would be required in addition to bird, bat and reptile surveys. There is potential for birds, reptiles and bats on the site. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected. Surveys would be required, and appropriate mitigation provided should species be present.~~

### **Archaeology:**

~~There is a historic farmstead at the heart of the site with a listed building. Further assessment will be required.~~

[Poplar Farmhouse is a Grade II listed building on the site and is part of a historic farmstead. A heritage impact assessment would be required](#)

### **Education:**

Local primary school provision is at capacity. No comments made regarding secondary school provision.

### **Environmental Health:**

No known air, noise or contamination issues.

### **Minerals and Waste:**

No known mineral or waste issues.

### **Land use planning consultation zone:**

The site is not within an AWE consultation zone

### **Environment Agency:**

~~No specific comments made on this site.~~ The site is within SPZ3. [The EA has no in principle objections to development in SPZs.](#)

### **Thames Water:**

~~No water supply infrastructure issues envisaged.~~

~~Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.~~

~~A drainage strategy would be required~~

[Thames Water has not raised any concerns regarding water supply/waste water services for this site.](#)

### **Parish Council:**

## Site Selection – Site Commentary

The parish council noted that there is a listed building on the site as well as the site being at risk from flooding. These factors could limit development potential. [The site lies directly in the path of surface water run off from further up the escarpment. Any building would be situated on a drift geological formation that exacerbates flooding further downhill. There is an existing Grade 2 listed building on the site. The site forms a significant part of the open views from the village over the surrounding open slopes and farmland. At the Preferred Options stage the parish council restated its objection to the site and submitted detailed comments in support of its concerns. In summary the main issues are:](#)

- [The development would reduce the rural gap between Ashmore Green and Cold Ash. The building of a second line of housing, further extending the building line up hill, is out of character with the built environment.](#)
- [The presence of Grade 2 listed, historic farmstead, in the centre of the site.](#)
- [The site is in the line of downhill surface water flows which has lead to the land and houses in and around the site being badly flooded in the past \(see photo below\). Building here will cause greater run-off from the site, endangering surrounding houses.](#)
- [The farm access road is not suitable as a site entrance which indicates that any building will necessitate the construction of a further access road to be built in the fields adjoining. The volume and excess speed of traffic on Cold Ash Hill means that egress onto the main road will be both difficult and dangerous.](#)

[It said that consideration should be given to a small number of starter homes along the entrance track to Poplar Farm. This would not detract from the rural gap between Ashmore Green and Cold Ash. Also it would not cause the flooding issues with the existing proposal.](#)

[The parish council also submitted detailed comments on the site selection work – Site Commentary, Site Assessment and Sustainability Appraisal/Strategic Environmental Assessment.](#)

### **SA/SEA:**

~~There are no significant sustainability impacts from this site. The site is located within a village setting, with good access to local services and facilities within the village, which will have a positive impact on sustainability. However, there will be a degree of car dependency for travel to employment and wider higher level services and facilities, which could have a negative impact on sustainability, in terms of an increase in greenhouse gas emissions. There is potential for protected species on the site, and should this be confirmed appropriate mitigation would be required to ensure that development does not have a negative effect on environmental sustainability. The site is at risk from surface water flooding, without appropriate mitigation flooding can have a negative impact on all elements of sustainability.~~

[Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects. The site is located within a village setting, with good access to local services and facilities within the village, which will have a positive impact on sustainability. However, there will be a degree of car dependency for travel to employment and wider higher level services and facilities, which could have a negative impact on sustainability, without the promotion of alternative modes of transport. There would be potential for a negative impact on environmental sustainability unless the site was developed in line with the Landscape Assessment and ensured the conservation and enhancement of the Grade II listed Poplar Farmhouse and its setting. Appropriate avoidance and mitigation measures may also need to be implemented so that any protected species were not adversely affected. The site is susceptible to surface water flooding. Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Preferred options Consultation – key issues**

[40 responses were received for the site. The main issues raised were regarding:](#)

- [Consultation process](#)
- [Principle of development](#)
- [Loss of rural character](#)
- [Flooding](#)
- [Highways and road safety](#)
- [Infrastructure](#)
- [Impact on heritage assets](#)

[For the consultation responses and the Council's response, please see the Statement of Consultation](#)

### **Proposed development (from SHLAA submission):**

No specific proposals have been submitted. Access is indicated from either the existing access or from Orchard End.

## Site Selection – Site Commentary

[An illustrative concept plan was submitted as part of the Preferred Options consultation](#)  
[An initial assessment of flood risk has shown that a detention pond, located close to the southern boundary, would be required to accommodate development drainage.](#)

	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

~~There are no significant sustainability impacts from this site.~~ [Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects.](#) The site is located within a village setting, with good access to local services and facilities within the village, giving a positive impact on sustainability. However, there will be a degree of car dependency for travel to employment and wider higher level services and facilities, which would have a negative impact on sustainability [without the promotion of alternative modes of transport](#) through the increase of greenhouse gas emissions. The site has easy access into Newbury and Thatcham for a wider range of service and facilities. Development on this site has the potential to detract from the landscape character, leading to a negative impact on environmental sustainability. There is anecdotal evidence that surface water flooding occurs on the site, meaning that mitigation measures would be required to ensure no negative effects on sustainability.

[There would be potential for a negative impact on environmental sustainability due to landscape and visual impacts and also unless appropriate avoidance and mitigation measures were implemented so that any protected species were not adversely affected.](#)

[There is anecdotal evidence that surface water flooding occurs on the site. Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.](#)

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Cold Ash	<b>Parish:</b>	Cold Ash
<b>Site ID:</b>	COL004	<b>Site Address:</b>	Liss, Cold Ash Hill, Cold Ash	<b>Development Potential:</b>	27 dwellings (0.9ha at 30dph)

### Recommendation:

The site is not recommended for allocation

### Justification:

While the site is adjacent to the settlement boundary the site itself is poorly related to the existing settlement pattern and has the potential to adversely impact on the setting and separate identify of Cold Ash and Ashmore Green.

[Other sites in Cold Ash are considered more appropriate for development.](#)

### Discussion:

#### Site Description:

The site is located to the west of Cold Ash. The eastern edge of the site is adjacent to the settlement boundary, but the extension of the site westwards would be poorly related to the existing settlement pattern. The site is close to local services and facilities and has access to the open countryside.

#### Landscape:

No formal assessment of landscape sensitivity has been made. The site has significant changes in topography.

#### Flood Risk:

The site is in flood zone 1, although there is a history of surface water flooding on the site. An FRA would be required and appropriate mitigation measures, including SUDS would need to be provided.

[The site lies within the EA's groundwater vulnerability zone although there is no record of groundwater flooding on the site](#)

#### Highways /Transport:

No specific comments have been made on this site.

A two hourly bus service links Cold Ash to Newbury and Tilehurst, with a railway station in Thatcham and in Newbury for links to London and the west.

#### Ecology:

There is potential for bats and other species on the site. ~~A extended phase 1 habitat survey and a bat survey would be required.~~ [An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected](#)

#### Archaeology:

No known archaeological issues on this site.

#### Education:

Local primary school provision is at capacity. No comments made about secondary school provision.

#### Environmental Health:

No known air, noise or contamination issues.

#### Minerals and Waste:

No known mineral or waste issues

#### Land use planning consultation zone:

The site is not within an AWE consultation zone

#### Environment Agency:

~~No specific comments made on this site.~~ The site is in SPZ3. [The EA has no in principle objections to](#)

## Site Selection – Site Commentary

### development in SPZs.

#### **Thames Water:**

No water supply infrastructure issues envisaged.

Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A drainage strategy would be required

Thames Water has not raised any concerns regarding water supply/waste water services for this site.

#### **Parish Council:**

The Parish Council considered this to be the 'least worst' site if development was required in the village.

It has limited potential, but there could be a small amount of development on the site. There are issues of surface water runoff. This site lies at the head of a gully (drift silt/sand/gravel geological formation), any building would add significantly to downhill flooding. The slopes and nature of the land would much reduce the amount of housing that this site could support. The site is outside the existing settlement boundary, traffic from the site would add to the already dangerous situation outside St Marks Infants and Junior school.

#### **Preferred options Consultation – key issues**

1 response was received for the site. This was from the site promoter.

For all the consultation responses and the Council's response, please see the Statement of Consultation

#### **SA/SEA:**

The SA/SEA indicates a predominantly neutral effect on sustainability. There are no significant sustainability impacts from this site. The site is located within a village setting, with good access to local services and facilities within the village, giving a positive impact on sustainability. However, there will be a degree of car dependency for travel to employment and wider higher level services and facilities, which would have a negative impact on sustainability through the increase of greenhouse gas emissions. The site has easy access into Newbury and Thatcham for a wider range of service and facilities. Development on this site has the potential to detract from the landscape character, leading to a negative impact on environmental sustainability. There is anecdotal evidence that surface water flooding occurs on the site, meaning that mitigation measures would be required to ensure no negative effects on sustainability.

Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects. The site is located within a village setting, with good access to local services and facilities within the village, giving a positive impact on sustainability. However, there will be a degree of car dependency for travel to employment and wider higher level services and facilities, which would have a negative impact on sustainability without the promotion of alternative modes of transport. There would be potential for a negative impact on environmental sustainability due to landscape and visual impacts and also unless appropriate avoidance and mitigation measures were implemented so that any protected species were not adversely affected. There is anecdotal evidence that surface water flooding occurs on the site. Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.

#### **Proposed development (from SHLAA submission):**

A mix of development with low cost housing in the northern area of the site and lower density development to the south is proposed.

