

Appendix 1

Adult Social Care		
Ref.	Target/Data Narrative	Further explanation on indicator
ASC1	<p>Figures represent a small cohort that may fluctuate quarter to quarter due to unexpected deaths, health alerts or severe weather i.e. extremely cold winter - events which are outside of our control.</p> <p>Data is based on 3 monthly reporting of hospital discharges to rehabilitation/enablement and outcome at 91 days after discharge.</p>	<p>Adult Social Care Framework 2B Part 1</p> <p>The proportion of older people aged 65 and over discharged from hospital to their own home or to a residential or nursing care home or extra care housing for rehabilitation, with a clear intention that they will move on/back to their own home (including a place in extra care housing or an adult placement scheme setting), who are at home or in extra care housing or an adult placement scheme setting 91 days after the date of their discharge from hospital. This measures the effectiveness of reablement services.</p>
ASC2	<p>An increase in the figure indicates increased demand on services.</p> <p>The use of data from the previous year is not appropriate for setting a baseline due to the new statutory reporting framework (SALT). The reports to extract relevant data aligned to statutory reporting are still to be completed. Therefore there is no national data or comparator group data or England average to measure against at this point.</p>	<p>Service Plan Performance Indicator</p> <p>This measure provides an overview of activity in Adult Social Care for the provision of long term services</p>
ASC3	<p>Definition: Those clients that have had long term support for more than 12 months that have been reviewed in the last 12 months.</p> <p>In previous years, the denominator included clients with electrical equipment services, respite and short term services but excluded professional support. The denominator is now based on Long Term Service clients in the year so now includes Community Mental Health Team, professional support but excludes all short term services and low level support.</p> <p>The use of data from the previous year is not appropriate for setting a baseline due to the new statutory reporting framework (SALT). The reports to extract relevant data aligned to statutory reporting are still to be completed. Therefore there is no national data or comparator group data or England average to measure against at this point.</p>	<p>Service Plan Performance Indicator</p>

Children's Social Care		
Ref.	Target/Data Narrative	Further explanation on indicator
CSC1	<p>Target numbers for CSC 1, 2 and 3 have been set by Children's Services and are set on the basis of the level that the service aspire to get the figures back to. Target numbers are what are considered as more manageable for the service. Trend data is based on the last quarter.</p>	<p>Looked after child: These are children who are looked after by the authority</p>
CSC2		<p>Child Protection Plan: A detailed inter-agency plan setting out what must be done to protect a child from further harm, to promote the child's health and development and if it is in the best interests of the child, to support the family to promote the child's welfare.</p>
CSC3		<p>Section 47 Enquiry: Where there is reasonable cause to suspect that a child is suffering, or likely to suffer, significant harm, the local authority is required under s47 of the Children Act 1989 to make enquiries, to enable it to decide whether it should take any action to safeguard and promote the welfare of the child.</p>
CSC4	<p>Target Numbers for CSC 4, 5 and 6 come from those set in Children's Services' Service Plan. Trend data is based on the last quarter.</p>	<p>Single Assessments: The single assessment is a new assessment document. It is gradually replacing the initial and core assessments by combining both within one document.</p>

(Appendix 1 continued)

Acute Sector		
Ref.	Target/Data Narrative	Further explanation on indicator
AS1	Data is based on provider as a whole	
AS2	Data is based on Provider figures for West Berkshire residents only. (Data has been backdated to ensure reporting methodology matches that used for AS3)	(Adult Social Care Framework 2C Part 1)
AS3	Data is based on Provider figures for West Berkshire residents only. Data for AS2 and 3 is sourced from NHS England and is a monthly snapshot of delays taken on the last Thursday of the month at midnight. The Total West Berkshire figure is reported on nationally. The calculation for each trust/hospital is: (YTD Average of Delays per month/ population)*100000. So for April, the figure for the YTD Average part will include April only, but for May it would include the average of April and May and so on for each month until the end of the financial year. The result of the above calculation for each hospital is then totalled up to give the West Berks Part 2 figure	(Adult Social Care Framework 2C Part 2) This measures the impact of hospital services (acute, mental health and non-acute) and community-based care in facilitating timely and appropriate transfer from all hospitals for all adults. This indicates the ability of the whole system to ensure appropriate transfer from hospital for the entire adult population. It is an important marker of the effective joint working of local partners, and is a measure of the effectiveness of the interface between health and social care services. Minimising delayed transfers of care and enabling people to live independently at home is one of the desired outcomes of social care. This is a two-part measure that reflects both the overall number of delayed transfers of care per 100,000 population aged 18 and over (part 1 - AS2) and, as a subset, the number of these delays which are attributable to social care services and to both (health and social services) (part 2 - AS3).
AS4		
AS5	Data is based on Berkshire West as a whole.	Category A Red 1 incidents: Presenting conditions that may be immediately life threatening and the most time critical and should receive an emergency response irrespective of location in 75% of cases. Category A Red 2 incidents: Presenting conditions that may be life threatening but less time critical than Red1 and receive an emergency response irrespective of location in 75% of cases.
AS6	Data is based on Provider figures for Berkshire West.	An elective admission is one that has been arranged in advance. It is a non emergency admission, a maternity admission or a transfer from a hospital bed in another healthcare provider.
AS7	Data is based on Provider figures for West Berkshire.	An elective admission is one that has been arranged in advance. It is a non emergency admission, a maternity admission or a transfer from a hospital bed in another healthcare provider.
AS8	Data is based on Berkshire as a whole	NHS 111 is a new service that was introduced to make it easier for people to access local NHS Services in England. 111 can be called when medical help is required quickly however, it's not a 999 emergency. Please note: There has been a change in the way this data is reported in that a monthly report is now received rather than on a weekly basis. Data has been back dated accordingly.

Primary Care		
Ref.	Target/Data Narrative	Further explanation on indicator
PC1(a)	No target can be provided because an increase or decrease in appropriate referrals is neither good or bad. (data provided will sometimes be an estimate and will be marked with an (e) accordingly if so)	Secondary (or 'acute') care is the healthcare that people receive in hospital. It may be unplanned emergency care or surgery, or planned specialist medical care or surgery.
PC1(b)	No target can be provided because an increase or decrease in appropriate referral is neither good or bad. (data provided will sometimes be an estimate and will be marked with an (e) accordingly if so)