--

## Site Assessment

<p><b>Parish Council consultation response:</b></p>	<p>- Site is on a ridge with good view to the south. There is a gully running along the base of the site, so there could be implications for flooding and run-off. There are no footpaths in the vicinity and the road is very narrow. The site is considered to be in an unsustainable location. <a href="#">This site sits on an exposed ridge and is a significant view and important open slope. Development of the site would close a significant gap between existing housing, worsening the ribbon development to the detriment of the character of the village. Lower down the slope, immediately below the site, is a gully made up of a Sand/Gravel- Drift geology, which will add to the downhill flooding. There are no footpaths that allow for walkers to get to public transport or local schools and shop, which would mean additional vehicular traffic.</a></p> <p><a href="#">At the Preferred Options stage the parish council restated its considerable concerns about the site. In summary, the main issues are:</a></p> <ul style="list-style-type: none"> <li>• <a href="#">Views from The Ridge southwards will be reduced significantly.</a></li> <li>• <a href="#">Will impact on the views from across the entire valley.</a></li> <li>• <a href="#">The site is not close to any local services and the lack of footpaths likely to mean a large number of car journeys.</a></li> </ul> <p><a href="#">The parish council also submitted detailed comments on the site selection work – Site Commentary, Site Assessment and Sustainability Appraisal/Strategic Environmental Assessment.</a></p>

**Key: Effects of option on SA objectives**

++	+	?	0	-	--
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	Good access to the countryside from the site for walking. Close to local services and facilities.		The site's location gives opportunities for walking and <u>potentially</u> cycling within Cold Ash itself. The site has easy access to the countryside. Therefore, in terms of environmental and social sustainability the development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	0	<u>There is a recreation ground in the village and more formal</u> <del>Nearest</del> sports facilities <del>are</del> in Thatcham.		
	Will it protect and enhance green infrastructure across the district?	0	Unlikely to have an impact on GI		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+?	The site is close to a local <del>services and facilities (e.g. primary school)</del> <u>and there is also a local shop and post office in the village</u> , with employment opportunities in Newbury and Thatcham.		<u>The proximity to some local services and facilities means the site could have a positive impact on economic and social sustainability, but it</u> <del>The site is located close to local education facilities near to employment facilities within Newbury and Thatcham. It is likely that there would be some level of car dependency due to the location of other village services. location. Overall the site is likely to have a positive impact on economic sustainability.</del>
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking,	+?	There is <u>a 2 hourly</u> <del>an intermittent</del> bus service through the village, linking Cold Ash to Newbury and	<u>Development could provide an opportunity to enable an enhanced bus service to be put</u>	<u>In terms of sustainability it is still likely that there will be a degree of car</u>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	cycling and public transport?		Tilehurst. There are opportunities for walking or cycling to local services and facilities.	<a href="#">in place, promoted and sustained</a>	dependency <del>within the Village</del> due to the location and limited range of services and facilities available within the <a href="#">village site</a> .
	Will it reduce the number of road traffic accidents and improve safety?	-?	There are no pavements along <a href="#">this part of The Ridge</a> , and limited scope to introduce them. <a href="#">Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.</a>	Consideration of how to improve road safety would be required. <a href="#">Footway provision could be sought to link the site to footways and bus stops nearby fronting St Finian's School</a>	Development could have a negative impact on road safety and all elements of sustainability. Consideration of mitigation measures would be required to reduce this impact.
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	0	No known protected species on the site		
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	0-	<del>Unlikely to have an impact</del> <a href="#">The Landscape Capacity Assessment (LCA) (2015) indicates that development on part of the site would be considered acceptable without harm to the setting of the AONB provided an opportunity to retain views southwards towards the Kennet valley is included within the development layout and the rural character of this approach to Cold Ash is conserved and enhanced.</a>	<a href="#">The development should be contained on the higher ground as a linear development along the road and be subject to the provision of:</a> <ul style="list-style-type: none"> <li>• <a href="#">A gap in the built form to allow views through the development to the open landscape to the south;</a></li> <li>• <a href="#">Individual driveway access onto The Ridge in keeping with the local pattern;</a></li> <li>• <a href="#">A soft edge to the southern boundary of the site with tree planting;</a></li> <li>• <a href="#">Retention of the hedgerow front boundary treatment;</a></li> <li>• <a href="#">A density to reflect that of the adjoining houses on The Ridge</a></li> </ul>	<a href="#">There would be potential for a negative impact on environmental sustainability unless the site was developed in line with the Landscape Assessment</a> Development unlikely to have an impact on any element of sustainability
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built	0-2	Development along The Ridge is ribbon development. <a href="#">A linear development reflecting the existing built form and not extending</a>	Development of the site would need to be in keeping with the existing building line.	<a href="#">There would be potential for a negative impact on environmental sustainability unless the site was</a>

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	environment?		<a href="#">down the slope would be acceptable provided gaps are available between new buildings to allow occasional views through and to soften the impact of the development</a>		<a href="#">developed in line with the Landscape Assessment. Development also has the potential to improve the built environment through a well designed scheme.</a>
	Will it conserve and enhance the significance of the District's heritage assets?	<b>0</b>	The site is close to a listed building Unlikely to have an impact	Design would need to ensure no impact on the listed building	With careful design in line with the existing development pattern it is unlikely that there would be an impact on sustainability.
	Will it promote, conserve and enhance the District's cultural assets?	<b>0</b>	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	<b>0</b>	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	<b>0</b>	Unlikely to have an impact		<a href="#">There would be potential for a negative impact on environmental sustainability unless the site was developed in accordance with the contamination assessment.</a> Development of the site is unlikely to have an impact on any element of sustainability.
	Will the site be at risk from, or impact on, noise levels?	<b>0</b>	Unlikely to have an impact		
	Will there be an impact on soil quality?	<b>0?</b>	Unlikely to have an impact <a href="#">Suspected contamination at St Gabriel's Farm due to some sludge lagoons</a>	<a href="#">A contamination assessment required.</a>	
	Will there be an impact on water quality?	<b>0?</b>	Unlikely to have an impact <a href="#">It is within a SPZ3</a>	<a href="#">The EA has no in principle objections to development in SPZs</a>	
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	<b>-</b>	Greenfield site		The greenfield nature of the site means that there could be a negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	<b>?</b>	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques <a href="#">and the promotion of alternative modes of transport.</a> development could have a negative impact on environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will the site be subject to / at risk from flooding	<b>0</b>	The site is not at risk from flooding	A FRA and appropriate flood mitigation measures, including SuDS, would be required.	<p><a href="#">A FRA will highlight the mitigation measures required to minimise the risk of flooding.</a></p> <p>Flooding can have a negative impact on all elements of sustainability <a href="#">unless appropriate mitigation measures can be put in place.</a></p> <p><del>Unlikely to have an impact on any element of sustainability.</del></p>
11. <a href="#">To ensure a strong, diverse and sustainable economic base</a>	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<b>0</b>	<a href="#">Not considered relevant</a>		<p><a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a></p>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<b>0</b>	<p><a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a></p> <p><a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a></p>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<p><a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a></p> <p><a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a></p>		

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

### Site Summary

~~There are no significant sustainability impacts from this site.~~ Overall the site is likely to have a neutral effect on sustainability, and the SA/SEA does not highlight any significant sustainability effects. The site is located within a village setting, with good access to local services and facilities within the village, which will have a positive impact on sustainability. However, there will be a degree of car dependency for travel to employment and wider higher level services and facilities, which could have a negative impact on sustainability, without the promotion of alternative modes of transport ~~in terms of an increase in greenhouse gas emissions.~~ Development of the site has potential to change the character of the built environment and impact negatively on environmental sustainability unless it is developed in line with the Landscape Assessment and the existing settlement pattern. Due to the lack of pavements along this part of The Ridge there is potential for a negative impact on all elements of sustainability due to road safety concerns and so consideration of appropriate mitigation measures to reduce this impact would be required.

There is the potential for a negative impact on environmental sustainability unless the site is developed in line with the outcome of the contamination assessment.  
Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.  
The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Cold Ash	<b>Parish:</b>	Cold Ash
<b>Site ID:</b>	COL006	<b>Site Address:</b>	St Gabriel's Farm, Cold Ash	<b>Development Potential:</b>	12 <a href="#">Approx 5</a> dwellings (0.4ha at 30dph)

### Recommendation:

[The site is recommended for allocation](#) recommended for allocation for 6 dwellings.

### Justification:

The site is well related to the existing development. [A linear development reflecting the existing built form is considered acceptable subject to the provision of:](#)

- [A gap in the built form to allow views through the development to the open landscape to the south;](#)
- [Individual driveway access onto The Ridge in keeping with the local pattern;](#)
- [A soft edge to the southern boundary of the site with tree planting;](#)
- [Retention of the hedgerow front boundary treatment;](#)
- [A density to reflect that of the adjoining houses on The Ridge](#)

~~The proposed number for allocation has been reduced to ensure development remains in line with the existing settlement pattern.~~

[The provision of footways should be sought to link the site with existing footways fronting St Finian's School.](#)

[An extended phase 1 habitat survey would be required with further detailed surveys arising from that as necessary.](#)

[A phase 1 contamination report would be required](#)

[A flood risk assessment and appropriate food mitigation measures, including SuDS would be required.](#)

### Discussion:

#### Site Description:

The site is located to the east of Cold Ash at the eastern end of The Ridge. [The site forms an open gap at the east end of residential built form along the south side of The Ridge, with two further residential plots to the east. It is in the setting of the AONB and forms part of the rural approach to the village from the east.](#)

~~The site is quite close to local services and facilities within the village and to open countryside.~~

#### Landscape:

~~The site is in an area of medium landscape sensitivity.~~

[The Landscape Capacity Assessment \(LCA\) \(2015\) indicates that development on part of the site would be considered acceptable without harm to the setting of the AONB provided an opportunity to retain views southwards towards the Kennet valley is included within the development layout and the rural character of this approach to Cold Ash is conserved and enhanced.](#)

[The development should be contained on the higher ground as a linear development along the road and be subject to the provision of:](#)

- [A gap in the built form to allow views through the development to the open landscape to the south;](#)
- [Individual driveway access onto The Ridge in keeping with the local pattern;](#)
- [A soft edge to the southern boundary of the site with tree planting;](#)
- [Retention of the hedgerow front boundary treatment;](#)
- [A density to reflect that of the adjoining houses on The Ridge](#)

#### Flood Risk:

The site is in flood zone 1, with no evidence of flooding. [A FRA and appropriate flood mitigation measures, including SuDS, would be required. SUDs would need to be provided.](#)

[The site lies within the EA's groundwater vulnerability zone although there is no record of groundwater flooding on the site.](#)

#### Highways /Transport:

~~Traffic is expected to have a limited impact on the highway network. Appropriate access to the site can be achieved.~~

~~There are no pavements along The Ridge, which could have an impact on Road Safety associated with the site. Consideration of appropriate mitigation measures would be required.~~

[It is considered that the impact of additional traffic generation may be limited due to the size of the development. Considering the shape of the site, multiple private driveways will be provided which should be](#)

## Site Selection – Site Commentary

[acceptable. There are no footways within the vicinity of the site. Footways provision may be sought to link the site to footways and bus stops nearby fronting the St Finians School. Bus services to and from Cold Ash are however limited. Development could provide an opportunity to enable an enhanced bus service to be put in place, promoted and sustained.](#)

### **Ecology:**

No known ecological issues.

### **Archaeology:**

No known archaeological issues.

### **Education:**

Local primary school provision is at capacity. No comments made regarding secondary school provision.

### **Environmental Health:**

No known air ~~or noise or contamination~~ issues. [There is suspected contamination at St Gabriel's Farm due to some sludge lagoons. A contamination assessment would be required.](#)

### **Minerals and Waste:**

No known mineral or waste issues.

### **Land use planning consultation zone:**

The site is not within an AWE consultation zone.

### **Environment Agency:**

~~No specific comments made on this site.~~ The site is in SPZ3. [The EA has no in principle objections to development in SPZs.](#)

### **Thames Water:**

~~No water supply or wastewater infrastructure issues envisaged.~~

[Thames Water has not raised any concerns regarding water supply/waste water services for the site.](#)

### **Parish Council:**

~~Site is on a ridge with good view to the south. There is a gully running along the base of the site, so there could be implications for flooding and run-off. There are no footpaths in the vicinity and the road is very narrow. The site is considered to be in an unsustainable location.~~ [This site sits on an exposed ridge and is a significant view and important open slope. Development of the site would close a significant gap between existing housing, worsening the ribbon development to the detriment of the character of the village. Lower down the slope, immediately below the site, is a gully made up of a sand/gravel-drift geology, which will add to the downhill flooding. There are no footpaths that allow for walkers to get to public transport or local schools and shop, which would mean additional vehicular traffic.](#)

[At the Preferred Options stage the parish council restated its considerable concerns about the site. In summary, the main issues are:](#)

- [Views from The Ridge southwards will be reduced significantly.](#)
- [Will impact on the views from across the entire valley.](#)
- [The site is not close to any local services and the lack of footpaths likely to mean a large number of car journeys.](#)

[The parish council also submitted detailed comments on the site selection work – Site Commentary, Site Assessment and Sustainability Appraisal/Strategic Environmental Assessment.](#)

### **Preferred options Consultation – key issues**

[29 responses were received for the site. The main issues raised were regarding:](#)

- [Consultation process](#)
- [Principle of development](#)
- [Loss of rural character](#)
- [Design and density](#)
- [Impact on wildlife](#)
- [Highways and road safety](#)
- [Infrastructure](#)

[For the consultation responses and the Council's response, please see the Statement of Consultation](#)

### **SA/SEA:**

## Site Selection – Site Commentary

The SA/SEA indicates that there will be a predominantly neutral impact on sustainability. There are no significant sustainability impacts from this site. The site is located within a village setting, with ~~good~~ access to local services and facilities within the village, which will have a positive impact on sustainability. However, there will be a degree of car dependency for travel to employment and wider higher level services and facilities, which could have a negative impact on sustainability, [without the promotion of alternative modes of transport](#) ~~in terms of an increase in greenhouse gas emissions~~. Development of the site has potential to change the character of the built environment and impact negatively on environmental sustainability unless it is developed in line with the [Landscape Assessment and](#) the existing settlement pattern. Due to the lack of pavements along [this part of](#) The Ridge there is potential for a negative impact on all elements of sustainability due to road safety concerns [and so](#) consideration of appropriate mitigation measures to reduce this impact would be required.

[There is the potential for a negative impact on environmental sustainability unless the site is developed in line with the outcome of the contamination assessment.](#)

[Flooding has the potential to impact on all elements of sustainability. Appropriate mitigation measures would need to be put into place to reduce any potential negative impacts.](#)

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### **Proposed development (from SHLAA submission):**

No specific proposals for this site ~~have been~~ [were originally](#) submitted.

[An illustrative layout for a linear development of 6 dwellings was submitted in November 2014](#)

<b>Development Potential:</b>	23 dwellings (0.76ha at 30dph)	<b>SHLAA Assessment:</b>	Not currently developable
-------------------------------	--------------------------------	--------------------------	---------------------------

## Summary of Site Assessment

### Key Issues:

- Road Safety (no pavements along the Ridge)
- Location in AONB. Area potentially acceptable in landscape terms considered too small to allocate
- [Whole site poorly related to existing linear settlement pattern along The Ridge](#)
- [Development of the whole site would extend the settlement off the ridge and down the slope to the north](#)
- Adjacent to ancient woodland

## Site Assessment

<b>Parish Council consultation response:</b>	Parish council agreed with the SHLAA assessment of not currently developable. The site is steeply sloping and poorly related to the settlement. <a href="#">It is also within the AONB</a>
--	--

A) Automatic exclusion			
Criteria		Yes/No*	Comments
Less than 5 dwellings		Y	Area potentially acceptable in landscape terms considered too small to allocate
Planning Permission		N	
Within flood zone 3		N	
Within significant national or international habitat / environmental / historical protection	SSSI	N	
	SAC	N	
	SPA	N	
	Registered Battlefield	N	
	Grade 1 / II* Park and Gardens	N	
Landscape	Adverse impact on the character of AONB (from LSA)	Y	Landscape assessment states that development of the whole of the site has the potential to impact the natural beauty and special qualities of the AONB. There may be limited development potential on part of the site, but would be an area too small to allocate.
SHLAA Assessment	Not Currently developable	Y	<a href="#">Whole site poorly related to existing settlement</a> Located opposite junction, undulating site with trees and adjacent to ancient woodland. Within the AONB.
Land Use	Protected Employment Land	N	
AWE consultation zone	Inner	N	
Relative scale in relation to settlement role and function	Inappropriate in scale to the role and function of settlement within the settlement hierarchy	N	
Within settlement boundary		N	Adjacent to the settlement boundary

Development Potential:	15 6 dwellings (0.5ha at 30dph)	SHLAA Assessment:	Potentially Developable
------------------------	---------------------------------	-------------------	-------------------------

### Summary of Site Assessment

#### Key Issues:

- [Site is automatically excluded because the Landscape Capacity Assessment \(LCA\) \(2015\) indicates that development on the site would cause harm to the setting of the AONB](#)
- Surface water flood risk
- Medium landscape sensitivity

### Site Assessment

<b>Parish Council consultation response:</b>	<p>The parish council had not had a chance to comment on this site <a href="#">at the workshops</a> as it was submitted after the consultation events <a href="#">in Feb 2014</a>. <a href="#">In March 2014 the parish council noted that the site has an extremely high flood risk. Culvert entry point is 5 m north of site which surcharged in 2007 flood. Floodwater from COL002 and land nearby drains on to this site. Dangerous location for access to Cold Ash Hill on south exit of blind bend. Driver reaction time minimal. Pedestrian access is to footpath on opposite side of road and is very hazardous. No effective public transport, so high car dependency. Compromises gateway to Cold Ash village; two storey housing out of character with bungalows which predominate. Loss of valued rural views to east and AONB approach.</a></p> <p><a href="#">At the Preferred Options stage the parish council restated that it strongly objects to the site. In summary, the main issues are:</a></p> <ul style="list-style-type: none"> <li>• <a href="#">Site has extremely high flood risk, the mitigation of which is impossible due to private gardens abutting Cold Ash stream above the culvert.</a></li> <li>• <a href="#">Loss of valued rural views to east and AONB approach</a></li> <li>• <a href="#">Dangerous location for car access onto Cold Ash Hill</a></li> <li>• <a href="#">Pedestrian access to footpath on opposite side of road and is very hazardous</a></li> <li>• <a href="#">Compromises gateway to Cold Ash village</a></li> </ul> <p><a href="#">The parish council also submitted detailed comments on the site selection work – Site Commentary, Site Assessment and Sustainability Appraisal/Strategic Environmental Assessment.</a></p>

### Key: Effects of option on SA objectives

++	+	?	0	-	--
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA-Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	Good access to the countryside from the site for walking. Close to local services and facilities.		The site's location gives opportunities for walking and cycling within Cold Ash itself. The site has easy access to the countryside. Therefore, in terms of environmental and social sustainability the development of the site would have a positive impact.
	Will it increase opportunities for access to sports facilities?	0	Nearest sports facilities are in Thatcham.		
	Will it protect and enhance green infrastructure across the district?	0	Unlikely to be an impact.		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The site is close to local services and facilities (e.g. primary school and local shop), with employment opportunities in Newbury and Thatcham.		The site is located close to local education facilities near to employment facilities within Newbury and Thatcham. It is likely that there would be some level of car dependency due to the village location. Overall the site is likely to have a positive impact on economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	There is an intermittent bus service through the village, linking Cold Ash to Newbury and Tilehurst. There are opportunities for walking or cycling to local services and facilities.		likely that there will be a degree of car dependency within the Village due to the location and limited range of services and facilities available within the site.
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity	0	Unlikely to have an impact		Development of the site is unlikely to have an impact

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	and geodiversity assets across West Berkshire?				on any element of sustainability.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	0	Unlikely to have an impact the site is in an area of medium landscape sensitivity		
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	0	Site is small and so unlikely to have an impact on the character of the built environment		Development of the site is unlikely to have an impact on any element of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	0	Unlikely to have an impact		
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact		Development of the site is unlikely to have an impact on any element of sustainability.
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact		
	Will there be an impact on soil quality?	0	Unlikely to have an impact		
	Will there be an impact on water quality?	0	Unlikely to have an impact		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Greenfield Site		The greenfield nature of the site means that there could be a negative impact on environmental sustainability.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will the site be subject to / at risk from flooding	-			Flooding can have a negative impact on all elements of sustainability. Mitigation measures would be required to reduce this impact.

### Summary

There are no significant sustainability impacts from this site. The site is located within a village setting, with good access to local services and facilities within the village, which will have a positive impact on sustainability. However, there will be a degree of car dependency for travel to employment and wider higher level services and facilities, which could have a negative impact on sustainability in terms of an increase in greenhouse gas emissions. The site is at risk from surface water flooding, without appropriate mitigation flooding can have a negative impact on all elements of sustainability.

#### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Newbury and Thatcham spatial area

**Duration:** Permanent

**Timing:** Short to Long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	N&T	<b>Settlement:</b>	Cold Ash	<b>Parish:</b>	Cold Ash
----------------------	-----	--------------------	----------	----------------	----------

<b>Site ID:</b>	COL014	<b>Site Address:</b>	Land at Cold Ash Hill	<b>Development Potential:</b>	15 dwellings (0.5ha at 30dph)
-----------------	--------	----------------------	-----------------------	-------------------------------	-------------------------------

**Recommendation:**  
 The site is recommended for allocation

**Justification:**  
 The site is well related to the existing settlement and in line with the existing building line.

**Discussion:**

**Site Description:**  
 The site is located to the south east of Cold Ash, in line with the existing settlement pattern. The site is close to local services and facilities, as well as being close to Thatcham and the services and facilities offered there.

**Landscape:**  
 The site is in an area of medium landscape sensitivity.

**Flood Risk:**  
 The site is in flood zone 1, but within an area of surface water flood risk. An ordinary water course runs through the site.. would be required and SUDs would need to be provided.

**Highways /Transport:**  
 No specific comments have been made on this site.  
  
 Intermittent (2 hourly) bus service passes the site linking the village to Newbury and Tilehurst.

**Ecology:**  
 No comments made on this site

**Archaeology:**  
 No previous work done on this site. Roman material has been found to the north east of the site so there is potential in the area. Further investigation would be required.

**Education:**  
 Local primary school provision is at capacity. No comments made regarding secondary school provision.

**Environmental Health:**  
 No known air, noise or contamination issues.

**Minerals and Waste:**  
 No known mineral or waste issues.

**Land use planning consultation zone:**  
 The site is not within an AWE consultation zone.

**Environment Agency:**  
 No specific comments made on this site. The site is within SPZ3.

**Thames Water:**  
 No water supply or wastewater infrastructure issues envisaged.

**Parish Council:**  
 The Parish Council have not made comment on this site as it was submitted after the parish council consultation took place.

**SA/SEA:**

## Site Selection – Site Commentary

**Proposed development (from SHLAA submission):**

No specific proposals submitted for this site.

## Summary of Site Assessment

Key Issues:

- Greenfield
- AONB – Landscape Assessment indicates only part of the site is suitable for development

[EUA008 and EUA003 have been considered as one site for the purposes of the preferred option consultation.](#)

## Site Assessment

<b>Parish Council consultation response:</b>	<p>Parish Council are strongly against any breach of the settlement boundary. Site is outside of settlement and would encroach into the AONB. Concern this would potentially set a precedent for further development beyond these sites. Parish Council feel that there are insufficient facilities to sustain more development (schools / doctors surgeries are full). Potential for the settlement boundary to be redrawn (in consultation with PC and Ward members) to include a small section of the site (along with EUA008).</p> <p><a href="#">At preferred options the Parish Council objected to development of this site on the following grounds – breach of settlement boundary in AONB, Highways, lack of public transport, infrastructure</a></p>

6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	0	Development of the site is unlikely to have an impact on the character of the built environment		Unlikely to have an impact on sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	0	The site is the site of an historic farmstead.	Development of the site should be done in such a way as to conserve and enhance any heritage assets on the site	
	Will it promote, conserve and enhance the District's cultural assets?	0	The site is unlikely to have an impact on cultural assets		
	Will it provide for increased access to and enjoyment of the historic environment?	0	The site is unlikely to have an impact on access to or enjoyment of the historic environment.		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact on air quality		Unlikely to have an impact on sustainability.
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact on noise		
	Will there be an impact on soil quality?	0	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	The site is greenfield		The site could have a negative impact on environmental sustainability as it is a greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will the site be subject to / at risk from flooding	-	The site is within an area at risk from surface water flooding	There is no evidence of flooding on the site.	Flooding can have a negative impact on all elements of sustainability, although there is no evidence of flooding on the site, so development on the site would be unlikely to have an impact on sustainability.
11. To ensure a strong, diverse and sustainable economic base	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<u>0</u>	<a href="#">Not considered relevant.</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a> <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There would be no significant sustainability impacts from development on this site. The site scores positively in relation to sustainable transport, walking and cycling options as well as opportunities for active, healthy lifestyles. The proximity of the site to ancient woodland means that buffers would need to be provided as part of the site design. The site is located in the AONB, and without the mitigation measures set out in the landscape assessment there would be a negative impact on environmental sustainability, [However, if the site was to be developed alongside EUA033 there would be a negative impact on the character of the AONB that would not be able to be mitigated.](#) The site is within an area at risk from surface water flooding, although there has been no evidence of the site flooding. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business](#)

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	EUA	<b>Parish:</b>	Tilehurst
----------------------	------	--------------------	-----	----------------	-----------

<b>Site ID:</b>	EUA003	<b>Site Address:</b>	Stonehams Farm, Long Lane, Tilehurst, Reading	<b>Development Potential:</b>	15 dwellings (0.77ha at 20dph)
-----------------	--------	----------------------	---	-------------------------------	--------------------------------

### Recommendation:

The site is recommended for allocation

### Justification:

The site is well related to local services and facilities with good opportunities for walking and cycling both locally and in towards Reading.

Development will need to take into account the Landscape Assessment, with only part of the site being considered suitable for development. Appropriate mitigation measures will be required to ensure no harm to the landscape character of the AONB.

[The Council would like to see this site developed in conjunction with EUA008 and this will be set out in the policy for the site. If this does not happen consideration needs to be given to pedestrian/cycle links between the two sites.](#)

### Discussion:

#### Site Description:

The site is located to the western boundary of Tilehurst within the AONB. The site has easy access to local service and facilities (including a primary school, secondary school and local leisure centre) within the urban area. A footpath is adjacent to the site, which would need to be preserved should development take place.

[If the site not developed in conjunction with EUA008 there still needs to be consideration of the links between the two sites.](#)

#### Landscape:

[The site is located in the AONB.](#) The Landscape Assessment states that the south eastern part of the site would be suitable for development subject to appropriate mitigation measures as set out in the Landscape Assessment.

[There is some concern about the cumulative impact on the AONB of developing this site alongside EUA033. The landscape assessment indicates that only one of these sites should be development, with a preference for this site.](#)

#### Flood Risk:

The site is within Flood Zone 1 and the centre of the site is within a surface water flood risk area, although there is no evidence that the site suffers from flooding. A FRA and SUDs would be required.

#### Highways /Transport:

The size of the proposed development is unlikely to have an impact on the highway network. Access can be obtained from Long Lane. Some work would be required to widen Long Lane to the front of the site to allow the provision of footways to connect the site to existing footways in the vicinity.

There are regular bus services passing within 400m of the site. There are opportunities for walking and cycling, locally and into Reading.

#### Ecology:

There are no protected species or ecological designations on the site. [An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected](#)

#### Archaeology:

The site is the site of a historic farmstead. [Further archaeological investigation and recording required. Any development on the site would need to conserve and enhance any heritage assets on the site.](#)

## Site Selection – Site Commentary

### Education:

Existing primary school provision in the Eastern Urban Area is close to or at capacity. There is capacity for additional pupils within the local secondary schools.

[The Local Education Authority has indicated that a satisfactory solution to school place provision can be achieved in the area.](#)

### Environmental Health:

There are no known air quality, noise or contamination issues associated with the site.

### Minerals and Waste:

Site is completely underlain with gravel giving high potential for use or prior extraction (depending on depth and quality of deposit). [Consideration of policies 1 & 2 of the RMLP are relevant. would be required](#)

No known waste issues.

### Land use planning consultation zone:

Site is not within an AWE consultation zone.

### Environment Agency:

The site is in SPZ3. [The EA has no in principle objection to development in SPZs.](#)

### Thames Water:

No water supply or wastewater infrastructure issues envisaged.

### Parish Council:

The Parish Council have concerns that development of this site would potentially set a precedent for further development beyond the site. Potential for a small section of the site to be included with the redrawn settlement boundary was considered to be ok.

[At preferred options the Parish Council objected to development of this site on the following grounds – breach of settlement boundary in AONB, Highways, lack of public transport, infrastructure\)](#)

### Preferred Options consultation key issues:

- [General comments](#)
- [Principle of development](#)
- [Landscape/setting including concern about coalescence and impact on AONB](#)
- [Contrary to policy.](#)
- [Infrastructure concerns and impact on services and facilities – schools, doctors etc, access to recreation and leisure, retail, emergency services.](#)
- [Highways and Transport including impact of traffic, access, capacity, congestion, lack of public transport, road safety etc.](#)
- [Ecology including impact on trees, species, destruction of habitat.](#)
- [Flood risk](#)
- [Personal issues – e.g. impact on health, well-being.](#)
- [Pollution – light, air, noise.](#)
- [Employment – loss of farm will lead to a loss of businesses.](#)
- [Crime and Security.](#)
- [Consultation – issues over timing, using the portal etc.](#)

[For the consultation responses and Council's response please see the Statement of Consultation.](#)

### SA/SEA:

The SA/SEA indicates a predominantly neutral sustainability impact. The site scores positively in relation to sustainable transport, walking and cycling options as well as opportunities for active, healthy lifestyles. The proximity of the site to ancient woodland means that buffers would need to be provided as part of the site design. The site is located in the AONB, and without the mitigation measures set out in the landscape assessment there would be a negative impact on environmental sustainability. [However, if the site was to be developed alongside EUA033 there would be a negative impact on the character of the AONB that would not be able to be mitigated.](#) The site is within an area at risk from surface water flooding, although there has been no evidence of the site flooding.

[Housing development contributes towards economic sustainability during the construction stage of the site](#)

## Site Selection – Site Commentary

and through the lifetime of the development as it will provide a workforce and increased population using local economies. However, there will be a negative impact on economic sustainability as redevelopment of the site for housing would result in the loss of some small scale employment on the site.

**Proposed development (from SHLAA submission):**

No specific proposal have been submitted for this site.

# Site Selection – Site Assessment

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	EUA	<b>Parish:</b>	Tilehurst
----------------------	------	--------------------	-----	----------------	-----------

<b>Site ID:</b>	EUA004	<b>Site Address:</b>	Land at Pincents Lane, Calcot, Reading, RG31 4UQ
-----------------	--------	----------------------	--

<b>Development Potential:</b>	120 49 Dwellings (5.95ha at 20dph)	<b>SHLAA Assessment:</b>	Not currently developable

### Key: Effects of option on SA objectives

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	The site is close to local recreation ground and is within walking distance of a range of services and facilities including the retail park		The site is close to local services and facilities and open countryside meaning that there would be a positive impact on environmental and social sustainability.
	Will it increase opportunities for access to sports facilities?	+	The site is close to the recreation ground.		
	Will it protect and enhance green infrastructure across the district?	?	A footpath runs through the site.	The footpath would need to be retained as part of the design.	
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The site is close to local employment and facilities.		The site is close to local services and facilities, with good access to education and employment services, meaning that there will be a positive impact on economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	There are a number of walking and cycling routes around the site. There is a bus interchange at the retail park which is within walking distance of the site.		The site is served by regular bus services, and is within walking distance of a number of services and facilities, meaning that there would be a positive impact on all elements of sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.		
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	-	The site is adjacent to Ancient woodland. There are TPOs and a Local Wildlife site on the site as well as the site being in a BOA	Appropriate buffers and careful design could help to mitigate the impact of development. An extended phase 1 habitat survey would be required.	Development on the site could have a negative impact on environmental sustainability. Appropriate mitigation would need to be provided to reduce this
	Will it conserve and	0	The site is within open countryside	<a href="#">Landscape Assessment work</a>	

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	enhance the local distinctiveness of the character of the landscape?		and adjacent to the AONB.	<a href="#">carried out sets out the required mitigation measures.</a>	impact.
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	-	The areas proposed for development are not adjacent to existing residential areas.		Development on the site would have a negative impact on environmental sustainability, and the location of the proposed developable areas could mean that there is a negative impact on social sustainability as well.
	Will it conserve and enhance the significance of the District's heritage assets?	-	Romano British material has been found on the site. Archaeological assessment of the site indicated that the site may not be suitable for development.	Further archaeological work required.	
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact on cultural assets		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact on access to or enjoyment of the historic environment		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from or impact on air quality?	0	Unlikely to have an impact on air quality		Unlikely to have an impact on sustainability.
	Will the site be at risk from or impact on noise levels?	0	Unlikely to have an impact on noise		
	Will there be an impact on soil quality?	0	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	Site is greenfield		The site could have a negative impact on environmental sustainability as it is a greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.
	Will the site be subject to / at risk from flooding	-	Part of the site is within a surface water flood risk area.	A FRA outlining the risk of flooding and mitigation measures to be implemented would be required.	Flooding can have a negative impact on all elements of sustainability. There is no evidence of

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
				SUDs would be required.	flooding on the site, and mitigation measures would need to be provided, so development on the site would be unlikely to have an impact on sustainability.
<a href="#">11. To ensure a strong, diverse and sustainable economic base</a>	Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a> <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	Will it promote and support the vitality and viability of the District's commercial centres?	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There are positive impacts on sustainability as the site is close to local services and facilities enabling walking and cycling and the promotion of healthy, active lifestyles. However, there are also a number of negative environmental impacts resulting from the development of the site including the site's proximity to biodiversity and geodiversity assets. Appropriate buffers, mitigation and careful design would be required to mitigate the potential negative environmental impacts.

As the areas proposed for development are not adjacent to existing residential areas this has the potential for a negative impact on social sustainability. Part of the site is within a surface water flood risk area; although there is no evidence of the site flooding, if it did, this would have a negative impact on all elements of sustainability. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Summary of effects:**

**Effect:** Predominantly neutral

**Likelihood:** High

**Scale:** Eastern Area

**Duration:** Permanent

**Timing:** Short to long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EA	<b>Settlement:</b>	EUA	<b>Parish:</b>	Tilehurst
----------------------	----	--------------------	-----	----------------	-----------

<b>Site ID:</b>	EUA007	<b>Site Address:</b>	Turnhams Farm, Pincents Lane, Tilehurst (Pincents Hill)	<b>Development Potential:</b>	285 dwellings (9.5ha at 30dph)
-----------------	--------	----------------------	---	-------------------------------	--------------------------------

### Recommendation:

[The site is not recommended for allocation in the DPD.](#)

[At preferred options the site was is recommended for allocation.](#)

### Justification:

The site is well related to local services and facilities, both for access locally and in to Reading. Work has been done since the previous planning application (and subsequent appeal) to take into account the impact on the landscape.

There are a number of ecological, environmental, water supply, archaeological and highways issues that would need to be resolved.

[Signification concerns were raised as part of the consultation regarding the traffic impact from IKEA, which will use the same access road as this site. It is therefore, considered prudent to wait and see what impact IKEA has before considering whether further development on Pincents Hill would be acceptable.](#)

[The developable area of the site is poorly related to the existing residential development, with the landscape assessment stating that development should be related to the industrial area. This means that there would be no links between the site and the residential development to the east.](#)

### Discussion:

#### Site Description:

The site is located to the west of Tilehurst, north of the Sainsbury's retail park. The site is close to local services and facilities (including shops, schools and public transport links) within the urban area. The site itself is poorly related to the existing residential development within the Eastern Urban Area, although this means that the impact on the landscape is minimised. A footpath, [now a formal right of way \(TILE1/13/3\)](#), crosses the site, which would need to be retained.

The site was subject to a refused planning application, which was upheld at appeal and an unsuccessful village green application in 2009/10.

#### Landscape:

The site is adjacent to the AONB, in an area of medium landscape sensitivity. The proposed developable area takes into account comments made during the previous planning application and subsequent appeal. [Further landscape assessment work carried out by the Council sets out the area of the site considered suitable for development and the mitigation measures required. This acceptable developable area is slightly different to the area proposed by the site promoter.](#)

#### Flood Risk:

The site is within Flood Zone 1 and a surface water flood risk area.

A FRA would be required with appropriate mitigation, including SUDs provided.

#### Highways /Transport:

Access to the site is proposed to be via Pincents Lane. With the IKEA development taking place to the south of the site there is some concern regarding the impact on the A4. Extensive mitigation to accommodate additional traffic generated by the development would be required.

The site is some distance from the existing local bus stops (at the retail park), and given the size of the development it is unlikely that a bus service would be extended to the site. [An improved bus service will stop at IKEA, which is slightly closer to the site than the existing bus stops at the retail park.](#)

The Highways Agency did not comment on this site.

A Transport Assessment and Travel Plan for the site would be required.

## Site Selection – Site Commentary

### Ecology:

The site is a BAP habitat, within a Biodiversity Opportunity Area. Badgers and bats are present on the site. The site is adjacent to ancient woodland and contains trees protected by Tree Preservation Orders.

Appropriate buffers ~~and an Extended Phase 1 Habitat Survey~~ would be required. [An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected](#)

### Archaeology:

There are significant archaeological finds on the site which could limit the development potential. Further archaeological work would be required.

### Education:

Potential issues with primary provision. [The Local Education Authority has indicated that a satisfactory solution to school place provision can be achieved in the area.](#) There is capacity for additional pupils within the local secondary schools.

### Environmental Health:

There are no known air quality, noise or contamination issues associated with the site.

### Minerals and Waste:

No known mineral deposits

No known waste issues

### Land use planning consultation zone:

Within the outer AWE consultation zone. The development potential is greater than 200; ~~therefore ONR will need to be consulted. This will take place as part of the preferred options consultation.~~ [ONR has not raised any concerns regarding development of this site.](#)

### Environment Agency:

Site is within FZ1

### Thames Water:

~~Significant~~ Concerns regarding Water Supply capability. Current water supply network in this area is highly unlikely to be able to support the demand from this site. ~~Significant~~ Water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of any development.

Concerns regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A water supply and drainage strategy would be required.

### Parish Council:

The parish council are very concerned about the development of this site. Access is poor and the area is used by the local community for walking. Traffic generation is expected to be high and result on pressure on Tidmarsh Road, Langley Hill and Pincents Lane. There is strong opposition to the site from the local community, ward members and the local MP. [The Parish Council objected to the allocation of the site as part of the preferred options consultation.](#)

### Preferred Options consultation key issues:

- [Principle of development](#)
- [Tilehurst has provided enough housing and shouldn't be a dumping ground for new development.](#)
- [Coalescence of development](#)
- [Precedent for more development](#)
- [Previous scheme rejected at appeal.](#)
- [Planning policy \(contrary to various planning policies\).](#)
- [Land use – e.g. use brownfield sites first.](#)
- [Use other, alternative locations.](#)

## Site Selection – Site Commentary

- [Landscape/setting.](#)
- [Concern over infrastructure and service provision \(shops, utilities, health care, education, leisure, emergency services\).](#)
- [Highways and transport including access, congestion, road safety, parking issues, public transport and the impact of IKEA.](#)
- [Ecology](#)
- [Flood risk](#)
- [Pollution \(light, noise, air\)](#)

[For the consultation responses and Council's response please see the Statement of Consultation.](#)

### **SA/SEA:**

The SA/SEA indicates a predominantly neutral impact. [There are positive impacts on sustainability as the site is close to local services and facilities enabling walking and cycling and the promotion of healthy, active lifestyles. However, there are also a number of negative environmental impacts resulting from the development of the site including the site's proximity to biodiversity and geodiversity assets. Appropriate buffers, mitigation and careful design would be required to mitigate the potential negative environmental impacts.](#)

[As the areas proposed for development are not adjacent to existing residential areas this has the potential for a negative impact on social sustainability. Part of the site is within a surface water flood risk area; although there is no evidence of the site flooding, if it did, this would have a negative impact on all elements of sustainability.](#)

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term. There are no significant sustainability issues, positive or negative. There are several negative impacts predicted from development of the site, particularly in terms of environmental sustainability and the impact on the environment and ecology. There are a number of positive impacts relating to access to local services and facilities.](#)

### **Proposed development: (from SHLAA submission/ [Site Promoter](#)):**

[The site is proposed for 225 – 330 dwellings at 35dph \(based on a developable area of 6.4ha – 9.5ha\)](#)

The proposed development of the site takes into account the findings of the appeal and has reduced the developable areas of the site, [focusing development to the south of the site](#). The site is proposed for predominantly residential development (including affordable housing), with some mixed use leisure, retail and employment to support the residential element of the scheme. The scheme would include retention of the right of way, a [substantial area of new area of public open space, to be retained in perpetuity](#) with potential for part of the site to be retained for agricultural use.

[A utilities study carried out for the previous planning application did not show any constraints.](#)

[Transport assessment work carried out shows that a single access point from Pincents Lane can be achieved and additional enhancements can be made to local road junctions, on top of the works proposed for IKEA.](#)

[Landscape buffers would be provided to ensure the character of the AONB is maintained and enhanced.](#)

### Summary of Site Assessment

**Key Issues:**

- The Council's landscape Assessment indicates that this site is not suitable for development.
- The site itself is not adjacent to the settlement boundary, and would require development of the whole of EUA007 in order to have any relationship with the existing settlement.

### Site Assessment

<b>Parish Council consultation response:</b>	Parish Council were not consulted on this site as it was not submitted until June 2015.

## Summary of Site Assessment

- Key Issues:
- Greenfield
  - AONB – Landscape Assessment indicates only part of the site is suitable for development

## Site Assessment

<b>Parish Council consultation response:</b>	Parish Council are strongly against any breach of the settlement boundary. Site is outside of settlement and would encroach into the AONB. Concern this would potentially set a precedent for further development beyond these sites. Parish Council feel that there are insufficient facilities to sustain more development (schools / doctors surgeries are full). Potential for the settlement boundary to be redrawn (in consultation with PC and Ward members) to include a small section of the site (along with EUA003). <a href="#">At preferred options the Parish Council objected to development of this site on the following grounds – breach of settlement boundary in AONB, Highways, lack of public transport, infrastructure</a>

### Key: Effects of option on SA objectives

++	+	?	0	-	--
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	+	Site is close to local services and facilities that would encourage walking or cycling as part of a healthy, active life.		The site is close to local services and facilities and open countryside meaning that there would be a positive impact on environmental and social sustainability.
	Will it increase opportunities for access to sports facilities?	+	The site is close to recreation ground and the Cotswold Sports Centre.		
	Will it protect and enhance green infrastructure across the district?	?	The site has a rights of way running along the western and eastern boundary of the site.	The right of way would need to be protected as part of any site design.	
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	+	The site is close to services and employment opportunities, including public transport links into Reading and beyond.		The site is close to local services and facilities, with good access to education and employment services, meaning that there will be a positive impact on economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	+	The site is close to public transport services. There are lots of opportunities for walking and cycling, with local services and facilities close to the site.		The site is served by regular bus services, and is within walking distance of a number of services and facilities, meaning that there would be a positive impact on all elements of sustainability.
	Will it reduce the number of road traffic accidents and improve safety?	?	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.	Additional footways would be required to link the site into the existing footways in the vicinity.	
5. To protect and enhance the natural environment	Will it conserve and enhance the biodiversity and geodiversity assets across West Berkshire?	?	The site is adjacent to ancient woodland and trees protected by Tree Preservation Orders. Although no protections on the site itself.	Appropriate buffers would be required.	Development <a href="#">of this site alone</a> could have a negative impact on environmental sustainability, but with appropriate mitigation the
	Will it conserve and enhance the local	-	The site is within the AONB, in an area of medium landscape	Landscape Assessment indicates that part of the site	

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	distinctiveness of the character of the landscape?		sensitivity. Landscape Assessment indicates that some development would be suitable on the site.  <a href="#">The LCA states that this site should not be developed in conjunction with EUA033 as this would have a negative impact on the AONB.</a>	would be suitable for development subject to important measures to conserve and enhance the AONB.	impact would be neutral. <a href="#">However, if this site was to be developed in conjunction with EUA033 mitigation would not be able to reduce the impact on the AONB.</a>
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	0	Development of the site is unlikely to have an impact on the character of the built environment		Unlikely to have an impact on sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	0	The site is the site of an historic farmstead.	Development of the site should be done in such a way as to conserve and enhance any heritage assets on the site	
	Will it promote, conserve and enhance the District's cultural assets?	0	The site is unlikely to have an impact on cultural assets		
	Will it provide for increased access to and enjoyment of the historic environment?	0	The site is unlikely to have an impact on access to or enjoyment of the historic environment.		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from, or impact on, air quality?	0	Unlikely to have an impact on air quality		Unlikely to have an impact on sustainability.
	Will the site be at risk from, or impact on, noise levels?	0	Unlikely to have an impact on noise		
	Will there be an impact on soil quality?	0	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land and buildings?	-	The site is greenfield		The site could have a negative impact on environmental sustainability as it is a greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	?	The level of impact depends on location, building materials / construction, transport / design	Mitigation could also include Transport Assessment / Travel Plans.	Without consideration of sustainability construction techniques development could have a negative impact on environmental sustainability.

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will the site be subject to / at risk from flooding	<b>0</b>	There is no flood risk on the site,	<a href="#">A FRA would be required, with appropriate mitigation and SUDs would be required. provided</a>	Unlikely to have an impact on any element of sustainability.
<a href="#">11. To ensure a strong, diverse and sustainable economic base</a>	<a href="#">Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?</a>	<b>0</b>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	<a href="#">Will it promote and support key business sectors and utilise employment land effectively and efficiently?</a>	<b>0</b>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a> <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	<a href="#">Will it promote and support the vitality and viability of the District's commercial centres?</a>	<b>0</b>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres. The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

There would be no significant sustainability impacts from development on this site. The site scores predominantly neutral, with positive scores in relation to sustainable transport, walking and cycling options as well as opportunities for active, healthy lifestyles and lack of flood risk. The site is in the AONB, therefore there is potential, without mitigation, for the site to have a significantly negative impact on the character of the landscape. The Landscape Assessment indicates that development would be appropriate on part of the site, and sets out the mitigation measures that would be required to reduce the impact of development on the environment. [The cumulative impact of development of both EUA003/008 and EUA033 would have a negative impact on the character of the AONB that could not be mitigated. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

### Summary of effects:

**Effect:** Predominantly neutral

**Likelihood:** High

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

**Scale:** Eastern Area

**Duration:** Permanent

**Timing:** short to long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	EUA	<b>Parish:</b>	Tilehurst
<b>Site ID:</b>	EUA008	<b>Site Address:</b>	Stoneham's Farm, Long Lane, Tilehurst, Reading	<b>Development Potential:</b>	44 dwellings (2.21ha at 20dph) <a href="#">60 dwellings</a>

### Recommendation:

Site is recommended for allocation in line with the area considered suitable for development by the Landscape Assessment.

### Justification:

The site is well related to local services and facilities with good opportunities for walking and cycling both locally and in towards Reading.

Development will need to take into account the Landscape Assessment, with only part of the site being considered suitable for development. Appropriate mitigation measures will be required to ensure no harm to the landscape character of the AONB.

[The development potential of the site has been changed following consultation responses from the site promoter and consideration of the density of the neighbouring development. Development of 30dph is considered appropriate in this location which gives approximately 60 dwellings on the site.](#)

### Discussion:

#### Site Description:

The site is located to the western boundary of Tilehurst within the AONB. The site has easy access to local service and facilities (including a primary school, secondary school and local leisure centre) within the urban area. A footpath is adjacent to the site, which would need to be preserved should development take place.

[If the site is not to be developed in conjunction with EUA003 there needs to be consideration of the links between the two sites.](#)

#### Landscape:

[The site is located within the AONB.](#) The Landscape Assessment states that the south eastern part of the site would be suitable for development subject to important measures to conserve and enhance the AONB. [There is some concern about the cumulative impact on the AONB of developing this site alongside EUA033. The landscape assessment indicates that only one of these sites should be development, with a preference for this site.](#)

#### Flood Risk:

The site is within Flood Zone 1 and the centre of the site is within a surface water flood risk area, although there is no evidence that the site suffers from flooding. A FRA and SUDs would be required.

#### Highways /Transport:

The size of the proposed development is unlikely to have an impact on the highway network. Access can be obtained from Long Lane. ~~Some work would be required to widen Long Lane to the front of the site to allow the provision of footways to connect the site to existing footways in the vicinity.~~ [If the site was to be developed on its own no additional off site highways work would be required, however, should the site be developed alongside others in this area improvements to widen Long Lane, and improve the junction of Long Lane and Sulham Hill would be required.](#)

There are regular bus services passing within 400m of the site. There are opportunities for walking and cycling, locally and into Reading.

#### Ecology:

There are no protected species or ecological designations on the site.

#### Archaeology:

The site contains a historic farmstead. This is not seen as a significant issue for development although further assessment work would be required.

## Site Selection – Site Commentary

### Education:

Existing primary school provision in the Eastern Urban Area is close to or at capacity. There is capacity for additional pupils within the local secondary schools.

[The Local Education Authority has indicated that a satisfactory solution to school place provision can be achieved in the area.](#)

### Environmental Health:

There are no known air quality, noise or contamination issues associated with the site

### Minerals and Waste:

Site is completely underlain with gravel giving high potential for use or prior extraction (depending on depth and quality of deposit). [Consideration of policies 1 & 2 of the RMLP are relevant. would be required](#)

No known waste issues.

### Land use planning consultation zone:

Site is not within an AWE consultation zone.

### Environment Agency:

[The site is in SPZ3. High risk to groundwater. The Environment Agency has confirmed that there is no in principle objection to development in SPZs.](#)

### Thames Water:

~~No water supply infrastructure issues envisaged.~~

[Concern regarding water supply infrastructure. The current water supply network in the area is unlikely to be able to support the demand anticipated from this development. Water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.](#)

Concern regarding Wastewater services. The existing network in this area is unlikely to be able to support demand. Drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development.

A [water supply and](#) drainage strategy would be required

### Parish Council:

Concerned that development of the site would potentially set a precedent for further development beyond the site. Potential for a small section of the site to be included within the redrawn settlement boundary is considered ok.

[At preferred options the Parish Council objected to development of this site on the following grounds – breach of settlement boundary in AONB, Highways, lack of public transport, infrastructure\)](#)

### Preferred Options consultation key issues:

- [General comments](#)
- [Principle of development](#)
- [Landscape/setting including concern about coalescence and impact on AONB](#)
- [Contrary to policy.](#)
- [Infrastructure concerns and impact on services and facilities – schools, doctors etc, access to recreation and leisure, retail, emergency services.](#)
- [Highways and Transport including impact of traffic, access, capacity, congestion, lack of public transport, road safety etc.](#)
- [Ecology including impact on trees, species, destruction of habitat.](#)
- [Flood risk](#)
- [Personal issues – e.g. impact on health, well-being.](#)
- [Pollution – light, air, noise.](#)
- [Employment – loss of farm will lead to a loss of businesses.](#)
- [Crime and Security.](#)
- [Consultation – issues over timing, using the portal etc.](#)

[For the consultation responses and Council's response please see the Statement of Consultation.](#)

### SA/SEA:

## Site Selection – Site Commentary

The SA/SEA indicates a predominantly neutral impact on sustainability. There would be no significant, positive or negative, impacts from development on this site. The site scores predominantly natural, with positive scores in relation to sustainable transport, walking and cycling options as well as opportunities for active, healthy lifestyles and lack of flood risk. The site is in the AONB, therefore there is potential, without mitigation, for the site to have a significantly negative impact on the character of the landscape. The Landscape Assessment indicates that development would be appropriate on part of the site, and sets out the mitigation measures that would be required to reduce the impact of development on the environment. The cumulative impact of development of both EUA003/008 and EUA033 would have a negative impact on the character of the AONB that could not be mitigated. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

**Proposed development (from SHLAA submission/ [Site promoter](#)):**

~~No specific proposals have been submitted for this site.~~ [The site is considered suitable for approximately 80 dwellings at between 30 and 40dph. Landscape buffering, and an area of public open space will be provided. At preferred options a reduced site area \(red line\) was proposed for the site.](#)

**Key: Effects of option on SA objectives**

<b>++</b>	<b>+</b>	<b>?</b>	<b>0</b>	<b>-</b>	<b>--</b>
Significantly Positive	Positive	Uncertain	Neutral	Negative	Significantly Negative

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment <small>inc. reference to Social, Economic and Environmental Sustainability</small>
2. To improve health and well being and reduce inequalities	Will it support and encourage healthy, active lifestyles?	<b>+</b>	Site is quite close to open space facilities, although the A4 would need to be crossed		The site is close to local services and facilities and open countryside meaning that there would be a positive impact on environmental and social sustainability.
	Will it increase opportunities for access to sports facilities?	<b>+</b>	Site is close to recreation ground		
	Will it protect and enhance green infrastructure across the district?	<b>0</b>	Development of the site would not have an impact on green infrastructure		
3. To safeguard and improve accessibility to services and facilities	Will it improve access to education, employment services and facilities?	<b>+</b>	The site has good access to local services and facilities including transport links to employment opportunities outside the immediate area.		The site is close to local services and facilities, with good access to education and employment services, meaning that there will be a positive impact on economic sustainability.
4. To improve and promote opportunities for sustainable travel	Will it increase travel choices, especially opportunities for walking, cycling and public transport?	<b>+</b>	The site is close to public transport options at Calcot retail part and quite close to Theale Station. There are a number of walking and cycling opportunities in the area.		The site is served by regular bus services, and is within walking distance of a number of services and facilities, meaning that there would be a positive impact on all elements of sustainability. Mitigation regarding access onto the A4 would help to ensure that development did not have a negative impact on road safety and the social sustainability associated with it.
	Will it reduce the number of road traffic accidents and improve safety?	<b>?</b>	Additional traffic could result in road safety concerns, but any development would also have the potential to improve road safety.	Mitigation regarding access on the A4 may be required to ensure development here would not negatively impact on road safety.	
5. To protect and enhance	Will it conserve and	<b>-</b>	The site is currently in environmental	An extended phase 1 habitat	Development is likely to

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
the natural environment	enhance the biodiversity and geodiversity assets across West Berkshire?		stewardship, including tree planting and bat roost creation. Water Voles are also present on the site.	survey would be required.	have an impact on environmental sustainability. Mitigation measures (such as habitat creation and appropriate buffers) could be implemented to reduce this impact.
	Will it conserve and enhance the local distinctiveness of the character of the landscape?	0	Unlikely to have an impact on the character of the landscape.		
6. To ensure that the built, historic and cultural environment is conserved and enhanced	Will it conserve and enhance the local distinctiveness of the character of the built environment?	+	The site is well related to the existing settlement pattern.	Development in line with the Core Strategy policies will ensure that development is in keeping with the character of the built environment	Unlikely to have an impact on any element of sustainability.
	Will it conserve and enhance the significance of the District's heritage assets?	0	Unlikely to have an impact on heritage assets		
	Will it promote, conserve and enhance the District's cultural assets?	0	Unlikely to have an impact on cultural assets		
	Will it provide for increased access to and enjoyment of the historic environment?	0	Unlikely to have an impact on access to or enjoyment of the historic environment		
7. To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire	Will the site be at risk from or impact on air quality?	- / - -	The site is adjacent to the M4/A4 junction with the M4 running along the south west edge of the site. The southern tip of the site is adjacent to the railway line	It may be that only part of the site is considered suitable for development. Mitigation measures, including careful design of buildings, and buffer zones, would be required.	Development of the whole site would have a negative and potentially significantly negative impact on social sustainability. Limiting the size of developable area and introducing approached mitigation should mean that there is no impact on sustainability.
	Will the site be at risk from or impact on noise levels?	- / - -	The site is adjacent to the M4/A4 junction with the M4 running along the south west edge of the site. The southern tip of the site is adjacent to the railway line.	It may be that only part of the site is considered suitable for development. Mitigation measures, including careful design, buffer zones and noise fencing, would be required.	
	Will there be an impact on soil quality?	0	Unlikely to have an impact on soil quality		
	Will there be an impact on water quality?	0	Unlikely to have an impact on water quality.		
8. To improve the efficiency of land use	Will it maximise the use of previously developed land	-	The site is greenfield		The site could have a negative impact on

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	and buildings?	-			environmental sustainability as it is a greenfield site.
10. To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change	Will it reduce West Berkshire's contribution to greenhouse gas emissions?	-	Development is likely to increase greenhouse gas emissions. The level of the impact will depend on building materials, construction methods, transport and design. The site's location adjacent to the A4/M4 could lead to greater car use than other sites, due to the proximity to the strategy road network and the links to wider opportunities that this offers.	Mitigation measures would be required, including design in accordance with the Core Strategy and Travel Planning measures to reduce car use to/from the site.	Development will result in an increase in greenhouse gas emissions, which will have a negative impact on environmental sustainability. Mitigation measures will help to reduce this impact, and could result in a neutral impact. The use of Travel Planning at this site will be important to promote the use of the public transport options offered near to the site, as an alternative to the private car.
	Will the site be subject to / at risk from flooding	-	Adjacent to Flood Zone 3, in Flood Zone 2 and in an area at risk from ground and surface water flooding	The southern half of the site is in Flood Zone 2, meaning development could take place on the northern half of the site.  While the NPPF does not stop development in Flood Zone 2, sites in Flood Zone 2 will be considered only if there are no suitable sites within Flood Zone 1.  A FRA would be required and appropriate mitigation, including SUDs included in any development.	Flooding can have a negative impact on all elements of sustainability, although there is no evidence of flooding on the site, so development on the site would be unlikely to have an impact on sustainability.
<a href="#">11. To ensure a strong, diverse and sustainable economic base</a>	Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. ## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

SA Objective	Criteria	Effects of option on SA objectives	Justification for assessment:	Mitigation / enhancement	Comment inc. reference to Social, Economic and Environmental Sustainability
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	<u>0</u>	<p><a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a></p> <p><a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a></p>		<p><a href="#">economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a></p>
	Will it promote and support the vitality and viability of the District's commercial centres?	<u>0</u>	<p><a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a></p> <p><a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a></p>		

### Summary

There is potential for significant negative impacts on air quality and noise on this site due to the proximity to the M4/A4 junction. Mitigation measures would need to be included, including careful design to minimise the impact. Flooding is also a risk on the southern part of the site, with ground water and surface water flood risk also present on the site. A FRA will identify the risk of flooding and direct development towards the least risky parts of the site. SUDs and other flood mitigation will be required. The site scores positively in terms of access to employment and services and facilities and opportunities for walking, cycling and public transport.

[The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

#### Summary of effects:

**Effect:** Predominantly neutral (with mitigation)

**Likelihood:** High

**Scale:** Eastern Area

**Duration:** Permanent

**Timing:** Short to long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EA	<b>Settlement:</b>	EUA	<b>Parish:</b>	Holybrook
----------------------	----	--------------------	-----	----------------	-----------

<b>Site ID:</b>	EUA025	<b>Site Address:</b>	Land adjacent to Junction 12 of the M4, Bath Road, Calcot	<b>Development Potential:</b>	100 dwellings (1.7ha at 30dph)
-----------------	--------	----------------------	---	-------------------------------	--------------------------------

### Recommendation:

A small part of the site to the north east is recommended for allocation [towards the end of the plan period](#)

### Justification:

The site is well related to the existing settlement, close to local service and facilities, including the bus interchange at the retail park.

Only part of the site is recommended for allocation due to air and noise pollution [impact due to the proximity of the site to the](#) generated by the M4/A4 and the flood risk on the southern part of the site. The Environment Agency strongly recommends that [the area of the site within the flood zones](#) this site is not allocated. The smaller area for development will also reduce any conflict with the Highways [England Agency's proposed M4 Smart Motorway Scheme](#) or [other future improvements to Junction 12 of the M4](#). ~~(proposed to start at junction 12).~~

[The site is required by Highways England as a site compound for the M4 Smart Motorway scheme until September 2018, therefore, the site would not be available for development until towards the end of the plan period.](#)

### Discussion:

#### Site Description:

The site is located to the east of Calcot to the south of the A4, adjacent to junction 12 of the M4. The site is close to the service and facilities offered at the Calcot retail part, including the bus interchange. Being adjacent to the M4/A4 means that there are good links to wider employment opportunities that the immediate area.

~~The site could be considered alongside EUA026.~~

#### Landscape:

The site is within an area of low/medium landscape sensitivity.

#### Flood Risk:

50% of the site is within Flood Zone 2. ~~This means that this area of the site should only be considered for development if there are no other suitable alternatives.~~ [The Environment Agency requires a sequential test for development to be allocated within a flood zone. Other sites, outside the flood zones are available, therefore, the sequential test cannot be carried out and so the area of the site within the flood zone cannot be considered for allocation.](#)

The north west corner of the site is within the groundwater emergence zone, with part of the site within a surface water flood risk area.

A FRA and appropriate mitigation, including SUDs, would be required.

#### Highways /Transport:

The site is considered to have a marginal impact on the highway network. Access would need to be from Dorking Way. Once the highway works associated with IKEA have been completed there will be no right turn from Dorking Way, vehicles wishing to turn right would need to use Charrington Road to the east of the site.

There are good pedestrian and cycle links to and from the site.

The site is opposite the bus interchange at Calcot retail park.

The Highways Agency has plans for a Smart Motorway Scheme on the M4 from Junction 12 to 3, which could have an impact on the deliverability of the whole of this site.

#### Ecology:

## Site Selection – Site Commentary

The site is currently in environmental stewardship with tree planning and bat roost creation taking place and in a Biodiversity Opportunity Area. Water Voles are also present on the site.

~~An extended phase 1 habitat survey would be required.~~

[An extended phase 1 habitat survey would be required together with further detailed surveys arising from that as necessary. Appropriate avoidance and mitigation measures would need to be implemented, to ensure any protected species were not adversely affected](#)

[Any land not allocated for development should be handed over to the Council as an extension to Holybrook Linear Park.](#)

### **Archaeology:**

There is potential for prehistoric archaeology on the site and WW2 pillboxes and anti-tank ditches. However this is unlikely to cause an issue for development.

### **Education:**

~~Existing primary school provision in the Eastern Urban Area is close to or at capacity. There is capacity for additional pupils within the local secondary schools.~~

[The Local Education Authority has indicated that a satisfactory solution to school place provision can be achieved in the area.](#)

### **Environmental Health:**

The site is adjacent to the M4/A4 and railway line. Noise and air quality could be a significant issue.

A noise and air quality survey would be required and careful design and mitigation measures would be needed.

### **Minerals and Waste:**

Site is partially underlain by gravel. Past minerals workings adjacent to the southern part of the site indicate high potential for viable deposits on the southern part of the site.

No known waste issues.

### **Land use planning consultation zone:**

The site is in the outer AWE consultation zone, although [the allocation of a small portion of the site](#) is below the threshold for ONR consultation. [Should the whole site be developed, consultation with ONR would need to take place.](#)

### **Environment Agency:**

Strong recommendation that the site is not allocated due to a large proportion of the location being within Flood Zone 2. The site is in SPZ3 and there is a major aquifer, a culverted ordinary watercourse and a high risk of groundwater contamination.

### **Thames Water:**

Concern regarding water supply capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of any development.

A water supply strategy would be required.

No wastewater infrastructure issues envisaged.

### **Parish Council:**

Flooding is seen as a major issue on this site. Concern raised about the traffic generation onto the A4, especially with the IKEA development on the other side of the A4. Noise and air pollution are seen as a major issue.

[At preferred options Holybrook Parish Council objected to development of the site on the following grounds \(sustainability, already densely populated area, traffic impact, infrastructure, flood risk, proximity to M4/A4 and pollution, impact of IKEA\)](#)

[Preferred Options consultation key issues:](#)

## Site Selection – Site Commentary

- [Principle of development.](#)
- [Breach of settlement boundary and coalescence of settlements.](#)
- [Need to use brownfield sites first and other alternative options given.](#)
- [Landscape and setting.](#)
- [Concern over infrastructure and services \(doctors, schools, reliance on Reading\).](#)
- [Highways and transport issues.](#)
- [Flooding](#)
- [Pollution \(noise, air\).](#)
- [Ecology](#)
- [Personal points.](#)
- [Proximity to M4/A4](#)
- [Unknown impact of IKEA](#)

*[For the consultation responses and Council's response, please see the Statement of Consultation.](#)*

### **SA/SEA:**

[There is an overall neutral impact on sustainability. There is potential for significant negative impacts on air quality and noise on this site due to the proximity to the M4/A4 junction. Mitigation measures would need to be included, including careful design to minimise the impact. Flooding is also a risk on the southern part of the site, with ground water and surface water flood risk also present on the site. A FRA will identify the risk of flooding and direct development towards the least risky parts of the site. SUDs and other flood mitigation will be required. The site scores positively in terms of access to employment and services and facilities and opportunities for walking, cycling and public transport. The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

~~The SA/SEA highlights air quality and noise pollution as potentially significant negative issues for the site. Developing a smaller area of the site and including mitigation measures should help to reduce this impact. Flood risk to the south of the site is also an issue. However, only the northern part of the site is suggested for development which will neutralise this risk.~~

### **Proposed development (from SHLAA submission):**

The whole of the site (9.6ha) is proposed for mixed use development including commercial and residential development with a density of no less than 50dph ([approx 250 dwellings](#)). Development of the site would include amenity space and approached mitigation for flood risk, noise pollution and air quality as a result of the proximity to the A4/M4.

To ensure a strong, diverse and sustainable economic base</a>	Will it enable the provision of high quality economic development which responds to business needs and delivers a range of employment opportunities?	<u>0</u>	<a href="#">Not considered relevant</a>		<a href="#">The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.</a>
	Will it promote and support key business sectors and utilise employment land effectively and efficiently?	<u>0</u>	<a href="#">The site is greenfield and there will be no loss of employment land through the development of the site for housing. No employment use development is proposed for the site.</a> <a href="#">The development of the site for housing will have an overall neutral effect on economic sustainability.</a>		
	Will it promote and support the vitality and viability of the District's commercial centres?	<u>0</u>	<a href="#">Housing development provides additional workforce and customers which has the potential to support commercial centres however the site is not for employment generating uses in such commercial centres.</a> <a href="#">The development of the site for housing only will have a neutral effect on economic sustainability.</a>		

### Summary

## Site Selection – Sustainability Appraisal / Strategic Environmental Assessment

There is potential for significant negative impacts of air quality and noise due to proximity to the A4 but with appropriate mitigation measures and design this impact should be mitigated against. A small part of the site is within an area at risk from surface water flooding, with the appropriate Flood Risk Assessment and mitigation measures (inc. SUDs) there should not be an impact on sustainability. There are a number of positive impacts in relation to sustainable transport and access to local services and facilities. This easy access should reduce the need for private car travel, reducing the impact on environmental sustainability. [The development of the site for housing will have a neutral effect on economic sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

**Summary of effects:**

**Effect:** Predominantly neutral (with mitigation)

**Likelihood:** High

**Scale:** Eastern Area

**Duration:** Permanent

**Timing:** Short to long term

## Site Selection – Site Commentary

<b>Spatial Area:</b>	EA	<b>Settlement:</b>	EUA	<b>Parish:</b>	Holybrook
<b>Site ID:</b>	EUA026	<b>Site Address:</b>	Land adjacent to Bath Road and Dorking Way, Calcot	<b>Development Potential:</b>	24 dwellings (0.8ha at 30dph) <u>35 dwellings</u>

### Recommendation:

The site is recommended for allocation, [towards the end of the plan period for 35 – 40 dwellings.](#)

### Justification:

The site is well related to the existing settlement, close to local service and facilities, including the bus interchange at the retail park.

[The site is required by Highways England as a site compound for the M4 Smart Motorway scheme until September 2018, therefore, the site would not be available for development until towards the end of the plan period.](#)

[The development potential of the site has been changed following consultation responses from the site promoter and consideration of the density of the neighbouring development. Development of up to 40dph is considered appropriate in this location which gives between 35 and 40 dwellings.](#)

### Discussion:

#### Site Description:

The site is located to the east of Calcot to the south of the A4. The site is close to the service and facilities offered at the Calcot retail part, including the bus interchange. Being adjacent to the M4/A4 means that there are good links to wider employment opportunities that the immediate area.

~~The site could be considered alongside EUA025.~~

#### Landscape:

The site is within an area of low/medium landscape sensitivity.

#### Flood Risk:

The site is within Flood Zone 1.

A small part of the western edge of the site is within a surface water flood risk area.

A FRA would be required, and appropriate SUDs provided.

#### Highways /Transport:

The site is considered to have a marginal impact on the highway network. Access would need to be from Dorking Way. Once the highway works associated with IKEA have been completed there will be no right turn from Dorking Way, vehicles wishing to turn right would need to use Charrington Road to the east of the site.

There are good pedestrian and cycle links to and from the site.

The site is close to the bus interchange at Calcot retail part.

#### Ecology:

There are no known ecological or environmental designations on the site.

#### Archaeology:

There is no known archaeology on the site.

#### Education:

Existing primary school provision in the Eastern Urban Area is close to or at capacity. There is capacity for additional pupils within the local secondary schools.

#### Environmental Health:

The site is adjacent to the A4. Noise and air quality could be an issue.

## Site Selection – Site Commentary

A noise and air quality survey would be required and careful design and mitigation measures may be needed.

### **Minerals and Waste:**

No known mineral deposits

No known waste issues

### **Land use planning consultation zone:**

The site is in the outer AWE consultation zone, although is below the threshold for consultation with ONR.

### **Environment Agency:**

The site is within Flood Zone 1.

### **Thames Water:**

Concern regarding water supply capability. Current water supply network in this area is unlikely to be able to support the demand from this site. Water supply infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of any development.

A water supply strategy would be required.

No wastewater infrastructure issues envisaged.

### **Parish Council:**

The parish council consider that this site might have development potential by traffic implications would need to be considered.

[At preferred options Holybrook Parish Council objected to development of the site on the following grounds \(sustainability, already densely populated area, traffic impact, infrastructure, flood risk, proximity to M4/A4 and pollution, impact of IKEA\)](#)

### **Preferred Options consultation key issues:**

- [General comments and principle of development.](#)
- [Breach of settlement boundary and coalescence of settlements.](#)
- [Need to use brownfield sites first and other alternative options given.](#)
- [Landscape and setting.](#)
- [Concern over infrastructure and services \(doctors, schools, reliance on Reading\).](#)
- [Highways and transport issues.](#)
- [Flooding](#)
- [Pollution \(noise, air\).](#)
- [Ecology](#)
- [Personal points.](#)
- [Unknown impact of IKEA](#)

[For the consultation responses and Council's response, please see the Statement of Consultation](#)

### **SA/SEA:**

The SA/SEA does not highlight any significant positive or negative impacts. [There is potential for negative impacts of air quality and noise due to proximity to the A4 but with appropriate mitigation measures and design this impact should be mitigated against. A small part of the site is within an area at risk from surface water flooding, with the appropriate Flood Risk Assessment and mitigation measures \(inc. SUDs\) there should not be an impact on sustainability. There are a number of positive impacts in relation to sustainable transport and access to local services and facilities. This easy access should reduce the need for private car travel, reducing the impact on environmental sustainability. Whilst housing development contributes towards economic development in the short term through the construction of the site, it is not seen to promote key business sectors and business development in the longer term.](#)

~~There are a number of positive impact in relation to access to local services and facilities. The only negative impacts relate to surface water flood risk, noise and air pollution could have potentially negative impacts without the appropriate mitigation.~~

### **Proposed development (from SHLAA submission):**

## Site Selection – Site Commentary

The site is proposed for mixed use development including commercial and residential development at a density of no less than 50dph [delivering approx 40 – 50 dwellings](#). [The site could come forward independently or jointly with EUA025](#).

# Site Selection – Site Assessment

<b>Spatial Area:</b>	AONB	<b>Settlement:</b>	EUA	<b>Parish:</b>	Sulham / Tilehurst
----------------------	------	--------------------	-----	----------------	--------------------

<b>Site ID:</b>	EUA027	<b>Site Address:</b>	Land north of Pincents Lane, Calcot
